TO ADJUST the discards of war to civil life again, physically, vocationally, spiritually, the Canadian Military Hospitals Commission makes use of volunteer service as the Patriotic Fund does in the care of soldiers' families. Doctors and nurses, teachers and vocational counselors, shoemakers and employment agents all play a part. The greatest wounds come not from bullets but from tuberculosis. Page 1.

EXPERIENCE from the field of workmen's compensation following industrial accidents has been of prime service in replacing French war cripples among the self-supporting. These cripples are themselves contributing to the understanding of organic habituation to mutilations. The schools for the handicapped are full of soldiers and their work is a success. Page 11.

AMONG some of the cripples of peace, to—the nervous invalids and the convalescents from sickness or strain—there is need of occupation not only useful but inspiring—something to put a poor, fidgety soul back on his feet again. Growing flowers, to be sold cheap to the flower-hungry in the cities, suggested as the ideal combination. Page 14.

PRESIDENT WILSON went the whole way in his address to Congress Monday night—war, alliance, universal service. He recites the invasion of our sea rights, but it is toward the overthrow of the German government, for the sake of the people of all Europe, that he calls on the American democracy to throw its full strength into the struggle. The text of the address. Page 16.

INDIANA'S school survey was an elaborate study not only of vocational education, but of its application to a given industry in a given city of specified size. Page 18.

PRACTICAL training for volunteers in the care of soldiers' families is to be given by the New York School of Philanthropy, with field work in the large relief agencies. Page 20.

THE proposal of a pay-as-you-enter war, financed by taxes laid on this generation, has met with such a response as almost to bury under approving letters the three social workers who invented it. Page 20.

SAN FRANCISCO newspapers are upholding their newsboys in opposing an extension of the child-labor law in street trades, following thereby the discarded practice of eastern papers a decade ago. Page 28.

GERMANY has had a great increase of juvenile crime since the war began, due, it is believed, to the bitterness and hate of newspapers and general public feeling. Page 24.

SIX years ago Los Angeles moved a municipal recreation center out into the neighboring mountains. Not only rest and recreation, but civic pride and community spirit have resulted. Page 22.

CIVIC reformers in Pittsburgh are rejoicing over the vindication of A. Leo Weil. A mountain vendetta, applied through the West Virginia courts, was employed to "get" him because of his prosecutions for the Voters' League. Page 26.

WHOLE church congregations—even train-loads—of southern Negroes have moved up to the high wages of Philadelphia. A joint committee is at work on the resulting problems of health, housing and schools. Page 27.

SURVEY ASSOCIATES, INC., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

THE SURVEY

A Canadian City in War Time

IV. The Battle-ground for Wounded Men

By Paul U. Kellogg

THE GREY NUNNERY they call it—and the name seems to fit the great half-quadrangle of that weathered limestone which gives to warehouse and church alike in Montreal the quality of etchings. But the name has to do with more than walls, for this is the mother house of Les Soeurs Grises, whose branches in the United States and western Canada have made the work of the order known throughout the continent.

In Montreal, that work reaches back to the French and Indian war, when the Grey nuns nursed wounded English soldiers who had been taken captive. Today, row after row of beds, floor after floor, one entire wing of the nunnery has been stripped of its customary furnishings and insignia and has been given over to wounded men, French-speaking, English-speaking, convalescents from the battlefields of another great European struggle in which, this time, France and England are making common cause, and in which stand together the descendants of the men who fought in the eighteenth century for control of the valley of the St. Lawrence.

The ground floor had been thrown into a recreation room, and patients lined the benches the morning of my visit, or hung about the piano where local talent was doing the honors of visiting day. At the billiard table, a one-legged man with his crutch laid aside and a cue in its place was meeting all comers on unequal terms—and in a sense personifying the genius of the place. For in the adjoining rooms were invalided men at work at the shoe-makers' and carpenters' benches and school desks that made up the simple equipment of the first of the vocational classes which are gradually turning the convalescent homes of the Military Hospitals Commission into training schools.

Here was an Irishman, an ex-stage driver from out Vancouver way; and next him Joe Desrosiers, a quiet-spoken young French-Canadian from the rural districts of Quebec. Two months before, just back from the war, Joe could neither read nor write, but he had made such rapid progress that he was now addressing daily notes to his instructor and multiplying in four figures. He showed me his copy-book with its proud label, For Canada and Empire; and inside, beginning on the first page with crudely formed letters, were the exercises which

stood for nothing less, step after step, than the opening up of civilization to a starved intelligence. There in the half-formed handwriting of this soldier of the expeditionary force, who was wounded in the side in the first battle of Ypres, were such painfully engrossed practice sheets as "Dickey bird, dickey bird, whither away?" When Joe Desrosiers can read, he is to take up motor mechanics; and when the doctors discharge him, he will face the world with some compensation for his life-long physical handicap.

The spirit of humane care in all medical service reaches back to the hospices of the Middle Ages. But the work in these convalescent homes draws its inspiration from some of the newest sources, not only in medicine but in industry and education. It draws on the latest developments in the schools for the blind and hospitals for crippled children, on psychiatric ward and tuberculosis sanatoria, operating room and research laboratory, on the technical colleges and the work shops of scientific managers and efficiency engineers.

And this convalescent home in the Grey Nunnery is but one of the way-stations on the return road which begins at the ports of debarkation, Halifax, St. Johns and Quebec, and reaches back to every cross-way and city neighborhood of the dominion from which men have set out for the front, whole and vigorous.

Perhaps there is no better way to visualize it than to tell at the start the story of one group of Jamaicans whose participation in the fortunes of war ran the whole gamut of bitter personal loss and partial reparation. Of these, nine had to have both legs amputated below the knee, eight lost one foot or most of one foot. In the West Indies, they had been cultivators, earning from ten to fourteen shillings per week. Their case was taken up by the Canadian Military Hospitals Commission with the government of Jamaica, which reported that if the crippled men could get training as shoemakers or garment makers they could earn a livelihood on the island. In less than five months, eight of the men were trained to the point where they could do ordinary shoe-repairing as well as the average journeyman; two showed such aptitude for cobbling that they could make custom-made shoes; three showed 60 per cent efficiency as garment makers; one, in tinsmithing,

CLASS IN WOODWORKING AT THE GREY NUNS CONVALESCENT HOME, MONTREAL

could make an ordinary utensil if given the pattern, although he was of such a primitive type, that he could not distinguish differences smaller than a quarter of an inch. One was trained to be a chauffeur (he had had some experience before); and one completed two-thirds of a course in stenography and type-writing.

All this process of re-education was carried on during the period of convalescence in Halifax, where W. J. Clayton, a clothing manufacturer, gave up his house, which the Red Cross furnished as a military hospital. The men were supplied with artificial limbs made in the government factory at Toronto, established and run by the Military Hospitals Commission. One month after they were fitted to these limbs and just before they left for Jamaica, they had a dance on their Canadian legs. But while this festivity appealed most to the popular imagination, it was less of a miracle than their transformation industrially. Jamaica paid the cost of maintaining, equipping and training the men. Instead of the unskilled farm hands who had left the island, instead of helpless war-cripples, prospective dependents for unnumbered days, seventeen producers, with enough artisanship to earn for themselves more than they had ever earned before, sailed south from Halifax to take up life hopefully in spite of their desperate maiming.

Quebec is the clearing-house for invalided men, but with the St. Lawrence frozen fast, Halifax and St. Johns are the ports of entry in winter. Hospital ships for all the sick or wounded, a debarkation hospital at the water-front, and special hospital cars for helpless patients, are links recently forged in the chain of care which mark great advances over the earlier provisions. Ordinary troop and passenger ships have been much used to bring back men from the English hospitals, but these often have proved to be crowded, the accommodations inadequate, and classification difficult.

More and more invalided men are being brought in English hospital ships, 500 at a time. In these ships with their four red crosses, port and starboard, forward and stern, and a large electric red cross at night, there has been less danger from submarines. Yet, in March, such a ship was attacked in English waters regardless of its markings and freights. A

doctor is in high command and outside of the officers and crew there are none aboard the ship save wounded men, orderlies and nurses. Moreover, the ships are divided into wards, which facilitates classification. Each man has a separate cot. If he is helpless and might roll out, he sleeps in something like an old-fashioned baby's crib, which can swing with the motion of the ship or can be made fast.

At Halifax the immigration building on Pier 2 has been transformed into a large clearing hospital. It can take care of 425 patients, so that a ship can be emptied practically at once and a man carried on a level from his cot aboard the boat to a cot on shore. One frequently told story of the port is of a chap who came down the gang-plank, hobbling along on crutch and cane with one leg off. A friend in front carried for him his kit-bag and his artificial leg, which he had not yet learned to manipulate, at least down a gang-plank. The friend, excited on getting back, rushed ahead onto Canadian soil until he was hailed by a howl from the rear, "How in hell do yez think this left leg can catch up wid that right one? For God's sake wait."

But it is the paralytics, especially those who must be carried

CLASS IN MECHANICAL AND ARCHITECTURAL DRAWING, KHAKI LEAGUE CONVALESCENT HOME, MONTREAL

INVALIDED SOLDIERS AND INVALIDED SHOES

on water beds, that have caused greatest concern. In one shipload were nine men, paralyzed from the waist down, who had to be swung off in hammocks. Some had been blown up, others hit by shrapnel, one sniped and one kicked by a horse.

It was through experience in handling this group of bed-ridden cases that the third advance in equipment, the hospital cars, came about. Until these cars were provided, with their big side doors, it was excruciating business to transfer such cases from the ships to the train. The hospital cars are arranged in units of two cars each. In the first, cots are put in place of the lower berths; the upper berths being left for the use of orderlies at night. The companion car has a smaller number of cots, doctors' and nurses' quarters, and a side entrance. The Canadian government railway has provided five such units, and the Canadian Pacific, three—or sixteen cars in all.

Human Cargoes

A HOSPITAL ship's list is made up somewhat like a manifest, with the man's name, company, regiment, residence and disability—a human cargo, if you will, of invalided and conva-

lescent men, and more recently, of active cases. For with roughly fifteen thousand sick and wounded Canadians under treatment in England, and prospect of immense additions to their number after the spring campaign, the cross-seas transport of patients at an earlier stage of treatment was entered upon in mid-winter to relieve the English hospitals. Not a few of the men have open wounds still.

One fellow came through with sixty-nine wounds. He had been reconnoitering with five others. As a mortar shell burst, he dove head first into a trench and all sixty-nine wounds were from his hips to the soles of his feet. Even so, he was more fortunate than his companions. A second man of the party died of his wounds; a third was killed outright; a fourth had to have a leg amputated; and a fifth was found dead against a post, whole, but killed by the concussion. Another wounded man brought twenty-eight pieces of shrapnel down the gangplank with him—still in his body. He had three stiff joints, but the metal had reached him in no vital part. The home-comers range from cases such as these, to men in apparent good health, whose injuries merely incapacitate them for further active military service.

First the men of the maritime provinces—Nova Scotia, Prince Edward Island, New Brunswick—are taken to the discharge depot and go before a medical board. This has on hand the documents from the corresponding English medical board, but it is on the basis of re-examination in Canada that the men are divided into three classes:

I. Men for immediate discharge without pension—those unfit for overseas service, but capable of taking up their previous civilian occupation, or those whose disability was neither the result of service nor aggravated by it.

II. Men whose condition may be benefited by further medical treatment.

III. Men with permanent disability who will not be benefited by further treatment, and whose cases come before the board of pension commissioners.

The men of class I go to the pay-master for transportation, are paid off, given civilian clothing (or \$13, as they prefer), and 15 days' extra pay, to tide them over until they get employment. This procedure is true to a degree of class III, ex-

ONE OF THE CLASSES IN MOTOR MECHANICS OF THE MILITARY HOSPITALS COMMISSION

cept that they are kept on pay until their pensions are adjusted. Red Cross committees look after these maritime men while in Halifax, giving them auto-rides, entertaining them in private houses, etc. Meanwhile the provincial Returned Soldiers Commission notifies its representative in each home town that the man is on his way, so that he may not arrive unknown, unheralded, and unwelcomed.

The men of class II get \$10 down, the balance of their pay is sent by check to their homes, and after a ten days' leave (if they are well enough) they come under the care of the Military Hospitals Commission, army pay and subsistence allowance continuing during their period of treatment.

Men of all classes whose destinations are west of the maritime provinces are entrained for Quebec, where they in turn come before a medical board, and are classified. Elaborate case histories are taken down for those of class II, covering not only their army and physical record, but such items as their former occupation, earnings, schooling, technical training. These records are sent in duplicate to the various governmental departments. For it is at this point, and with these men of class II, who, after medical and vocational treatment may either be rehabilitated into self-sufficient civilians (like class I) or drop into the pensioners (class III), that the primary work of the Military Hospitals Commission begins.

Almost by accident, Canada put into the hands of a civilian commission the handling of this return current of men from overseas. The far-reaching social significance of so doing is only now beginning to lay hold of the public. In testifying before a parliamentary committee in March, the general charged with mustering battalions in the Montreal district, said tersely that he had no time to consider the handling of returned convalescents; his business was to produce fighting men for the front. Not only do the currents run in opposite directions, but their whole functioning is different. The goal of the Military Hospitals Commission is to take the discards of war and readjust them physically, vocationally and spiritually to civil life. Gradually, as the return current grows in volume, and as the commission becomes better known its work is being visualized as a great economic and patriotic responsibility and service.

To date upward of 15,000 men have gone through its hands. These are only the advance guard of no one knows how large an army of invalided men. Until three or four months ago, they came only gradually, and the first to reach Canada were not the most seriously disabled. Amputation and other serious cases would stay on in England for a long time. People in most of the provinces are only now

beginning to meet the real war cripples—to shake men by the left hand or try to talk naturally to one whose painfully labored breath and speech are due to gassing. At the outset, the heads of the medical corps, engineering and clothing bureaus of the Canadian Department of Militia and Defense were made a special committee to look after returned soldiers. A few convalescent homes were started, and there was one file at Ottawa to contain the correspondence. Today there are 1,000 files. The commission was formed by an order in council dated June 30, 1915, under the presidency of Sir James A. Loughheed, member of the Cabinet without portfolio, and was composed of representative men from all parts of the dominion, some of them nominated by the provincial governments. As secretary, E. H. Scammell was chosen, an Englishman who had lived ten years in Canada and who, before the war, had organized the Canadian end of the celebration of one hundred years of peace with the United States. Incidentally, Mr. Scammell's father had been active in rehabilitation work for returned soldiers in England following the Boer war. His own experience in mining and industrial operations in Canada and Australia has stood him in good stead in projecting the social and economic phases of the work. For increasingly, those phases, no less than the medical, have become important.

The Canadian Army Medical Corps had been developed for fifteen years prior to the war. Base and camp hospitals were put in operation to care for the heavy medical work incidental to mustering the expeditionary force. Provision for physical examination of recruits had to be expanded, reorganized and brought to new efficiency following the rejection of large numbers of unfit men after they had reached England. The corps was constantly drained of some of its most experienced physicians who accompanied the troops over sea. But even had the medical corps been equipped to handle invalided men also, so far as numbers goes—and this is a moot point—it is my conviction that the present Canadian system which has vested administrative responsibility for handling returned men in a separate civilian agency, is the better one. The physical restoration of a sick or temporarily injured soldier, so that he can return to the ranks, is a job for army doctor and drill master. The rehabilitation of a permanently injured man for the resumption of civilian life where he left off, or even the care of the wide variety of war wrecks who come back from the front, calls into play all manner of specialists, surgeons, psychiatrists, tuberculosis experts, trade teachers, agriculturists and the like.

Specialization in Treatment

THE work falls into four chief branches—medical,¹ military, vocational and employment. In order to make use of existing resources, and to bring convalescent patients within reach of friends and families, the first step in development was to arrange for hospitals in the chief provincial centers. The work was emergent, much of it clearly temporary, and the effort was not to supplant but to use existing institutions. In December last, overseas patients were being cared for in approximately thirty such, some managed directly by the commission, some by philanthropic or public agencies with which the commission made per-diem arrangements; this in addition

¹The work has been handicapped to a degree by vagueness as to medical and official jurisdiction, but a working arrangement has been arrived at by which physicians of the Army Medical Corps now carry on the general medical work in the institutions of the commission, under a medical superintendent responsible to the commission; while army officers assigned to a command also responsible administratively to it look after discipline, pay, etc., the patients being still, of course, enlisted men. Meanwhile, the commission, as a civilian body, is able to enlist in many cases full-time volunteer work from citizens, make favorable arrangements with private and provincial institutions, and carry on, more flexibly, its overhead administrative work.

JAMAICANS WHO LOST THEIR LEGS AND FOUND A VOCATION

to eighteen sanatoria for tuberculosis. In many cases an addition is built, the commission paying half the cost and having the use of it so long as required.

As the number of men increased, a second classification according to physical disability naturally followed, which called for the creation, equipment and maintenance of specialized institutions. One day at the Montreal office, I ran through the blanks which had reached it that morning of invalided soldiers on the way to the city. The physical disabilities included "over age and unfit"; tendon of Achilles partially severed; ruptured ligament of the right knee; stiff hip; injury to musculo-spiral nerve from gunshot wound in arm; shell shock and goitre; shell shock and anaemia; stiff right elbow; amputated fingers; fibula shot away; gunshot damage to thoracic nerve; shell shock and deafness; nervous break-down. A great many wounds were of the arm and shoulder; few of the legs and feet. To the simple explanation that the upper part of the body may be more exposed, the doctors added the darker one that often the men wounded in the legs and feet in No Man's Land die there. Rheumatism, tuberculosis and heart trouble were the most frequent entries.

War Consumptives

IN HANDLING tuberculosis cases, the commission has been meeting an emergency situation for a year past. Last summer it cabled to England for an estimate of the number of invalided soldiers to be anticipated. The commission arranged for 30 per cent in excess. When the Canadian camps were closed last fall the hospitals were fairly swamped with tuberculous and other ailing men whose presence in the camps had not been reported. Returned men from England numbered twice the estimates. The demand developed so rapidly and so far ahead of medical prognostications that the commission has been meeting it by leasing hotels, schools and other buildings for the quickly-curable cases. In the province of Quebec, the commission has thus opened an old inn and increased the size of two private sanatoria. It has had designed a standard tuberculosis pavilion which will take care of ten men and will last from six to ten years. This can be put up in two weeks and attached to the drainage and water system of any sanatorium. Whether the commission will create permanent institutions of its own for chronic cases to be pensioners of the dominion for life, remains to be seen, but it is felt that the general outcome will be the development of a stronger sentiment for public sanatoria throughout all Canada.

Perhaps 80 per cent of the patients had the disease before they came on the strength. In some cases it was impossible to tell when they enlisted. But that many clearly incipient cases were admitted to the ranks in the early rush due to lack of skill of local examining physicians or the ill-advised pressure of recruiting officers and commanders, is without question. Large numbers of the men developed pulmonary tuberculosis during their training in Canada, brought on by long route marches, wet feet and sleeping in tents before they were moved into barracks for winter. Others came down in England and others through exposure in the trenches. At one time as high as 60 per cent of the tuberculous men had never left the country. Today the percentage is about 50. Not more than 15 per cent have been to France.

In the matter of treatment, the Saranac Lake men in Canada have held to the rest policy. The English sanatoria go in for physical work. The Canadian commission has taken a middle course in adapting vocational training to the three classes into which the patients are divided:

CLASS IN POULTRY RAISING AND GENERAL AGRICULTURE, SEWARD PARK CONVALESCENT HOME, QUEBEC. EGGS AND FOWLS ARE SOLD AND THE PROFITS GO TO THE SOLDIERS

1. Bed cases with temperature. These are given no vocational training.

2. Porch cases. These men in the warmer months study general subjects which can be taken from books; they draw, or do raffia, basketry, crocheting or embroidery. Of course, these occupations cannot be carried on outdoors in the severe Canadian winter.

3. Men on exercise. These put in from one to four hours a day in classroom or workshop along the lines which will be described for general convalescents.

The most striking specialized institution is at Toronto. Here is both an orthopaedic center for amputation cases and a factory for artificial limbs. In the manufacture of such limbs the United States has led the world. Three American experts have, in fact, been called to Europe since the war began to cooperate with the military authorities of the Allies in artificial limb production—Hanger of Brooklyn, the inventor of a special joint; Rowley of Chicago, a large manufacturer of legs, and Carnes of Kansas City, noted for his patent arms. The Canadian soldiers have had difficulty in getting limbs from the English depot, however, because of the great demand from English war cripples. The Toronto institution is the result.

This factory is in charge of a man of thirty years' experience. Skilled artisans have been brought from the United States. As it is a government institution, the factory is able to draw on all known devices without regard to Canadian or foreign patents, and the Military Hospitals Commission claims that its limbs include the best points of French, Belgian and English war designs. In other words, the Canadian soldier marches off on an Entente leg. More practically, perhaps, it should be added that one of the members of the Military Hospitals Commission has an artificial arm—a man of wealth who has tried all inventions and whose advice has had influence in developing a simple government type.

The procedure in the United States has been to give a crippled veteran a grant for an artificial limb. This grant he can spend as he sees fit or go without the limb entirely if he chooses. Limbs are very costly. A soldier has not much chance to kick even with his natural member, if his bargain is not satisfactory. Under the Canadian system the limb is made satisfactory and kept so. Recently a Frenchman with two medals but a bad leg—all gifts of his government—was re-fitted at Toronto.

In amputation cases a cast is taken of the stump, the limb is made, fitted and practised for a certain length of time. Four

to six months must elapse after the operation before the stump is shrunk to normal size, and it must meanwhile be massaged and exercised, or, to use the technical phrase, functionally re-educated, to restore as much as possible of the normal strength and freedom of the muscles. Meanwhile, the time is turned to account. As yet little attempt has been made to follow the French precedents, where mechanics have been taught to use their artificial arms in fine operations. The vocational preparation has been simpler, but is felt to be more practical.

To illustrate: Ten apprentices are to be taken on at the Toronto factory itself, preferably soldiers from different parts of the dominion who have lost their legs. The life of an artificial limb is from three to ten years, and the government undertakes to repair and replace limbs as often as necessary. These apprentices are to be taught leg making and repairing, that they may be able to look after the legs in their part of the country in following years.

A central hospital for nervous diseases has been established at Coburg, Ontario, where men suffering from shell shock and neurasthenia are sent. All the different forms of nerve sickness are present—melancholia, amnesia and dementia, and the rest. At the end of two or three months, chronic cases are transferred to provincial hospitals for the insane. Two alienists are in charge, and a new institution is likely to be opened soon for shell-shock cases, which do not mix well with the others. Theirs is nervous prostration through terrible experience. The head wiggles; if you speak quickly the man jumps; he cries easily. Only a small residue it is hoped will be in need of permanent institutional care, but no one can forecast what recurrent consequences of the great war will press down upon these men in the years to come.

A war-time version of the bramble bush is that of Private Chambers who was blinded as a result of shell-shock. After an extended but unsuccessful treatment in London, he was started home in a boat which was torpedoed. The excitement restored his sight and the passengers were saved. Even so, there are limitations to the psychiatric treatment which can be generally recommended! If the case proves to be only a mild form the patient is sent to his home on military pay, or to a convalescent home with recommendation for vocational training. For here again occupation has been found to be of great value.

The story is told of a young American volunteer, wounded in the shoulder, who, as a result of shell-shock, had a total loss of memory. Before the war he had been a stationary engineer in the South Station, Boston. He was sent to his sister's home in St. John, N. B., so nervous that he could not be treated in a convalescent hospital of the ordinary sort and so afflicted that he could not go three houses away and find his way back again. A teacher was sent to the house and began with raffia, basketry and simpler woodwork. Memory exercises were built up on these occupations and the man is slowly recovering.

Hospitals for Convalescents.

ALTOGETHER some 4,000 soldier patients are being cared for by the commission at this time, either in institutions or as out-patients. Even after the process of institutional differentiation is carried much further than at present, the largest group will be the general cases—just as with a city hospital, or charity organization society, or any other social agency receiving all comers. Along with its various advantages, the commission was not only unwieldy in size and scattered in membership, but it has had to be educated. It has learned some things, slowly, only through experience; a process which nev-

ertheless has been accelerated by the fact that certain key members have practically put in full time, grappling with problems as they arose. The commission started with small homes and not a few of these were donated. While each was a tribute to a patriotic conscience, it was apt to be a poor place for a convalescent patient. Writing of them, Senator John S. McLennan, of Sydney, one of the broadscale members of the commission, said:

"There are many men in our homes today, still unfitted to resume civil life, whose wounds were received in the great battles of a year ago. The supply of comforts, which in many cases were luxurious; the relaxation of discipline, the treating of men as one treats a civilian patient in the interval between illness and the resuming of ordinary occupation, which might do no harm if the experience was to be counted in days, are most seriously detrimental to the best interests of the men when extended over the prolonged periods which have been found unavoidable. The first conception of the homes was that they were places of relaxation; the right one, which experience has taught us to realize, is that they are places of rehabilitation."

In the second stage of the commission's work, therefore, the trend has been toward larger city units under its own management. There are signs that this, in turn, is giving way to a third stage of still larger units, some distance out from the cities, near enough to call on the best medical service, but far enough away so that men will not be cooped up in barracks-like recreation-rooms, nor left in their free time to the commercial amusements of a wide-open town like Montreal, with resulting drunkenness and venereal disease.

Much is anticipated from the development at Whitby, where a large hospital for the insane built by the Ontario government has been taken over by the commission for its convalescents. Similarly, in Quebec, Lieutenant-Colonel Smith is negotiating for new suburban institutions and getting estimates on hut-hospital settlements similar to those created in France.

Moreover, every month has added to the evidence that it is not rest the men require so much as occupation, mental and physical, a need which calls for a further classification of patients quite as important as any thus far set down. Among the 2,600 patients in the Ontario hospitals, 300 occupations were represented. The men's tastes ran in twenty different lines. Only in large units can you get enough men to justify a class in even representative trades. But while the commission failed to call in institutional experts at the outset, in working out its administrative problems, it has been forehanded in calling into its vocational work some of the most experienced men in technical education in Canada under the superintendency of T. B. Kidner. Professor Kidner came to Canada in 1900 under the Macdonald fund, organized technical education in Nova Scotia and New Brunswick, and came to the commission from Calgary, where he was director of technical education.

The Vocational Work

THE ORIGIN of the vocational work was characteristic. The first year of war Mr. and Mrs. T. K. L. Ross lent their home, Drumbo, in Sydney, as a convalescent home. Mrs. Ross's sister, Miss Matthews, discovered the social need of the men who were beating time while waiting to get well. She approached B. H. Murray, premier of the province, who asked Principal F. H. Sexton, of Nova Scotia Technical College, to look into the matter. Engineering courses in five colleges (mining, civil, electrical and mechanical) and evening technical schools at twenty points throughout the province fall

FREDERIC H. SEXTON

SIR JAMES A. LOUGHEED

LIEUT. COL. C. F. SMITH

under Professor Sexton's oversight, so that he brought exceptional knowledge of occupational conditions as well as educational method to his task.

"The stream of badly wounded soldiers has started to flow to Canada," wrote Professor Sexton; and asked, "Are they to drift through life as respected paupers, or to be helped to competency?" He pointed out that pensions would keep men from want, but without productive labor would not maintain them on the level desired; that the country at large did not want to enter upon "such an elaborate and spendthrift policy as has been developed in the United States." The way to prevent such a wholesale charity, argued Prof. Sexton, is "to train disabled soldiers for occupations by the well-known and tried methods of vocational guidance and the training of adolescents." There would be nothing new, except the kind of human material which would be available. With increasing use of the dictaphone, it might be possible to make an efficient stenographer out of a blind man with no legs. But the practical range of opportunity has opened up in many less spectacular ways. More than twice as many gainful, skilled and semi-skilled occupations, according to Professor Sexton, are open than there were fifty years ago, or at the close of the Civil war. Automatic machinery is calling for less physical strength. Whereas the old apprenticeships took from two to five years, the time necessary to become proficient in some of the new occupations which have come in with the subdivision of labor may be only as many months. There would be, therefore, a host of outlets for men partly disabled. It would not be sufficient, however, warned Professor Sexton, to train an invalid man as machine tender. He must be given a general groundwork so as to adapt himself to rapid evolution in manufacturing.

Professor Sexton pointed out the beginnings already made in France in schools and workshops for invalids; boarding-houses with apprenticeship in private workshops; organized cooperative workshops subsidized and encouraged by the state; and industrial allowances permitting invalids to follow apprenticeships in their homes. He felt that the Canadian solution lies in shop-hospitals and convalescent homes cooperating with technical schools and neighboring workshops and in

enlisting voluntary instructors, such as schoolteachers, skilled mechanics and employers. Such a system should be applied locally, for the man would want to be near home, and industrial and educational cooperation would be most efficient and natural, province by province.

"It should be looked upon," wrote Prof. Sexton, "both as a public investment and as an obligation to the men who have risked all, that the individuals of the empire may continue under the conditions of personal liberty which they have bought so dearly and cherished so ardently."

In October, 1915, at the federal prime minister's invitation, an interprovincial conference was held at Ottawa. Five premiers, among other provincial ministers, took part. The commission's secretary submitted a report recommending that the work of training returned soldiers and finding employment for them should be established on a comprehensive basis; several of Prof. Sexton's suggestions were embodied in his report, and vocational education was definitely entered upon early in 1916. Canada, while not the first to take it up, has the distinction of being the first not only of the colonies, but of the allied countries to put it on a national basis under a centralized authority. In France it has been taken up in many different ways by many different institutions. Education in Canada is a provincial matter. At first there was some question of its being an infringement on local autonomy, but the creation of provincial commissions and of local advisory bodies adjusted this difficulty. Expenditures by provincial educational authorities in connection with classrooms or shops are reimbursed; teachers are responsible to the commission and their salaries are borne by it. The vocational work is divided into six main regions, each under an experienced secretary—Quebec and the maritime provinces, Ontario, Manitoba, Alberta, Saskatchewan and British Columbia. The work in Quebec and the maritime provinces is under Professor Sexton, with headquarters at Montreal. There the pioneer development has taken place which has set the norm for the dominion.

The therapeutic value of the work gives it its first claim. Keep a convalescent busy, get him to forget his troubles and he will get well more quickly. It is this principle which threads through the scheming of classes in such varied subjects

as arithmetic, English, stenography, bookkeeping, poultry-raising, bee-keeping; market-gardening and the lighter forms of agriculture; motor mechanics and carpentry; mechanical and architectural drawing, no less than through the handicraft work of the sanatoria. Of course, there are some slackers who would rather loaf through convalescence, but that is not the spirit of the majority. The army doctors say that vocational work is better than drugs—and so do the men. For example, a man who had ankylosis of the fingers—stiffening of the joints—claimed he got three times as much good from typewriting as from the most skilful massage. His testimony was not altogether different from that of the returned officer, wounded by shrapnel in the wrist, who found more relief in sweeping vigorously at curling than in massage. Some men in the carpenter shop develop more flexibility and precision in muscular effort than in using the most elaborate mechanical devices for treatment.

Nor are the results merely physical. Most of the men come back with sluggish mental action. They have been under military discipline so long, clothed, fed and ordered about, that they have lost independence. On top of that may have come loss of further initiative by hospitalization as an active case in an overseas military hospital. Many of them have been under tremendous strain which they do not recognize until they are back from the front. All this involves a nervous reeducation for which vocational work proves more effective than any medical or disciplinary program. A man gains confidence by making something with his hands. He concentrates on it and gets a new freedom for eye and muscle.

Recently, at the Grey Nunnery, the medical officer brought in one English-born patient who was suffering from insomnia dating back to shell-shock in the second or third battle of Ypres. "He's simply lost his nerve and is going to pieces," said the "M. O." "Can you do anything for him?" When the fellow took his stand at the carpentry bench he jumped at every noise; he could not work for an hour; he found difficulty in coordinating his muscles. The day of my visit he was leaning over his bench making some careful measurements with sure fingers on a wooden candlestick which was to fill a Montreal order. They said he was sleeping like a top.

The men I saw in the classes at the Grey Nunnery ranged from trappers to clerks and mechanics. Mostly, however, they had been unskilled laborers. When they come in, according to the vocational officers, they have little plan for the future. They have been used to living from day to day as the soldier does. Many are depressed, yet many are optimists. A man with a leg off says—"It might have been my arm." A man with a hand off says—"It might have been my leg." In the vocational classes they begin to gain not only a new self-confidence, and slowly a new initiative, but a new horizon for the future. Here the economic motive is brought into play. To illustrate with a low-grade group:

From Trench to Cobbler's Bench

SHOE repairing is adapted to the older men—for some who went out with the first recruits, men of adventurous type, had turned fifty if they were a day. "Do you want my regimental age or my real one?" they ask when they are back in a hospital. The vocational classes get condemned military boots, or those which have been partially worn out. These are repaired by the probationary cobblers in the shoemaking class, so that, on an average, seventy-five pairs a week are turned out at the Grey Nunnery. In some cases it means taking the uppers and relasting them to boys' sizes. The shoes are for the most part sold back through the regimental canteens at \$1.50 a pair.

The difference between the cost of the stock and the sale price of the made-over shoe goes to the convalescent. "Here," says Professor Sexton, "is a good economic circle. The shoes would have been useless; the soldier-pupils have actual shoes to work on—something much easier for a beginner than to make a new pair. Moreover, the soldier gets a good pair cheap. He gets only two pair a year from the government while in the Canadian camps, and has to buy others out of his own pocket. The repairing is something which men forty years old can carry out, who have had only unskilled occupations in the past, and who are no longer going to be strong enough to do heavy labor. And there are openings for little repair shops in many a village in Canada."

Not a few of the instructors are themselves invalided soldiers. One reason lies in the fact that the war has drained the trade schools. No less than five of the men from the technical staff of Calgary went overseas. One of the best instructors in Montreal was a wounded man sent back as conducting officer with a party of sick. At Lake Edward the commission is making the experiment of building up the entire staff from among returned men. A graduate of an agricultural college, a graduate from a technical school and one from a business college were found among the tuberculous patients. The shoemaking class at the Grey Nunnery is taught by Corporal Brown, returned from the sixtieth battalion with a severe case of asthma. The vocational officer in charge is himself a former instructor in philosophy at Kings College, who had taught general subjects in summer schools throughout the Canadian west, and whose physique kept him from going overseas after enlistment.

The Carpenter's Shop

ONE of his most interesting experiments has been in the carpentry class. Through an exhibit of their first work one thousand dollars' worth of orders were taken in. These filled, orders for one thousand dollars more are in hand. At first there was some reluctance on the part of the commission to have men earning in addition to their soldier's pay, as it was felt it might induce some to keep on as institutional workers, especially should they get a sentimental value for the things sold. That last was easily prevented. The plan itself involves no cost to the government, and its practical value in motivation has been convincing, so that it has been adopted.

Twenty-five per cent is checked off the retail value of the article for material and overhead; the soldier-pupil gets 75 per cent. In this way men earn from fifty cents to over a dollar a day. One such soldier, as the result of three months' work, left the Grey Nunnery with \$70, with which he was going to give his little girl music lessons. The soldiers can draw 20 per cent of their earnings in cash, the remaining 80 per cent on discharge. Thus, incidentally, thrift is encouraged.

Meanwhile the handicraft classes are turning out things for the hospitals themselves. Three massage-tables and 100 bed-trays are being made in the carpenter shop at the Gray Nunnery—to say nothing of chests, umbrella-stands, tabourettes, workbaskets, magazine-racks and kitchen-tables.

Similarly, in Alberta, the men receiving agricultural training at one of the convalescent homes get the returns from their small gardens and poultry-raising. Each is allotted a piece of ground and prizes are given for the best vegetables.

The industrial classes are schemed out along practical lines so at once to arouse ambition and make the man more valuable as a producer when he re-enters industrial life. Very often a machinist or carpenter, for example, can increase his earning power by learning to read blue-prints. A molder, hit

with shrapnel in the back, was unable to return to his work. After much talk, he was persuaded to go into the drafting class, and discovered that he had talent for drawing. In six weeks he was doing simple mechanical drafting with precision and equipping himself to become a foreman in a molding shop. Corporal Cassils was a Canadian machinist who came back with a distinguished conduct medal and a wound in the back. He took four months' instruction in drafting, and in March secured a place at more pay than he has ever earned.

In some cases men are able to shift occupations, leaving those they do not like for ones they do. A man who had been driving a milkcart, earning \$12 a week, came back from war with a wounded shoulder. He was placed in the drafting class for three months. In March he got a job in a munitions factory at \$75 a month. A Russian in the carpentry class had been a coal-miner in Canada, and by a trick of fate it was a mine explosion on the battlefield which seriously injured him, so that he could never use a pick again. He had never handled bench tools in his life, but proved to be a "natural born carpenter." After two and a half months his instructor said he was fit to take up light work.

Further illustrations of the simpler forms of vocational re-adjustment—which in the mass mean much more than the more striking cases of re-education to be described later—are the following:

A Nova Scotia farmer's son of twenty had worked as a painter before enlistment. He contracted tuberculosis before leaving the country, but could not return to painting because of the danger of a recurrence, nor was he strong enough for farming. All work like pitching hay, ploughing or even hoeing strains the pectoral muscles and is apt to reopen lesions. The boy was of ordinary intellectual ability. He has been sent to a business college for six months and is proving an excellent student.

Another Nova Scotian farmhand partially lost his hearing. He tried to get work without success; for the farmers did not want to bother writing out their directions. He was sent to a school for the deaf to learn lip-reading. Incidentally, the principal is a poultry-fancier, the young fellow is working with him in his hennery and later is to be sent to an agricultural college for six months.

A Scotchman employed as a filing clerk in handling blue-prints before he went overseas, where he was shot through the elbow, has been taught stenography and trained to use the typewriter with the left hand. He is now a typist in the pay department of the Canadian army, and catalogs books at night in the law library of McGill University.

The day of my visit to the Grey Nunnery twenty-one men had written the preliminary examination for the civil service. Fifteen men had been studying history, geography, composition and arithmetic in preparation for the qualifying examination, which leads to a general clerkship starting at \$900 with a \$100 increase annually up to \$1,200. Two were writing their papers for the second class, which qualifies for \$1,600 positions.

Altogether, 347 men went through the training classes at this Gray Nunnery from September to February. Orders have been issued from Ottawa requiring every man (unless excused by the medical officer) to take a certain amount of vocational work every day in some class he elects. The vocational department, however, counts more on interest than on compulsion, and, as better equipment is introduced, the response is immediate. The simple shops at the Grey Nunnery have been succeeded this spring by the machine shops at McGill University, where chipping, filing and the general range of bench work is being taught; and by classes at the Montreal Technical School, to which the men go in squads for carpentry, motor mechanics, architectural drafting, mechanical drafting,

metal work, shoe repairing, electrical wiring, agriculture in its lighter forms and handicrafts. In February seventy-four men took the courses at the Grey Nunnery; 140, or double the number, applied for the new classes.

The Borderline Cases

OCCUPATIONAL therapy—such as has been described, and such as has brought about excellent results in progressive sanatoria for tuberculous and neurasthenic patients, and earlier in institutions for cripples and defectives—is new as a wartime medical policy. And it is still, so far as the Canadian hospitals go, conceived of chiefly as a medical policy. Its economic aspects are only now carrying conviction outside the group of vocational officers who have been its pioneers. As yet it has a great shortcoming.

When medical discharge comes the vocational work is cut short. The doctor may estimate that it will take three months for a man successfully to convalesce; the vocational work may be schemed out accordingly. The man grows well more quickly, is discharged and the vocational plan frustrated. Not only should there be provision for continuing training in such cases, but the vocational officer should be empowered to work out a complete program for each man on a vocational basis in the same way that the medical officer works out his on a medical basis. Discharged men are allowed to come back to classes after they leave the institutions, but theirs is a problem both of money and strength. A patient just discharged from a convalescent home is not likely to have the surplus physical energy to continue class work in addition to earning a living. He may have to go a long way before he is fit to carry his ordinary load.

The vocational men believe that the door of opportunity should be opened wider. It has been opened to one group of men—those so physically disabled as to be unfit for their previous occupations. These are continued on a modified scheme of government pay during a period of re-education. A year's trial has shown that this program, as far as it goes, is worth while. Secretary Scammell is ready to advocate an enlargement of its scope to take in the borderline cases—men who could return to work, but, being capable of development, would be much better off eventually if given a longer probationary period. In their testimony in March before the parliamentary committee investigating the treatment of discharged men, this recommendation was strongly made by Secretaries Kidner and Sexton.

The fear has been expressed that if the government should loosen up its regulations there would be a great deal of malingering. Unlike ordinary patients, the men are on pay. Yet it would seem no more difficult for a vocational officer to prevent malingering—less difficult, perhaps—than a doctor. The thing, obviously, to guard against is lest numbers of men feel that they have a living coming from the government and so cling to the convalescent institutions when they might be striking out for themselves. Psychologically, this is a very real problem; but not an impossible one through such a half-time arrangement for trade training, for example, as Wisconsin has worked out between the public schools and industrial establishments.

Re-Education

AT A rough guess, 2 per cent of the invalided men are candidates for re-education. This is the second main division of the vocational work, and was only entered upon last June. Senator McLennan has made it his special interest and recently brought out a report covering French, English and (a rare example of wartime broadmindedness) German experi-

ence in this field. It means a much longer process, and a much larger government investment in the individual man—from three months to two years, during which the Medical Hospitals Commission supports him and his family on standards built up from the experience of the Patriotic Fund. Here Alberta has taken the lead. The training is carried out either in hospitals or provincial institutions, or it may be intensive industrial apprenticeship in conjunction with some industrial plant.

The most obvious cases are the blind, but to date nearly all Canadian men who have been blinded—fortunately no more than twenty—have been trained in St. Dunstan's Home, Regents Park, London, under Sir Arthur Pearson. The record of some of these men has been very encouraging. Lieutenant Baker, for example, is on the staff of the Hydro-Electric Commission. Two privates are being trained in the school for the blind at Halifax, established by Sir Frederick Fraser.

Perhaps the most engaging story is that of Private Smith, an American homesteader in Alberta who enlisted in the Canadian expeditionary force. Broad-shouldered, young and vigorous, the medical examiners did not detect that he could not see out of one eye. While he was in training camp the sight of his second eye became affected. Even the doctors in the camp hospitals did not discover that his seemingly good eye was blind, for he kept his secret and clung to his hope of going to the front. He was sent to Quebec, put on a train for Montreal and found his way to the Patriotic Fund. He was suffering from detached retina and half an hour later was in a hospital under skilled medical care. There was a chance through an operation. He fought his fight in the Montreal hospital, and lost, so far as his eye went. When that eye went, the light of the world, of course, went out for him.

But Private Smith won his fight in another way. He went to the blind school in Montreal for two months. A visitor from the Patriotic Fund went to the hospital every day and read to him. If you can get a man over the spiritual darkness at the outset the fight is half won. Smith came to see that he was learning things he had never known before. Tired of the juvenile classes at the blind school, he went back to his homestead. The fund gave him a typewriter, which he had learned to use, a Braille machine, a blind man's watch and an outfit of clothing. One of the fund visitors learned Braille in order to write to him, as she does every week. He is dividing his work into three parts, and has an avocation besides. He peddles aluminum ware and books on farming; he shovels grain in harvest-time; he does the typewriting at the local hotel, and when county-fair time comes he sells soft drinks. But more than all that, he is writing letters to other blinded soldiers, encouraging letters to help them through the first difficult period of spiritual darkness. "The first thing to remember is to be cheerful," he writes. "If you don't, you are a burden to yourself and nobody else likes you."

Secretary Kidner tells of a private in the tenth battalion who lost an arm, which ended his former calling, that of a locomotive fireman. Not to scrap his knowledge of railroad he has become a station agent and trained telegrapher.

Less than a dozen men have as yet been fully re-educated in Canada. The first step is an analytical survey of physique, mentality and industrial experience. In France elaborate apparatus has been invented to test scientifically the reserves of physical and nervous power a man has to build on; but even with that, his problem of livelihood has only been broached. "You have to sit down and think hard," says Professor Sexton, "and then think hard some more, to figure out what a man who

comes back badly crippled physically and industrially can be fitted for in the scheme of things which will be Canada after the war. On what you think out may hang years of that man's fortune."

If, on investigation, the vocational officer believes a patient entitled to re-education, he brings his case before a Disabled Soldiers' Training Board, composed of the vocational officer of the district, the medical officer of the Canadian Army Medical Corps and a lay member—usually a member of a provincial committee on vocational education appointed under the Military Hospitals Commission. These last committees are composed of men in each province representing different phases of life, such as experts in general and applied science, in agricultural education, employers, labor representatives and members of the provincial soldiers' employment commissions. If a man is recommended by this board, forms giving his record and its findings are sent to Ottawa, where they come before the vocational secretary and the medical superintendent of the Military Hospitals Commission for final action.

Facing Life Again

THE vocational work proper is, of course, numerically, the more important division, and, as we saw earlier, enters into the scheme of treatment for practically every group of invalided men—and this, for social as well as medical reasons. And, veterans though they are, the process, psychologically, is often one of conquering fear. "The majority think they cannot go back to their old positions," says Professor Sexton. "They dread not being able to make good. They shrink at the thought of continuous effort eight or ten hours a day, for, while the demands of military life are often intense, they are spasmodic. They fear the daily grind necessary to make a living. It is here that the vocational training comes in. They get an opportunity to find their old power. Men go into a carpentry shop and make things they have never made before. Men go in with insomnia who hang around the door in the morning until the shop is opened. Only so can they forget what they have been through and the ghastly horrors burned into their minds. To fix their attention on the thing they want to do, the thing that grows under their own hands, is the greatest of restoratives."

For, after all, the men crippled with rheumatism who limp about the halls of the convalescent homes, or the men with poison oozing from their feet from forms of trench gangrene, the men still weak after pneumonia or panting from gas, the war consumptives who line the porches of the sanatoria, or the nervous shakers in the shock-hospitals have only reached what might be called the second line in fighting their return way to the ordinary walks of life. They are throwbacks from the ugly business of war. They are recruits for peace from the front, and all comers must be mustered in. And still ahead of them, after discharge, is the final battle-ground for the wounded men.

Something of that and of the work of the provincial employment commissions will be taken up in another instalment. This can well close with a word of recognition of Canada's good fortune that this mustering of broken soldiers—this "civilization," if you will, to use a thought-challenging phrase to set off against the out-going "militarization"—is in the hands of a civilian body. The Military Hospitals Commission has shown breadth and social insight in conceiving its work for 13,000 convalescents, invalids and insane along lines of health, schooling and vocation. It has coordinated widely scattered institutional agencies into a working scheme for readjusting men to normal life and labor.

Rebuilt Men

New Trades and Fresh Courage for French War Cripples

By Bruno Lasker

OF THE SURVEY STAFF

“WHO will make a courageous start? The Army Medical Corps would like nothing better; but the war minister has declared that he will not meddle in school matters. A commission, it seems, is going to establish these schools for war cripples. It consists of delegates from several government departments. If we have to wait until they agree! The mayor would gladly take this new institution under his wing. But some of the city councillors are afraid of the cost. They want to know what this is going to lead to. They would like to limit this new school to residents. They demand in advance quite a number of precise guarantees.” So, according to Jean Breton (*A L'Arrière*, a series of charming sketches written to tell the men in the trenches how things are getting along “behind,” published by Delagrave, Paris, 1916), the provision of proper training facilities for war cripples hangs fire indefinitely.

But matters are moving. In one place, a big manufacturer simply overrides all red tape, supplies the material means and infects others with his enthusiasm. In Lyons, Mayor Herriot (known to many Americans as the genius behind the French exhibit at the San Francisco fair and organizer of the Lyons municipal exhibition of 1914, now a senator, and minister of national subsistence and labor in the last cabinet) has taken the initiative and transformed a trade school for cripples previously in existence. Other cities have followed; and there is now in progress throughout the country the establishment of a great, new social service, the training of the war victims in industrial and commercial activities which will make them self-supporting in spite of their physical limitations.

In some cases, says Breton, involuntary idleness already had made inroads upon the spirit, health, and capacity of the crippled soldiers. Accustomed to vigorous activity, many of them were languishing, pessimistic, and gradually falling into that hopeless invalidity which is psychological rather than physical. They were even suspicious of the new trade schools when these were established. “Does the government want to deprive us of our pensions?” “Are we to work without pay?” “What is behind this effort to get us into schoolrooms and teach us new crafts?” But when it was found that the payment of pensions went on as before and that there was no pressure, other than that of well-meant advice, the number of voluntary candidates for admission to the schools quickly increased. Now the attendance is so great that the improvised premises with their imperfect equipment are very far from adequate.

Taking for his motto the old adage that “habit is second nature,” and for his program “no more invalids,” Prof. Charles Juillard, of Geneva, head of the surgical department of Red Cross Auxiliary Hospital 112 at Lyons, has published a study on Habituation to Mutilations, which won the first prize of a competition organized by the Committee on Accidents of the second International Medical Congress at Rome (library of the University of Geneva, and Felix Alcan, Paris, 1916).

This work owed its inception to the increasing need felt by administrators of workmen's compensation laws to define the

extent to which victims of labor accidents may reasonably be expected to become self-supporting. The idea that a maimed or wounded limb can still be useful, that its functions are not necessarily compromised by the organic loss, has become more and more accepted. The study of habituation to such losses was begun by Guermontprez, who drew attention in 1884 to cases of remarkable adaptations to the losses inflicted by serious accidents, and has since been advanced by a voluminous literature, chiefly by German students.

The chief factors in functional adaptation are age, nature of hurt, previous occupation, legislation to which patient is subject, his character, intelligence, and temperament, general health, social environment, sex, education, time elapsed since accident, influence of doctor and lawyer. Youth is, of course, a great advantage. But if a serious mutilation occurs before the period of growth is over, it may in certain affections of the bone arrest the natural development of what remains of the limb. No statistics are available on the effect of amputation on the length of life; and at least one big insurance company has confessed that its premia in such cases are based quite arbitrarily on the mortality expectation of invalids entirely incapable of work. The chief advantage of youth is greater ability to change occupations. But more important still is the effect of mutilation on the mental state of the patient; and here it is sometimes found that the young, seeing their professional career destroyed and believing themselves unable to marry, are more likely to fall into a state of melancholia.

The effect of legislation is seen by the difference of results obtained in Switzerland, where compensation is in lump sums, and in countries where it is in the form of a life pension. In the former, adaptation is much more rapid. “We have found a large number of maimed workers,” says the author, “who have become accustomed to their mutilation in one year, for example in the case of total loss of thumb and several fingers. They were working at a full wage after several weeks but declared they had not become really habituated to their loss in less than a year. For the same mutilations, we see in Germany delays of habituation extending sometimes over several years.”

The amount of compensation also makes a difference. The author believes that inertia can best be overcome by a periodical revision of benefits, on the basis of a new medical examination with a special view to establishing whether functional adaptation has progressed. Character, education, and other factors are too subtle to enable statistical or other definite comparisons. Experience goes to show that married workers and heads of families are more likely to adapt themselves quickly than the unmarried.

How to Accelerate Habituation

How may this functional adaptation best be accelerated? Juillard insists on the need, more especially, for early mechanotherapeutic treatment to alleviate the troublesome symptoms and to encourage new helpful muscular movements. Often it is the best thing to adapt such treatment from the beginning

Left, a turner in the Joffre trade school for wounded soldiers at Lyons; center, an Algerian, who has lost both legs, learning shoemaking at the Paris school for crippled soldiers; right, a "left-hander"

to the specific employment of the patient by placing him in an institution where the proper tools or machines of his craft are available. In some German institutions, navvies may be seen shovelling sand into barrels which empty themselves automatically within the proportionate time allowed for the operation. Other workers try to wield a hammer, a file, a saw.

Prof. Jules Amar, director of the Paris research laboratory for occupational labor, has installed in a number of training schools apparatus for physical and psychical tests (described by him in a special bulletin of the Military Hospitals Commission of Canada, April, 1916) where men's movements are analyzed by graphic registration, in relation to their regularity, direction, speed and force expended. They give a fairly reliable test of the nature of the physical incapacity, maladroitness or disability, and thus indicate the most promising method of training. The laboratory expert furnishes each man with a card of his qualifications upon the strength of which expert instructors in the workshops select the practical and theoretical training.

The mental condition of the patient is of the greatest possible importance in this connection. It will determine, says Professor Amar, "the diminution of his former personal value which is the result, often unsuspected, of the wound." A man in good health, fairly intelligent and well educated, other things being equal, is a much more promising student for a skilled trade, either his previous or a new one, than a man suffering from the nervous effect of his illness, not particularly bright and with no rudiments of trade knowledge. In the one case, it will pay to make every effort, even though prolonged and costly, to set the student up as an independent, skilled craftsman; in the other, one of the unskilled trades, and possibly relief employment at a made task, may have to be chosen.

Dr. Bourillon, director of the National Trade Institute for War Invalids at St. Maurice, believes that the re-training of

men for their former occupations may easily be carried too far. (*Revue Philanthropique*, January, 1916.) "For example, one cannot help thinking, when contemplating a carpenter who is laboriously planing with an artificial arm that it would have been wiser to have found him a profession which would profit by his intelligence and by the arms and legs remaining to him, and have made him either head of a timber yard, by developing his instruction, and giving him some notions of drawing, or a postman, a bookkeeper, a caretaker in an office, etc. One would have less occasion then to fear that, discouraged by the insufficiency of his wage, and the trouble he experiences in the exercise of his trade, he might abandon it and find himself without hope in life." Dr. Bourillon also foresees other possible problems arising from training an over-supply of workers for certain trades which would result in a lowering of wages, from competition with women workers, from greater liability to accident. To some extent, the first two can be solved by directing disabled men toward trades in which they themselves can become small employers; but a mention of these difficulties shows how complicated are the considerations which must go into the choice of trades and how many different kinds of training schools will be required.

New Types of Trade Schools

THUS, trade schools are needed for those able after re-training to follow their previous occupations, those who must be trained for new occupations, and those who can never become quite self-supporting by their work. There were, previous to the war, such institutions in Denmark, Sweden, Norway, at Altona (Prussia) and Charleroi. Here shoe making, book binding, paper box making, tailoring, basket work, harness making, and bookkeeping are taught, and a choice is provided of a number of suitable occupations. In these schools wonders have been accomplished. The case is told of a pensioner in

the institute of Charleroi who, both hands amputated, with the help of apparatus ending in a magnet at the right and a hammer at the left, was able to secure employment in the manufacture of brushes by driving nails. There is no limit to human ingenuity. "However mutilated and useless in appearance, a man can with good will succeed in taking up again an honorable place among his fellow workers."

One of the chief functions of these schools is that of giving students a taste for work, the habit of discipline and regularity, saving them from pauperism and moral deterioration. In the most modern establishments, an effort is made to bring as many of these unfortunates as possible back to their accustomed occupations. Care, of course, must be exercised not to interfere with the inflammations of neo-plastic affections which sometimes follow an accident and require either immobility or appropriate treatment. But most of the traumas which leave behind faulty circulation, nervous troubles, hyper-sensitiveness, muscular atrophy, thickening of the epidermis, etc.—that is the residue of the great majority of non-fatal labor accidents—benefit from everything that aids circulation, attenuates the impressionability of the nerve ends, makes supple the ligaments and tissues, and strengthens the muscles. No orthopædic treatment alone, in the majority of cases, is of the same value as regular work, requiring real effort.

Applied to war mutilations, this finding from the experience of industrial accidents becomes at once of vast importance. There is not, however, an absolute analogy. A greater number of the mutilations are of a serious nature, wounds more often affect important organs, and complications by suppuration are frequent which leave behind irreducible ankylosis. Yet, from the experience of industrial mutilations it is certain that the great majority of war cripples can be made industrially productive and economically independent.

Again, amputation is incomparably more frequent in war surgery than in civil surgery, because of inability to give immediate attention, infection from lodgment of projectiles or fragments of clothing in tissues, of seriousness of lesions, and repeated hemorrhage. Yet, in the schools for wounded soldiers created during the war, marvellous results have already been observed in the rapid habituation to new uses of healthy limbs and to artificial limbs.

A surgeon connected with one of the trade schools for wounded soldiers says: "We thought in installing our pupils in their trades that time and experience would throw light on the respective usefulness of different makes of artificial limbs and would show desirable modifications. . . . But in practice, the pupils have so quickly learned to overcome difficulties by natural means—substituting for movements that hurt others, developing an ingenuity of touch in the stump of a forearm or arm—that it has proved difficult to make them accept the aid of any apparatus. At first when I paid an unexpected visit to the workshop of the brushmakers or of the paper box makers, I got red angry to observe that they had carefully laid aside on the table their artificial arms and were at work with the greatest zeal, using the invalid limb, the stump, the elbow. Now I have come to the point where I no longer insist on the use of these aids except in certain particular cases."

The experience of these schools already has shown that the amputation of a limb is not incompatible with the exercise of the trade of a machinist, a bookbinder, a toymaker or a designer. Loss of a leg does not prevent a tailor or shoemaker—in short, any member of one of the so-called shop

MUTILATED SOLDIERS LEARNING BOOKBINDING

crafts—from following his trade. Gardeners with a wooden leg will soon be common.

Here is a case where habituation after an amputation has taken place with remarkable celerity: An Alpine chasseur, thirty years old, was wounded in August, 1914, and made a prisoner. He had his left leg amputated by the Germans, was operated on again later to regulate his stump, and finally was repatriated to France in March, 1915, with a convoy of "seriously incapacitated." He received his wooden leg in May. Eight days later, he was dismissed as "mended" and went home. He immediately turned to work on the land and, a month later, was able to mow the mountain meadows of his farm and to employ himself in all the chores of field and stable, even climbing trees to gather fruit, mounting on horseback without assistance, and riding equally well at a trot and gallop.

Another hopeful discovery is that projectiles of every caliber and of every kind, balls, howitzer splinters, shrapnels, can remain in the organism without occasioning trouble. In the long run, the wounded gets accustomed to them, and no bad effects remain behind. Sometimes there is a reopening of the infection which may bring about suppuration and elimination; but in far more cases than is usually thought a complete tolerance of the foreign object results.

Rapid mobilization of wounded limbs, in nearly every case where reinfection is no longer to be feared, has been found the most important factor in rapid functional adaptation.

POILUS INITIATED INTO THE MYSTERIOUS FORMALITIES OF FRENCH BUSINESS CORRESPONDENCE

Even when the unhealthy region must be kept immobile, the neighboring functions can be exercised. There is now a general feeling that bandages should not be worn longer than absolutely necessary, that crutches should be taken away as soon as it is possible for the patient to walk with an effort, even though still in pain. "The apparatus of immobilization and of aid, is valuable while the wound is healing; it is a certain enemy when functional adaptation to a new state has already commenced."

There is not as yet much experience to show how different kinds of cases will adapt themselves to different occupations and trades. Among the mutilated some try to make the best of their old careers which their infirmity permits; while others prefer to embrace a new one for which they are more fitted.

Professor Amar is of opinion that the fitness of war cripples for any particular trade can be accurately proven by the experiments already mentioned. On the strength of much experience he is convinced that 80 per cent of the maimed are capable of vocational re-education. "They may be divided as follows: 45 per cent totally, that is to say that they may succeed in earning normal salaries, on condition that 10 per cent among them, or thereabouts, specialize. The direction in which they specialize should always be within the limits of their former trade. Twenty per cent may not arrive at a full working capacity, as their re-education is partial, but still it gives an appreciable output. . . . Fifteen per cent will have to work in small shops (*petits metiers*), in which production is limited, their re-education being entirely fragment-

ary; they must work in workshops organized for this purpose, where in any case they can earn a bare livelihood. The majority of the 20 per cent not capable of being re-educated are dependent upon relief institutions for work; nevertheless, a very small minority attain sufficient productivity to be useful in the workshops."

The immediate establishment of suitable training schools, thus, is the matter of utmost importance if the great majority of war-cripples is to be permanently self-supporting. Such training schools multiply throughout France. They teach a great variety of manual trades, also bookkeeping, stenography, typewriting, even industrial drawing and music. All are full.

As we have seen, the treatment of this problem of the war-cripple, at least in France where seemingly it is most advanced, has benefited enormously from the experience gained with industrial accident surgery and in training institutions for disabled workmen. In its turn, there is now no doubt it will contribute materially to the practical knowledge of one of the most important biological phenomena—that of organic habituation to mutilations. On the other hand, it is not yet clear whether in the system of pensions for invalided soldiers adopted by France—the existing method cannot be regarded as final—a similar departure will be made from antiquated traditions. There is no agreement, it would seem, among the authorities concerning the form which war pensions to these men should take, except that they should be so devised as to encourage the greatest degree of self-help and to relate in some way both to effort and to family needs.

Lock and Key

By Elizabeth Robbins Hooker

DR. RICHARD C. CABOT once showed in a lecture how urgent is the need of a sanatorium for nervous invalids that are neither very rich nor very poor. As we all know, many wage-earners and professional men and women break down early in life through causes for which they are little if at all to blame. Some have been square pegs in round holes; some, under pressure of family crisis or other stern compulsion, have received upon their shoulders burdens too heavy for them to carry; some are paying dear for their portion of experience. This class of invalids includes men and women of fine quality—broadly sensitive, conscientious, easily touched by noble impulses. Perhaps, after long preparation, they had made a start in which by working long hours and straining every nerve, they had won some measure of experience and reputation. Then has come the break; and, weak and suffering, misunderstood by friends and especially by relatives, they sit in the house, dreading the coal bill, despairing of ever again being of use in the world, and schooling themselves, perhaps, to accept bravely the fate of the unfit, over whose fallen bodies the strong must pass to the conquest of the heights.

Shall we accept this waste of that most precious form of human wealth—well endowed and highly trained workers? To lift themselves out of despondency is for all such patients slow and difficult, and for many impossible. But with the help of right conditions, nerve specialists believe, in the words of one of them, that "much salvage is possible."

What are these conditions? We are taking into account, be it understood, only those disciplined workers who are broken down but not utterly prostrated. In the first place, they need a complete change, which shall remove them from relatives and from everything that might remind them of work, worries and responsibilities. They need a healthful regimen, subjecting them to the healing influences of nature: air, sunshine, food, sleep and contact with the earth. They need carefully graduated exercise, especially of the larger muscles. They need an engrossing interest, which may keep them from brooding over their own troubles. And, finally, they need a sense of present and growing usefulness.

Most of these conditions the sanatoria for nervous invalids, with much science, ingenuity and outlay, attempt to provide. But the invalids with whom we are concerned are unable to pay the rates which the sanatoria, with their large staff and expensive equipment, are obliged to charge. Some of the sanatoria take privileged invalids at reduced rates or even free; but such opportunities do not cover even a small part of the cases, and our wage-earning invalids gain slowly under the irksome sense of being objects of charity. It is true that in some cases of serious breakdown, the patient needs constant oversight from experts, and a highly specialized course of treatment, often with apparatus and attendants. For such, a stay in a sanatorium is almost indispensable. In the cases of which we are speaking, however, the conditions of recovery are attainable on much more reasonable terms. Pleas-

ant and graduated work out of doors, producing something really needed by man, would form an ideal course of treatment, provided the environment could be healthful and happy.

A nervous invalid could rarely find these conditions by taking a place, say, upon a farm. Even where favorable living arrangements are attainable, the work is too hard and the hours too long. A great defect of our present industrial order, in farming as elsewhere, is the lack of half jobs. Tom must keep up the pace of Dick and Harry, or be trodden down in the lockstep industrial march. Our fettered invalids not only cannot fill their own former places; they cannot do any kind of full day's work. Yet they could do something. Pent up within them is vitality fretting at inaction, humiliation at their dragging ineffectiveness, craving for self-support and service. Streamlets that set free and collected might turn some idle mill wheel, thus dammed up, are creating a stagnant marsh. Can we not find that idle mill? To do so we must originate a new industry, in which the nature and hours of the work may be adjusted to the small but increasing powers of the workers. Here is a key, now idle and rusting with disuse; can we find a lock which it is fitted to turn?

I once went to visit a patient in a large hospital for the insane, carrying a bunch of garden flowers open in my hand. I was led through corridors lined with bare little cells, and through broader, shiny halls, almost unfurnished except for a bench or two and a few chairs. As I passed, a woman rocking monotonously with folded arms roused to ask for a flower. Another, who had paced up and down making strange noises, came toward me with outstretched hands. More women appeared from I knew not where, crowding around me, and demanding "just one flower." To hold my bouquet high and make myself deaf and blind to the entreaties of those prisoners of little hope, for the sake of the one to whom the flowers had been sent, seemed a cruel thing to do.

Again, a friend of mine used sometimes to pass along certain poor streets of Boston, with a basket of fruit on one arm, and a basket of flowers on the other. When the children gathered about her, she would offer each one his choice between a flower and a red apple or juicy pear. They invariably chose the flower.

Far more pathetic instances of the longing for flowers come under the daily observation of many a social worker in the cities. References to such cases may be found in any issue of the *National Plant, Flower and Fruit Guild Magazine*. Recent numbers have told of the mission of flowers to a woman just past the crisis of a long and serious attack of typhoid fever, and to a poor, hard-working mother, bending over a tiny coffin. What flowers must mean to some of our immigrants was vividly suggested at the beginning of the present European war, when French soldiers marched out of Paris for the battlefield, each decorated with a flower, while the sidewalks were crowded by women carrying more, lest any soldier should have been overlooked.

The Love of Flowers Deep Rooted

THE desire to satisfy this craving is not mere sentimental soft-heartedness. The need of flowers is rooted deep in universal human nature. Witness the sunflowers beside the poorest cottage, and the sickly geranium in the dark tenement-house kitchen. For many people, flowers are the only accessible form of beauty. What comes to the more favored through music, the drama, painting, landscape, poetry—all the softening and

ennobling work of beauty upon man—must reach the slums, if at all, through the bright, familiar faces of the flowers. The ministries of flowers also sweeten and strengthen the bonds between one human being and another; and in many a hard lot a flower is the most persuasive evidence that there is goodness at the heart of the world.

These flower-hungry people cannot afford the prices of the florist. But suppose that we could raise blossoms without a hothouse, and distribute them without either market or store. If the enterprise could be run on a scale sufficiently large so that nickels and dimes might balance running expenses, would the poor, after all, care enough for the flowers to pay for them? I believe they would, especially in sections inhabited by immigrants. Settlement workers have in some degree tested the question; so has at least one five- and ten-cent store.

The labor of raising these flowers for the poor could be done largely, in short periods, by those nervous invalids needing and craving such useful outdoor activity. Raising flowers would take the invalids into a new world. They would see and help forward the magical processes of growth, and have a proud share in the production of beautiful things. Since the product of their labor would be marketable, they could be paid a small wage, which would make vivid their sense of usefulness and strengthen their self-confidence.

On the other hand, without the appropriation of some such unclaimed labor, the poor could not have their cheap flowers. Moreover, cultivated men and women, instead of confining themselves to the conventional favorites of the florists would draw widely on the wealth of the flower kingdom; and they would arrange the flowers with taste, and would distribute them with intelligence and sympathy.

The bare essentials of such an industry for invalids would include a home for the workers, where their peculiar needs—change, nutritious food, outdoor rest, and good cheer—could be economically met. There must be fields, hotbeds, tools and workrooms. The more beauty, the more interest, the more wise and great-hearted guardians, the better; but the beginnings might be very simple, for the chief recuperative agencies of the institution would lie in the work itself, and in the contact it would ensure with nature and with human need.

The distribution of the flowers could be accomplished partly through existing institutions, such as missions, settlements and salesrooms for the work of convalescents. Outdoor flower markets like those abroad would form another possible outlet; especially in the foreign quarters of cities. There might be also a mail-order department. Hampers for hospitals and homes might be financed by benevolent persons. With clever advertising, regularity and persistence, the enterprise ought to succeed. General support would rally to a novel enterprise doubly philanthropic without being a charity in either of its aspects. The plant, of course, would have to be contributed, together with working capital for a few years; but though an endowment would be desirable, the necessary running expenses should soon be covered by the board paid, plus the money received from flowers.

This dream, with its promise of spreading hope and health and joy, is so alluring that it must surely some day come true. Perhaps a warm-hearted and childless farmer will bequeath his house and his fields for such an enterprise. Perhaps a life-long invalid will collect subscriptions, in order to save others from a similar fate. Perhaps a lonely millionaire will establish such a memorial to a frail lover of flowers who is gone. Some day the dream will be realized.

GENTLEMEN OF THE CONGRESS: I have called the Congress into extraordinary session because there are serious, very serious, choices of policy to be made, and made immediately, which it was neither right nor constitutionally permissible that I should assume the responsibility of making.

On the third of February last I officially laid before you the extraordinary announcement of the imperial German government that on and after the first day of February it was its purpose to put aside all restraints of law or of humanity and use its submarines to sink every vessel that sought to approach either the ports of Great Britain and Ireland or the western coasts of Europe or any of the ports controlled by the enemies of Germany within the Mediterranean. That had seemed to be the object of the German submarine warfare earlier in the war, but since April of last year the imperial government had somewhat restrained the commanders of its undersea craft, in conformity with its promise, then given to us, that passenger boats should not be sunk and that due warning would be given to all other vessels which its submarines might seek to destroy, when no resistance was offered or escape attempted, and care taken that their crews were given at least a fair chance to save their lives in their open boats. The precautions taken were meagre and haphazard enough, as was proved in distressing instance after instance in the progress of the cruel and unmanly business, but a certain degree of restraint was observed.

The new policy has swept every restriction aside. Vessels of every kind, whatever their flag, their character, their cargo, their destination, their errand, have been ruthlessly sent to the bottom without warning and without thought of help or mercy for those on board, the vessels of friendly neutrals along with those of belligerents. Even hospital ships and ships carrying relief to the sorely bereaved and stricken people of Belgium, though the latter were provided with safe conduct through the proscribed areas by the German government itself and were distinguished by unmistakable marks of identity, have been sunk with the same reckless lack of compassion or of principle.

I was for a little while unable to believe that such things would in fact be done by any government that had hitherto subscribed to humane practices of civilized nations. International law had its origin in the attempt to set up some law which would be respected and observed upon the seas, where no nation has right of dominion and where lay the free highways of the world. By painful stage after stage has that law been built up, with meagre enough results, indeed, after all was accomplished that could be accomplished, but always with a clear view, at least, of what the heart and conscience of mankind demanded.

This minimum of right the German government has swept aside, under the plea of retaliation and necessity and because it had no weapons which it could use at sea except these, which it is impossible to employ, as it is employing them, without throwing to the wind all scruples of humanity or of respect for the understandings that were supposed to underlie the intercourse of the world.

I am not now thinking of the loss of property involved, immense and serious as that is, but only of the wanton and wholesale destruction of the lives of noncombatants, men, women, and children, engaged in pursuits which have always, even in the darkest periods of modern history, been deemed innocent and legitimate. Property can be paid for; the lives of peaceful and innocent people cannot be. The present German submarine warfare against

commerce is a warfare against mankind.

It is a war against all nations. American ships have been sunk, American lives taken, in ways which it has stirred us very deeply to learn of, but the ships and people of other neutral and friendly nations have been sunk and overwhelmed in the waters in the same way. There has been no discrimination.

The challenge is to all mankind. Each nation must decide for itself how it will meet it. The choice we make for ourselves must be made with a moderation of counsel and a temperateness of judgment befitting our character and our motives as a nation. We must put excited feeling away. Our motive will not be revenge or the victorious assertion of the physical might of the nation, but only the vindication of right, of human right, of which we are only a single champion.

When I addressed the Congress on the twenty-sixth of February last I thought that it would suffice to assert our neutral rights with arms, our right to use the seas against unlawful interference, our right to keep our people safe against unlawful violence. But armed neutrality, it now appears, is impracticable. Because submarines are in effect outlaws, when used as the German submarines have been used against merchant shipping, it is impossible to defend ships against their attacks as the law of nations has assumed that merchantment would defend themselves against privateers or cruisers, visible craft giving chase upon the open sea. It is common prudence in such circumstances, grim necessity indeed, to endeavor to destroy them before they have shown their own intention. They must be dealt with upon sight, if dealt with at all.

The German government denies the right of neutrals to use arms at all within the areas of the sea which it has proscribed, even in the defense of rights which no modern publicist has ever before questioned their right to defend. The intimation is conveyed that the armed guards which we have placed on our merchant ships will be treated as beyond the pale of law and subject to be dealt with as pirates would be. Armed neutrality is ineffectual enough at best; in such circumstances and in the face of such pretensions it is worse than ineffectual; it is likely only to produce what it was meant to prevent; it is practically certain to draw us into the war without either the rights or the effectiveness of belligerents. There is one choice we cannot make, we are incapable of making; we will not choose the path of submission and suffer the most sacred rights of our nation and our people to be ignored or violated. The wrongs against which we now array ourselves are no common wrongs; they cut to the very roots of human life.

With a profound sense of the solemn and even tragical character of the step I am taking and of the grave responsibilities which it involves, but in unhesitating obedience to what I deem my constitutional duty, I advise that the Congress declare the recent course of the imperial German government to be in fact nothing less than war against the government and people of the United States; that it formally accept the status of belligerent which has thus been thrust upon it; and that it take immediate steps not only to put the country in a more thorough state of defense, but also to exert all its power and employ all its resources to bring the government of the German empire to terms and end the war.

What this will involve is clear. It will involve the utmost practicable cooperation in counsel and action with the governments now at war with Germany, and, as incident to that, the extension to those governments of the most liberal financial credits, in order

“Safe For The President’s Add

that our resources may so far as possible be added to theirs.

It will involve the organization and mobilization of all the material resources of the country to supply the materials of war and serve the incidental needs of the nation in the most abundant and yet the most economical and efficient way possible.

It will involve the immediate full equipment of the navy in all respects, but particularly in supplying it with the best means of dealing with the enemy’s submarines.

It will involve the immediate addition to the armed forces of the United States, already provided for by law in case of war, of at least 500,000 men, who should, in my opinion, be chosen upon the principle of universal liability to service, and also the authorization of subsequent additional increments of equal force so soon as they may be needed and can be handled in training.

It will involve also, of course, the granting of adequate credits to the government, sustained, I hope, so far as they can equitably be sustained by the present generation, by well-conceived taxation.

I say sustained so far as may be equitable by taxation, because it seems to me that it would be most unwise to base the credits, which will now be necessary, entirely on money borrowed. It is our duty, I most respectfully urge, to protect our people, so far as we may, against the very serious hardships and evils which would be likely to arise out of the inflation which would be produced by vast loans.

In carrying out the measures by which these things are to be accomplished we should keep constantly in mind the wisdom of interfering as little as possible in our own preparation and in the equipment of our own military forces with the duty—for it will be a very practical duty—of supplying the nations already at war with Germany with the materials which they can obtain only from us or by our assistance. They are in the field and we should help them in every way to be effective there.

I shall take the liberty of suggesting, through the several executive departments of the government, for the consideration of your committees, measures for the accomplishment of the several objects I have mentioned. I hope that it will be your pleasure to deal with them as having been framed after very careful thought by the branch of the government upon whom the responsibility of conducting the war and safeguarding the nation will most directly fall.

While we do these things, these deeply momentous things, let us be very clear, and make very clear to all the world, what our motives and our objects are. My own thought has not been driven from its habitual and normal course by the unhappy events of the last two months, and I do not believe that the thought of the nation had been altered or clouded by them. I have exactly the same things in mind now that I had in mind when I addressed the Senate on the twenty-second of January last; the same that I had in mind when I addressed the Congress on the third of February and on the twenty-sixth of February. Our object now, as then, is to vindicate the principles of peace and justice in the life of the world as against selfish and autocratic power, and to set up among the really free and self-governed peoples of the world such a

Democracy" Congress on April 2

concert of purpose and of action as will henceforth insure the observance of those principles.

Neutrality is no longer feasible or desirable where the peace of the world is involved and the freedom of its peoples, and the menace to that peace and freedom lies in the existence of autocratic governments, backed by organized force which is controlled wholly by their will, not by the will of their people. We have seen the last of neutrality in such circumstances. We are at the beginning of an age in which it will be insisted that the same standards of conduct and of responsibility for wrong done shall be observed among nations and their governments that are observed among the individual citizens of civilized states.

We have no quarrel with the German people. We have no feeling toward them but one of sympathy and friendship. It was not upon their impulse that their government acted in entering this war. It was not with their previous knowledge or approval. It was a war determined upon as wars used to be determined upon in the old, unhappy days, when peoples were nowhere consulted by their rulers and wars were provoked and waged in the interest of dynasties or of little groups of ambitious men who were accustomed to use their fellowmen as pawns and tools.

Self-governed nations do not fill their neighbor states with spies or set the course of intrigue to bring about some critical posture of affairs which will give them an opportunity to strike and make conquest. Such designs can be successfully worked out only under cover and where no one has the right to ask questions. Cunningly contrived plans of deception or aggression, carried, it may be, from generation to generation, can be worked out and kept from the light only within the privacy of courts or behind the carefully guarded confidences of a narrow and privileged class. They are happily impossible where public opinion commands and insists upon full information concerning all the nation's affairs.

A steadfast concert for peace can never be maintained except by a partnership of democratic nations. No autocratic government could be trusted to keep faith within it or observe its covenants. It must be a league of honor, a partnership of opinion. Intrigue would eat its vitals away; the plottings of inner circles who could plan what they would and render account to no one would be a corruption seated at its very heart. Only free peoples can hold their purpose and their honor steady to a common end and prefer the interests of mankind to any narrow interest of their own.

Does not every American feel that assurance has been added to our hope for the future peace of the world by the wonderful and heartening things that have been happening within the last few weeks in Russia? Russia was known by those who knew her best to have been always in fact democratic at heart in all the vital habits of her thought, in all the intimate relationships of her people that spoke their natural instinct, their habitual attitude toward life. The autocracy that crowned the summit of her political structure, long as it had stood and terrible as was the reality of its power, was not in fact Russian in origin, character, or purpose; and now it has been shaken off

and the great, generous Russian people have been added, in all their naïve majesty and might, to the forces that are fighting for freedom in the world, for justice and for peace. Here is a fit partner for a league of honor.

One of the things that has served to convince us that the Prussian autocracy was not and could never be our friend is that from the very outset of the present war it has filled our unsuspecting communities, and even our offices of government, with spies and set criminal intrigues everywhere afoot against our national unity of counsel, our peace within and without, our industries and our commerce. Indeed, it is now evident that its spies were here even before the war began; and it is unhappily not a matter of conjecture, but a fact proved in our courts of justice, that the intrigues which have more than once come perilously near to disturbing the peace and dislocating the industries of the country, have been carried on at the instigation, with the support, and even under the personal direction of official agents of the imperial government, accredited to the government of the United States.

Even in checking these things and trying to extirpate them we have sought to put the most generous interpretation possible upon them because we knew that their source lay, not in any hostile feeling or purpose of the German people toward us (who were, no doubt, as ignorant of them as we ourselves were), but only in the selfish designs of a government that did what it pleased and told its people nothing. But they have played their part in serving to convince us at last that that government entertains no real friendship for us, and means to act against our peace and security at its convenience. That it means to stir up enemies against us at our very doors the intercepted note to the German minister at Mexico City is eloquent evidence.

We are accepting this challenge of hostile purpose because we know that in such a government, following such methods, we can never have a friend; and that in the presence of its organized power, always lying in wait to accomplish we know not what purpose, can be no assured security for the democratic governments of the world. We are now about to accept the gauge of battle with this natural foe to liberty and shall, if necessary, spend the whole force of the nation to check and nullify its pretensions and its power. We are glad, now that we see the facts with no veil of false pretense about them, to fight thus for the ultimate peace of the world and for the liberation of its peoples, the German peoples included; for the rights of nations, great and small, and the privilege of men everywhere to choose their way of life and of obedience.

The world must be made safe for democracy. Its peace must be planted upon the tested foundations of political liberty. We have no selfish ends to serve. We desire no conquest, no dominion. We seek no indemnities for ourselves, no material compensation for the sacrifices we shall freely make. We are but one of the champions of the rights of mankind. We shall be satisfied when those rights have been made as secure as the faith and the freedom of nations can make them.

Just because we fight without rancor and without selfish object, seeking nothing for ourselves but what we shall wish to share with all free peoples, we shall, I feel confident, conduct our operations as belligerents without passion and ourselves observe with proud punctilio the principles of right and of fair play we profess to be fighting for.

I have said nothing of the governments allied with the imperial government of Germany because they have not made war upon

us or challenged us to defend our right and our honor. The Austro-Hungarian government has, indeed, avowed its unqualified indorsement and acceptance of the reckless and lawless submarine warfare, adopted now without disguise by the imperial German government, and it has therefore not been possible for this government to receive Count Tarnowski, the ambassador recently accredited to this government by the imperial and royal government of Austria-Hungary; but that government has not actually engaged in warfare against citizens of the United States on the seas, and I take the liberty, for the present at least, of postponing a discussion of our relations with the authorities at Vienna. We enter this war only where we are clearly forced into it because there are no other means of defending our right.

It will be all the easier for us to conduct ourselves as belligerents in a high spirit of right and fairness because we act without animus, not with enmity toward a people or with the desire to bring any injury or disadvantage upon them, but only in armed opposition to an irresponsible government which has thrown aside all considerations of humanity and of right and is running amuck.

We are, let me say again, the sincere friends of the German people, and shall desire nothing so much as the early re-establishment of intimate relations of mutual advantage between us, however hard it may be for them for the time being to believe that this is spoken from our hearts. We have borne with their present government through all these bitter months because of that friendship, exercising a patience and forbearance which would otherwise have been impossible.

We shall happily still have an opportunity to prove that friendship in our daily attitude and actions toward the millions of men and women of German birth and native sympathy who live among us and share our life, and we shall be proud to prove it toward all who are in fact loyal to their neighbors and to the government in the hour of test. They are most of them as true and loyal Americans as if they had never known any other fealty or allegiance. They will be prompt to stand with us in rebuking and restraining the few who may be of a different mind and purpose. If there should be disloyalty, it will be dealt with with a firm hand of stern repression; but, if it lifts its head at all, it will lift it only here and there and without countenance except from a lawless and malignant few.

It is a distressing and oppressive duty, gentlemen of the Congress, which I have performed in thus addressing you. There are, it may be, many months of fiery trial and sacrifice ahead of us. It is a fearful thing to lead this great, peaceful people into war, into the most terrible and disastrous of all wars, civilization itself seeming to be in the balance.

But the right is more precious than peace, and we shall fight for the things which we have always carried nearest our hearts—for democracy, for the rights of those who submit to authority to have a voice in their own governments, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free.

To such a task we can dedicate our lives and our fortunes, everything that we are and everything that we have, with the pride of those who know that the day has come when America is privileged to spend her blood and her might for the principles that gave her birth and happiness and the peace which she has treasured.

God helping her, she can do no other.

Learning for Earning or for Life?

By Winthrop D. Lane

OF THE SURVEY STAFF

INDIANA, the state in which James Whitcomb Riley ran away from home to take up with a travelling painter and to learn the painter's trade, has been having a vocational survey. Both shop and school have been studied, and an effort made to analyze opportunities for employment open to young people today, and the training those young people get, or can get, for their later work in life.

Three communities came under the microscope. One of these, Indianapolis, with a population of over 250,000, was chosen as a type of "the large industrial center"; another, Evansville, with 80,000, as a type of "the small industrial center," and the third, Jefferson county, with no town over 8,000, typifies the rural and farming area of the state.

The survey is now over. Its findings fill several volumes, more than a thousand pages. The National Society for the Promotion of Industrial Education, which was the genius back of the inquiry, intended to make the results the chief matter of discussion at its annual meeting in Indianapolis a few weeks ago, and would have done so if the Smith-Hughes bill, appropriating federal money for vocational education in the states, signed while the convention was in session, had not captured attention.

The Indiana survey represents a type of educational philosophy and research that is fast gaining ground in this country and that is the cause of intense disagreement among educators wherever it goes. The committee that made the present study included many prominent Indiana educators. It had the hearty support of the state department of education. Most of its members, however, were men and women directly connected with the administering of vocational training. Three were representatives of the national society already mentioned, and one of these, Charles A. Prosser, was its chairman.

The study was much more than a survey. It included a program and a course of action. It had no difficulty in proving the need for some kind of vocational training. To do this, it had only to recite facts that have already sunk deep into American consciousness. It had only to recall that an army of young children leave school every year at the sixth and seventh grades to enter employments for which they have no training. It had only to suggest that our public schools, in so far as their instruction is vocational at all, prepare for a limited kind of employment, chiefly a clerical and office employment, and one that is far less prevalent today than when the present courses of study were devised. Finally, the survey had only to discover that in Indianapolis alone there are more than 20,000 young people between the ages of fourteen and twenty-one who are entirely without instruction, either in the public schools or in industry.

But the survey went much farther than this. It defined concretely the vocational character of Indianapolis and Evansville industries. It made "occupational analyses" of the various trades, and analyzed each trade and subdivision of a trade into the operations involved, the tools used, the materials employed, and the general and special knowledge required of the worker. Those who made the survey believe that these anal-

yses "present the problem of vocational education, so far as that problem is involved in occupational efficiency."

The inquiry went even farther. It concluded trade agreements between the schools and employers for all-day, part-time and evening vocational instruction. This instruction is intended to benefit both those who are already in employment and those who are still in the public schools and intend to enter specific lines of work. For example, one agreement stipulates that Indianapolis shall establish a two-year course in wood-working and that the shops signing the agreement, which number sixteen, shall use the pupils coming out of this course as their source of supply for new workers. Under another agreement, free evening classes for apprentices in plumbing have been established and sixty employers have agreed to place all apprentices at the disposal of the school for instruction in the theory and practice of plumbing, guaranteeing at the same time steady employment at specified wages. Other agreements of the same general nature have been entered upon in both Indianapolis and Evansville.

It is the conception underlying all this work that is perhaps most interesting. This is stated repeatedly in substantially this wording: "Vocational education means just what the term implies, an education or training which aims to fit an individual or group of individuals for a particular occupation or trade. . . . All work and all subjects—technical, scientific and academic—which contribute to this purpose are selected; all subjects which do not contribute to this purpose are excluded from the course. In a vocational school or course in printing, for example, . . . all instruction and all practice must prepare *directly for work in a commercial print shop.*" (Italics mine.)

The course in English, for example, would include spelling, punctuation, composition and proofreading, while courses in printing, art and mathematics would cover training in type harmony, design and color harmony, and stock cutting and cost estimating. Industrial history and geography would be taught "to give the boys a broader view of life and industrial possibilities." Instruction in personal and shop hygiene and in practical citizenship would be included "because the purpose of every vocational school is not merely to make more intelligent, capable and ambitious workers, but happier and more useful citizens."

The survey was based upon the belief that vocational education, to be effective, "must be adapted to the communities where the workers are to live." "The same vocational courses," says Alvin E. Dodd, secretary of the national society and one of its three representatives in the survey, "will not serve in a furniture manufacturing city like Grand Rapids and a textile city like Fall River."

Pushed to its conclusion, this doctrine apparently means that each city and town in the United States is to train the children who happen to be born in it for the particular industries there carried on. Evansville and Indianapolis are to train their children for the work that Evansville and Indianapolis do. If there are flour mills there, children are to be trained to work efficiently in flour mills. If no shoe factories exist,

children there are not to be trained to work in shoe factories.

Not all of the reasons given by the committee for its belief in some sort of vocational education have yet been indicated. Such education is needed, it declares, to conserve and to develop the natural resources of the country, and to prevent for industry the great waste of human labor. Indianapolis needs such education because in it lies the "promise of an adequate supply of skilled workers for industrial processes." For every permanent position in the industries of the city, says the committee, at least four persons have served temporarily and have given way to others.

Again, the prosperity of both Indianapolis and Evansville demands that they should provide this training. Both cities need it if they are to keep up their present pace in occupying "larger and more attractive markets." Both need it if they are to add, as they ought, to the value of raw materials used in their manufactories. Both need it because the price they are now paying for inefficiency is greater than the price that such training will cost them. Indianapolis needs it because she is the center of the economic life of the state and other communities depend upon her to a large extent for workers. Evansville needs it because through the Ohio river, the Gulf of Mexico and the Panama canal she is bound to meet the competition of Germany in her search for South American markets, and she must have more highly skilled workmen if she is to win out. Both need it because without it industry cannot succeed, and industry itself cannot supply it.

The committee's plea for vocational education throughout the reports of this survey is made chiefly from the standpoint of industry and the manufacturer. Its summary of "the case for Indianapolis" presents twenty-three separate reasons for vocational education; sixteen of these deal with industrial and economic gains, seven may by a generous interpretation be said to deal with gains to the individual and the community. Only four are in any sense arguments for a completer education for the child. A quite similar emphasis appears in the Evansville report.

All of this has a direct bearing on the two great approaches that are being made at the present time to the matter of vocational education for young people. Unless these thousand pages lie, they reveal strikingly which of these approaches is embraced by the dominant educational group in Indiana today, and by the National Society for the Promotion of Industrial Education.

These approaches have to do with the question: Whose interests are to be primarily considered in the development of industrial education? John Dewey recently gave so clear an analysis of both philosophies that he might almost have been talking about the Indiana surveys. He did not even mention them, nor the national society, but his remarks are so appropriate that I quote in part:

"To understand the educational issue [in industrial education] is to see what difference is made in the schools themselves, whether we take the improving of economic conditions to be the purpose of vocational training, or take its purpose to be supplying a better grade of labor for the present scheme, or helping on the United States in a competitive struggle for world commerce. I know that those who have the latter end chiefly in view always make much of the increased happiness of the industrial worker himself as a product to result from better industrial education. But after all, there is a great difference between the happiness which means merely contentment with a station and the happiness which comes from the struggle of a well-equipped person to better his station. Which sort of happiness is to be our aim? I know, also, that stress

is laid upon the ability which is to proceed from a better industrial education for the laborer to increase his earnings. Well and good. But, does this mean simply that laborers are to have their skill to add to the profits of employers increased, by avoiding waste, getting more out of their machines and materials, so that they will have some share in it as an incidental by-product, or does it mean that increase in the industrial intelligence and power of the worker for his own personal advancement is to be the main factor?"¹

Professor Dewey went on to point out that those who conceive the main purpose of vocational training to be to supply a better grade of labor for industries will endeavor to narrow this training down to "those forms of industrial skill which will enable the future workers to fall docilely into the subordinated ranks of the industrial army." On this "narrow trade plan," he said,

"the curriculum will neglect as useless for its ends the topics in history and civics which make future workers aware of their rightful claims as citizens in a democracy, alert to the fact that the present economic struggle is but the present-day phase taken by the age-long battle for human liberties. So far as it takes in civic and social studies at all, it will emphasize those things which emphasize duties to the established order and a blind patriotism which accounts it a great privilege to defend the things in which the workers themselves have little or no share."

Professor Dewey is, of course, one of the severest critics of our present public schools of the traditional type. Continuing, he said that the other idea of industrial education will proceed in an opposite way:

"Instead of trying to split schools into two kinds, one of a trade type for children whom it is assumed are to be employes and one of a liberal type for the children of the well-to-do, it will aim at such a reorganization of existing schools as will give all pupils a genuine respect for useful work, an ability to render service, and a contempt for social parasites, whether they are called tramps or leaders of 'society.' . . . It will indeed make much of developing motor and manual skill, but not of a routine or automatic type. It will rather utilize active and manual pursuits as the means of developing constructive, inventive and creative power of mind. It will select the materials and the technique of the trades not for the sake of producing skilled workers for hire in definite trades, but for the sake of securing industrial intelligence—a knowledge of the conditions and processes of present manufacturing, transportation and commerce so that the individual may be able to make his own choices and his own adjustments, and be master, so far as in him lies, of his own economic fate. . . . It will remember that the future employe is a consumer as well as a producer, that the whole tendency of society, so far as it is intelligent and wholesome, is to an increase of the hours of leisure, and that an education which does nothing to enable individuals to consume wisely and to utilize leisure wisely is a fraud on democracy. So far as method is concerned, such a conception of industrial education will prize freedom more than docility, initiative more than automatic skill, insight and understanding more than capacity to recite lessons or to execute tasks under the direction of others."

Indiana has at least rendered a service in making sharp the division between these two methods of approach. We may now watch to see what other states will lend themselves to the doctrines and purposes that have been made so plain in these surveys.

¹ This and the following quotations from Professor Dewey are taken from his address at the annual meeting of the Public Education Association of New York city, February 20.

COMMON WELFARE

PLANS FOR THE CARE OF SOLDIERS' FAMILIES

THE American Red Cross issued instructions last week to its 370 chapters telling them to announce their intention of meeting the needs of families of soldiers and sailors as long as may be necessary, or at least until provision is made by the government for a separation allowance. Last summer, it was pointed out, when troops went to the Mexican border, provision by the government did not become operative for three months after the men had left their homes. During this period many different organizations helped to meet the need. If any of these organizations, or new ones, wish now to help, local Red Cross chapters are advised to encourage and cooperate with them and not to start competitive plans.

Concerning the future method of meeting this huge relief need, the instructions say: "To have this work done under the Red Cross flag and as part of a national organization will prove advantageous should the problem become a large one and have to be taken up on a national basis."

With the sanction of the Red Cross, the New York School of Philanthropy has undertaken to train volunteer workers for civilian relief similar to the volunteer agents of the Canadian Patriotic Fund. Starting April 11, the course will last for ten weeks, including two lectures and three days of field work each week. The class will be conducted by Porter R. Lee, of the staff of the school, and the field work will be supplied by the Charity Organization Society, the Association for Improving the Condition of the Poor, the Brooklyn Bureau of Charities, the Department of Public Charities, the State Charities Aid Association and the United Hebrew Charities.

Those who complete the course will receive a certificate in emergency social service. Both lectures and field work are free, but all who are admitted will be required to pledge themselves to complete the course and to consider themselves subject to call for active service.

The lectures will include a study of the factors in the normal development

of the family, the problems which it faces in ordinary times and the special problems of war time; organization of relief after floods, fires, earthquakes, and other disasters; methods of social work with families—health, home economics, care of children, employment of women and children, low standards, value of personal influence, material relief, employment for the disabled, ways in which social agencies in New York can be used in war relief work; the correlation of charitable effort; the responsibility of the nation and of the Red Cross worker.

The field work will include the making of personal contacts with families, interviewing, writing and using records, study and treatment of the problems of disorganized family life; acquaintance with hospitals, dispensaries, day nurseries and other agencies which form an important phase of civilian war relief; and an introduction to such facilities as the city offers for the care and employment of the disabled.

With Joseph H. Choate, its president, in the chair, the board of managers of the New York State Charities Aid Association adopted a resolution last week offering the services of the association to

the nation "in such form as may be considered advisable and most efficient" in the event of war. A committee was appointed to confer with national and state authorities and to consider how to give practical effect to the resolution.

This association owes its origin in large part to humanitarian work done during the Civil war. Louisa Lee Schuyler, who founded it, obtained her early experience and much of her inspiration from serving throughout that conflict in the New York branch of the United States Sanitary Commission. The early membership of the association was largely recruited from former members of that commission. It was Miss Schuyler who presented the resolution adopted last week.

One suggestion of the kind of service that the association might render is that in places in the state where there is no Red Cross chapter or local social service agency it might act as an intermediary between bodies formed for the relief of soldiers' families and the families themselves. Its field agents might stimulate local giving to such families and might enlist local volunteers to perform the necessary administrative and other work.

TAXING WEALTH TO PAY FOR WAR

A "TEST OF PATRIOTISM" is being conducted by a newly organized committee in New York, known as the American Committee on War Finance. The test consists of a pledge, inserted in newspapers throughout the country, which places its signers on record as favoring legislation to take all profit out of war. Thus, it proposes, that in case of war all net incomes of \$5,000 or over shall be subjected to a graduated tax ranging from 2½ per cent on incomes from \$5,000 to \$10,000 to a contribution on incomes over that sum which will permit of no individual retaining an annual net income in excess of \$100,000 during war.

Other clauses of the pledge call for reducing profit on war supplies to not more than 3½ per cent, and on food and necessities of life to not more than 6 per cent. Failure to furnish the government with correct figures as to in-

WORD FROM MADAME BRESHKOVSKY

ALICE STONE BLACKWELL, of Boston, has received from Madame Breshkovsky a postal card, dated February 2, and written from her exile in Minoussinsk, Siberia. In it she makes no reference to the impending revolution, but expresses her pleasure in the magazines sent her by American friends. "The SURVEY," she writes, "has had some very remarkable articles about the international questions. We may hope this year is the last of fighting and desolation. Nobody can imagine the reality without seeing it. Live and be blest, all you who work for the common welfare and progress of mankind! . . . I am well, and wish you to be the same."

comes and profits or to sell defective war supplies to the government would make an individual or corporation guilty of a felony, punishable by imprisonment.

Seventeen committees have been organized in every section of the United States to obtain signatures to the 2,665,000 copies of the pledge which have been distributed and to insure the immediate adoption of such tax laws both by Congress and by state legislatures. Responses to the newspaper advertisement of the pledge have swamped the committee's offices. Over thirty thousand dollars has been contributed.

The organization committee, Owen R. Lovejoy, Amos Pinchot and John L. Elliot, of New York city, have all been identified with peace activities, but the present movement is being supported both by militants and pacifists. Its purpose is to discover by a sort of referendum of return pledges whether the advocates of war are willing to pay the price of war; whether the country is ready to be involved in a "dollar war" or a "war for humanity;" whether the rich are willing to bear the burdens of war with the poor.

"If we have a war," appeals the committee, "the burden of fighting must be carried by those who are physically strong and fit to fight. The burden of finance must be borne by those who are financially strong and able to give. Above all, the war must be paid for as it proceeds, in dollars as well as in lives. There must be no crushing legacy of bonded debt to be paid in taxes by the men who have done the fighting and their children. Let us make this a cash war, a pay-as-you-enter-war. Let all loyal citizens who have incomes above their immediate necessities volunteer their wealth."

YOUTH AND SPRING ON THE STAGE

UNDER the title, *The Awakening of Spring*, Frank Wedekind's celebrated German play. *Frühlings Erwachen*, which deals with the peculiarities of adolescence and excoriates the conventional attitude toward imparting the facts of reproduction to the young, was given in New York city last week under the auspices of the *Medical Review of Reviews*. An audience composed largely of social workers and students of sex hygiene was kept waiting an hour while an injunction was being secured against the municipal authorities who were withholding permission to present the play. It was the first time a performance had been given in English. Geoffrey C. Stein and his co-workers did the acting.

Frühlings Erwachen was written more than twenty years ago. It depicts in frank realism the morbidity, the dawning sex consciousness, the strange

dreams and budding passion of youth. Through ignorance of the way children are born, a girl of fourteen becomes pregnant. One of the strong scenes of the drama occurs when the girl, first

discovering this fact, reproaches her mother, whom she had often plied with questions, for not having "told her everything."

Four years ago the *Medical Review*

A LINCOLN STATUE FOR PETROGRAD

At a mass meeting held under the auspices of the American Friends of Russian Freedom in Carnegie Hall, New York, it was announced that George Grey Barnard has offered that organization a duplicate (not replica) in bronze of his Lincoln statue, to be presented to the city of Petrograd. To judge from the applause with which Russians at the meeting greeted every mention of Lincoln's name, this gift will be received by the Russian people as a token of the lasting bond which unites them with America. In Faneuil Hall, Boston, 1,500 persons, many of whom had lived in Russia under the old regime, met at the call of Civic Service House, and cabled to Prof. Paul N. Milyukov, minister of foreign affairs, a welcome to "the new-born republic of Russia, founded on liberty and dedicated to social progress."

of *Reviews* produced similarly Brieux's *Damaged Goods*, and last year it staged *The Unborn*, a play written to show the evils of reproduction without regard to heredity or circumstance. In presenting *Frühlings Erwachen*, Dr. Frederic H. Robinson, editor of the *Medical Review of Reviews*, said:

"The tragedy and danger of the adolescent period has been little understood in the past. In presenting Wedekind's great masterpiece, *The Awakening of Spring*, the committee of the *Medical Review of Reviews* feel that another step has been taken which will encourage the full and free discussion of a burning problem which convention has clouded and hypocrisy obscured."

A CITY PLAYGROUND IN THE MOUNTAINS

TO provide at minimum cost a place where wholesome outdoor activities may be enjoyed, where boys, girls, adults—in fact, the whole family—may spend an outing in the high mountains, was the subject with which Los Angeles, six years ago, established its playground summer camp. This is a municipal recreation center transferred to a spot where opportunities are ideal, a democratic institution where the crowded, unhealthy city life gives way to one of pleasure and contentment in intimate contact with nature in her most serene mood. For, this city playground away

OFF FOR A HIKE

from the city, looks out over deep ravines and beautiful streams, over boulders and giant pines, flowered meadows and distant hills.

The camp is not for the poor alone. It stands on a plane with the public school; its popularity is that of the city park; and the question for the coming seventh summer of its administration is

how to provide enough accommodation for all applicants. The Playground Commission has made a special point of keeping down charges so that citizens may enjoy the outing at a minimum cost. The mountain recreation center is too far removed from the city to encourage many day trips. The majority of its visitors stay for two weeks at a time. Their payments cover all salaries, food and transportation. The group of campers is looked upon as one big family, each member of which has a daily service to render for the good of the community. This work is so arranged that the dwellers of each cabin take turns in rotation, and none is excused. Thus the cost to the individual is reduced.

C. B. Raitt, superintendent of the Playground Commission of Los Angeles, recommends that such a summer camp, if planned by other cities, should be from thirty to seventy-five miles from the city, giving, if possible, an entire climatic change, preferably in the mountains. Cabins should be simply constructed, rustic in appearance, well ventilated, equipped with good beds, and, of course, not congested. An open-air dining-room with cemented floor is all that is needed for living quarters, in addition to a sanitary kitchen. In a large camp it is, of course, necessary to see to it that the sewage is properly handled so as not to pollute the stream, that modern flush

A TALE OF TWO FAMILIES

Normal Wife KALLIKAK FAMILY Martin

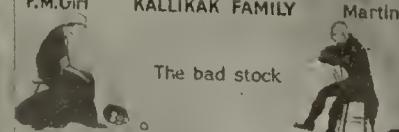

The Good Stock

Among 436 descendants of Martin and his normal wife there were

- NO mental defectives and
- NO criminals but
- MANY distinguished citizens

F.M. Girl KALLIKAK FAMILY Martin

The bad stock

Among 480 descendants of Martin and the F.M. Girl there were

- 143 MENTAL DEFECTIVES
- 46 known to be normal
- 291 doubtful or unknown

THE WILD OATS

At the outbreak of the Revolutionary war, Martin Kallikak, an American soldier, used to replenish his fighting spirit at a tavern in Trenton, N. J., in company with other militiamen. One day he met a feeble-minded girl there. They had a son. The son also was feeble-minded. He, in turn, had many feeble-minded children and since then this bad stock has been helping to fill almshouses, prisons and custodial asylums with degenerates. See the percentage of mental defectives in the upper right-hand corner.

THE NORMAL MARRIAGE

But those were the soldier's days of wild oats. After the war he married a good and intelligent woman and settled down. Their union was blessed with a fine progeny. Among the descendants were clergymen, artists, professional people—but not a mental defective or a criminal. One of the descendants of this normal marriage is now with an American ambulance corps in France. He has recently been decorated for conspicuous bravery. See the chance he had in the upper left-hand corner.

WHEN THE KALLIKAKS MOVED TO HARRISBURG

WHEN the Pennsylvania legislature of 1915 declared, in effect, that it could not find a single dollar out of the \$70,000,000 revenue with which the state would be blessed in the following two years, to devote to the completion, opening and maintenance of the state village for feeble-minded women established two years before, some thousands of forward-looking men and women were suddenly awakened to a realization that educational work on the subject was imperatively needed in their state. Accordingly, under the leadership of the Public Charities Association of Pennsylvania, an exhibit on feeble-mindedness was prepared, setting forth crisply, graphically and concretely the facts of the problem.

In Philadelphia, where it was first shown, a plan of extensive cooperation was worked out, which has since been followed in more than a score of communities in Pennsylvania. Business men were appealed to for aid in meeting the practical problems. One gave the use of a store building in the very heart of the business center; another donated lumber for the construction of booths; a third contributed the services of carpenters; a department store gave the use of tables and chairs; another provided

the decorations and the service of expert decorators.

Forty organizations of philanthropic and civic character—led by women's clubs—volunteered to provide guides and attendants for directing and assisting the visitors. The booths, each of which told one chapter of the story, were parceled out to the care of these organizations, so that before the two weeks were over more than 300 men and women, active and prominent in social and civic affairs in the city, had devoted time to telling uninformed visitors of the importance of the problem and to making certain that no vital point in the story was missed.

Newspapers were brought into the campaign and publicity was unprecedented. More than 100,000 adult citizens visited the exhibit during the 110 hours the rooms were open for inspection. A nucleus of sentiment was created that immediately put the problem of the mental defective to the very forefront of the public mind in Philadelphia.

Encouraged by this success, the association set about extending the campaign throughout the state. A plan identical with the Philadelphia scheme of cooperation was set in motion. Local committees were organized by correspondence; the expense of transportation and ar-

toilets, lavatories, shower-baths and tub-baths are provided. A cemented swimming pool is a great attraction.

An executive is required who should be an enthusiast and a person with an understanding of human nature. "The success of a camp," says Mr. Raitt, "rests almost entirely in the hands of the director in charge." Los Angeles provides this leader with a corps of specialized assistants, responsible for commissary, finances, clinic, store, athletics and hikes, entertainments, and care of grounds and equipment. It is these who organize the services rendered by the campers themselves.

Of the success of the camp, Los Angeles citizens speak with enthusiasm. In the gathering around the campfire of hundreds of people from all walks of life, from all parts of the city, with no interest in common except that of their citizenship, the seed of a community spirit is sown which, transplanted from the ideal conditions of this nursery garden into the everyday conditions of the city itself has every hope of healthful growth. "More civic pride is developed around the campfire in five minutes," says Mr. Raitt, "than in the city in one year. Many friendships of a lasting nature are formed, and these evenings are lived over and over again around the hearth in the home."

rangement was met by these committees through the same sort of appeal to public-spirited citizens that had proved so fruitful in Philadelphia; expert instruction for the guides was given by correspondence and personal visits; scores of organizations in every community got back of the enterprise with enthusiasm.

For a year the trail was followed almost without interruption, and with singularly uniform success in every part of the state. Whether in store buildings, dance halls, Y. M. C. A. buildings, courthouse or private homes, the exhibit brought its message and focused attention upon a program of control. More than a quarter of a million people had visited the exhibit before it was taken to Harrisburg, for the special benefit of the members of the legislature.

The legislature of Pennsylvania knows now the need for the village for feeble-minded women; it knows that public sentiment will justify appropriations to that end; and it may even begin to suspect that public opinion will not long tolerate neglect of so fundamental a project.

NEW YORK'S NEW CITIZEN POLICE

WITH the approach and convening of what the metropolitan press has for weeks been describing as a "war session" of Congress, cities and towns near New York have been actively seeking information about the Home Defense League in that city, and have been preparing to launch similar organizations of their own citizens. This league was formed some time after the outbreak of the European war to act as a reserve to the police force and today has an enrollment of over 20,000 men.

It exists to do in emergencies whatever the regular police force does. Its members will, if called upon by the commissioner of police, undertake to preserve the peace, prevent crime and enforce laws relating to the police, health and tenement house departments and to criminal procedure. They could be asked to preserve fire lines and to do other service in the event of great fires. It is expected that their chief opportunity will come at night, when most of them are best able to give time.

The league is also organized for social and civic duties not customarily done by the police. Already it has been called upon in three emergencies. Once it was asked for volunteers to help get recruits for the Red Cross, once to aid in local efforts to reduce street accidents, and during the epidemic of infantile paralysis last summer to help in the sanitary patrol of the city, block by block.

A motor-boat division for water patrol has been created and thirty boats offered for use. Five hundred motor cars have been enrolled, and three cavalry squads formed of seventy horsemen each. Between 10,000 and 11,000 of the mem-

PROTEST BY CLEVELAND SETTLEMENTS

WHEREAS the Board of Education of the city of Cleveland has seen fit [the SURVEY, March 24] to introduce military training into the public high schools of this city, and

Whereas it has formally branded as immoral or cowardly the sincere opinions and activities of "peace societies and others," and

Whereas it has declared that "our children must be taught . . . that wrong . . . must be FOUGHT and must come to know the utter silliness of declining war if war be necessary to overcome evil and hold up high principles and ideals," and

Whereas it has arranged for meetings in school buildings during or after school hours at which these opinions of the members of the board are to be presented to the children or to their parents, with the provision that "there must be no debate or questions at any meeting,"

Be it resolved, therefore, that we, the members of the Cleveland Settlement Union, residents and workers in the settlements of Cleveland, knowing intimately in our daily lives and work the industrial classes of Cleveland and their children, do hereby register our protest against the subtle inculcation of militaristic ideals through military training of immature, impressionable lads of high school age; that we heartily disapprove of the attempt to force upon the schools a point of view in matters of present and future public policy and a theory of international relations to which three of the seven members of the Board of Education itself could not entirely subscribe, and that we express our horror at the characteristic militarist determination to crush free speech by using the school buildings and the resources provided by public taxes for the purpose of presenting a theory of patriotic public policy, with the un-American provision that no debate, question or difference of opinion may be permitted as to what truly constitutes national honor, international morality and democratic ideals.

bers would, it is expected, actually respond to a call for service.

Members of the league receive instruction in elementary military drill and in the duties of police officers. They are organized by precincts and each local organization meets periodically for drill and exercise. The drill is conducted in armories, public halls, schoolhouses and similar places.

The services of the league can be given only when officially called for by the head of the police department.

A statement issued by the secretary to the police commissioner declares that the league "is not armed, it is not a military body, and it is not related to the Plattsburg training camp." The fact that it is not armed, however, does not mean, says the statement, "that the members cannot shoot or ride. A great ma-

majority of the members are in it because of the opportunity offered for service to the city and because they feel they could give a good account of themselves should they be called to render such service."

Many members are declared to have had experience in the army or navy, militia or naval reserve, as woodsmen on the plains, as railroad men and as baseball and football players. The membership is declared to be made up of "day laborers and men of means, business and professional men, actors and writers, men earning \$4 a day and men whose income is big enough to support both town and country homes."

Recruiting and preparations are in the hands of a special staff attached to police headquarters. At the head of this is Alexander M. White, of the banking firm of White, Weld and Co., recently appointed aide to the commissioner.

JUVENILE CRIME THE NEMESIS OF HATE

THE excessive excitement of the childish imagination by the events of the war, especially as they are depicted in trashy literature, is one of the brutalizing influences acting on our young people in war time. To inoculate the children with hate would breed lust for revenge, and could only bear evil fruit."

Thus writes Albert Hellwig, a German police court judge, in a book which he has recently published, *Der Krieg und die Kriminalitaet der Jugendlichen*, reviewing the criminality of German children between the outbreak of the war and the end of June, 1916.

The material for his study is composed of replies to a questionnaire sent to police authorities in several hundred towns and cities, from reports of institutions and societies, and from newspaper clippings. His general conclusion

HEADWORKER—HOSPITAL SOCIAL SERVICE DEPARTMENT

Competent headworker wanted for social service department in a large New York hospital; organization includes twelve paid workers, undergraduate pupil nurses, district physicians, volunteer Auxiliary. Apply to Dr. S. S. GOLDWATER, 1 E. 100th St., N. Y. City.

FOR RENT OR SALE

Staten Island

Small farm, near New Dorp. Situated on high land in centre of island. 14 acres, 3-story stone house, completely furnished, 12 rooms, 2 baths, 3 toilets, veranda enclosed with glass. Annex adjoining containing 1 large room. Telephone.

Good barn, with cement cellar and gardener's living quarters above. City water in house and barn. Good kitchen garden. Fine orchard, yielding plentifully. 10 minutes from trolley. Has been occupied for the past 2 years as a Home for Girls. For further information, apply to

MRS. P. MALI, 8 Fifth Avenue.

is not given statistically, but he leaves no doubt that the increase in youthful delinquency, and especially in acts of violence, has been considerable. "From all these figures it is evident that crime among the young diminished in some places during the first months of the war. But afterward the increase was all the greater—at least in the larger cities and as regards crimes tried before a judge and jury."

This change is easily accounted for if we remember that during the first months of the war hundreds of thousands of youths under eighteen entered the army as volunteers or were drafted into other public service, whereas the new factors making for lawlessness worked with cumulative effectiveness. Dr. Hellwig explains the increase in crimes of violence by the change in economic conditions—poverty at first and high wages afterward; and further by slackening school attendance and home control, "trashy war books and films," amnesty of juvenile criminals granted in the earlier days of the war, reduction of the police force through mobilization.

But that these causes, important though they may seem, are not the primary ones will appear from the following order of the Prussian government dated January 15, 1916: "The desire has been expressed recently that the teachers in our schools should combat by suitable instruction the spread and deepening of national hate and pave the way for the future reconciliation of civilized nations. Such endeavors should not, however, provide opportunities for the spread of a cosmopolitan propaganda and idle talk of peace."

This change of heart, it would seem, is coming rather late in the day. In Berlin, in 1915, there were twice as many crimes by children as in 1914. In Munich, the number of young delinquents for the first three months of 1915 equaled the total for 1914. Frankfurt reported a decrease of 55 per cent in the number of minor offenses—possibly because prosecution had slackened—with an increase in serious crime by 40 per cent.

It would be easy to minimize the apparent lesson of these figures by pointing out that crimes of violence, both in the adult and in the juvenile population of Germany, have been on the increase for some time. Professor von Liszt, of Berlin University, in a lecture last year stated that the number of young people sentenced for offences and crimes in Prussia had increased from 30,719 in 1882 to 54,949 in 1912, and was still rising year by year. But such statistics are of no value unless we know what changes have taken place in the law and in the practice of police courts. As was mentioned in the SURVEY for March 17, social workers in Germany are sufficiently impressed with the seri-

Standards of Service

In rural communities clusters of mail delivery boxes at the crossroads evidence Uncle Sam's postal service. Here the neighbors trudge from their homes—perhaps a few yards, perhaps a quarter mile or so—for their mail.

Comprehensive as is the government postal system, still the service rendered by its mail carriers is necessarily restricted, as the country dweller knows.

Long before rural delivery was established the Bell System began to link up the farmhouse with the neighboring towns and

villages. One-fourth of the 10,000,000 telephones in the Bell System are rural. They reach more places than there are post offices. Along the highways and private lanes the telephone poles lead straight up to the farmer's door.

He need not stir from the cheerful hearth ablaze in winter, nor grope along dark roads at night for friendly news or aid in time of trouble. Right in the heart of his home is his telephone. It is the American farmer's key to the outside world, and in no other country is it found.

Ditson Community Chorus Collection

BOOK I.

THE movement for Community Singing is fast spreading over the land, and Whitman's prophetic word, "I hear America singing," is being realized.

Have you organized to meet the new demand? Bring old and young together to sing the songs of common appeal—the songs of the people, sung by the people.

These songs have been printed in keys that bring the melody within the compass of untrained voices. The average voice can sing them.

Music is the common heritage of man. Give every one in your community a chance to sing.

If you want the name of your organization printed on each copy and so give it the local stamp, we will do so without charge on all orders of one hundred or more copies. Don't skimp your first order.

Price, 20 cents postpaid. \$10.00 per hundred, carriage extra.

SOCIAL WORKERS' EMPLOYMENT EXCHANGE: The Department for Social Workers of the Intercollegiate Bureau for Occupations registers men and women for positions in social and civic work, the qualifications for registration being a degree from an accredited college, a year's course in a professional school training for social or civic work, or experience which has given at least equivalent preparation. Needs of organizations seeking workers are given careful and prompt attention. EMELYN PECK, MANAGER, 130 East 22d St., New York City.

ousness of the increase in juvenile crime since the beginning of the war to give their attention to special measures for mitigating the influences which make for it. It was largely due to their urgent protest against the spread of the gospel of hate through the schools that the Prussian ministerium was moved to issue the decree quoted above.

If anyone would like to know why war should have this effect in Germany to so much greater an extent than in the allied countries he will find the explanation in abundance in a typical file of newspapers. At all times the bitterness of German partisan literature, of internal as well as external polemics, even of caricature, has been unequalled. During the war the seed of hatred has been sown even more broadcast on an even more responsive soil, and an unexpected and unwelcome crop was the result.

VINDICATION FOR A CIVIC REFORMER

THE Intermediate Court of Kanawha county, West Virginia, has dismissed the indictments brought in March, 1915, against A. Leo Weil. The case attracted widespread attention at the outset because of Mr. Weil's civic record in Pittsburgh, where as president of the Voters' League he was instrumental in running down graft in the old Pittsburgh councils, leading to wholesale confessions, indictments and prison sentences for men prominent both in municipal politics and in local banks. Political influence or wealth were no protection against his rigorous prosecutions.

In the West Virginia case Mr. Weil, who had been acting as counsel for the Manufacturers' Light and Heat Company, was taken off the train at midnight, and the original sensational report of the arrest said that he was "charged with an attempt to bribe two of the public service commissioners of West Virginia." The actual charge was that he authorized a statement to these commissioners that if they were called as witnesses in a suit pending in the United States District Court, and would testify to the truth as to the alleged interference by the governor with the commission in its consideration of the case of his client, other positions would be obtained for them if the governor removed them.

Mr. Weil emphatically denied that he authorized these proposals, much less an offer of bribery. But for two years he has been fighting for his liberty and to clear his name in a situation in which a person with less means, less knowledge of the law and of detective methods, would have been not only railroaded to jail overnight, but under an antiquated West Virginia law kept there

HELP WANTED

WANTED, in small social settlement, New York City, resident who will give part time service in return for board. Possibility of her being retained as summer worker with salary. Address 2491 SURVEY.

pending trial, so as to seriously handicap him in fighting the forces arrayed against him. At one end was a political group which drew its strength from the feudal mountain counties of West Virginia, where revenge is an active political motive and the ruthless use of courts and state departments for political ends is but a projection on a state scale of the bad blood and shooting by which some men get their way in the back country. At the other end of the scale were detectives identified with some of the most glaring examples of partnership between the police and the underworld in the middle West. The combination met its match in the civic reformer-attorney; but about two of the best years of his life have been absorbed in fighting the case.

Late in February, T. C. Townsend, former prosecuting attorney, who originally brought the charges, appeared before the Intermediate Court of Kanawha county and stated that investigation and recent developments had satisfied him "that there was not sufficient evidence to justify the state in bringing Mr. Weil to trial"; while his successor, the present prosecuting attorney, followed with the statement that "no offense in fact had been committed. That if trial and conviction were to be based alone upon statements of such witnesses as one Guy Biddinger, upon whose evidence the state's case was predicated, and who is now under numerous indictments in the state of Illinois, Kanawha county for the next four years would have a minimum of criminal court work."

THE LURE OF THE NORTH FOR NEGROES

PHILADELPHIA'S Negro population, some 150,000 for the city and its environs by the last census, is growing at a pace and in a way that is little short of a folk migration.

High wages have drawn to the city practically every Negro from one town in North Carolina; whole church congregations, headed by their pastors, from Virginia; a special train, with two engines, from southwestern Georgia. Of 12,000 men brought up since July 1, 1916, by the Pennsylvania railroad for work on its lines, only 2,500 are still with the company. The others are believed to have drifted to Philadelphia and other large cities.

To help adjust these immigrants to their new city environment, a committee has been appointed as a result of a conference on migration called by the Philadelphia Round Table Conference for Work Among Colored People, attended by some 150 social workers, both colored and white. John Ihlder, of the Philadelphia Housing Association, is chairman of the committee, and John T. Emlen, of the Armstrong Association,

Lingerie and Corsets at McCutcheon's

Reg. Trade Mark

Fine Lingerie of foreign and domestic manufacture for Spring and Summer wear is now on display at McCutcheon's in very full assortment. Included in the collection are some very attractive goods of Philippine make which are worthy of inspection.

Gowns, \$2.95, 3.25, 3.75, 4.85.

INVESTMENT SECURITIES

The Survey accepts only the advertisements of reliable banking firms, brokers, trust companies, savings banks and other financial institutions.

Corn Belt Farm Loans

offered and recommended by The Merchants Loan and Trust Company—the Oldest Bank in Chicago.

These loans are all secured by First Mortgages on improved farms of established value in the Corn Belt—the safest farm loan section in the United States. They are made only after thorough and exhaustive personal investigation and never for more than one-half the value of the land alone.

No investor purchasing these mortgages has ever failed to receive principal and interest when due.

These loans are sold to net from 4½% to 5%.

A detailed list and description of loans aggregating any amount you state, will be sent upon request.

Our service includes the examination and approval of title by the Bank's own attorneys, an inspection of the property by our own salaried examiner, the certification that all taxes are paid as they mature, the collection and remittance of interest and principal, and the facilities for renewal or substitution of mortgages at current rates, all without charge to the investor.

CAPITAL AND SURPLUS—TEN MILLION DOLLARS

Diversified Investments For Your Present Funds

Successful, experienced investors agree that for utmost safety it is advisable to select investments secured by properties of varied character and location.

We have an exceptionally broad list of diversified 5½% and 6% securities in denominations of \$100, \$500 and \$1,000 suitable to the most exacting requirements. We offer and recommend for your present funds four bond issues secured by these different classes of property:

Established Industrial Property—Company's earnings largely in excess of principal and interest requirements.

Farm Land—Well located and under profitable cultivation.

Improved Chicago Real Estate—Large value, ample earnings and strong ownership.

Natural Resources—Power plant in successful operation. Substantial cash investment behind the bonds.

All these recommendations are based on long experience, complete investigation by our experts and outright purchase. Write for circular No. 9820-A, giving details.

Peabody, Houghteling & Co.

(Established 1865)

10 South La Salle Street

CHICAGO

secretary. There are sub-committees on receiving immigrants, education, housing and sanitation, employment, recreation, courts, relief and churches. City departments and philanthropic agencies are cooperating.

The committee has found that many families are coming; of 2,500 arriving in Coatesville, near Philadelphia, about 2,000 were men, the remainder women and children. They are not poor, for, besides the good wages for men and the eager openings in domestic service for women, many have brought with them sums ranging from \$50 to \$1,500 realized from selling their homes in the South. They wish to buy new homes in Philadelphia, but few are available for either purchase or rent. Real estate agents discourage their going into white neighborhoods and, on the other hand, the Negroes from small towns are not anxious to buy the regulation Philadelphia row-houses or houses in alleys and courts.

Resultant overcrowding, particularly in the lodging houses, has left women and children stranded in railroad stations over night and has reached the stage of a public health problem. An increase in pneumonia is already evident, as it was in Newark [the SURVEY for February 17] among southern folk, in southern clothes, suddenly plunged into a northern winter.

The schools are having difficulties with the children, partly because poor schools, held only a few months of the year, have retarded the youngsters so that big children from the South must go in to classes with much smaller Philadelphia children.

ONE POINT WHERE CALIFORNIA LAGS BEHIND

NEWSBOYS and newspapers may complain, but the street trades amendment (Senate bill No. 101) to the California child labor law bids fair to be enacted. The proposed measure prohibits boys under fourteen and girls under eighteen years of age from engaging in street occupations in large cities. It permits, however, boys between fourteen and fifteen to work in cities of 23,000 population and over outside of school hours between 5 A. M and 8 P. M. provided a badge is secured annually from the superintendent of schools. The purchaser of a newspaper will thus be assured that the wearer of a badge is at least fourteen years old, that he is physically able to work and has fulfilled certain educational requirements.

The opposition is using the argument, time-worn in the East, that such a law would take the bread from the mouths of the widow and orphan. At a mass meeting of the boys, resolutions were passed denouncing the bill as interfering with parental authority, restricting a boy's pursuit of honest toil and encour-

aging "habits of idleness which lead to begging or worse," and as depriving boys of opportunities to contribute to the family support and to become self-supporting.

In refutation of such statements the National Child Labor Committee, which is supporting the act, quotes from recent investigations of street trades made in several states.

A Connecticut report on the subject shows that of the whole number of newsboys (74) from whom information was secured, only three were fatherless (two of these began before their fathers died) and two were motherless. Most of the boys said, according to this report, that they started selling through seeing some other boys sell. Not one said his parents sent him out.

The twenty-fourth annual report of the Bureau of Statistics and Information of Maryland corroborates this testimony. It found that 1,776 newsboys, or 80 per cent of the total number investigated, came from families with foster parents living, while 345, or 15 per cent, represented families with the breadwinner dead or away or not contributing. Not one newsboy stood as the sole individual of earning capacity within the family.

And again the sixth annual report of the Board of Public Welfare of Kansas City gives figures showing how paltry are the earnings of the average newsboy in that city. "Allowing for tips, 60 per cent of the 317 boys took in during the school days less than 26 cents, and 46 per cent took in less than 21 cents. The suggestion that the newsboys would be deprived of a very important part of their support is not sustained by the facts obtained during this investigation."

The proposed amendment in California is supported by the Juvenile Protective Association of San Francisco, California State Federation of Labor, Civic Section California Club (San Francisco), Public Welfare Commission of the County of Los Angeles, Child's Welfare League of Alameda, many of the social organizations and a score of prominent women's clubs. These bodies are endeavoring to have the bill amended so that the requirement of a badge shall apply to boys between fourteen and sixteen instead of fourteen and fifteen.

SOCIAL SETTLEMENTS AND THE WAR

WRITING as president of the National Federation of Settlements, "representing 170 settlements throughout the country, with a very large constituency of neighbors and co-workers with whom they are associated," Mary K. Simkhovitch, head resident of Greenwich House, New York city, stated her position with regard to the entrance of this country into the European war in a letter to the *New York Evening Post*.

(Scene: Pullman Smoking Compartment. Judge Kirkland and Lawyer Roberts continuing a conversation begun at dinner.)

Judge: "Well, this business of selling direct-by-mail throughout the country is surely very popular with the public."

Lawyer: "Yes, but some of my clients say that in the interest of local merchants the States ought to find some way to check it."

Judge: "I don't see why they should check it or how they can do it. Selling merchandise is an interstate business. I can sell and you can buy in the best market wherever it is. What can any State do about it?"

Lawyer: "You're probably right, I'll admit. The States can't very well put the 'kikosh' on legitimate interstate business."

Judge: "Certainly not. The States cannot hold up arbitrarily any direct-by-mail transaction, such as the payment of life-insurance premiums by mail."

Lawyer: "How's that?"

Judge: "Policies are written for people, 'direct,' all over the country, and have been for years. The United States Supreme Court has decided unanimously that life-insurance premiums on such policies are exempt from State taxes. The usual license-fees and charges also do not apply. All this helps policyholders."

Lawyer: "Oh, you refer to the Postal Life?"

Judge: "Yes, that Company hasn't any agents and never has had. The applicant deals direct, personally or by letter. The method is good common sense as well as sanctioned by law."

Lawyer (laughing): "Guess you're right. I wrote the Postal once myself just to find

out how the Company did business, but never followed it up."

Judge (laughing): "I go you one better; I not only wrote them, but took out a policy nine or ten years ago and have carried it ever since."

Lawyer: "How's the cost?"

Judge: "Lower than in other companies for the same kind of insurance—legal reserve—and besides that they give me a free medical examination each year just so I can keep in trim."

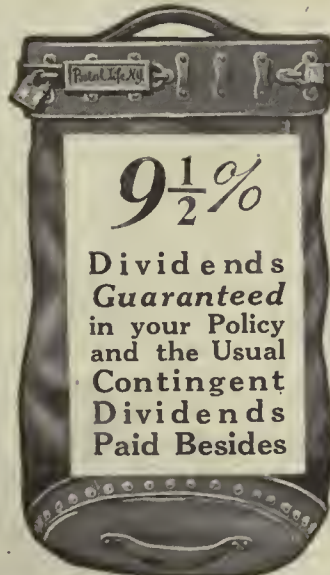

Lawyer: "That's pretty good. You live in Idaho and deal with a New York company by mail. Did you ever look the Company up?"

Judge: "Only to know that it is chartered and licensed by New York State, whose laws are very strict, but I called on them when I was East last year. They're now in their new building on Fifth Avenue."

Lawyer: "So I heard. Believe I'll write them to figure on a policy for me."

Judge: "Don't think you could do better. Life insurance without agents is a distinct public service. The point is made, and I think it is a good one, that the Company is subject to the United States Postal Authorities. The Postal simplifies the business, saves you money, safeguards your health and will treat you right in every way. I'd take another policy myself if I hadn't passed the age limit."

Timely Talk on a Vital Subject

That tells the story. Thoughtful insurers like Judge Kirkland take policies with the Postal and not only hold on to them but are disposed to take new insurance, while those like lawyer Roberts, who at first write out of curiosity, at last find they can save money by taking a Postal Policy, and they do it.

Find Out What You Can Save

You should take advantage of Postal benefits and economies. Call at the Company's office or simply write and say: "Mail insurance particulars as mentioned in *The Survey* for April 7th." In your letter be sure to give:

1. Your full name.
2. Your occupation
3. The exact date of your birth

You will receive full information based on official reports regularly filed with the New York State Insurance Department. Writing places you under no obligations and no agent will be sent to visit you. The resultant commission-savings go to you because you deal direct.

Playground and social center directors and leaders, park commissioners and superintendents, civic improvement committees, managers and trustees of childrens' institutions, social settlement workers, and manufacturers interested in employees' welfare will find this directory convenient and helpful when planning and ordering recreation equipment.

Medart Playground Apparatus

THE SPIRAL SLIDE is another recent Medart innovation. This winding slide caters to the "something new" longing which dominates every child heart. The easy spiral gives a winding sensation and the descent is extended over a longer route.

THE SPIRAL SLIDE is listed in our catalog "W" in a variety of styles and sizes. This catalog covers other new Medart creations in Playground Equipment.

All of our new inventions have been thoroughly tested and approved by leading authorities in this work. Medart reputation prohibits marketing any untried piece of apparatus.

" . . . As the months since the war began have marched by, to many of us has come more and more poignantly the conviction that American democracy is not secure or honorable unless it is consciously bound up with the fate of world-democracy.

"But though democracy in many ways seemed championed by the allies, yet impurity of motive, and action anything but democratic, so sullied the situation on both sides, that it was by no means clear to many of us that the world's fate demanded positive and national action on our part.

"The Russian revolution, following the increased ruthlessness of Germany, resolved that doubt, and made it possible, and, yes, imperative, for many of us to hesitate no longer. America for the world rather than America first is our motto. And in the interest of a democratic world America cannot hold aloof. Not for aggression, and not even for defence, but for world democracy, is America justified at this hour no longer to stand apart, but rather to die that the world may live. . . .

"It is not in the districts where the settlements are situated that disloyalty is shown. And let us see to it that the burden of the war does not fall too heavily on those least able to bear it. Workers in industry and agriculture must not be decimated for a still unestimated military need; or rather, they are the very props on which such need must rest.

"Artemus Ward was willing to sacrifice his wife's relations on the altar of his country. But we must see that contemporaneous Artemus Wards do not sacrifice the property and income of their wife's relations on the altar of their country, rather than their own. The settlements therefore desire to express their conviction that to break down the standard of living of the workers and to neglect the social safeguards which surround the youth of our cities would result in neglecting a most vital element in national service.

"In the first year of the war the settlements in Canada gave up their regular work of community organization and neighborly social service for what seemed more immediate. But now they have gone back to their neighborhood tasks as the most important patriotic service they can render.

"The settlements offer themselves to the nation at this crisis in the hope for, and the belief in, a democratic world. They will seek in their own neighborhoods to bring about in war time, as they have continuously sought for twenty-five years in peace, cooperation, fellowship and common loyalty among all their neighbors of whatever race or creed. For Americanization can never be effective if it does not take place through the close personal fellowship arising from daily association."

TO PROTECT AMERICAN IDEALS

"OURS is a democracy. It would not be worth our while going into the conflict if, when we come out of it, we do not still have a democracy."

In these words, William B. Wilson, secretary of Labor, put in a sentence the thought that was in the mind of nearly everyone at a meeting of the committee on labor of the Council of National Defense which met last Monday at the headquarters of the American Federation of Labor in Washington. The committee, consisting of about 150 labor men, employers, health experts and students of labor questions, was appointed by Samuel Gompers, who is a member of the advisory commission of the Council of National Defense.

The entire day and the evening were spent in discussing how national efficiency could be promoted, the welfare of workers conserved and the principles of democracy left intact. The sentiment most earnestly expressed was that we are setting out not just to win a war, but to win a war for justice; hence there must be no weakening of adherence to fundamental American principles of liberty.

"I love the United States not because it has that name," said Samuel Gompers. "It is the ideals for which our country stands that makes it dear to us. That is what makes it worth fighting for. If those ideals were to change we would not care to fight for it."

There was a strong tendency to oppose the idea that has already found expression, that hours of labor should be extended indefinitely and other standards broken down. Prof. Felix Frankfurter, of the Harvard Law School, offered a motion requesting the Council of National Defense to urge the various state legislatures not to break down standards, as has been recently proposed in New York, except on recommendation of the council. This resolution was referred to the executive committee which is to organize the work of the general committee.

It is proposed that sub-committees be appointed as follows: education, sanitation, housing, recreation, equalization and conciliation, wages and hours, standards, fatigue and physical welfare, publicity.

Frederick L. Hoffman suggested that there should be a committee on statistics and information, and one on health. Professor Frankfurter urged the creation of a body similar to the English Committee on the Health of Munition Workers. These suggestions and others are to be considered by the executive committee and a program of action is to be presented at the next meeting of the general committee which was adjourned subject to the call of the chairman.

CHICAGO SCHOOL OF CIVICS AND PHILANTHROPY

1917 SUMMER SESSION, JUNE 20—JULY 27

General Course for Social Workers

Four Credit Courses: *First Year*—Methods in Social Work; Social Economics. *Second Year*—Principles of Case Work; Municipal Problems. *Field Work* with one of the social agencies of Chicago. *Visits of Inspection* to the important social institutions in or near Chicago. *Open Lecture Course*—Social Agencies in a Modern City.

Special Course for Playground Workers

Folk Dancing, Gymnastics, Games, Story-telling, and other technical classes held at Hull-House

Fifteenth Year Opens October 1, 1917

We Believe—

THAT home-making should be regarded as a profession.

THAT right living should be the fourth "R" in education.

THAT health is the business of the individual, illness of the physician.

THAT the spending of money is as important as the earning of the money.

THAT the upbringing of children demands more study than the raising of chickens.

THAT the home-maker should be as alert to make progress in her life work as the business or professional man.

—American School of Home Economics.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

"None genuine without
Trade Mark"

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

The Metropolitan Life Insurance Company

has just closed its most prosperous year. By this is meant the most prosperous year, not alone for the corporation, but for the policy-holders, who have owned it since it became a mutual company.

Notable progress was made in the reduction of the expense of Industrial insurance. The ratio of Industrial insurance expenses to premium income is far lower than has ever been shown by any American or English industrial insurance company, and its lapse ratio is the lowest in its history.

Some very interesting facts have been developed in its summary of the business.

It paid a policy claim every 41 seconds of each business day of eight hours, during the year.

Its average payments were \$266.05 a minute of each business day of eight hours.

It paid 701 claims per day on an average the year through.

It issued or revived 8,304 policies a day on the average, amounting to \$1,969,823 of insurance.

Every day it paid to policy holders, or set aside as reserve, \$376,827.40.

Its assets increased on an average every day \$220,509.26.

On December 31, 1916, its whole number of policies outstanding was 16,952,769 for the great total of \$3,482,431,996.

BOOKS ON RUSSIA

POTENTIAL RUSSIA

By Richard Washburn Child

Net \$1.50

The New York *Post* says: "Knowing Russia for Mr. Child has meant the production of an interesting book, careful and temperate in statement, reflecting with sympathy the havoc of war, but noteworthy particularly for its forecast of what the future may hold. A land of neglected yesterdays but confident to-morrows."

SELF GOVERNMENT IN RUSSIA

By PAUL VINODGRADOFF, F.B.A.

Net \$1.25

The New York *Nation* says: No living man has a firmer grasp upon the political history of the Russian people or could display greater skill in making it clear to English readers. The book is written in vigorous style and should prove of great interest to every student of governmental institutions.

RUSSIA AT THE CROSS ROADS

By C. E. BECHHOFER.

Net \$2.00

The Boston *Transcript* says: Shows that the two great divisions of Slavic thought are represented on the one side by those who hunger and thirst for western culture, those who are called "Westerners" and on the other the Slavophiles, who believe that Russia should be self sufficient and should turn its back on a political development sure to result in red riot and revolution.

A HISTORY OF RUSSIA

By V. O. KLUCHEVSKY. Translated by C. J. Hogarth.

The only complete History of Russia from the beginning to 1855. The result of years of expert investigation, it contains much which has never before appeared concerning the political, economic, legal and religious institutions of Russia.

3 Vols. Net \$7.50

AN ECONOMIC HISTORY OF RUSSIA

By JAMES MAVOR, Ph.D. Two volumes.

Net \$10.00

The aim of the present work is to present to English readers the main result of recent historical researches which have been conducted by various Russian scholars. The central fact of modern Russian economic history is regarded as serfdom, or the right of the proprietor of the land to hold in bondage the cultivator of it. The gradual growth and decay of this right can only now be fully elucidated and placed in due historical perspective. The value to students of economics and history of such a survey can scarcely be overestimated.

THE SLAVS OF THE WAR ZONE

By W. F. BAILEY.

Net \$3.50

This celebrated work by one who has lived long among the varied and fascinating people of eastern central Europe takes up the little nations in turn. The reader goes into all their doings, work, play and worship, with a vividness that brings them very near.

THE NEW RUSSIA

By ALAN LETHBRIDGE. With 3 maps and 95 illustrations from photographs by the author.

Net \$5.00

Russia, the land of the future, is the author's cry, who sees in the vast untouched forests, the mines and unused water power of Russia, the great storehouse for civilization's needs in the 20th century which the Western United States were in the 19th.

THE RUSSIAN ARTS

By ROSA NEWMARCH.

Net \$2.00

Author of "The Russian Opera"; uniform in size with "The Russian Arts."

Net \$1.75

Chicago *Evening Post* says: With Russia before the eyes of the world to-day, the coming of a book on The Russian Arts will meet a welcome among those who have been interested in the development of this giant nation as well as the art workers who have seen the Russian characteristics creeping into the field of exhibitions of the arts.

SONGS OF UKRAINA

With Ruthenian Poems. Translated by FLOR-ENCE RANDAL LIVESAY.

Net \$1.50

There is no better way of coming to a clear understanding of the mind and heart of the Russian people than by studying the songs and poems which have been evolved from the nation. This collection of translations shows the people of little Russia in their joys and sorrows, their aspirations and their contentment.

A CONCISE GRAMMAR OF THE RUSSIAN LANGUAGE

By LEONARD A. MAGNUS.

Net \$1.50

The Russian *Review* says: Clear, concise and scholarly—a thing foreign grammars too seldom are—this book is one of the most valuable tools that can be possessed by the student of the Russian tongue.

A NEW POCKET DICTIONARY OF THE ENGLISH AND RUSSIAN LANGUAGES

By J. H. FREESE.

Net \$2.00

This volume removes one of the greatest handicaps of the student in Russia—the lack of a really good Russian dictionary in a small compass.

RUSSIAN COMMERCIAL CORRESPONDENCE

By MARK SIEFF.

Net \$1.25

A useful contribution to "improved trade relations with Russia." In compact form, it conveys the whole art of writing business letters to former subjects of the Czar.

Katrinka

The Story of a Russian Child. By HELEN EGGLESTON HASKELL. Net \$1.25

The Little Schoolmate Series. Edited by Florence Converse.

Describing the experiences of a Russian girl in her efforts to obtain a pardon for her parents exiled in Siberia. It gives a vivid impression of the whole range of picturesque Russian life, from the snow-clad village, under the shadow of the dreaded Cossacks, to Petrograd and the court of the Czar.

WAR AND CHILDREN

SOcial work and social workers have ahead of them a tremendous task in seeing to it that the pressing needs of war do not break down standards and sacrifice the social point of view. A statement of it, in definite terms, for the field of child welfare, has been made by Julia C. Lathrop, chief of the Federal Children's Bureau, for

An Early Issue of the Survey

WAR has been declared and we are rushing to prepare. The Council of National Defense believes that protective labor laws should not be broken down except upon its own recommendation. The National Consumers' League believes they should not be lowered for any cause—real preparedness means enforcing them to the letter. Page 37.

PREPAREDNESS includes prohibition, says Mrs. Tilton, and calls upon the dry governors to support her. Page 38.

HOOVER, of Belgium, may be called on to take charge of our food supply and cut out the slip 'twixt the farm and the lip. Nothing short of government control, it is believed in Washington, will keep American stomachs filled. Page 38.

FARM LABOR is where the present shortage is felt. The University of Illinois has a plan for sending recruited men to the farmers for work under orders in the fields just as they are sent to military camps for drill. Page 39.

OREGON'S radical minimum wage law for women and its ten-hour law for men were both upheld by the federal Supreme Court on Monday—a thumping day's work. The decisions on these two laws, the Adamson eight-hour law for railroad men, the Webb-Kenyon prohibition law and the Mann white slave law, all since January 9, give social legislation for 1917 a white stone the size of Gibraltar. Page 33.

EVERY STEP in the giving, collecting, packing, shipping and delivering of medical supplies and of comforts for the troops has been organized by the Red Cross. The plan is devised to handle them with a smooth efficiency like that which picks up odd bits of metal on a moving platform and suddenly delivers a honking Ford car to the smiling purchaser. Page 34.

VOCATIONAL training may get a great boost from the military training law for school boys in New York state. Office boys and messengers and the kids in "dead end" trades will have to tote guns, but mechanics-in-the-making may serve the state with the tools of their trades. Page 35.

BUSINESS men have been put in charge of the reorganized state service of Illinois under the new civil code. Charles H. Thorne enlists as commissioner of public welfare, in charge of all the charitable and correctional institutions, as "a welcome opportunity to do my bit for my country." Page 40.

THE United Mine Workers have signed with their bitterest opponent in the late Colorado coal strike—the Victor-American Company. Page 40.

MINNEAPOLIS has a new housing secured through the cooperation of housing reformers and real estate men, that make it a model city. Page 41.

UNION printers and the Department of Health have joined forces for a health campaign in New York city. Page 41.

EIGHTY per cent of the New York "white wings"—the street cleaners—are disabled every year by sickness, losing an average of a week each. Page 42.

ARKANSAS went bone dry, gave votes to women—a nick in the solid South—appointed a State Charities Commission and improved its education laws at the recent session of the legislature. Page 42.

THE SURVEY

The Law of the Land

Minimum Wages for Women and Shorter Hours for Men

TWO decisions of greatest national importance were announced by the Supreme Court of the United States on April 9. The text is not yet at hand, but it is possible nevertheless to some extent to gauge their significance.

One ended the long suspense over the status of minimum wage laws by upholding the constitutionality of the compulsory Oregon law, giving the Welfare Commission power to fix minimum wages for women.

The other gave a new aspect to the power of state legislatures to regulate hours of labor for adult men, a power that has been exceedingly questionable since the Supreme Court twelve years ago, in the famous case of *Lochner vs. New York*, declared unconstitutional a law limiting the working day of bakers in New York to ten hours.

The hours-of-labor case came before the court in the form of an Oregon law which limits the working hours of male employes in "mills, factories and manufacturing establishments" to ten hours in each twenty-four. This is a more sweeping provision than any other legislation of similar character that has ever come before the court. An eight-hour law for miners has been upheld because the court believed mining to be an unhealthful occupation. A sixteen-hour law applying to men in railway train service has been held to be valid because such a limitation has a direct relation to public safety. But the ten-hour law for bakers, in the opinion of the court as constituted in 1905, had neither of these merits, and therefore was void, as an unwarranted interference with freedom of contract.

That the court should now uphold a general ten-hour law is evidence of a significant change in judicial opinion. The Oregon law covers trades in general, regardless of special hazard either to the public or to the employes. It covers even bake-shops, which twelve years ago the court said specifically no legislature had the power to do.

The effect of this decision, whatever the grounds on which it is based, must be to encourage the enactment of laws regulating hours for men, as well as women and children, wherever such regulation seems socially desirable.

The decision in the minimum wage case will be felt immediately in ten states where minimum wage laws for women have been enacted, but where watchful waiting for the attitude of the Supreme Court has hindered efficient enforcement. It will also stimulate legislation insuring the minima of decent

living for workers in those states which have hesitated to adopt minimum wage legislation while a test case was pending. Finally it places a broader interpretation upon the police power of the state than has ever been admitted before.

By its act the Supreme Court concedes that the state should interfere not only with long hours and injurious conditions of labor because public health is affected, but with wage payments. When Louis D. Brandeis appeared before the Supreme Court in December, 1914, as attorney for the defense, he based his argument on the cost to the state of underpaid, under-nourished workers. This cost he reckoned up with the aid of Josephine Goldmark of the National Consumers' League in an 800-page brief presenting conditions found in Oregon among working women by the Industrial Welfare Commission and confirmed by investigations in various states.

No decision was rendered at that time and on account of the reconstruction of the Supreme Court the case was ordered reopened in January, 1917. Mr. Brandeis, who had meantime been appointed as a member of the court, could not partake in the argument or sit in the case. But Felix Frankfurter, counsel of the National Consumers' League, who made the oral argument for the state of Oregon, again stressed the fact that the "grave consequences to the public health [of low wages], the general lowering of standards, the resultant drain on the taxing resources of the government gave indubitable grounds for state action." In a new brief, compiled by Miss Goldmark, the world experience supporting these assertions was brought down to date. This brief is the latest in a list of fifteen prepared by the National Consumers' League, which since 1908 have played a successful part in upholding the constitutionality of labor laws in state and federal courts of last resort.

In upholding the law four justices decided in favor, four voted in the negative and Mr. Justice Brandeis was disqualified from voting. Under the rules of the court no opinion was rendered, as there was no majority; it is simply announced that the decision of the Oregon Supreme Court in this case is sustained.

At a time when attempts are being made to break down working standards, at a time when industrial strain will be tense and at a time when the cost of living mounts up each day—these two decisions of the Supreme Court stand as bulwarks.

Standardizing War Relief

The Red Cross Plans for Reducing Misery

By Winthrop D. Lane

OF THE SURVEY STAFF

JUST as skilled surgeons, eager to dress the wounds of men hurt in battle, are of little use away from the bedsides of their patients, so medical supplies, though highly desirable, are of no avail unless at hand when wanted. Money, comforts, dressings—gifts and supplies of all kinds—are necessary for the relief and convalescence of men in the army and navy, but they are of about as much value as good intentions unless they can be conveyed promptly and in adequate quantities to the people for whom they are meant.

On the basis of these simple truths, the American Red Cross has just organized to render a new service. This step will constitute, perhaps, one of the most important efforts made in this country for the prevention of undue misery in war since the reorganization of the Red Cross sixteen months ago, when the departments of military and civilian relief were made distinct and base hospitals, hospital units, emergency nursing corps and other devices were begun to be organized by the military department.

The executive committee of the Red Cross created within the Department of Military Relief on March 21 the bureau of Red Cross Supply Service. Plans for the organization of this bureau had already been drawn up by W. Frank Persons, director of general work of the New York Charity Organization Society, who was loaned to the Red Cross two months ago. Mr. Persons becomes the first director of the new bureau, with headquarters in Washington, and Thomas W. Farnam, vice-president of the New Haven Bank, of New Haven, Conn., becomes associate director. Branches will be established in the principal cities of the United States. Men of national reputation have volunteered to aid in the work during the present war.

Objects of New Service

THE supply and movements of surgeons, nurses and other personnel have been organized by the devices mentioned above. The new bureau has to do only with supplies intended for the comfort and relief of soldiers and sailors. Stated succinctly, its objects are:

1. To afford full information of the standard, kind and quality of all supplies for military relief.
2. To collect, inspect and store until needed supplies produced for that purpose.
3. To distribute supplies of the right kind and quantity at the right place at the right time, and to have the ability to do so upon any and every request of the army and navy.
4. To stimulate the production of useful, standardized material, not only by chapters and members of the Red Cross, but by all interested organizations and by citizens generally.

When the naval and military forces of the United States are engaged in actual fighting, the American people will respond with overwhelming generosity for the relief and comfort of those who are in battle. Individuals everywhere and organizations of every description will at once want to contribute money and supplies of all kinds. Women's clubs will make surgical dressings, lodges will provide hospital comforts, churches will make clothes for convalescents, local chapters

of the patriotic societies will produce bandages, Sunday school classes will send games, commercial houses and others will send delicacies to eat, novels, tobacco, and a multitude of articles intended to add to the happiness of men in hospitals, on the decks of ships, in training camps and in trenches.

All of this motley material will have to be collected, transported and distributed. Who will know where it is most needed? How will confusion, waste and delay be avoided in getting it there? What guarantee will be furnished that it is of standard quality and that much of it will not be useless when it arrives? It is to answer these questions and to meet these needs that Red Cross Supply Service has been organized.

Let us see, now, how the new bureau will do its work. Red Cross Supply Service will receive from the army and navy promptly and, when possible, in advance of actual needs, specific information concerning the amount and kind of supplies needed, and the place of delivery. The director of each branch will be assigned specific territory. He will be responsible for the collection and purchase of supplies within that territory and for starting them, upon orders from the central office, upon the road to their destination.

Suppose a case of surgical dressings has been produced by a Sunday school in Marshalltown, Iowa. It is turned over to the Red Cross chapter in that city, if there is one. If not, the secretary of the nearest chapter, let us say in Des Moines, is advised of the existence of the case of dressings. He adopts appropriate means (possibly by securing a sample) of assuring himself that the supplies named are of suitable kind and quality to warrant their being received for distribution. He then authorizes the shipment of the case from Marshalltown to Des Moines. This may be done at the expense of the consignor, but when the case of supplies has passed into the possession of Red Cross Supply Service it will be sent on its further journey without expense to the producer. Its first journey will be to the branch warehouse in Chicago, there to form part of a larger shipment, or, upon orders from the Chicago office, it may be sent direct from Des Moines to the place where needed for immediate use.

To Stimulate Giving

THE case may be marked with the name of the Sunday school if desired. It will be marked also with a description of its contents. If various kinds of supplies are in the package they will be removed and each kind placed with larger quantities of similar articles at the committee's warehouse, to be repacked. This will still permit the larger packages to contain smaller bundles marked with the names of the agencies making them, if this is desired.

In announcing the new bureau the Red Cross is anxious to make clear that its sole purpose is to afford an efficient means of standardizing, collecting and distributing supplies. It has no purpose to control or to dominate their production. Every opportunity will be left free to others to produce in any quantity they desire, so long as products conform to desirable standards.

The organization of the new bureau gives effect to the

proclamation issued by President Taft in 1911 characterizing the Red Cross as "the only volunteer society now authorized by this government to render aid to its land and naval forces in time of war," and declaring that any other society desiring to render similar assistance must do so through the Red Cross.

In line with this proclamation President Wilson issued a letter last week in which he declared that "recent experience has made it more clear than ever that a multiplicity of relief agencies tends to bring about confusion, duplication, delay and waste." Herbert C. Hoover, chairman of the Commission for Relief in Belgium, in endorsing the Red Cross plan, said that "every country in Europe has gone through an era of disintegrated, overlapping effort, the multiplying of thousands of committees and tons of useless, inapropos, and wrongly destined material. In general," he said, "the one fundamental factor in war organization is centralization of executive, and such centralization cannot be effected if there are a lot of national semi-independent boards or organizations operating outside, or partially outside, the direct control of the Red Cross Executive."

Branch offices have been opened in Boston, New York city, Chicago, New Orleans, Denver and San Francisco, with a director in charge of each. A small informal committee of prominent business men is to aid each director of a branch.

The director of the New York branch is Otto T. Bannard, of the New York Trust Company. Mr. Bannard will give practically his entire time to this work, and he will be assisted by an advisory committee consisting of Henry James, chairman of the executive committee of the New York County Chapter of the American Red Cross; Irving T. Bush, of the Bush Terminal Company; Newcomb Carlton, president of the Western Union Telegraph Company; A. L. Salt, vice-president of the Western Electric Company; Charles D. Norton, vice-president, First National Bank, and others.

Thirty thousand square feet of warehouse space has been donated to Red Cross Supply Service in New York city by Mr. Bush. Excellent shipping facilities by both water and rail are provided, and the New York warehouses are likely to serve as the central distributing point for supplies for any American forces, naval or military, sent abroad. Mr. Bannard has established his office on the thirty-fourth floor of the Metropolitan Tower.

In Boston, direction of Red Cross Supply Service headquarters has been assumed by Henry S. Dennison, president of the Dennison Manufacturing Company. Associated on the Boston committee are Allston Burr, chairman of the Boston Chapter of the American Red Cross; John W. Hollowell, of Stone & Webster; A. C. Ratschesky, president of the United States Trust Company; J. Franklin McElwain, and others. Warehouses and offices are located at 1000 Washington street.

The Chicago committee is headed by A. A. Sprague, 2nd, president of Sprague, Warner & Company. Among the members are the following: James Simpson, president of Marshall Field & Company; John W. Scott, of Carson, Pirie, Scott & Company; Robert J. Thorne, president, Montgomery Ward & Company; William Hibbard, president, Hibbard, Spencer, Bartlett & Company; and Homer Stillwell, of Butler Brothers. Offices are at 112 West Adams street, and the warehouse at 225 East Illinois street.

Directing the New Orleans branch will be H. R. Labouisse, a retired banker, assisted by Frank B. Hayne, William Mason Smith, and William E. Stauffer. Offices will be at 316 Carondelet street, and the warehouses at the United States Mint.

The San Francisco branch will be in charge of A. B. C. Dohrmann, head of a large mercantile firm. Offices will be at 502 California street.

Headquarters have been opened in Denver at 1612 Fifteenth street with William G. Evans as director. The warehouse is at the same address.

The expenses of Red Cross Supply Service at the central office in Washington and at each of the branch offices will be paid from the national fund of the Red Cross. It is expected also that donations will be made by local people to meet the cost of each branch manager's office and warehouse.

Tools as Well as Guns

Vocational Education as the Equivalent of Military Training

By *Arthur D. Dean*

CHIEF OF THE DIVISION OF VOCATIONAL SCHOOLS, NEW YORK STATE EDUCATION DEPARTMENT

THERE is deep educational significance, especially for the future of vocational education, in the revised Welsh-Slater bill recently signed by the Governor of New York and now law in that state, and in the annual appropriation bill that has already passed both branches of the legislature.

It will be remembered that the Welsh-Slater bill as passed last year created a Military Training Commission and compelled all boys between sixteen and nineteen years of age, except those at work, to take such military training as the commission might prescribe. It affected only about 22,000 boys of the specified ages, since it was practically limited to boys at school. The revised law strikes out the exemption. It therefore extends compulsory military training to all boys sixteen, seventeen or eighteen years old. The number of these in the state is estimated at about 220,000. Thus the new law multiplies by ten the number who will receive such training. In taking this action the legislature seems to have responded to the very strong feeling, not only in New York, but elsewhere, that school boys should not be selected as the only ones to receive military training.

The revised law goes much farther than this, however. In the first place, it creates three significant bureaus. The names

of these and the amounts allotted to each in the annual appropriation bill, in round numbers, are as follows: Bureau of Physical Training, \$60,000; Bureau of Technical Military Training, \$150,000; Bureau of Vocational Training, \$90,000. The first bureau is to have the supervision of the compulsory physical training in the schools for all male and female pupils above the age of eight, during periods which shall average at least twenty minutes in each school day. The second bureau is to be charged with the specific military part of the program for all boys above the age of sixteen years and not over the age of nineteen years for periods aggregating not more than three hours in each week between September first of each year and the fifteenth day of June next ensuing. The third bureau will interpret and administer the following sentence in the revised law:

"Such requirement as to military training, herein prescribed, may in the discretion of the commission, be met in part by such vocational training or vocational experience as will, in the opinion of the commission, specifically prepare boys of the ages named for service useful to the state, in the maintenance of defense, in the promotion of public safety, in the conservation and development of the state's resources, or in the construction and maintenance of public improvements."

This provision is a very forward and interesting step. It

is likely to have a far-reaching effect on the number and character of vocational schools in New York state, and on the kind of work for which boys fit themselves. In commenting on the revised law, John H. Finley, state commissioner of education and a member of the Military Training Commission, said: "For the post of chief of the Bureau of Vocational Training we must get the very best man we can—it's a \$5,000 place, but a \$25,000 job. I think it will offer the right man one of the largest conceivable opportunities for a piece of truly constructive work for the state."

It is evident that this bureau must sift out such vocational opportunities as fit boys for service "directly useful to the state." It must make recommendations to the commission that will guide it in interpreting those activities in which boys are engaged that may be directly useful in the maintenance of defense, in the promotion of public safety, in the conservation and development of the state's resources or in the construction and maintenance of public improvements. It offers opportunities for a very constructive plan of effort. It anticipates in a scheme of military preparedness a line of action that draws its cue from the exempting provisions that have been recently a part of the plan of conscription service of England. It is drawn from the experience of France which has had to come to the point of recognizing that men must be taken from the front for service behind the lines. It is based upon the procedure of Germany, who found it necessary in the midst of war to organize her entire "man power."

Effect on Vocational Education

COMMISSIONER FINLEY said further:

"Obviously the program puts the maintenance of defense as the first opportunity, but it recognizes the factors which make sudden and effective mobilization for that purpose possible, and, beyond that, it foresightedly sees that the plan has in it elements which will make it of value in other than times of war or peril of war. It is a program whose realization should be immensely valuable in the development of material resources and even more valuable in identifying as patriotic service all such activities as this program includes, and in cultivating civic and patriotic spirit through that very service, and in training for it."

No one knows how far its effect upon the vocational education system of New York will reach. It may modify the present system or it may attempt to fit in with the present system, or the present system may be made to fit in with the "military equivalent" idea of the commission. Vocational training, from the standpoint of contributing to a military equivalent, and a military equivalent, from the standpoint of vocational preparation, are not incompatible. No one knows; but I personally should say that the proposal would do a great deal toward promoting the development of day part-time and continuation schools and evening trade schools. The boys who are at work will obviously enroll in evening vocational schools in order to meet in a large measure that training that will specifically prepare them for service directly useful to the state, and in this way will be excused from the major part of the required military service. It may be confidently expected that the establishment of part-time schools (on, perhaps, the Fitchburg and Cincinnati plans) will be greatly stimulated.

It is not likely that boys so enrolled will be completely excused from any military training. Personally it would seem to me that they should be brought together once in a while to receive some direct lesson which will make it clear to them that they are, through this indirect preparation for military service, really serving directly the state, for otherwise

these boys would gain the idea that they were simply learning trades for their own ends, and this is not the fact. They are learning these trades and are excused in part from attendance upon military training because the trade which they are learning is of service to the state in time of war.

The plan will have some tendency to develop day vocational instruction for those boys who are already in school and are subject to military training. For here will be an opportunity for a boy to "kill two birds with one stone." He may learn a trade which will fit him for profitable employment and he may meet, in part at least, the military training requirement. Of course, there will be school boys who are not in attendance upon vocational schools who will expect to be excused from military drill on the basis that they are taking a few periods of a week in a manual training shop making tabourets, coat-hangers and sleeve-boards. It is to be hoped that the military commission will accept the definition of vocational training as laid down in the Smith-Hughes bill and in the laws or practice of such states, for example, as New York, Indiana and Massachusetts.

Do Bell-hops Serve the State?

ONE of the most far-reaching results will be to show boys, parents and the public that a good many of the occupations in which boys are engaged are not in themselves directly useful to the state, either in the maintenance of defense or promotion of public service, in the conservation of the state's resources or in the construction and maintenance of public improvements. For the "experience" which these boys acquire through work (for the law implies that the occupation of the boy may be a military equivalent) in unskilled occupations is not within the field of military preparedness. On the other hand, many of the skilled industries in which boys are engaged do serve the interests of the state. It is clear that industries dealing with metals, machinery and conveyances (for example, manufacturing implements and tools, sheet-iron work, forging, structural iron work, rolling-mill work, firearms, railway equipment, engines and boilers, electrical apparatus, boats and boat-building and agricultural machinery) are in the class which is directly useful in the maintenance of defense. It is equally clear that boys who are delivering messages, carrying bundles, driving grocery wagons, picking fruit in the canning sections, working in cotton mills or mines, and so on, would not be considered as performing service which brought "experience" that would specifically prepare for any state service.

Of course, there are occupations which stand between these two extremes, and the question of whether or not they contribute to state service under one of the four heads is for the commission to decide. But what an eye-opener it will be to young people and to employers to learn that a state commission with full power has decided that many occupations open to children are not recognized as coming under "experience" contributory to the four heads; that what these children do does not promote public safety or conserve state resources or contribute to the maintenance of public improvements or are of little, if any, service directly useful in the maintenance of defense.

Some deadly parallels are bound to be drawn. The employed boy who is learning the trade of machinist has his "experience" recognized, while his pal who is the bell-hop must attend military drills or enroll in a vocational school. The young agriculturist of the country vocational school who has his home projects in farm crops may play ball at a time when his schoolmate of classical inclinations shoulders his gun for the weekly drill. Thus do the ploughshare and the sword each serve the state and this is as it should be.

COMMON WELFARE

WAR AND LAWS OF SAFETY AND HEALTH

WHEN by a vote of 373 to 50 in the House of Representatives and 82 to 6 in the Senate, the Congress of the United States last week declared this country to be in a state of war with the German imperial government, it opened up the necessity for a host of new adjustments, not all of which are military. The question of financing is one of them. Reference was made in the SURVEY last week to the proposals of the American Committee on War Finance, which involve a heavy increase in the tax on incomes of \$5,000 and over. News from Washington indicates that in the fiscal plans now under consideration the possibilities of the income tax are not to be overlooked.

Another question of immediate importance is the matter of industrial unrest and the standards of labor that are to prevail in the manufacture of supplies for the government. As in England at the beginning of the war, there is a demand just now for such modifications in health and labor laws as will mean for the time being their virtual abrogation. Many people believe, despite the experience of England to the contrary, that unlimited overtime and seven-day labor will result in maximum efficiency in output.

Last week at the meeting of the Labor Committee of the Council of National Defense the opinion was expressed that there should be concessions in the interest of harmony, but that standards, so far as possible, should be maintained. That opinion has found further expression in some recommendations drawn up by the executive committee of the Labor Committee and adopted by the Council of Defense. These recommendations are as follows:

"The defense and safety of the nation must be the first consideration of all patriotic citizens. To avoid confusion and to facilitate the preparation for national defense and give a stable basis upon which the representatives of the government may operate during the war, we recommend:

"1. That the Council of National Defense should issue a statement to employers and employees in our industrial

plants and transportation systems advising that neither employers nor employees shall endeavor to take advantage of the country's necessities to change existing standards. When economic or other emergencies arise requiring changes of standards, the same should be made only after such proposed changes have been investigated and approved by the Council of National Defense.

"2. That the Council of National Defense urge upon the legislatures of the states, as well as all administrative agencies charged with the enforcement of labor and health laws, the great duty of rigorously maintaining the existing safeguards as to the health and welfare of workers, and that no departure from such present standards in state laws or state rulings affecting labor should be taken without declaration of the Council of National Defense that such departure is essential for the effective pursuit of the national defense.

"3. That the Council of National Defense urge upon the legislatures of the several states that before final adjournment they delegate to the governors of their respective states the power to suspend or modify restrictions contained in their labor laws when such suspen-

sion or modification shall be requested by the Council of National Defense and such a suspension or modification, when made, shall continue for a specified period and not longer than the duration of the war."

Samuel Gompers is chairman of the Labor Committee and of the executive committee of that body as well. The other members of the executive committee are William B. Wilson, secretary of labor; V. Everit Macy, president of the National Civic Federation; James Lord, president of the Mining Department, American Federation of Labor; Elisha Lee, general manager Pennsylvania Railroad Company; Warren S. Stone, grand chief International Brotherhood of Locomotive Engineers; Frank Morrison, secretary American Federation of Labor; Lee K. Frankel, third vice-president, Metropolitan Life Insurance Company; James O'Connell, president Metal Trades Department, American Federation of Labor; A. Parker Nevin, National Association of Manufacturers; Louis B. Schram, chairman Industrial Accident Prevention Department, the National Civic Federation.

OF similar import is a vigorous letter issued by Florence Kelley, general secretary, and Pauline Goldmark, research secretary, of the National Consumers' League. "America today is in danger of the fate of the runner who, by a spurt at the beginning of the race, sacrifices the staying power that makes for victory. Labor laws can be repealed, but not the laws of physiology," it reads.

The letter is addressed particularly to officers of the National League for Woman's Service, the New York State Woman Suffrage Party, the National Council of Women, the woman's section of the Woman's National Service School, all of which have offered the services of their members to state or federal government.

"The universal impulse to sacrifice prompts eager men and women to give their all—sons, fortunes, strength, home, efforts of every kind—to the country in war time. In their zeal and haste, there is danger that the safeguards of the life, health and vigor of working people will be lost, upon which success depends.

TWO IN ONE

From "United Hospitals," to be published occasionally by the United Hospital Fund of New York city, an organization of 46 private hospitals which last year cared for 132,615 bed patients and 560,146 dispensary cases.

"In the whole industrial history of the country we have never faced so critical a moment. The United States is being prepared on a colossal scale and the wage-earners are called on to exert their fullest working capacity. They will respond to the call. It is of supreme importance for the efficiency of the nation as a whole that the energies of this army should be kept at their highest pitch. Now as never before we must remember that output and health are inseparable. If the human resources of the nation are to be preserved, our own experience and that of other warring nations must not be ignored."

The letter recites the bitter experience of England in permitting long hours, night work and other exhausting exemptions from existing labor laws, and shows that already similar proposals have been made in this country—an attempt to abrogate the fifty-four-hour law for women in New York state engaged in the manufacture of any supplies for army and navy, and an exemption to the one-day-of-rest-in-seven law, which has been allowed the Curtis Aeroplane Company by the State Industrial Commission for an unlimited length of time.

The letter concludes as follows:

"The present crisis in the United States calls for the best thought and effort of all our citizens. It calls for renewed and persistent exertions to preserve the hard-won safeguards of legislation for labor and public health. Will you not join us in the effort to

"Preserve short working hours wherever they exist;

"Maintain the present minimum of sanitation and safety;

"Keep the children in school, by means of scholarships where necessary;

"Uphold the standard of living for the family, whether the chief wage-earner is a soldier at the front, or working on national supplies at home?"

"We cannot believe that the people of the United States are willing to sacrifice all the difficult achievements of social progress in the impulse to defend their country without thought of the future, or even of the present need of the highest industrial efficiency. For this efficiency can only be secured by holding to the protective laws proved by science to be essential to health and well-being.

"In this common strain upon the nation the workers will bear the heaviest part. It is for us to see that they shall not be uselessly sacrificed."

FEDERAL FOOD CONTROL PROPOSED

DEMANDS for an efficient federal control of the distribution of food, as a means not only to reduce the retail cost to consumers, but also to assure a market for increased crops, are raining in upon Congress. The Council of Nation-

PROHIBITION FOR PREPAREDNESS

SOcial workers, you must all know what liquor means in war time—leakage in health, leakage in efficiency, more prostitution and consequently more disease. I have just come from making a survey of four cities under prohibition, Charleston, Richmond, Columbia and Savannah. Forced against their will to go dry, these cities are now making such a remarkable showing in reduction of wreckage that, with the exception of Charleston, they are strong for prohibition.

But I found women distressed that their boys were to be ordered North into wet states. "The North is full of preparedness talk, but does it really think hundreds of open saloons make for preparedness?" was their question to me.

Social workers of dry states, you should ask the governors of the twenty-five dry states to call on the twenty-three wet states to close the saloons.

Social workers of wet states, you should not lose a minute in demanding that your state immediately close its saloons.

Prohibition in war time is a well-proven bit of preparedness. It means more health, more efficiency, less prostitution in the field and infinitely better conditions in the home.

Up to now you have not really done your part against the saloon. But now is your great chance. I beg of you to be leaders in prohibition-preparedness.

ELIZABETH TILTON

al Defense is considering the matter. Howard Coffin, its adviser on munitions, predicts that a food control will be established within six months.

It is reported that the White House is considering the naming of a man of broad experience in the feeding of large numbers of people to take charge of this great task, and Herbert C. Hoover, director of the Belgian Relief Commission, is mentioned as the most likely selection. His achievements in organizing and maintaining the work of Belgian relief during the war in Europe are thought to assure him of the ready support of Congress in any plan which he may work out for the more economical victualing of the United States during the remainder of the war.

That the country is facing a dangerous shortage of food and that this shortage, under present legal conditions, will be aggravated by high retail prices and by wasteful methods of marketing the crops, is the first fear of experts in the Department of Agriculture. "Agricultural preparedness" is the theme of a campaign which the department is now conducting, through the press and through speeches and letters of appeal to organized farmers everywhere. The farmers are asked to raise more foodstuffs this year, for patriotic as well as

for financial reasons. They are informed that the winter wheat yield for 1917 is estimated at 71.1 per cent—the worst condition ever recorded by the crop experts. They are shown that the stocks of potatoes, oats, corn and other staples are light, and that wheat is scarce in all countries. David Lubin, American representative at the International Institute of Agriculture in Rome, has sent word to President Wilson that the world's store of food has never been so low as at present.

Nevertheless the farmers are reported not to have responded enthusiastically. They want a guarantee of a favorable price and a safe market. Such a guarantee can only be given through federal control of the distribution of food supplies. The Council of National Defense is understood to incline to the idea that a food controller, vested with full authority to organize and run the machinery of such control, would do more to establish the farmers' confidence in a good market than would any reorganization of existing branches of the government.

On the side of the consumers, the case is more serious. The rise in wages during the last ten years has perceptibly lagged behind that of retail prices. At the headquarters of the American Federation of Labor in Washington the statement is made that there is no likelihood this year of any such increase in wages, applying to the vast majority of workers, as would meet the expected further increase in cost of food. Hence the labor movement is keenly interested in the reduction, or in any event, the regulation, of food prices.

Suggested duties of a food controller—a man of the type of Goethals or Hoover, used to carrying big projects through to detailed completion—are many. He would take an emergency census of the food and livestock throughout the country, using present federal agents for this work. He would take stock of the transportation facilities, the condition of roads, the possibilities of local milling, canning, storage, drying and other preparation of foods. He would secure from Congress authority to organize the various services in the Department of Agriculture, the Post Office Department, the Interstate Commerce Commission and other branches of the government to create a complete system of daily intelligence as to the need for delivery of food in every town and section of the United States.

The same intelligence system would direct the shipping of all foodstuffs ready for market. Transportation would be economized. Local supply would be stimulated. Adaptation of local markets to local production would be encouraged. Waste through duplication of delivery would be penalized, as the system developed, until the food con-

troller would bring about the elimination of unnecessary charges.

RECRUITING OUR SOLDIERS OF SUSTENANCE

BEFORE the Chicago Association of Commerce, the Agricultural College and the department of economics of the University of Illinois launched their "civil-military service" scheme for the national mobilization of food production. Dean Eugene Davenport, who presented it, based the plan upon the following facts:

Food production in the United States is not now increasing in proportion to the increase in population. The production of food is our strongest war asset, in view of the reduced production in Canada and western Europe. Without regard to the disturbance of basic industrial conditions, even to the production of the food of the people, every nation in going to war puts men into active military service; indiscriminate enlistment from the farms, with no plan for labor replacement, is certain to reduce food production below the level of positive need.

Enlistment for food production in this military plan of mobilization must be as definite as for service at the front, if an adequate food supply is to be assured, and the War Department must as rigorously protect food production as any other means of national defense. With land enough, if properly cultivated, to feed both herself and western Europe, America need not limit the food of her people, as more men would be

required to enforce a police restriction of food than would be required to turn scarcity into abundance. The farmer has reached the limit in the use of machinery and in the employment of his children to replace the hired help that has gone to the city. Military enlistment from the country must not only be offset, but the farmers' present labor supply must be increased.

To meet all these ends, the following procedure is proposed: To register every farm owner, tenant or manager, the number of acres in tillable, pasture and timber land, and the number of men usually employed or that would be needed to insure maximum crops; to enlist in the civil-military service and under military pay, men of military age or older who may be permanently or temporarily unfit for service at the front, and also boys from fourteen to sixteen years old in country and city; to establish training camp farms on land suitable for intensive farming, rented at convenient points by the government, where enlisted men not otherwise employed may be gathered, housed and employed in raising crops requiring a maximum amount of hand labor, such as vegetables, small fruits, cotton and tobacco; to erect at these centers facilities for drying and canning such food products, for preservation and transportation.

As the largest asset for food production is the thousands of farms already organized under the management of experienced farmers, independently operated through established channels of trade, most of the enlisted men would

be assigned to work them. When employed by the farmers these enlisted men would be regarded as on furlough and off government pay, receiving from the farmer the going wage of the locality, which is above the pay of soldiers. Men dissatisfied with these conditions of employment might return to the camp at the lower wage, and also in case of discharge for unsatisfactory service. Enlisted men not employed on private farms would be under military discipline at the camp farm, but under agricultural leadership, devoting their first attention to the production of food under the direction of an agricultural officer. Time for regular military drill would be reserved. Men of military age and above, without farm experience, would be quartered in regions engaged in intensive farming where oversight is possible. New enlistments would systematically replenish the numbers at the camp when depleted by men entering active military service. Enlistment for civil-military service would not only be considered as a patriotic duty, but would be made attractive through such formal recognition as uniforms, use of special organizations, ranks and degrees of efficiency, promotion and commissions.

Shortage of crops the world round gave timeliness to this mobilizing plan of the great prairie state of Illinois, as it does to the governor's initiative in calling a conference of the governors of all the great agricultural states to formulate a plan of concerted action for the conservation and production of the nation's food supply.

Drawn by Michael Kopsco for the American-Hungarian "People's Voice"

THE FIRST LINE OF DEFENSE

Dean Davenport warns the United States against the mistake made by every warring nation in Europe, of paying little or no attention to the production of food until its limitation is suddenly found to be necessary. America's power to produce food, he says, "far exceeds her strength at any other point in the struggle for mastery. If America is to win in the great war," he concludes, "she must mobilize her forces for food production as definitely as her fighting."

EFFICIENCY IN ILLINOIS' STATE SERVICE

GOVERNOR LOWDEN'S first appointments under the new civil code of Illinois, reported in detail in the SURVEY for March 10, are held to fulfill amply his pledge to reconstitute the state service on the basis of efficiency without political preferment.

The governor's choice of five of the nine department directors was based on their business experience. For director of finance he appointed Omar H. Wright, president of the Second National Bank of Belvidere, member of the executive council of the State Bankers' Association, former councilman and president of the Board of Education of his home town. The director of the Department of Public Works and Buildings, charged with letting contracts, furnishing supplies, maintaining the upkeep and erecting buildings for all state institutions, is Leslie D. Puterbaugh, of Peoria, who has been judge in the probate, circuit and appellate courts, a director of two banks and president of the board of trustees of Bradley Polytechnic Institute. William H. Stead, of Ottawa, attorney-general of Illinois from 1905 to 1913, and a man of large executive experience, heads the

Department of Trade and Commerce. To the directorship of the Department of Public Health, Dr. C. St. Clair Drake has been promoted from the secretaryship of the State Board of Health. In that office, as in the Health Department of the city of Chicago, he has a creditable record for service covering twenty-two years.

The department for which the governor found it most difficult to select a director was that of public welfare, under which all the charitable and correctional institutions of the state are now placed. Disappointed in not securing Col. C. B. Adams, recently appointed commissioner of prisons in Massachusetts, Governor Lowden appointed Charles H. Thorne, of Chicago, long head of Montgomery Ward and Company's mail order house, from which he had retired some time ago. A man of means and leisure, he accepted this public responsibility with the statement that "duty to the state under present conditions is paramount to whatever considerations stand in the way of its performance," and that the proffer of this position afforded him "a welcome opportunity to do my bit for my country." He gives his entire time to the work.

Albert D. Early, of Rockford, brings to the presidency of the State Civil Service Commission his experience as an active member of the Illinois Civil Service Reform Association, the presidency of the Illinois State Bar Association and his trusteeship of Northwestern University and the Rockford Public Library.

Governor Lowden has assured each director either the nomination or veto of every appointment to be made in his department, which is not in the classified list of the civil service.

The selection of the departmental staffs will be awaited with interest, especially that of the Department of Public Welfare, which is now open to the choice of the best available specialists as assistant director, superintendent of charities, criminologist, superintendent of prisons, superintendent of pardons and parole, alienist, and the board of five public welfare commissioners. Only such changes in the superintendency of state institutions are contemplated as may be required to improve the service.

UNIONS IN THE COLORADO COAL MINES

TWO years and four months after the end of the Colorado coal strike of 1913-14, word comes that the United Mine Workers of America have signed an agreement with the Victor-American Fuel Company, the second largest coal company in Colorado, involving full recognition of the union, the check-off for union dues and provision for check weighmen on the scales.

To appreciate the significance of this development it must be recalled that of all the companies involved in the strike, the Victor-American Fuel Company was regarded as the most implacable foe of unionism. Wherever there were "closed" camps, those of the Victor-American were closed the tightest. Wherever men who talked unionism were sent "down the canyon," they were sent a little faster and a little further from the camps of this company than from any other.

Commenting on this bit of news from Colorado the *United Mine Workers' Journal*, the official organ of the union, says: "The spirit for organization that brought about the settlement with the Victor-American Company is not confined to the miners of this company

FLIES AND BABY DEATHS

THAT the largest number of infant deaths occur during the fly season is diagrammed by the Pennsylvania State Department of Health. Heat, wrong food, too heavy clothing all play their part, but evidence exists that flies aid in transmitting typhoid, cholera, dysentery, diarrhea, ophthalmia and perhaps poliomyelitis. Tuberculosis bacilli have been found upon a fly's feet, also in his digestive tract fifteen days after he was marked in a patient's room. The only sure way to avoid the fly is to give him nothing to live on. He breeds chiefly in manure and garbage. Clean stables, clean houses, clean yards are death to the fly.

only. The employes of the Colorado Fuel and Iron Company [the Rockefeller company] openly announce that they are members of our union and demand agreements through the organization, instead of the 'almost as good' Rockefeller method of adjusting wages and grievances."

ADVANCED HOUSING LAW FOR MINNEAPOLIS

AS a result of five years' agitation and effort by the Minneapolis Civic and Commerce Association, supported in the end by the Minneapolis Real Estate Board, Builders' Exchange, Minnesota Chapter of Architects and the Central Trades and Labor Assembly, the legislature of Minnesota has passed a housing code for Minneapolis which, combined with the new building code secured by that city last year, will place it among the foremost American cities in insuring adequate light and ventilation, decent sanitary conveniences, safety from fire and proper privacy for every family.

The movement for better housing in Minneapolis is another interesting instance of the modern trend in civic and commercial agencies. The Minneapolis business and professional men's organization, called the Civic and Commerce Association, has given much emphasis to the civic side of its work from its inception. At the very start it secured as one of its secretaries Otto W. Davis, who had accomplished the passage in Columbus, Ohio, of a housing code which at that time was the first code in this country to apply to the one- and two-family houses regulations similar to those which had hitherto been applied only to tenement houses. Such regulation has now become an accepted principle.

Minneapolis at that time was resting

Doney in the Cleveland Plain Dealer

"THE SHACKLES BROKEN"

in quiet confidence that it had no housing problems. The Civic and Commerce Association undertook an investigation to find out the facts and soon uncovered a half dozen embryo slums containing every variety of housing evil, many of them of a character that had long ago been prohibited in other cities. Fortunately the quantity of such evils was found to be small.

Four thousand copies of a liberally illustrated report describing these conditions were circulated by the association. The Minneapolis newspapers gave whole pages to the matter and were united in their demand for the passage of laws that would prevent any increase in housing ills. The new code is the result.

One of the interesting features of the

movement in Minneapolis has been the cooperation obtained from other bodies, particularly from the Real Estate Board, which appointed a strong committee of twenty-five members and held regular weekly meetings, going over the code in detail for nearly a year. Fred G. Smith, chairman of the Real Estate Board Housing Committee, became so interested that he was instrumental in getting the National Real Estate Association to appoint a housing committee of which he is chairman. This committee is endeavoring to awaken the interest of real estate men throughout the country to the importance of cooperating with other agencies in securing better housing.

Interesting features of the Minneapolis code are a provision limiting the height of dwellings (except hotels) to six stories and basement or seventy-five feet, and a provision requiring side yards proportionate to the height of the building.

UNIONS ORGANIZING AGAINST DISEASE

MOBILIZATION of the trade unions to resist the invasions of disease is one of the latest moves for public defense. Dr. Louis I. Harris, head of the Division of Industrial Hygiene in the New York city Department of Health, met recently at the Labor Forum a large delegation of men and women representing various unions, and with them planned this cooperative effort to check occupational disease.

For some time Dr. Harris has been working with individual unions. With the assistance of the furriers' union he made a study of disease hazards in handling skins and furs. With Typographical Union No. 6, popularly known as "Big Six," he has arranged to have offi-

—Baltimore Evening Sun

THE CHILDREN'S HEALTH CRUSADE

THIRTY-FOUR states have plans already under way for baby week. The first week of May is the time agreed upon by the General Federation of Women's Clubs, but Nebraska, Massachusetts, California and Pennsylvania will observe it earlier to avoid possible risk of poliomyelitis. The importance of complete birth records has been chosen as their special study by Washington, Illinois, Iowa, New Hampshire and Ohio. Delaware will discuss the prevention of infant paralysis; North Dakota, the needs of children below school age; Kansas, which had last year the largest number of local celebrations, will emphasize birth registration, instructing mothers in infant care, the care of expectant mothers. The federal Children's Bureau at Washington has published a bulletin to assist committees in preparing for baby week. It refers to many agencies from which bulletins, list of exhibit material and other assistance may be had for the asking.

cially designated members report to him on unhealthful conditions in composing rooms. This is the beginning of a democratic system of self-inspection, and of the necessary education for it. It means, says Dr. Harris, that representatives from all laboring groups in the city act as a vigilance committee guarding sanitary standards; that they have opportunity to confer upon their needs directly with the official sanitary agencies of the city, and to have a personal share in disseminating among workers the needed information. More than seventy members have already been appointed by their unions to serve on a committee under the direction of the Division of Industrial Hygiene.

In addition to securing the point of view of practical tradesmen, prompt notice of conditions inimical to health, and widely diffusing advice on industrial disease and personal hygiene, this cooperative plan has a definitely economical value from the administrative angle. For employes' reports give frequently valuable information to the inspector and save his time and effort in investigations when he goes to check them up. If the delegates report conditions as satisfactory, there seems to be no need of inspecting that plant immediately. It is important to avoid wasting energy when a limited staff tries to oversee fully 50,000 work places in the city. The successful cooperation with "Big Six" promises a wider solution of the problem of health and sanitation in occupations.

SOME HAZARD OF CITY HOUSE CLEANING

STREET-CLEANING does not appear to be a particularly hazardous occupation, yet every year eight out of ten "white wings" are physically disabled from causes in their occupation, according to a recent study by Dr. S. I. Rainforth, chief physician of the Department of Street Cleaning of New York city, discussed by Dr. Creighton Barker as follows:

For \$2.50 a day 6,000 of these street-cleaners, mostly aliens, work ten hours and remove refuse and dirt from 1,500 miles of street. This is equivalent to a road sixty feet broad extending from New York to Kansas City. In a year there are nearly 813,000 cubic yards of "sweepings" collected. All days and every day this work must be done—on pasty asphalt under the scorching August sun, in driving rain, in sleet and snow. It is not remarkable that 80 per cent of them are disabled each year. Dr. Rainforth's figures show that there are 5,484 cases of disability each year, causing a loss of approximately 56,000 days.

The incidence of certain types of diseases is interesting to note. Accidents, including freezing and sunstroke, lead the list, causing 18 per cent of the dis-

abilities. Conditions resulting from improper and intemperate living, such as gout and chronic arthritis, alcoholism, diseases of liver, kidneys and digestive tract, cause 16 per cent. This gives a fair idea of the type of labor employed. Myalgia, neuralgia and neuritis, results of great physical exertion, are responsible for 14 per cent. Diseases resulting from exposure to cold and lowered vitality, such as pneumonia, bronchitis and influenza, but not including tuberculosis, cause 9 per cent of the cases of disability.

It might be supposed that the tuberculosis incidence would be high, considering the constant inhalation of street dust and the exposure to severe weather conditions. The fact is, however, that all forms of tuberculosis caused but 1.4 per cent of all disabilities.

A morbidity rate of 80 per cent is extremely high. To combat it the city of New York gives free medical attention to all employes and requires a complete physical examination once each year. In the Department of Street Cleaning seven physicians give their full time to this service. By this means, the average time lost per man compares favorably with the per capita loss of time because of illness in normal groups. The time lost by employes of the Department of Street Cleaning averages 7.8 days per man, a slightly higher percentage than that found by Frankel and Dublin in their North Carolina sickness survey. There white males (in all occupations) lost 7.6 days a year; Negroes, 7.4 days.

Certain preventive measures have been adopted also, to lower the personal hazard. Most unique among these is the practice of sweeping "against the traffic," that is, sweeping in the opposite direction to which the traffic is going. This simple measure has done much to lower the number of accidents caused by vehicles. First-aid kits are conveniently placed in all stables and docks; and the application of tincture of iodine to all wounds as soon as possible has perceptibly lessened the number of days lost because of infected wounds.

MAKING OVER ARKANSAS IN SIXTY DAYS

MANY constructive measures for social reform were passed by the Arkansas legislature during its sixty-day session ending March 8. An act that stimulated especial interest was that calling for a constitutional convention which will be held in Little Rock November 19.

For the first time Arkansas will have compulsory education, requiring all children from seven to fifteen, inclusive, to attend school. A compulsory attendance law was passed in the state several years ago, but the counties having a large Negro population were exempt, and

this left over half of the state without any such attendance law. Heretofore there have been no uniform textbooks, but they were changed indiscriminately, making a hardship, especially for those children who come from poor families. Now a commission is created which will make contracts for textbooks and arrange for their uniformity. The act also provides that school boards shall furnish books to children who are unable to buy them. Moreover, a commission composed of nine members appointed by the governor is to investigate means of eliminating illiteracy in this state.

The University of Arkansas and the normal schools have heretofore been in politics, since those interested in the university found it necessary to lobby at the state capitol in order that the legislature vote a sufficient appropriation. The new law will remove these educational institutions from politics by the levying of a tax of one-eighth mill to pay the interest on the common school bonds held by the state. Another educational measure passed will enable the state to secure federal aid for teaching vocational subjects in public schools.

The solid South has at last been broken into by the suffragists, the Arkansas legislature having passed an act permitting women to vote in the primary elections. Practically this gives almost full suffrage, for the primaries in Arkansas virtually determine the election. Another act permits women who pass the examination to practice law in the state courts and two additional acts removing disability of married women regarding property were passed.

A free state employment bureau was created to be operated in connection with the state labor commissioner's office.

Following the decision by the Supreme Court that the Webb-Kenyon bill is constitutional, Arkansas was the first state to pass the bone dry law prohibiting shipments of liquor into the state.

And there was also created a state general hospital to be located in Little Rock. For this purpose \$200,000 was appropriated, the money to come from the sale of state land adjoining the state school for deaf mutes. And most important is the creation of a school for the feeble-minded, the proceeds of the sale of one-fourth of the land above mentioned to be used for this purpose.

Another act provides for an industrial school for delinquent girls, and the removal of the state reform school for boys to another site on good tillable land where they can have outdoor employment. This is not adequate, but is an encouraging beginning. To study the charitable and penal institutions, public and private, and to act in an advisory capacity to those in charge of these institutions, there was appointed a State Charities Commission. Reports

CARING FOR WOUNDED HORSES IN FRANCE

The American Red Star Animal Relief has been organized with a corps of trained veterinarians and is to be equipped with all necessary supplies, field and base hospitals and ambulances to give first aid in the field to wounded horses and mules and to look after the health of animals bought by the government for field service. Similar organizations are connected with the Dutch and British armies. The picture shows British Red Star workers caring for wounded horses in France. Since the beginning of the war, this organization has spent half a million dollars, and it is recognized by the government as the principal agency for the conservation of army animals. The American Red Star is busy organizing a similar service, requiring the enlistment of two hundred veterinarians who must pass the examination of the surgeon-general for army veterinarians. It is expected that many officers of anti-cruelty societies will avail themselves of this opportunity to serve the country and that these societies themselves will be active in the collection of the necessary funds

are to be made to the governor and state legislature biennially.

Through the activities of the State Federation of Women's Clubs a mother's pension bill was passed authorizing each county to allow pensions to indigent widowed mothers with children under fourteen. Fifty-one counties were exempt from its provision, however, so the law applies to practically only one-third of the state. The wisdom of this law is questioned, since the county judges under the present law can and do give outdoor poor relief and the law itself does not qualify this relief. Therefore, even without the passage of this law, county judges can grant pensions if they choose, and since the law is not mandatory they are not obligated any more than formerly.

EQUAL SUFFRAGE FOR RUSSIA?

RUSSIA'S constitutional convention will be chosen by women as well as men voters and will establish equal suffrage as a fundamental principle of the new form of government, in the opinion of J. G. Ohsol, who was a member from the city of Riga in the second Duma. It was this Duma which set the high-water mark for radicalism in Russia and which

was dissolved on the ground that some of its members were plotting revolution.

Mr. Ohsol, who lives now in Washington, suggests that since women have borne a leading part in every revolutionary and educational movement in modern Russia, the workingmen's council and all other radical elements will insist that they be enfranchised at once. They have the example of full suffrage in Finland, and of long established participation by women in the counsels of the village communes, while the present war has brought them into industry and the professions quite as fully in Russia as in England.

Woman suffrage in the peasant communes, he explains, is on this basis: The head of the family speaks for it in communal meeting. If the men of the house be unable to take part, due to absence from home or from sickness, the woman goes to the meeting. She exercises the right to speak and vote exactly as though she were the man of the family. Again, when her husband is mentally her inferior, she accompanies him to the meeting and instructs him as to his vote. With this political custom in the peasant commune, Russia has welcomed her women into every political reform group. Indeed, a large part of the

revolutionary activity of the past decade has been financed by women, while girls have distributed much of the forbidden literature of discontent.

With "Babushka" Breskovsky—who has arrived in Moscow—there are coming from exile and from prison more than 150,000 political offenders, of whom thousands are women. To deny to these women, even temporarily, the right to vote on the future of Russia will not be tolerated by the masses.

Mr. Ohsol sees in the forthcoming convention three principal issues upon which the influence of the modern Russian woman will be powerfully exerted. These are the creation of a democratic republic rather than a constitutional monarchy; the separation, both political and financial, of the Orthodox Greek Church from the state, and the breaking up of the vast private holdings of land for distribution among the peasants. He cites the demands of the peasant revolutionist elements in 1903-7 as emphasizing the cry of the peasants for land. Throughout the present war the peasants have appealed for "bread and peace" in their demonstrations, but these were but expressions of immediate suffering; the peasants' land-hunger is the one great Russian problem, he says.

BOSTON'S TANGLED SCHOOL SYSTEM

FOR months Boston has been torn by an educational controversy involving some far-reaching questions of school control and of the relation of the educational function to democracy. The matter is now before the School Committee of Boston, a board elected by the people and therefore representing the people's interests in school affairs.

Two years ago the mayor requested the Finance Commission to investigate the school system. This commission appointed a survey committee with James H. Van Sickle, superintendent of schools of Springfield, Mass., at its head. The committee made a report dealing with various phases of educational policy and practice, and especially emphasizing the need for a reorganization of the central administrative system of the Boston schools.

This system consists of the superintendent; the board of superintendents, consisting of the superintendent and six assistant superintendents and in which the superintendent has no greater authority than any other member; the secretary; the business agent; and the schoolhouse custodian. Each of these is supreme in his or its respective department and accountable only to the School Committee. In addition there are several other independent units such as the janitor's trial board, the salary board, and the board of apportionment. The superintendent is only a member of the two latter boards and is not the guiding or supreme authority in any of them.

The gist of the report, concerning organization, is that this system should be so changed as to make the superintendent the chief executive officer, responsible to the School Committee for the entire administration of the schools in all their branches and departments. This recommendation is based on modern business practice and organization.

The board of superintendents has taken sharp issue with this conclusion and has printed a pamphlet setting forth its objections to the proposed change. The board thinks that the public school system is a far more complicated mechanism than an ordinary business concern and that there would be great danger, if the recommendations were adopted, that the superintendent of schools, who is to be made the sole administrator of the system, would tend more and more to become a business executive and less and less an educator.

The whole controversy has been brought to a head by the report of the Finance Commission to the mayor, which urges strongly the recommendations of the survey committee. This now puts the situation up to the School Committee, which is practically supreme in the whole field of public school finance and administration and is responsible

only to the electorate for the discharge of its duties.

Meanwhile citizens of Boston are engaged in animated and even acrimonious discussion of the matter. One of the interesting questions being asked is the possible effect upon the School Committee itself of the centralization of so much administrative power in the hands of the superintendent. In Boston the election of the School Committee has generally elicited much popular interest and has been the means of a good deal of education to the people on school problems. Each year some member of the committee has gone out to the electorate and thus a practical test has often been provided to determine whether the community believes the present policies of the committee are sound. This system serves also to give the people a sense of personal responsibility for the management of the schools that they might not otherwise get.

OLD AGE AND DEPENDENCY IN MASSACHUSETTS

MASSACHUSETTS, as a preliminary to her struggle with the problem of old age pensions, has been making a survey of numbers and cost. The State Bureau of Statistics has made an exhaustive canvass of all the available data relating to the number of persons 65 years of age and over, together with statistics of present outlays for the support of aged persons.

The director finds that of the 189,047 persons 65 years of age or over, 34,496 were dependent to some degree upon either public or private charity. The total amount of aid paid them in the year ending March 31, 1915, exclusive of federal pensions, but including all aid given by public correctional institutions, hospitals for the insane, state pauper institutions, overseers of the poor, state and military aid, soldiers' relief, and private charitable aid rendered by benevolent "homes" and other organizations and institutions, was \$3,233,949.

As a further classification, it was found that 26,403 of the total aided received some form of public relief, the aggregate of which was \$2,250,686. The average for each person in the total outlay, public and private, was \$93.75. The bureau also finds that 73.02 per cent of the persons covered by the inquiry received aid amounting to less than \$100 in each case, while only 2.77 per cent received aid amounting to \$300 or over.

Thirty-one per cent of the total population of Massachusetts is foreign-born. The report finds that of the 189,047 persons 65 years of age or over, 39.4 per cent were foreign-born; while of the 34,496 in that group who received aid last year, 52.2 per cent were foreign-born. But in spite of this proportion so greatly in excess of the proportion of the foreign-born in the general popula-

tion, it was further found that practically 95 per cent of the entire group of persons 65 years of age or over had been residents of Massachusetts for ten years or over, while there were figures to indicate that probably about 80 per cent of all the persons thus aged who received aid in 1915 had been residents of Massachusetts for 30 years or more. Two-thirds of all the aged dependent women were widows while something over one-third of all the aged male dependents were widowers.

In its interpretation of these facts the Massachusetts legislature must reckon with the further finding that the total disbursements for the relief of persons of all ages in the state in 1915 from public sources and from all private sources represented by the 805 incorporated charitable agencies was \$23,365,138.

Governor McCall in his last inaugural message said: "I am of opinion that an annuity should be paid by the state and its subordinate governments, without contribution, to its deserving citizens seventy or more years of age who do not have children able to support them nor an income more than \$200 a year, and who have been residents of the commonwealth at least ten years."

Hence the issue.

ON GUARD FOR THE RISING GENERATION

"WE must not forget the children." As America enters the war the National Child Labor Committee warns its members to oppose the breakdown of school and labor laws and cites the disastrous results of such relaxation in England and Germany.

Compulsory education laws must be enforced; school funds should not be cut down, says the committee. The usual local and national social agencies—settlements, recreation centers, health boards, juvenile protective associations, child welfare and child labor committees, and all other organizations which it has taken years to build—must not be destroyed. "The appropriation for the enforcement of the federal child labor law was not passed by the last Congress. This Congress must pass it," urges the pamphlet, "if, at this time, when children are more likely than ever to be exploited in industry, we are to be assured of the federal government's protection for working children."

"Those of us," says Owen R. Lovejoy, secretary, "who have dedicated ourselves to the protection of these defenseless ones must keep our heads clear and our motives unmixed, determining that whatever happens all other forms of treasure, all other forms of wealth, all other methods of defense shall be sacrificed before we compel the children of America to pass through the fire."

Book Reviews

WHY MEN FIGHT

By Bertrand Russell. Century Company. 272 pp. Price \$1.50; by mail of the SURVEY, \$1.60.

A Creed Forbidden

This is unquestionably one of the most outstanding books of the war. It is not complete in form or perfect in internal structure. It is the forerunner of the great revaluation of political concepts in the light of recent history which Bertrand Russell is the best qualified contemporary to undertake, rather

than that work itself. Yet we are thankful that the publication of these lectures has not been postponed, that the message which this great English philosopher was prevented by his government from delivering in person to America, has none the less reached us now, at a time when ideas are in the flux and serious men and women everywhere are anxious, as they have never been before, to learn the truth about the forces that make for war and the forces that make for world federation and progress.

With singular courage and utter disregard of his personal standing in the community and in the hierarchy of learning, Russell has set before the world a program which takes nothing for granted and lays bare the hidden sources of evil in our political, industrial and social organization, not omitting the educational system, formal religion, and the institution of marriage. To him it is the repression of healthy impulse, the restriction imposed upon spirit by the state as organized today, by the tyranny of accepted traditions, by property, by industrial despotism, which finds its outlet in the one form of unrestrained fervor sanctioned by society—militant patriotism, the mainspring of war. Summarized in one sentence, "It is not the weakening of impulse that is to be desired, but the direction of impulse towards life and growth rather than towards death and decay."

He desires freedom as a condition of growth in every relationship of life. He takes issue with every doctrine which would oppose the liberation of the soul, whether it be the erroneous commonplace that human nature cannot be changed or the exaggerated, because exclusive, love of country which excites false patriotic pride, jealousy, and warlike spirit. The power of the majority in a democracy and the power of public opinion may be exercised in such a way as to repress the most vital instincts and desires in the nation. There is no safeguard against oppression except in a deeply ingrained reverence for life. International aggression must persist so long as the desire for power is made subservient to the ends of individual, class, nation or race.

Patriotism is no safeguard. "A world full of patriots may be a world full of strife. The more intensely a nation believes in its patriotism the more fanatically indifferent it will become to the damage suffered by other nations. When once men have learned to subordinate their own good to the good of a larger whole, there can be no valid reason for stopping short of the human

race." It is the admixture of national pride that poisons patriotism "and makes it inferior, as a religion, to beliefs which aim at the salvation of all mankind." The author admits that it is natural to love one's country more than other countries, one's family more than the community. He preaches no loose cosmopolitanism or brotherhood of man based upon a sense of absolute equality in claims upon the devotion of the individual. Indeed, it is difficult, within a brief space, to do justice to the commonsense and sound recognition of biological laws which underlies Russell's fervent advocacy of a more liberal state and world policy. But as family affection does not preclude good citizenship, so patriotism must no longer be allowed to stand in the way of international good-will.

"It is sheer cant to speak of a contest of might against right and at the same time to hope for a victory of the right. If the contest is really between might and right, that means that right will be beaten." Thus, in this present European conflict, or in any dispute, it is idle to dream of a conservation of righteousness by the use of force. Indeed, it is only the educated men in any country, says Russell, who can desire war at ordinary times, since for the mass of humanity knowledge of the world is so circumscribed as to leave it entirely in the dark concerning the aspirations of other countries or the part which their own might play in the affairs of the world. But though there can be no desire for war in a democracy, there is the instinct for war, the instinct for power and triumph denied most men in their humdrum lives, the instinct for adventure without risk of social opprobrium, the instinct for destruction where there is no hope of enjoyment.

Thus, an analysis of the psychological causes of war brings us to a recognition of the social maladjustment which is at their root. So long as the worship of money and the desire for respectability based on property hold society together, so long must society be endangered by outbursts of war fever. Therefore, the task of constructive statesmanship must be directed to the equalization of opportunity, of security and of responsibility. The industrial system, especially, must be made to provide abundant occasion for the participation of all in the economic processes of society. This, the author contends, can best be brought about not by a Marxian state socialism, but by an extension and mutual complementation of voluntary cooperation and syndicalism.

But reorganization of the material relationships is only the outer aspect of the task which civilized humanity has to face. Far more important is the integration of society in mind and impulse which requires that the common purposes of men and women, whether conscious or not, shall both absorb and vitalize their creative activities. "The supreme principle, both in politics and in private life, should be to promote all that is creative, and so as to diminish the impulses and desires that center round possession." "Dominant impulses directed to objective ends" must take the place of the subjectivism which makes life fragmentary and isolated.

It may be that critics will find little that is new in Russell's philosophy and in his political program. The freshness of both is derived from a new emphasis, a realignment of ideas formulated, many of them, by others

and at other times. And more than this, to have said these things now, to have given fearless and eloquent utterance to ideas vaguely formulated and uncoordinated in other minds, has given to Bertrand Russell an intellectual leadership which will win him crowns both of laurel and of thorn.

BRUNO LASKER.

A LAYMAN'S HANDBOOK OF MEDICINE

By Richard C. Cabot, M. D. Houghton, Mifflin Co. 524 pp. Price \$2; by mail of the SURVEY, \$2.16.

For Social Workers

This is a book written for one class of laymen especially, the social workers, and doubtless it will receive from them the welcome it deserves. Social workers are obliged to know more about medical matters than does the ordinary layman, because so many problems they meet are in the last analysis medical problems.

Usually they recognize that fact, but they do not know where to turn for guidance. Most of the social workers I know who have sought such guidance have suffered many things of many physicians and been nothing bettered, for the usual medical man has the habit of *ex cathedra* statement, and clings to it even when speaking about those parts of the science which are still growing and changing; so that the intelligent layman is bewildered by pronouncements that vary radically from year to year and yet are always authoritative.

Dr. Cabot's book distinguishes between those things that are known and those that are believed, and when, as is often the case, he differs in his belief from other medical men he says so plainly. No book written for laymen can quite escape the danger of firmly fixing ideas that are still *sub judice*, and perhaps Dr. Cabot will be obliged to bring out revised editions of his book at short intervals to keep up with the development of medical knowledge. But as the book stands, the social worker may pin his faith to it with no fear of going astray on any important matter.

The arrangement of the book is logical and refreshingly simple; the space devoted to anatomy is quite sufficient, though only the absolute essentials are given; and there is no tiresome elaboration of facts that are known to any ordinarily intelligent person. Indeed, Dr. Cabot saves time and space very gratifyingly by assuming that his readers will have average knowledge and common sense, an assumption rarely made by the scientist when he speaks to the lay public.

The sections on heart disease, on diet, on the diseases of the nervous system, and on infectious diseases, will be especially valuable to social workers, clearing up many difficult problems in the practical handling of cases. In a book destined to be widely read by those we hate to hear called "uplifters," it is a good thing to find a clear statement about the unimportance of pure food as compared with nutritious food. For years we have been spending money and effort on a campaign against harmless adulterants, and only very slowly are we learning that food adulteration is an economic problem, not a health problem.

The chapter on diseases of the generative system has probably more points on which other physicians would take issue with Dr. Cabot than has any other. To me the section on industrial diseases is the least satisfactory and the subsection "industrial overstrain" the most unsatisfactory part of it, but probably that is because industrial disease

is my hobby and a hobby is a little like an only child—outsiders can hardly be expected to do it justice.

ALICE HAMILTON, M. D.

PRISON REFORM

By Corinne Bacon. The H. H. Wilson Company. 309 pp. Price, \$1; by mail of the SURVEY, \$1.12.

This handbook is brought out by the publishers of the *Reader's Guide to Periodical Literature*, and may be regarded as an extension of the section of that guide on prison reform without the limitations of date and space, and with the additional feature of actual reproduction of the articles referred to. There is no original contribution in the volume except a short article of general nature by Thomas M. Osborne. The bibliography is of the same general nature. The critical student will find nothing helpful in the volume. It may aid school debaters and people of leisure with a general interest in the ephemeral aspects of the problem. The selection of articles was evidently made with an eye to these latter groups.

PHILIP KLEIN.

READINGS IN SOCIAL PROBLEMS

By Albert Benedict Wolfe. Ginn and Company. 804 pp. Price, \$2.80; by mail of the SURVEY, \$3.00.

What Manly, Newcomer and Gayley have done for students in English literature, Professor Wolfe has done for his classes in economics and sociology in the University of Texas. For this book is a collection from various sources of material, illustrating not only the historical development of thinking on social problems, but also the various points of view represented by the thinkers. The entire collection is prefaced by an essay indicating the author's philosophy of his choice. Each group of readings also is introduced by a brief note upon the particular selections.

Professor Wolfe, as a sociologist, of course, sees population as the great question of all nations, complicated in the United States by the further questions of immigration and of race. He gives readings on the woman problem from the first declaration of "women's rights" down to the latest plea for birth control.

The book has an evident value in its professed field, but its value extends beyond this specific limit. Many a teacher of English composition, who has grappled with the task of finding a subject which shall stimulate clear thinking and vigorous expression, may turn with relief to himself and to his students from the tepid interest of *My Summer Vacation* and *A Glimpse of a Village Street* to some of the more real and important matters suggested in this book.

G. S.

HYMNS OF THE UNITED CHURCH

Edited by Charles Clayton Morrison and Herbert L. Willett. The Christian Century Press. Chicago. 501 pp. Price \$1.15, cloth; by mail of the SURVEY \$1.27.

The distinctively contemporaneous note struck by the book is the emphasis it lays upon "human service and brotherhood," "the nation," "peace among the nations" and "social aspiration and progress," classifications under which many hymns, old and new, may be put to larger use.

Democracy, justice and fellowship for those of all classes and races breathe through these brotherhood hymns. The eleven national hymns include the un-hymn-like *Star Spangled Banner* and are supplemented by seven peace hymns, the best of which is John Haynes Holmes' "God of the Nations Near and Far." The compilers credit the "invaluable pioneer work" of the SURVEY associates and Mabel Hay Barrows Mussey in collecting and publishing *Social Hymns* (A.

S. Barnes Company), and in suggesting "not only a department of social hymns, but a hymnal whose whole atmosphere we believe to be charged with the social idealism characteristic of the Christianity of our time."

G. T.

THE IDEAL PATRIOT

TO THE EDITOR: There are some words of Chesterton's, dashed off a dozen years ago in his *Daily News* column, that deserve to be inscribed in the memories of us all, whether in the ordinary every-day struggle against adverse popular opinion, or at those tragic moments in the national life of every land, when we have to see wrong triumphant, and our well-loved co-workers ranged on the other side. I should be glad if you would reprint them:

"The ideal patriot is he who sees the faults of his fatherland with an eye clearer than any eye of hatred, the eye of an irrational and irrevocable love."

ALICE HENRY.

Dorchester, Mass.

TO EDUCATORS

TO THE EDITOR: Is there any good reason for sex hygiene as a *separate* study for the young or indeed for anyone but a specialist? Years ago I saw a sexless manikin in a school. Now it seems to be that the manikins shall be all sex.

Hygiene has been shockingly neglected, and is an all-important study for children. They should know all functions of the body, but is it not more scientific and mentally wholesome to study the body as a whole? Ignorance of sex and preoccupation of sex could thus, it seems to me, best be avoided.

I ask this question desiring information from educators. It is, I believe, of the utmost importance in introducing a new study to put it exactly in the right place. Balance and the relative importance of subjects studied are surely to be considered as much as the actual knowledge acquired.

MARY McMURTRIE.

Philadelphia.

THE MILLS-COFFEY BILL

TO THE EDITOR: A highly gratifying indication of the steadily growing interest in health insurance in the United States is the number of pamphlets that are appearing criticizing details of the Mills bill, now before the New York legislature. This bill, as SURVEY readers will recall, provides medical care, a cash benefit equal to two-thirds of wages during twenty-six weeks of illness, and a funeral benefit of \$100.

Among the opposition pamphlets, perhaps the ablest is the statement on compulsory health insurance, prepared by the legislative committee of the Social Insurance Department of the National Civic Federation. In looking over this memorandum, the principal characteristic that is impressed upon the reader is the extremely negative attitude assumed. This seems to justify the query whether the chairman of the committee, Lee K. Frankel, still favors a comprehensive system of health insurance or has changed the opinion which he expressed as recently as November 10, 1915, when he stated before the National Association for the Study and Prevention of Infant Mortality that "the need for sickness insurance can no longer be denied. The next decade will probably see, in the United States, the development of a comprehensive system which will protect the

worker against the contingencies of sickness and invalidity due to sickness."

If these sentences still accurately describe the views of the chairman of this influential committee, may not the friends of the best possible health insurance law for New York hope that its critical memorandum on the Mills bill will be supplemented by aggressive efforts to secure the appointment of a state commission to investigate the whole subject on behalf of the wage-earners of the state? The assistance of the National Civic Federation and of the Metropolitan Life Insurance Company, which Dr. Frankel so ably represents, as well as of all other organizations and individuals who have at heart the betterment of labor and social conditions in the United States, would help greatly toward this desirable outcome. Readers of the SURVEY can hardly render a better public service than by writing at once to their representatives at Albany in support of the Mills-Coffey bill, which provides for the appointment of such a commission.

HENRY R. SEAGER.

[Chairman, Social Insurance Committee, American Association for Labor Legislation.]

New York.

A CALL FOR SPEAKERS

TO THE EDITOR: For some years I have been interested in the work for which your journal stands. I am heading a movement here for a great Chautauqua. We plan an assembly period in July, and I am writing to know whom you would suggest as worthwhile people to bring across the continent to our program. If you would give me a few suggestions or an indication of the particular skill and capacity of each individual, I would be greatly obliged to you. Most celebrated people come this way at some time and we are often able to bring them to a platform that affords them good opportunity, if only we know of their coming. So I am seeking to tie our office to outstanding characters throughout North America and the world.

We plan to build our Chautauqua so as to meet the next necessity of the different professions and callings in life as nearly as may be.

WILLIAM M. BELL.

[World's Social Progress Council.]
227 West 51 street, Los Angeles.

THE ADAMSON LAW

TO THE EDITOR: In your issue of March 3, Mr. Fitch expresses regret that the decision of the Supreme Court sustaining the constitutionality of the Adamson law "establishes no precedent that can be depended upon to justify legislation carefully and thoughtfully drafted for the purpose of destroying industrial evils or promoting social progress." This boils down to a lament that the court decided only the question before it.

The judges did not have before them a statute "carefully and thoughtfully drafted for the purpose of destroying industrial evils or promoting social progress." They had before them a statute hastily drafted in an emergency for the purpose of preventing a great public calamity. And that statute they upheld.

To regret that the decision did not settle broader questions than it did is to regret that the case before the court did not involve broader questions than it did. To call the decision "disappointing from the standpoint of social advance through legislation" is to ask the court to declare itself on questions which were not before it. The sounder criticism on the opinions in the case is that they contained too much that was irrelevant, not too little.

The opinion of the chief justice proceeds on the theory that in order to determine the precise nature of the question before the

court, account must be taken of the facts of the situation which prompted the statute. Mr. Fitch, it would seem, would have the court disregard those facts in determining the nature of the question before it. He places himself in the position of agreeing with the dissenting opinion of Justice Pitney as to the immateriality of the facts. The learned justice concedes that the Adamson law removed an obstruction to interstate commerce. But this, he says, though true in fact, is immaterial in law. The majority acted on the theory that what was true in fact was material in law.

It is not to be assumed that Mr. Fitch would have the court disregard the facts in deciding whether the statute was a proper exercise of legislative power. Yet he would have them disregard the facts in determining what was the question presented for decision. When so much depends on educating the judiciary to appreciate the relevancy of social facts in applying such broad language as "due process of law," it seems a pity to criticize a court for appreciating the relevancy of social facts in ascertaining the precise nature of the question presented for decision.

THOMAS REED POWELL.

New York.

TO THE EDITOR: Mr. Powell is a lawyer and I am not. If we disagree on points of law and judicial procedure, it is to be assumed therefore that he is right. Consequently it is with all due humility that I attempt to state what, from my layman's viewpoint, the situation seems to be.

The social facts underlying the Adamson law included more than the strike threat. They included the facts concerning hours and wages and social relationships. These underlying facts seem to me to have furnished the real reasons for passing the Adamson law. The court tacitly recognized them in upholding that part of the law dealing with hours. It dismissed that phase of the subject before it without discussion as having been completely settled in an earlier decision where the reasoning was based on considerations of human welfare. That is, it justified a regulation of hours because there is a relation between a limitation of the working day and the health and well-being of society.

But when, in considering the Adamson law, the court turned to the sections involving a wage regulation, it abandoned all consideration of the permanent underlying social facts and turned to the outstanding, temporary social phenomenon of a threat of interruption of interstate commerce. Thus the court took cognizance of only one fact out of the group of facts before it.

Mr. Powell would not deny the existence of the basic social facts back of the wage demand which led to the passage of the wage law. In holding that the court ought not to have considered them, he seems to me to commit the very sin that he lays at my door. While "true in fact" he regards them as "immaterial in law." I still feel that these facts were both true and material.

JOHN A. FITCH.

New York.

JOTTINGS

ASIA, the journal of the American Asiatic Association, published since 1898, is now coming out as a large, finely illustrated monthly magazine which aims at a closer binding of occident and orient by bringing

the interesting facts of every-day life across the Pacific, and by showing the important share which especially China and Japan play in our national life.

FOURTEEN social agencies of Syracuse, N. Y., have formed a committee to organize a social service federation, inspired by an address by Rabbi M. C. Currick, president of the Erie, Pa., federation.

RESOLUTIONS adopted at its recent Kansas City meeting put the Department of Superintendents of the National Education Association on record as disapproving military training in public schools. The resolutions were based on the report of a committee appointed a year ago. Two state commissions—in Massachusetts and New Jersey—have also condemned military training in the schools.

THE Districting Committee of the City Plan Commission of St. Louis has learned from its past experience and that of other cities that it is wise to secure suggestions before framing a law on the height of buildings and zoning regulations, rather than have to meet a storm of indignation afterward. It is accordingly circulating a schedule to secure the consensus of competent judgment as to what is practicable and desirable to prevent congested and erratic building in the future.

THE Texas Town and City Planning Association met recently at Sherman, where it had been organized two years ago by Dr. O. C. Ahlers, who realized that the smaller towns and cities of Texas shared the same problems of neglect and unregulated growth, and that reformers in all of them had to overcome the same apathy. The trouble of the smaller city is too frequently that its more influential citizens move away to some larger center to retire. The association endeavors to stimulate an active interest in the smaller cities and their needs. The principal speaker at the convention was George E. Kessler, whose audience of 200 delegates included many city officials from every part of Texas and from southern Oklahoma.

THE campaign against the cigarette in Kansas [the SURVEY, January 27] has resulted in the enactment of a law that not only makes it unlawful for anyone to "sell or give away cigarettes or cigarette papers or any disguise or subterfuge of either of these," but also to advertise them in any way in Kansas. It makes it unlawful to sell cigarettes, cigars, cigarette papers, tobacco or "any other such materials connected with the smoking of tobacco" to persons under twenty-one years of age. William A. McKeever, head of the department of child welfare of the state university, calls it "the most radical and sweeping measure of the kind ever passed by any legislature," and adds, "we are slowly but certainly developing a state-wide movement for the enforcement of this law."

BROADSIDES are the favorite weapon of the People's Campaign League, formed in New York city for the purpose of taking up on a national scale one issue after another in behalf of the people. At present the league is specializing in an attack on capital punishment. It has issued five broadsides, the first an announcement of its program, and the others open letters from Frederic C. Howe, commissioner of immigration at the port of New York, from Charles M. Lincoln, managing editor of the New York World, from Frederic L. Hoffman, statistician of the Prudential Insurance Company, and from Samuel Williams Cooper, member of the Pennsylvania bar. Grace Humiston, attorney, is president; Pierpont Grannis, vice-presi-

Classified Advertisements

NOW READY

The Social Teachings of the Prophets and Jesus

By Prof. Charles Foster Kent, Ph. D., Litt D.

377 pages. 12mo cloth. \$1.50

This book answers clearly and directly the vital questions that thoughtful men are asking.

Has Christianity failed to solve the problems of human society or have men failed to appreciate and apply its social principles?

Is it true that in the utter breakdown of the present materialistic civilization the religion of the prophets and Jesus alone remains?

What was their contribution to the solution of such social problems as poverty, the living wage, the programme of Socialism, the rights and duties of capital and labor, the responsibilities of public officials, the private ownership of property, the divorce question, the treatment of criminals, the practical interpretation of democracy, the right and wrong of war, and the basis of an enduring peace?

Are their teachings too idealistic to meet modern conditions or are they alone practical?

These live social problems, in both their ancient and modern aspects, are treated in this book frankly and constructively. Written in a clear, fascinating style, this volume has a compelling message for the business man, for parents, for teachers, for pastors, for social workers, for men in public life, and for all who are striving to become intelligent and efficient citizens in the new social order.

dent; Mabel Coldin, secretary, and Spencer Miller, Jr., formerly assistant to Thomas Mott Osborne at Sing Sing, treasurer.

ANNOUNCING the selection of Alvin E. Dodd as its director, the Retail Research Association emphasizes the educational aspect of the work it plans to do. Mr. Dodd has for several years been secretary of the National Society for the Promotion of Industrial Education, which has taken a leading part in drafting legislation for vocational training in a number of states. The Retail Research Association is a combination of eighteen stores to study various problems relating to retail distribution. Some of the stores are William Filene's Sons Company, Boston; Joseph Horne Company, Pittsburgh; L. S. Ayres & Co., Indianapolis; L. Bamberger & Co., Newark; the Bon Marché, Seattle; D. H. Holmes Co., New Orleans, and others. The association hopes to make educational studies that will be of service both to the public schools and to private and corporation schools. Mr. Dodd will remain as a member of the board of directors of the national society.

PERSONAL AND PROFESSIONAL

ROGER N. BALDWIN, secretary of the St. Louis Civic League and an active worker in many social agencies, has joined the staff of the American Union Against Militarism, in New York City, as a volunteer.

J. W. MAGRUDER, secretary of the Baltimore Federated Charities, has been appointed an associate of Ernest P. Bicknell, director of civilian relief of the American Red Cross, with headquarters at Washington.

CHARLOTTE RUMBOLD, formerly of St. Louis, has joined the staff of the Cleveland Chamber of Commerce as an assistant secretary working with the committees on city planning, housing, sanitation and public recreation.

GEORGE H. CRAZE, a member of the staff of the National Housing Association for nearly five years, has been appointed assistant to the chief of the Bureau of Housing of the Pennsylvania State Department of Health at Harrisburg.

DAVID M. BRESSLER has resigned as general manager of the Industrial Removal Office, New York City, which he has held for sixteen years, to go into business. A testimonial dinner to his work in the distribution of Jewish immigrants is to be given on April 16.

E. M. BARROWS, who has had editorial charge of the *Bulletin* of the National Conference on Community Workers, has recently been made secretary of the National Committee on Films for Young People, which is affiliated with the National Board of Review on Motion Pictures. Seventy communities have applied for affiliation since January, and the committee is in correspondence with 250 others.

THE Board of Education of New York City has appointed to the new office of executive manager Leo Arnstein, formerly in the office of the president of Manhattan when George McAneny filled that position, and recently chairman of the board's finance committee. The position carries a salary of \$10,000 and

was created after considerable discussion of the waste and duplication in the school system and the need of business-like coordination among its parts.

RUDOLPH MATZ, of Chicago, whose accidental death costs the bar of that city and the cause of civic justice one of its sturdiest leaders, was the senior member in the firm of Matz, Fisher & Boyden, with which Walter L. Fisher, formerly secretary of the interior, has long been associated. For many years he bore the burden of the initiative, leadership and support of the Legal Aid Society of Chicago, which he served as president for the past seven years, and as its most active director through all its earlier years. At every annual conference of the National Alliance of Legal Aid Societies, Mr. Matz was foremost in its administrative councils and in its public discussions. He gave the last hard work of his life to framing and promoting the bill pending in the Illinois legislature to deal effectively with the loan-shark evil.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912, of the Survey, published weekly at New York, N. Y., for April 1, 1917.

State of New York, county of New York, ss. Before me, a notary public in and for the state and county aforesaid, personally appeared Arthur P. Kellogg, who, having been duly sworn according to law, deposes and says that he is the secretary of the Survey Associates, Inc., publishers of the SURVEY, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, postal laws and regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, Survey Associates, Inc., 112 East 19th St., New York city; editor, Paul U. Kellogg, 112 East 19th St., New York city; managing editor, Arthur P. Kellogg, 112 East 19th St., New York city; business managers, none.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.) Survey Associates, Inc., 112 East 19th St., New York city, a non-commercial corporation under the laws of the state of New York with over 1,000 members. It has no stocks or bonds. President, Robert W. de Forest, 30 Broad St., New York city; vice-president, John M. Glenn, 130 East 22nd St., New York city; treasurer, Frank Tucker, 346 Fourth Av., New York city; secretary, Arthur P. Kellogg, 112 East 19th St., New York city.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stocks, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is — (This information is required from daily publications only.) [Signed] Arthur P. Kellogg, Sec'y.

Sworn to and subscribed before me this second day of April, 1917, James P. Heaton. Form 3526, Ed. 1916. Notary public, Kings County, certificates filed in New York County, New York County Clerk No. 366, New York County Register No. 8291. My commission expires March 30, 1918.

Note. This statement must be made in duplicate and both copies delivered by the publisher to the postmaster, who shall send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the post office. The publisher must publish a copy of this statement in the second issue printed next after its filing.

The GIST of IT

WAR comes to us with almost three years' experience to draw on from abroad; not only military experience, but social—in industry, health, civics, education, crime, relief. We needn't bungle unless we insist on it.

ENGLAND, for instance, has been all through the gigantic blunder of trying to make munitions in feverish haste. Muscles and nerves break down almost as easily as powder explodes. The British have increased their output by cutting out seven-day work and overtime. Page 51.

CHARITY workers know from long practice how to put into effect Baden-Powell's statement that the true victory will come in the conservation of children. Civilian relief at its task of maintaining the standard of living among soldiers' families. Page 53.

BY MEANS of a man-power inventory and an occupational survey, the National Service Board is bringing into Canadian recruiting some of the system with which an insurance company goes after prospects. It is laying the groundwork for organizing the human resources of the country for production during the war and reconstruction afterward. Not conscription, but selective volunteering is the Canadian plan. Page 56.

HEALTH needs of country and city are increased rather than changed by war. Health may be bought, we have been told. First payments should be for an officer trained for public health service, a board with police powers, the vision and vim to apply scientific truth unflinchingly. Page 59.

SPEAKING officially for the brewers, Mr. Fox challenges Mrs. Tilton's prohibition facts and figures and outlines their own program of reform. They would have a federal commission study the subject and they propose that saloons shall serve both food and drink, to women and children as well as men. Page 62.

WE'VE come to a choice between food and drink—the waste of grain in making alcohol must be stopped at once, replies Mrs. Tilton. Prohibition must be enacted as part of our preparedness. The brewers can help. Page 65.

AT THE HEART of the food problem, discussed by everyone from the President to the least of us, are three demands: abundant production, just and economical distribution, wise conservation. Mr. Hoover must sift the myriad suggestions made. Right now the pressing need is for farm laborers. Sir Horace Plunkett, the distinguished Irish agriculturist, heartily endorses the plan of Dean Davenport, of the University of Illinois, for "civil-military service" under the farmers who own the land and hold the key to the whole situation. Pages 67-69.

CONSCIENTIOUS objectors to the number of some hundreds of thousands—mostly Quakers and their kin—propose a "farm labor league" which will both ease consciences and grow food. Page 70.

WHAT the church has to offer the nation set forth by the Federal Council of Churches. Page 70.

SCOTT NEARING'S resignation for "the good of the university" has been declined by the trustees of Toledo. Page 72. But the Pennsylvania trustees, who fired Nearing, are retiring Dr. Patten promptly on his sixty-fifth birthday. Page 55.

Output and Hours

A Summary of the English Experience¹

By *Henriette R. Walter*

DIVISION OF INDUSTRIAL STUDIES, RUSSELL SAGE FOUNDATION

WITH the shadow of war upon the nation, demands are growing more and more pressing on every side for more guns, more shells, more armor plate, more ships, more workers to man our plants, and turn out the great quantities of supplies which are needed by the Allies and by the large army we are to raise. In this acute demand, however, there is a very real danger that we who are profiting by so much of the experience of the nations already at war, may disregard one lesson which England, in particular, has learned at a great cost of time and strength.

Already we hear of steps being taken to break down the safeguards raised by years of effort for the protection and welfare of industrial workers. Even before the actual declaration of war the eight-hour day had been suspended by order of the President for workers on government naval contracts; the New York State Federation of Labor, in a burst of patriotic fervor, had declared in favor of relaxing laws which restrict hours of work; and a bill, later withdrawn, had been introduced into the New York legislature which waived all restriction of hours and night work and day-of-rest for women and children over sixteen in factories making supplies for the army or navy. A bill giving power to the State Industrial Commission to suspend or modify provisions of the labor law in "times of national crisis" has now been proposed in New York. Resolutions are being passed and pressure is being brought to bear on various state legislatures to relax the limitations of their labor laws. The Council of National Defense is urging that governors be vested with authority to suspend or modify legal restrictions at the recommendation of the council. The same emotional disregard of experience which swept over England in the opening year of the war appears to have this country in its grasp. To throw aside in a moment the accumulated knowledge of basic principles of industrial efficiency would be folly in the face of England's industrial history since August, 1914.

Beyond doubt the production of all the necessaries of war will have to be pushed now and pushed to the utmost. The important question, however, is how this speeding-up can be most effectively accomplished. Shall it be by relaxing labor laws, letting workers toil twelve or fourteen hours a day, permitting a seven-day week and night work for women and children, and endangering the labor force of the nation through failure to maintain proper safeguards against fatigue, industrial disease and accident? British experience answers emphatically in the negative.

England began, as we seem likely to begin,² sacrificing all standards in industry in an effort to secure an adequate supply of munitions. Excessive overtime prevailed; seven-day work became the rule; night work for women as well as men was revived after nearly a century of disuse; thousands of emergency orders were issued, relaxing restrictions; many employers assuming labor laws to be in abeyance disregarded all limitations without even securing permits.

For nearly a year conditions were allowed to be thus demoralized, with the result that the supply of munitions lagged dangerously behind the tremendous demand. Workers were exhausted by overwork, and despite their patriotic enthusiasm could not put forth their best efforts. Almost inevitably evidences of industrial unrest appeared. Then attention turned to the effecting of strong governmental control and organization of the production of munitions, which, during the first months of the war, had been left largely to unorganized private initiative. Privately owned munition plants were placed under government control; employers' profits limited; trade unions persuaded to abandon their most cherished rights and rules; and campaigns for recruiting new workers pushed. A Ministry of Munitions came into being with the formation of the coalition cabinet in May, 1915.

But even these measures did not achieve a sufficient output of munitions.

With control centralized in a responsible authority came a realization of the reckless waste of human strength that had been permitted. The science and experience which in time of peace had built up laws for the welfare of workers were

¹ A full summary of the English reports may be found in a pamphlet just issued by the Division of Industrial Studies of the Russell Sage Foundation, 130 East 22 street, New York city (No. IS-6, price 20 cents).

recalled, and a Committee on the Health of Munition Workers was appointed in September, 1915, by Lloyd George, then minister of munitions, with Sir George Newman as chairman. This committee was created not with any idea of sentimentalizing over the hardships of the workers, but for the very practical purpose of finding out how maximum output could be secured and maintained over a long period. After more than a year of war, it was realized that the reserve supply of labor was too small to risk the exhaustion of the existing force.

All Work Makes Jack—Unproductive

THE question of the relation of output to working hours was then the primary problem for the committee to solve. The first studies which it made were of a general character based on visits to factories and talks with managers and workers. It found that the more enlightened and observant employers were by that time detecting evidences of industrial fatigue and in some cases voluntarily curtailing the hours of work. But, for the most part, seven-day work, excessive overtime and night work had been universally adopted, and the vitality and efficiency of the labor force had been allowed to reach a low ebb. Many workers who in ordinary times would have stayed away from work because of illness, now from a desire to "do their bit," stuck to their jobs, and thus a permanent undermining of health was resulting. Many others from sheer exhaustion and fatigue were forced to be absent from work at frequent intervals, and a large amount of "broken time," as a consequence decreased output. During the overlong working hours it was found that there was slackening in the rate of production, sometimes conscious, as when a crew nurses its strength over a long course, sometimes unconscious as an automatic measure for self-protection.

The most immediate need, in the opinion of the committee, was for the restoration of a weekly day of rest. It was absolutely essential that the workers have some opportunity to recuperate from the accumulated fatigue of a 70 or 80-hour week. Moreover, many employers were beginning to see that a seven-day week was false economy. One large firm found that when, after running its plant seven days a week over a considerable period, the Sunday holiday was restored, without any change in the daily schedule, the men worked a greater number of hours in the six days than they had in seven, because of a consequent falling off in the amount of "broken time." As a result of the committee's investigation and the support which the Ministry of Munitions has given to its findings, Sunday work has now been almost entirely abolished except for occasional repair work. In some plants crews of "week-end workers" have been recruited from the leisure class to release the regular workers for rest and yet keep the factories running.

The next plea of the committee was directed toward a reduction in overtime. That men and women could not work twelve to fifteen hours a day for weeks and months on end and maintain output seemed self-evident. But not content with general inquiries into the effect of these hours on productive capacity it instituted intensive scientific studies of the exact relation between the volume of production and the period of work. The output of groups of workers, both men and women, engaged in light work and in heavy work was followed over periods of from four to six months, during which several changes in working hours were put into effect. For example, a reduction from 68.2 to 59.7 in the average weekly hours worked by a group of 100 women engaged in the heavy work of turning fuse bodies resulted in a 23 per cent increase in hourly output and an actual rise of 8 per cent in total weekly output. Further decrease in hours to 56 a week and

even less showed not only an equally large product but also a decided improvement in regularity of attendance by the women. This case is typical of the findings of the investigators.

These results, which point to increased output in shorter hours, were substantiated by detailed studies of fatigue undertaken for the Home Office by Prof. A. F. Stanley Kent. He found that the total daily output may be actually diminished by introducing overtime, because increased fatigue affects the production not only of the actual overtime period but of the regular working hours as well. An absolute increase of over 5 per cent was effected in the output of one group of workers by reducing their working day from 12 to 10 hours. Studies of both individual and group output proved that the interests of production are best served when industrial standards are maintained.

As a further result of the studies of the Health of Munition Workers Committee, the necessity was brought out for adapting hours of labor to the age and sex of the workers and the nature of the process to be performed. In line with this principle the committee gave certain maximum hours for different types of work and workers beyond which output cannot be increased, but was emphatic in declaring that even these were war maxima, involving too great a strain for any but the strongest to bear. For men on very heavy work, the maximum hours should be no more than 56, for men on moderately heavy work 60, for men on light work 70, for women on heavy work 56, and on light work about 60. Not only should there be such adaptation of hours to groups of workers, but the reaction of individuals to their hours and other conditions of work should be carefully watched.

To reduce the amount of overtime worked in munition plants and yet meet emergency demands, the committee advocates wherever possible the institution of double or triple shifts, for even night work with all its evils is considered more desirable than excessive hours of work. It is urged, however, that women be employed at night only in the most extreme cases of shortage of male labor. When this necessity does arise, women should not be allowed to work more than eight hours and adequate rest periods should be provided. Night work for children under sixteen should be absolutely prohibited. Eight-hour shifts are of course recommended for men as well as women, though because of the scarcity of male labor they are more difficult to arrange. The introduction of short rest pauses in the long spells of work were also found to be an effective method of maintaining or even speeding up the rate of production.

Trade Sickness and Accidents

NOT only have the immediate effects of excessive hours on output been studied by the committee, but also their more lasting results on the efficiency of workers in lowered resistance to industrial disease and other illness and the greater risk of accident. In munitions manufacture, workers are exposed to a formidable array of industrial poisons, ranging from the commonly known lead to the newly discovered "dope" used in varnishing wings of aeroplanes and the highly poisonous and explosive "T.N.T." The lowered vitality of the workers due to overtime, night work and seven-day labor has made them doubly susceptible to the industrial diseases caused by these poisons, and the committee has urged careful precautions and, especially, periodic medical examination.

An increase in both sickness-rate and accident-rate in munition plants has also accompanied the demoralized industrial conditions. The accident rate in one large plant, which was 100 per thousand employed under normal conditions before

the war, for a corresponding period in 1915, rose to 292 per thousand on the day shift and 508 per thousand on the night shift. Similar increases in the sickness-rate were noted.

Other matters which came within the committee's scrutiny and which were held to be important for conserving the efficiency of the workers, were ventilation, lighting, washing facilities and sanitary factory environment; the provision of industrial canteens where workers might get the nourishing food necessary to sustain them; improvement of housing and transit facilities; and the appointment of welfare supervisors to give special attention to women and children in relation to whose increased employment special problems had arisen.

Practically all the important recommendations of the Health of Munitions Workers' Committee have received some degree of support from administrative authorities. Canteens have

been established in all government factories and in most "controlled" plants; a special Welfare Department, under B. S. Rowntree, has been established in the Ministry of Munitions to stimulate the development of welfare work; improvements in housing conditions have been accomplished; and, more important than any of these, seven-day work has disappeared from both "controlled" and government factories, while the eight-hour day has been established for women in all state-owned plants, and overtime has everywhere been decreased.

This is a remarkable record of achievement for little more than a year of work. England can well be proud that in a time when the most judicious lose their sense of proportion, she has had the ability, in spite of blunders, to regain her balance and see the truth of the homely adage that haste makes waste. We in America will do well not to forget it.

The Task of Civilian War Relief

This is the first of a series of articles based upon a course of lectures upon civilian relief now being delivered in New York with the sanction of the American Red Cross by Porter R. Lee of the staff of the New York School of Philanthropy. These lectures are supplementing three full days of field work a week which the class of more than one hundred persons is doing under the supervision of several of the social agencies of the city. Those who are enrolled in this course have volunteered for service with the Civilian Relief Department of the Red Cross. The articles are being written by Karl de Schweinitz, secretary of the Committee on Cooperation and District Work, New York Charity Organization Society.

"WHEN do you think the war will end?"

This, the most frequent question of current history, Sir Baden-Powell answers in the first annual report of the Canadian Patriotic Fund.

"The war will be decided in 1935.

"The true victory," he explains, "will lie not so much in the actual tactical gains on the battlefield today as in the quality of the men who have to carry on the work of the country after the war. War kills off the best of a nation's manhood; therefore, extra care must be exercised to save every child—not for its own sake or for its parents' sake, but for the sake of the nation. It has got to be saved—saved from infant mortality, then from ill health, and finally from drifting into being waste human material. We must economize our human material. Each individual must be made (1) healthy and strong, (2) endowed with character, for becoming a valuable citizen for the state."

The problem of Canada and of all the other nations at war has now become our problem. Like Canada, we must fight this war in terms of the next generation. From this point of view all our plans and policies must be directed, and particularly those plans and policies that have to do with civilian relief.

No matter how carefully the recruiting of a large army and navy is conducted, it is almost certain to cause a large number of families to suffer economic and social distress unless some preventive measures are taken. Men old enough to enlist are also of an age when whether married or single they are usually contributing to the income and domestic life of the household. The homes from which they have gone will be the less able to meet a rising cost of living, a change in conditions of employment, and other vicissitudes of war times. Even now the New York Civilian Relief Committee of the Red Cross is giving assistance to a number of families.

Later there will return from the front men disabled beyond all hope of ever becoming self-supporting, for whom some provision will have to be made, and men handicapped by

wounds from engaging in former occupations, who will have to be adapted to other work. It is not inconceivable that disasters may occur in this country which will add non-combatant victims to the list of military casualties.

Superficially the answer to all these problems is an allowance from the government. But government allowances have not solved the problem in Canada or in any other of the warring countries.

To consider an allowance as the solution of the difficulty is to regard the enlisting man merely as a source of income when, in fact, he is also a brother or a father or a son. The absence of the head of the family is the absence of one of the most important members of the household firm, often indeed the senior partner. He it is who has arranged for the insurance and general overhead expenditures of the household. In all of the important questions—the location of the home, the amount to be paid for rent, the extent of the children's schooling and their place of work—he has shared the responsibility for decision. As the children grow older, his part in the discipline of the home increases.

Regard the family merely as an economic unit and the absence of the father is the absence of an administrator; recognize also the educational importance of the family and there is taken away a teacher, and a guide in the development of character. In addition to the loss here, there is one that is more subtle, and perhaps even more vital—the loss of companionship. "It is not merely the work I have to do," said a woman whose husband had died, "it is not merely that I have to be responsible alone for the care of the children, but there is nobody who comes home at night."

In many homes the absence of a son or a brother who may have been the head of the family involves a hardship second only to that of the absence of the husband. Any deprivation of advice and sympathy is a heavy handicap to a household, even in times of peace. During war such a loss may be so serious as to threaten the normal development of the family life.

Who has not felt the unsettling effect of war times? There is a tension and an excitement that make concentration upon daily routine difficult. Magazine editors, for example, have found that people will not sit down to the reading of long or serious articles except they be on war topics. The demand for brevity and interest has never been so great as now. Similarly in work at home or in the factory it is more difficult than before to be steady.

Meanwhile the cost of living rises. The need for judgment and care in adjusting the budget is greater than before. It may become necessary for the women in the household to add to even the most liberal allowance by securing employment. On the other hand, they may be called into industry to replace men who have gone to the front. Amusements that before were within their means must be given up, and yet a certain amount of recreation must be had lest the life of the family move sluggishly.

The growing scarcity of certain foodstuffs will for many homes necessitate a change of diet. Substitutes that are cheaper, much as we dislike the idea of the substitute, will have to be introduced—and nothing requires more delicate adjustment than a new dietary, especially among families whose range of food has always been limited. If potatoes and onions have been the only garden products used in the household, it is much more difficult to give them up and to use something else than if they have been merely two of a dozen varieties of vegetable.

Perhaps war's greatest characteristic is change. Nothing remains stationary. Government, thought, customs are revolutionized. Industry does not escape the universal upheaval, and the home and its workers must be prepared to adapt themselves to new conditions of employment. A job that three months ago may have appeared to offer a life tenure may three months hence cease to exist.

Add to all these uncertainties the misfortunes of everyday life—sickness, death, domestic troubles—and the problem of making up the deficit in family life, caused by the enlistment of a soldier, becomes far too difficult to solve simply by the award of a separation allowance.

Upsets in Canadian Families

THE implications of this problem have been appreciated in Canada as the work of the Patriotic Fund shows. Recent issues of the SURVEY have described how more than seven hundred volunteer visitors in Montreal alone have been engaged in assisting families to meet difficulties beyond the power of

an allowance to remove. In one year in the households under their care there were 604 births, 347 deaths, 99 serious accidents, 404 cases of intemperance, 246 instances of immorality, 20 of bigamy, 182 of desertion, 93 of fraud, 2,566 families in which there were debts that proved to be a serious burden, 579 cases of illiteracy, 1,622 cases of chronic disease, and 1,008 cases of acute illness. When you consider how the arrival of a baby in a home disarranges the whole household or how, when one member falls ill, the responsibilities of every other member are increased, you begin to realize the great service which the Canadian volunteers have been called upon to perform.

Some German Experience

LIKEWISE in Germany has the mere award of an allowance proved to be inadequate. The German Red Cross has corps of women workers who care for the health of babies which do not thrive and who see that mothers have the services of milk stations, hospitals, day nurseries. The means of obtaining an education has been guaranteed to the younger boys in the families with men at the front. Guardianship has been arranged for those who have been orphaned, and sanatorium care has been made possible for tuberculous children or those who have been exposed to the disease.

There is no way of registering in statistical form the help in the solution of domestic problems, the advice, the sympathy and the companionship which the visitors of the Red Cross in the warring countries have given to the families of the men at the front. It has been a work much like that which the American Red Cross has done in catastrophes such as the San Francisco earthquake or the sinking of the Titanic.

The story of what was accomplished for the family of a man who was drowned in the great steamship disaster illustrates what is meant when the need of personal service in relief work is urged and also what may indeed be the kind of situation to develop in the course of civilian relief work during the present war.

This man had been employed as an oil operator by an English company. He was returning to his home in Canada after an absence of two years. The committee of the Red Cross learned quickly by correspondence that he was survived by a wife who was twenty-nine years old and by three daughters. The eldest, a girl of thirteen, was crippled with hip disease; the second was a delicate child who was suspected of having tuberculosis of the larynx; and the third had recently been attacked by poliomyelitis, which had paralyzed one of her ankles. The need of the family was so evident that a check for \$250 was sent to them at once.

The Red Cross, however, realized that nothing of a constructive or permanent character could be accomplished by letter. Accordingly, one of the workers of the committee was sent to visit the family. She found that the reason why correspondence had been so unsatisfactory was because the wife did not know how to write. She was only a child when she was married and had never had much schooling. She was an attractive young woman and so intelligent that the visitor soon recognized that, given an opportunity, she would be able to do much for her children and for herself.

Her own inclination and the circumstance of the invalidism of her daughters made nursing seem to be an appropriate career. She was, therefore, sent to a sanatorium to take training as a nurse. The Red Cross visitor found that the widow had many friends and a number of relatives who, though without means, were willing to look after the children while their mother was away. The best medical attention available was secured for the three girls. Their ill health had kept them

The Family, a pamphlet containing two addresses, one by Prof. James Hayden Tufts and the other by the Rev. Samuel M. Crothers, 25 cents. These two addresses appear also in the proceedings of the National Conference of Charities and Correction for 1915.

The SURVEY of March 17, 24 and 31, containing articles by Paul U. Kellogg, describing the work of the Canadian Patriotic Fund in Montreal. One of these issues is out of stock. A reprint of the three may be had with a new subscription to the SURVEY, to be sent to the subscriber or anyone he may elect; copies are not for sale.

back in school so that it would be a long time before they could help to support the family. The mother, with her training as a practical nurse, would be able to earn from eight to ten dollars a week and still have time to give to her daughters. The husband's life insurance was \$1,300. To this the Red Cross added money enough to bring the total to \$5,000, which they placed in the hands of local trustees, who agreed to disburse it to the widow in quarterly payments of \$125. During the ten years or more that these payments continue, the children will have time to prepare for some occupation adapted to their physical handicaps.

Had the Red Cross simply sent the woman a lump sum or a monthly check she would doubtless have remained unlettered and unskilled. The health of the children would probably have deteriorated, and, when the pension ceased, they would have been obliged to depend upon the charity of their neighbors. The death of the father would have resulted in a lower standard of living for the family.

There, indeed, is the real object of civilian relief, not merely to offset the loss of income that the absence of the head of the family involves, but to make possible the same standard of living that during his presence was in force. More than this, when the standard of living is low it is the duty and the opportunity of the civilian relief visitor to raise the standard.

The problem of civilian relief is a problem in safeguarding

the normal interests of those families whose lives have become disorganized by the exigencies of war. Sometimes the family itself, assisted by pension or grant from a relief fund, is infinitely better able to accomplish this than any outsider, however much skill and delicacy such an outsider may bring to bear. More often the loss of the husband and father leaves a home with problems that are too great for the strength and resourcefulness of the mother. In such cases we owe it to those who have made the war's greatest sacrifice to bring to them the fullest measure of personal, sympathetic, skillful helpfulness. This is a task which can be performed only by those who appreciate the subtle values of family life and know how to assist in their conservation by methods which neither humiliate nor weaken, but which rather lead to wider opportunity and healthier, richer life.

The test of the success of any system of civilian relief in war time is not the number and the amount of the allowances awarded, but the health, the happiness, the comfort and the character of the families cared for—and particularly of the children in those families. The quality of the next generation will be the measure of our victory in the war upon which we have entered. "Women and non-combatant men," to quote Sir Baden-Powell again, "have here as big a national work open to them behind the scenes as the men have who are playing their part so gallantly on the stage in Flanders and elsewhere."

TO SIMON N. PATTEN

By Guy Nearing

Simon N. Patten, who for thirty years has been professor of political economy at the University of Pennsylvania, has been notified by the trustees that he will be retired for age at the end of the present college year.

UPON a sacred altar reared to Truth
 You kept the consecrated fire ablaze,
 Which year by year, with unpolluted rays,
 Burned as a beacon to your country's youth.
 But Greed and Envy scattered without ruth
 The brands, and cast them out by devious ways—
 Now hurl you forth in your declining days,
 The mightiest brand of all—for speaking sooth.

The desecrated altar empty lies.
 Yet while they revel in that infamy,
 Let Greed and Envy lift their treacherous eyes;
 The hundred conflagrations let them see,
 Which from the embers of your fire arise.
 For their own hands have given you victory.

A Canadian City in War Time¹

V. Recruiting and the Man-Power Inventory

By Paul U. Kellogg

IT may seem like stretching the city limits of even the largest city of Canada to include a description of the National Service Board as an installment in this series. But it is in the urban centers that occupations become complex, the social composition is ever changing and human resources are difficult to appraise. To appraise them for industrial community and agricultural region alike has been the commission of this board. Moreover, a parliamentary hearing brought its president and secretary to Montreal during my stay there.

At first sight, also, it may seem like stretching the scope of this series to include a parenthetical installment having some bearing on the recruiting problem before Congress this month. But Canada has paid dearly for failing to think of that very thing in broader than the most conventional military terms, in the early months of the war. It has come to see, for example, that recruiting should be a consecutive government function rather than a disjointed semi-private affair. Much energy, devotion and sacrifice, together with some less desirable qualities, have gone in to the endeavor by which groups of men, out of their own time and means, have gotten together units—while other units have been built up in succession without provision for consecutively replenishing the earlier ones. "Wide open" cities have proved to be poor training grounds for the winter barracks of battalions in the making, and there has been an extravagant amount of venereal disease filling the military hospitals. Further, in the first rush for enlistment, the working crews of vital industrial occupations of the sort that appeal to adventurous men were rifled by the more adventurous appeal of war; while groups of young engineering students, stimulated by short-sighted academic leaders, were mustered in as privates, only to be later and at much pains shifted to other assignments where their training would count.

More particularly, the eagerness to fill up commands, coupled with the inexpertness of local physicians, led to the

uniforming, training and even overseas transport of many unfit men, who have had to be weeded out and their places filled. As brought out in an earlier article, from 50 to 60 per cent of the invalided soldiers in the tuberculosis sanatoria have never left the country and a considerable proportion of these were incipient cases before they were mustered in. In the hospitals for shock cases and neurasthenics, many indications go to show that the patients were abnormal before going on the strength—unfitted to bear the extreme nervous strain of modern warfare.

All recruits are now "boarded" (come before an experienced medical board), and if the Canadian experience goes to show anything it is that not only much time and lost motion is to be saved from a military standpoint, but that a great deal of the heavy burden of invalidism may be forestalled if experts in tuberculosis and mental hygiene cooperate with the general medical staff in dealing with the physical end of the recruiting problem.

The story is told of the ingenuous superintendent of one small tuberculosis hospital who claimed such success in his "cures" that thirty-five invalided men had re-enlisted and had actually passed the examining physicians a second time. By the time word of this process reached Ottawa, some of these consumptives were already drifting back again to the hospitals from the camps.

It is another series of social relationships of the recruiting problem that the Canadian National Service Board has taken up. Conceiving that the prime responsibility of government in war time is to utilize the energy of the country up to the hilt, it sets a corollary: namely, to prevent the indiscriminate use of the man-power of the country for one purpose only, in such a way as to defeat or impair that purpose.

The National Service Board was created in September, 1916, by order in council under the war-measures act. It is composed of a director-general and a director in each military district in Canada. The former is Richard Bedford Bennett, M. P., from Calgary—a law partner of Senator Loug-

¹ The SURVEY for March 17, March 24; March 31, April 7.

heed, chairman of that other active war-time civilian body, the Military Hospitals Commission. The secretary is C. W. Peterson, also of Calgary, known for his statistical work in agriculture in the Northwest territory. The work is still very much in process. I had no opportunity to investigate it and have no comparative knowledge of similar activities abroad or in the United States to measure it by. What is here set down is the results of an interview with the two officials named, both men of means who as volunteers addressed themselves to the work with characteristic western push.

To their mind the war-time employment of Canadian man-power simmers down to the efficient utilization of each man's powers; and for this the male population resolves itself into three major types—the fighting man, the working man and the paying man.

The fighting man is the man for the army, the navy, the air service; for every branch of the military establishment from the man in the trenches to the clerk and the administrative officer directing operations; and no less the skilled artisan employed in the upkeep of the appliances used by the fighting man.

Mr. Bennett was in France in 1915 and made a study of military needs. "The experience at the front all goes to show," he says, "that men from eighteen to thirty are the best type to stand up under the strain upon infantry in modern warfare. From thirty to thirty-five there is a marked increase in wastage by disease and breakdown and corresponding loss in efficiency. From thirty-five to forty the increase is 100 per cent. The human system is so constituted that it is best adapted to resist the strain of trench fighting at the younger period. Unless the fighting men are fed and kept in prime condition, we might better never send them across the seas.

"This brings us to the working-man and his part. First the farmer—the producer of meat, wheat, fish and the whole range of provisions. It is essential for military success that a man best qualified to be a farmer serve his country that way. Second is the war-material maker; the worker in the steel industry in any of its branches, the coal industry, copper, spelter and the rest. Third comes the working-man retained for the public service of the state, whether it be in transportation, telegraph, telephone and other means for communication, the government departments or the financial institutions on which depend the maintenance and smooth running of a modern nation at war.

"Last comes the paying man. As we put it, 'Some may fight and some may work but all may serve.' This category includes those unable to fight, those whose work is not necessary to the running of the war, or bound up in the essential industries, but whose earnings or means are such that they can pay, pay, pay. That is where the Patriotic Fund and Red Cross come in. The rich province makes good the resources of the poor, which may actually send more men to the front. But the fact that all are bearing their share of the load makes for a sense of justice and common cause. The appeal and response of the Patriotic Fund creates a sentiment in the heart-life of the country; essential to war in a democracy where neither instinct nor compulsion, but patriotism by choice, is to be relied upon as the prime motive force for national coherence and devotion. Another element in this phase of mustering and conserving the national strength is the promotion of economy and thrift, especially the encouragement of war savings to be put into the war loan, the creation of an atmosphere in every home, so that every child can feel it is doing its part and so that the rank and file of people can feel that they are partners in the great enterprise of the country."

Its first responsibility as the National Service Board saw it was to discover deficiency or surplus in the human resources of Canada for each of these purposes. This, they felt, could be shown by a man-power inventory addressed to all citizens and an occupational survey which would draw on employers and organizations.

The man-power inventory was the first attempted; and the first week of the new year (1917) was selected for its taking. Incidentally, it proved one of the most ambitious and thought-provoking efforts to turn the postal service to new social uses. As a self-registering census in double quick time, it called for the utilization of existing government machinery for the collection of returns, for a blank "with questions so simple that the lowest intelligence could answer them without misunderstanding, questions so formed as to admit of no ambiguous answers," and for a campaign of agitation to get the blanks filled in. The plan called for returns from all males between sixteen and sixty-five and a self-addressed envelope was attached to each blank, so that the return would be secret so far as the local post-office was concerned. Packages were sent out in advance to each postmaster, with wall notices and instructions from the postmaster general to place a card in each box, and hand one to every person inquiring for mail. In the cities the extra Christmas carriers were kept on beyond New Year's, and cards not only left at each house on every route, but later called for, and special trips made if necessary to bring in the returns.

The publicity campaign was purposely concentrated into a short period, just before action was required of the public. Four advertisements were placed in every daily paper in Canada in the last two weeks of December, two in the weeklies and one in the monthlies. Editors were appealed to to exploit the local and national aspects of the work in their news columns at the same time. Slides were supplied every moving picture theater and cards placed in every street car in Canada from December 10 to January 10. Over twenty special forms were drafted and 150,000 individually addressed letters went out to leaders and organizations.

Clergymen were asked to devote the last Sunday in the year to preaching a sermon on national service and responsibility; secretaries of fraternal societies, lodges, etc., were asked to bring the matter up at their first meetings; secretaries of boards of trade to circularize their members and to call special meetings; teachers to address their pupils; manufacturers to see that public notices were conspicuously displayed in their factories and to make it a personal matter to see that every employe filled in and returned his card.

THIS CARD MUST BE FILLED IN AND PROMPTLY RETURNED BY ALL MALES BETWEEN THE AGES OF 16 AND 65 INCLUSIVE

NATIONAL SERVICE.

CANADA.

1. What is your full name?	2. How old are you?
3. Where do you live? Province	5. In what country were you born?
4. Name of city, town, village or Post Office } Street	6. In what country was your father born?
Number	7. In what country was your mother born?
10. How much time have you lost in last 12 months from sickness?	8. Were you born a British subject?
11. Have you full use of your arms?	9. If not, are you naturalized?
12. Of your legs?	15. Which are you—married, single or a widower?
13. Of your sight?	16. How many persons besides yourself do you support?
14. Of your hearing?	
17. What are you working at for a living?	
18. Whom do you work for?	
19. Have you a trade or profession?	20. If so, what?
21. Are you working now?	22. If not, why?
23. Would you be willing to change your present work for other necessary work at the same pay during the war?	
24. Are you willing, if your railway fare is paid, to leave where you now live, and go to some other place in Canada to do such work?	

INSTRUCTIONS FOR FILLING IN THIS CARD ARE ON THE OTHER SIDE. IT ASKS 24 QUESTIONS. COUNT YOUR ANSWERS.

SELF-REGISTERING CARD

Used in the Man-Power Inventory of the Canadian National Service Board

For every mayor in Canada was asked to call a meeting of the council, and get the municipal authorities to actively interest themselves in the work. The prime minister and the director of national service toured the country in December and a proclamation to the people of Canada was issued by the former.

The Returns

"THE response," to quote Mr. Bennett, "was beyond expectations. Franking privileges were accorded the national service so that the returns involved no extra outlay. The ordinary Canadian census costs from \$750,000 to \$1,000,000. This cost less than \$50,000, and we promptly secured within 10 per cent of what the census gets in the same age and sex classifications. The census developed rapidly three classes of military prospects: 1, men from eighteen to thirty without dependents; 2, men from thirty to forty-five without dependents; 3, men from eighteen to forty-five without more than three dependents. By March the board had turned into the military department 20,000 cards of military prospects of the first class.

"The board has power to prevent men from enlisting who are needed in occupations where they have skill—for example, send them back to the farm. England had to return four divisions of shipbuilders and coal-miners, who enlisted in the first wasteful period of recruiting. A nation should not let the wild cry for soldiers from a thousand sources stampede irreplaceable men needed at home to make those soldiers effective. It takes six months to make a soldier; it takes six years to make a tool setter, two years to make a coal cutter, long apprenticeship and training to make an engineer or machinist. Nothing is more ruinous than the cry for wholesale indiscriminate volunteering."

"Do you favor compulsion then?" I asked.

"Indiscriminate compulsory service is only less bad than indiscriminate volunteering," he said, "and compulsion is not needed if you apply modern census and efficiency methods to the process of selection. With a thousand first-class prospects in a district to work with, the process of recruiting can proceed on an entirely different plane from the old-style five-and-drum method. The atmosphere is entirely changed. The recruiting officer goes to the young man, without dependents, without any special equipment to serve his country at home, with strength and youth in his favor. He asks, 'Why are you not in khaki?'"

As these Canadian Service Board men saw it, the old-fashioned way of opening a recruiting office was about as antiquated as a town crier. The modern way is more in common with the system by which a high-class insurance agency develops its prospects in any locality and an efficiency engineer deploys his human equipment once he has studied its make-up and individual prowess.

To illustrate, along military lines: Recently the British government wanted 3,000 men for the royal flying corps—acetylene welders, blacksmiths, carpenters, coppersmiths, motor cyclists, motor drivers, electricians, engine fitters, motor cycle fitters, engineers' storemen, motor fitters, millwrights, sailmakers (tailors), milling machinists, metal turners, painters, tinsmiths, cabinet makers, vulcanizers, cooks—at pay ranging from \$1.10 to \$2.80 per day. It was an easy matter for the National Service Board to run through its cards and turn over to the military department 12,000 excellent prospects of men with the right training.

Similarly, in the industrial field, there was a slowing up of traffic due to lack of men to clean up locomotives in the roundhouses. It was a simple matter to put more than ample

prospects in the hands of the employment agents of the Canadian railways.

In the field of agriculture, the man-power inventory made it abundantly clear that there was a shortage of labor with exception of Prince Edward Island. Manitoba needed 5,000 men, Saskatchewan 5,000 and Alberta 2,500. The thing to do, as the Canadian board saw it (Washington papers please copy!), was to induce 12,500 agricultural laborers to come from the United States to help in the spring work on the farms. An arrangement was completed with the provincial governments of the prairie sections by which over \$150,000 would jointly be appropriated by the dominion and the provinces, to send forty-four special agents south in cooperation with the immigration branch of the Department of the Interior. The plan called for the absorption of a portion of the railway fare of experienced farm hands from certain common points in the United States to the Canadian line where the cent-a-mile rate applies.

In March, the second or occupational survey was initiated, schedules sent out to employers, and the cooperation of all boards of trade and industrial bodies solicited. The immediate purpose was to learn the labor needs of the essential industries, so as to make the labor resources disclosed by the man-power inventory practically available. The survey reaches deeper, however, so as to disclose opportunities for substitution in the general industries, where women or partially crippled soldiers might release present employes for the essential industries or for military service.

The survey reaches further also, and calls for estimates of employment needs following the war, so that the government will have a clear picture of the stupendous problem of displacement which will confront the dominion, and may develop an intelligent and nation-wide program to ease the stress when the expeditionary force and the shutting down of munitions work will put the whole social and economic structure of Canada to extraordinary test.

Scientific Selective Volunteering

THIS then is the system which the dominion is developing under its National Service Board to approach the problem of demobilization, and which in the view of the officials of the board would have conserved time, resources and efficiency in the earlier period of recruiting, such as the United States is now entering. From a social standpoint, this Canadian demonstration can scarcely be ignored by the American public. It is the answer of the great English-speaking new-world democracy to the north of us to the challenge of war. Its elements are the voluntary principle as against old-world conscription; pay standards related to the current economic life of the people—far in excess of the European armies, double that of our own, supplemented by subsistence allowances which release great numbers of young married men for military service; and, with the institution of the National Service Board, census and efficiency methods in developing and placing recruits for the army and the essential industries. It is scientific, selective volunteering. It has conserved the liberty of conscience to the individual; and in spite of the provocation of under-enlistment among the French-Canadians, it has stubbornly refused to yield ground to any system of conscription which would place in the hands of the government the power of casting armies of citizens into war without their volition. And it has mustered 400,000 volunteers—the equivalent, roughly, of a free-will army of four million from the population of the United States.

The New Public Health

III

By *Alice Hamilton, M. D., and Gertrude Seymour*

WAR makes sanitation a common cause. Commanders and people alike see it imperative that no epidemic enter the troops—the commander, that his forces be not diminished; the people, that infection be not spread through the land. How keen is the effort to guard an army's health, any manual of military sanitation will show. What need there is for careful attention on a people's part in order that sickness shall not follow the returned army from regions where exposure is inevitable, was told in the abstract of Dr. Rucker's essay in the *SURVEY* for March 10. And there are indications that the present enlistment will prove to be a new allignment of social resources in health work. Needs already existing for health measures alike in rural districts and in city crowds will not be lessened. New responsibilities will face both official and voluntary worker. It is a time when each may serve the other, and both the health of the country.

Because, then, the war crisis has increased rather than diminished the importance of "tomorrow's public health" the following article, written more than a month ago, is published now with but little change. Its plea for the best organization, for unhampered administration, for the extension of health work throughout the country, takes on a new significance—the sudden seriousness that tinges all activity today.

From Sickness Back Towards Health

IN THE United States, as everywhere else in the world, the usual reason for official sanitary activity has been the presence of some serious epidemic. The "state board" of Louisiana in 1855 had to do with such conditions, and rendered quarantine service only during an outbreak of yellow fever. To Massachusetts belongs credit for organizing the first state department of health, though even here it took nineteen years for public opinion to crystalize. It was in 1850 that the sanitary commission, headed by Samuel Shattuck, advised a permanent organization to safeguard public health; it was 1869 before a permanent board was established. California followed in 1870.

Today every state in the union has some sort of an organization whose very title, "state board of health," commits it to a program the minimum of which was outlined in the preceding article of this series [the *SURVEY*, January 20]. Sometimes the organized board was self-perpetuating. Often it was regarded as a part of the state's machinery, to be oiled and kept in some sort of working order by the political party in power. This was a convenient arrangement. It saved a good deal of thought and responsibility for the voter; it added one more considerable benefice to the gift of the governor. From the people's standpoint, "let the state do it" was a *modus operandi* that kept things comfortably abstract and remote. The state health officer might be appealed to in an emergency—such as an outbreak of plague; otherwise he would keep the streets as clean as he could, fumigate a house now and then and perhaps write a bulletin, more or less dull; but no constructive relationship existed between state and local officers—much less between state officers and the people. The change from this kind of administration, in which the appointed practitioner

gave to state health work such time as he could spare from the task of earning his own living, to the modern method of employment by an advisory board of a specially trained official on a full-time basis, directing a corps of division experts, has been sure, even though slow.

The subject of health administration is no longer shunned as a bit of party politics; it is discussed to good purpose as a vital issue at medical meetings and conventions; in groups primarily civic, such as leagues of mayors; in voluntary study groups—all quite in addition to professional discussions of technical detail.

It is a growing conviction among all thoughtful groups that the health officer should have a public health training. What this implies has already been discussed in this series of articles [the *SURVEY*, November 18, 1916]. This country is adopting rapidly of late years what has for more than half a century been the practice in England, where the medical officer of health is to be "registered as a holder of a diploma in sanitary science, public health or state medicine."

Moreover, the health officer should be a full-time official. Of the fourteen states that a year or so ago had only part-time officers, nine (so far as can be ascertained) are requesting of their legislatures such appropriations as shall assure the full-time service of the state health officer.

Yet another desideratum is that the health officer should be entirely free of politics. On this basis the federal Public Health Service is established, and it is the rule in many states. But elsewhere, in the words of Dr. C. V. Chapin, "the health officers go with the change of administration. Indeed, sometimes they hand in their resignation automatically when election comes." The effect upon an official's work of knowing that his public service is only for a brief season, and that then he will return again to the ranks of private practice, is easy to discern.

Where the health officer comes from is of small significance—whether appointed or elected, whether a resident of the state or not, whether his political opinions harmonize with those of the administration, contrast with them, or are invisible to the unaided eye. But it is of great and immediate significance that he know his subject; that he be able to perceive the state's needs and its resources and develop those resources skilfully or import assistance to meet the needs.

Health Officers Elected

It is estimated that success in securing the best type of officer more surely follows election by the board than appointment by the governor. Election is the method in thirty states; in fifteen states the governor appoints, sometimes with Senate or council, sometimes after recommendation from the board. Says Dr. Chapin on this point:

"Although the present gubernatorial appointments made in New York and Massachusetts, necessarily in the full light of publicity, are exceptionally good, there is little in the history of health conditions in the states named to encourage a belief that improvement in the character of the state's sanitary executive can best be secured by appointment by the governor."

As to the board itself, as part of the state's machinery, its

members are very generally appointed by the governor for terms of service lasting from two to seven years.

In personnel the boards vary widely. Physicians, naturally, predominate. Sometimes the state superintendent of education and other state officers are, ex-officio, members of the board. Records show a sprinkling of veterinarians, journalists, business men, among the members, and—rarely—an experienced philanthropist. In one bulletin last year it was said that membership in the board included clergymen, merchants and undertakers, and it was respectfully suggested that the governor consider for the next vacancy a physician. But, whatever its representation, however impeccable its intentions, a large group never accomplishes so much as an executive can; and consequently, even before there was a special training for the work, boards often selected one of their members or someone from outside who could and would give time to its practical executive duties. The weak point in that plan proved to be that members of the board had to take the initiative in suggesting policies, and as a result the executive's time and the public's money were sometimes used for projects representing less the weal of the state than the interest of an individual.

Tendencies in Reorganized Boards

IMPORTANT steps in reorganization have recently been taken in several states and are under consideration in others. Massachusetts and New York now have a commissioner appointed for a long term (five and six years) and a "public health council" upon whom are conferred wide legislative powers. Indiana is earnestly endeavoring to secure legislation insuring a better health law. Says Dr. Hurty:

"Three fatal defects exist in the present law: (1) Health officers are doctors giving what time they choose to public health work. (2) Health officers are practicing doctors in competition with their brother doctors, and, therefore, cannot secure their cooperation. Without this cooperation present health officers are only partially successful. (3) Health officers are, with exception, uninformed and untrained in disease-prevention work. Their education and training is in the line of the pound of cure and not in the line of the ounce of prevention. Hence they are not efficient and economical to the state.

"The present law is like an old, wheezy, back-number locomotive, which can run a little and pull a light load. Think of a railroad company trying to do business at this time with such a machine."

The reorganization just effected in Illinois [see the SURVEY, March 10] will relieve the secretary of the health department of the unnecessary burden which has attached to his office for a quarter of a century. Overseeing the registration of physicians, practitioners of all kinds, and embalmers is said to have claimed heretofore fully 75 per cent of his time.

It is regrettable that so thorough a reorganization, as this in Illinois, should be marred by a bit of provincialism, such as restricting the choice of a state health officer to physicians who have practiced for five years in the state. Residence has not proved a necessary or always a valuable qualification for this position.

Meantime, Dr. Hill's warning should not be forgotten:

"The head of the administration should be unhampered by any 'board of strategy.' The chiefs of his own divisions, picked properly, to begin with, should form his best council, and he should seldom need other. Political exigencies should control him no more than they control the military officer in the face of the enemy. The board of health of today is often a mere anachronism, built up when there were no ex-

perts with the hope that, all being blind, combining one with another would manufacture sight between them.

"Now that men really versed in public health can be secured, nothing is gained by placing a merely official board in actual control, for if composed, as many boards may now be, of experts, they tend to take the place of a single executive; while if composed, as they usually are in practice, of inexpert laymen or, worse, physicians inexpert in public health but who are, nevertheless, under the supposed halo of a medical degree, they do more harm than good."

The vital matter, however, in any scheme or organization is the provision for a centralizing and distributing system—a means of bringing all parts of the state into line with principles of hygiene and sanitation—no small task, whether in the thickly settled areas of eastern states or the wide stretches of Montana or Wyoming. Toward this end the principle of health or sanitary districts is being widely followed. At this time four states have such divisions. California is considering the plan this year.

By this plan the state is divided for supervision into sections each large enough to demand all the time and attention of a health officer. These sections may correspond to township or county divisions; or they may include two or more of these political boundaries. This arbitrary districting is flexible, of course, and districts may be easily reassigned if one proves to demand more time than another, or else consolidated as work progresses and a "pooling" of funds and force would seem to be of greater benefit to the whole area.

Perhaps the greatest importance of these country or district units is their possible relation to the rural sanitary problem. This thesis was convincingly developed not long ago by Louis I. Dublin, of the Metropolitan Life Insurance Company. Speaking before the public health section of the American Medical Association convention, Mr. Dublin said:

"The key to the solution of the problem of rural hygiene lies in the development of efficient county health organizations in the United States. In most states the chief unit of local government is the county. There are 2,953 counties in the United States. The typical county is about 600 square miles in area, with a population of about 20,000. Five-sixths of these counties are rural in character; fully 10 per cent have no incorporated places, and about half contain towns with less than 2,500 people. The American county, however, has not as yet been aroused to the fact that it has distinct health functions to perform, and it is the only government unit that can properly and efficiently perform such functions."

In spite of preconceived ideas as to the healthfulness of the country, Dr. Dublin continues, typically rural sections suffer a higher death rate from tuberculosis than cities in the registration area. The typhoid rate is also decidedly higher.

In Spite of "Country Air"

FACTS and figures prove that ventilation in the country is sadly neglected. Respiratory diseases, those that depend largely on fresh air for both their prevention and their cure (among which may be mentioned tuberculosis, grippe, bronchitis and colds), as well as adenoids and defects of the nose and throat, are more prevalent in country than in town. Medical school inspection shows that country children are from .34 to 14.2 per cent more unhealthy than city children, even than children of the slums. Overcrowding is said to be another unexpected, uncalled-for condition often met in the country. Investigations have shown that four, five and six people sleeping in one room, which probably had only one window or perhaps two, with neither one open, was not an uncommon occurrence.

Perhaps overcrowding is occasioned in various places, as

well as New York state, by a curious enterprise reported by the New York State Department of Health—tenement houses on farms in the state “conducted by immigrants with a keen eye for financial gains at the expense of their own race” throughout the school vacation season.

The victims pay their rent “for the season” before seeing the rooms. If dissatisfied, they may leave—but leave their money; there are other tenants. Notes made on the premises by one of the supervising nurses of the health department tell of one such place containing nine beds in seven rooms; it housed seven families, twelve adults and seven children; one child was dead from poliomyelitis, another ill; filth in yard from kitchen waste and a privy. In another of these summer resorts eighteen bedrooms held forty-three adults and sixty children, and three cases of poliomyelitis.

Some of these places are said to be within 500 feet of railway stations, past which many summer tourists travel or at which they stop. Small wonder, then, that infection spreads even among people who believe they have taken every precaution to avoid “carriers.”

It is a heavy burden that falls upon the country child. But among children is the most promising future for health work. Their interest in being told about these things and in being treated is illustrated in a recent report by Elizabeth Hanson, school nurse at Mitchell, S. D. One little boy of seven, seeing the other children going to the dispensary to have their teeth cared for, asked the teacher, “May I go to the penitentiary, too, and have my teeth filled?”

One other fact is a strong plea for rural health work. More women die in this country annually from causes incident to childbirth, yet known to be preventable or curable, than from any other one cause except tuberculosis. This is the core of the report made by Dr. Grace L. Meigs, of the Children's Bureau, just published under the title *Maternal Mortality*. The remedy for such suffering and loss of life as are now found in rural counties Dr. Meigs believes to be, first, a unit of nursing, centering at the county seat, with nurses especially equipped for obstetrical service. The establishment of such a service, says Dr. Meigs, would undoubtedly be the most economical first step in creating a network of agencies which would assure proper care for both normal and abnormal cases.

As has already been said [SURVEY, January 20], in only four state boards of health is there at present a definite division of child hygiene. In only two states, it has been said recently, is there provision by law for the employment of county nursing service, though if the efforts of the women's clubs in North Dakota are successful, a third state will be added to the list and will have at least one visiting nurse in each county.

It would not seem that further illustration is needed of the peculiarly important opportunity at this time open for health service in rural districts of the country, nor of the advantageous position which a health officer holds in a “sanitary district,” both to coordinate the various local departments and to extend health service beyond what is, strictly speaking, their jurisdiction. It means men and money; but these are usually forthcoming as soon as there is an appreciation of the conditions.

State or Local Support?

TURN for a moment to the practical matter of cost: In some places the district officers are paid by the state; elsewhere the work is supported by the district itself. This method, though slower, is held to be more democratic and ultimately surer; for it rests upon the intelligent cooperation of the people

affected by this sanitary administration. Dr. Hurty goes as far as to say:

“Each county should appoint its own county health commissioner; his salary should be a living one graded by the number of people he serves; his duties and powers should be clearly defined; a proper health appropriation should be provided in each county; he should keep full and accurate records of his work and he should be subordinate to the state board of health and be subject to dismissal for such reasons as the law may set forth.”

Typical State Board Problems

WHAT is to be done in such a case as the following? A sanitary engineer of the Alabama State Board of Health included the following statements in his report for 1915:

“Twenty-three separate places were visited, some more than once. Ten of the twenty-three followed the recommendations made, and, according to information received, the results have been entirely satisfactory. Three places ignored our recommendations entirely, hence the time spent in making the necessary investigations in order to be in position to submit plans for relief was entirely thrown away. Such occurrences suggest very forcibly that larger mandatory powers be conferred on the state board of health.

“From ten places we have no information of what steps, if any, were taken.”

Again: An outbreak of typhoid recently reported in Utah was traced promptly to a polluted water supply. The comment on this fact is laconic but instructive:

“For several years the state board of health has issued warnings to the residents of the county and has called attention to the necessity for protecting the water supply.”

Now it may be that when the county has paid its doctors and its undertakers, it will install an adequate purification plant. But why should it be the limit of a board's authority to “warn” and to “call attention”? It would seem that health laws might be a trifle mandatory at times. If people will not act upon advice to keep themselves, their children, their school and all the activities of their community in health, there should be lodged with the department of health the necessary police power to enforce the law and so protect the adjoining communities from paying the penalty for the indifference of one group. The courts may be trusted to keep the citizen from being victimized by over-zealous scientists, it would seem, from a study of some recent court verdicts. Many states provide for fines, ranging from \$1 to \$1,000, or imprisonment in case of failure to report communicable disease. But the enforcement of such laws is so much a novelty as to receive newspaper comment, and to draw forth congratulations upon this “pioneer” activity.

Beyond, beneath and through administration, however, reaches the vital fact of scientific truth discovered, shared and applied. Not by something hectic, special, as one “day” or “week” will sanitation and hygiene win their way into the consciousness and life of people. Steady progress follows a loyal, every-day sure application of known preventive measures to known sanitary needs. Said Dr. William De Kleine, of the Michigan State Board of Health:

“The public health problem is not entirely a scientific problem, viewed from the standpoint of scientific medicine. It is much broader. It includes a study of social questions and their relation, as well as a study of the application of the strictly scientific principles.”

In view of his recent experience in the tuberculosis survey of Michigan, Dr. De Kleine's words are doubly significant.

The future of health work rests first of all with the health officer—state, district, local. He faces a brilliant opportunity and a responsibility of peculiar weight at this time.

Progress in public health rests also upon legislators. "When they fail to make proper provisions for the protection of health and the lives of the people, it is because they do not understand matters of this kind," a state health officer is reported to have said. But the remark seems needlessly generous. "Matters of this kind" are not esoteric, nor too abstruse to be

realized by legislators in a large number of states. Their application to concrete conditions is usually clear-cut and of immediate importance for both physical and economic welfare.

And, finally, before the community and every individual therein stretch possibilities that are limitless for the knowledge of the splendid facts of modern sanitary progress, for the application of them in the routine of every-day existence, and for the acceptance of burdens of cooperation as the crisis of today may demand.

"Turning Off the Spigot"

A Reply to Mrs. Tilton

By Hugh F. Fox

SECRETARY UNITED STATES BREWERS' ASSOCIATION

IN a series of articles published recently by the SURVEY,¹ Elizabeth Tilton submits her apologia for prohibition. She makes an especial appeal to her associates in the field of social service to join in the movement which seeks to end all traffic in alcoholic beverages, sorrowfully confessing that few of them accept her panacea for the ills of society. It may not be amiss, therefore, to suggest, at the outset, that indifference to prohibition, on the part of social workers, has a sound basis. They do not ignore the sad results of alcoholic excess, but they recognize that it almost always proceeds from some cause, such as physical or mental deficiency or the misery consequent upon economic handicaps—and that no surface remedy would be effective.

In one way, however, Mrs. Tilton is right in appealing to social workers. They can probably contribute more of value to the solution of the drink problem than any other class. With the highest of ideals, they employ the most practical of methods; they are not concerned with dogmas or theories; they have the situation directly under view at all times, and they have exceptional opportunities for studying and assimilating its psychology.

Within the limits set it will be possible only to discuss the principal points in Mrs. Tilton's articles, the first being the circumstances of her conversion which she relates with a fine dramatic touch. She was uncertain and troubled, when there suddenly appeared to her, very much as the light from heaven must have appeared to Saul of Tarsus as he journeyed on the road to Damascus, certain murder statistics of Birmingham, Ala. Mrs. Tilton says she had to "bend to the healing in their wings." The figures follow:

1909 (dry).....130	1911 (dry)..... 88
1910 (dry).....138	1912 (wet)..... 306

The source of these figures was not given, though they were employed twice. A letter to Birmingham brought the following statistics of homicide (not all murders, mind!) from the Department of Justice:

1906..... 78	1911..... 85
1907..... 65	1912..... 82
1908..... 57	1913.....133
1909..... 65	1914.....114
1910.....107	1915..... 66

If Mrs. Tilton desires further evidence that prohibition does not lessen this form of crime I invite her attention to the tables

published annually in the *Spectator* by Frederick L. Hoffman, the distinguished statistician. In the issue for December 21, 1916, he shows that the place of dishonor in the matter of homicides is held for 1915 by Memphis, Atlanta, Savannah, Nashville and Charleston in the order given. The first named had in 1915 a rate of 85.9 per 100,000 population; the last named a rate of 24.9. All are prohibition cities. The rates for the principal wet cities were: Chicago, 8.7; Cleveland, 7.4; Baltimore, 6.9; Boston, 5.0; New York, 4.7; Philadelphia, 4.4; Milwaukee, 3.3. The rate in the prohibition cities mentioned shows an increase in the period 1910-14 over 1905-09. The large Negro population of these municipalities is sometimes advanced by prohibitionists in explanation of their greivous records. But New Orleans with a large Negro population is below any of these cities, and moreover shows a decreasing rate. Or, to take another example, North Carolina, prohibition, leads the twenty-one registration states in homicides. (U. S. Census Bulletin on Mortality, 1914.)

As offsetting Mrs. Tilton's attempt to show an intimate connection between drink and crime, I shall quote a passage from a recent address by Chief Justice Olson, of the Municipal Court of Chicago, before the Bar Association of New York. In describing the psychopathic laboratory connected with his court, with which, by the way, Mrs. Tilton must be familiar, the chief justice said:

"The laboratory has examined hundreds of alcoholics. The director says that he has yet to find the first case of chronic alcoholism where there was not at least a psychopathic constitution, dementia praecox, maniac depressive insanity, epilepsy or feeble-mindedness as the basis, with the exception of a few cases where there was a physical basis such as diabetes or tuberculosis, and the man was whipping up his flagging energy with alcoholic stimulants. The group with the mental defects at the bottom of the alcoholism practically all show a defective heredity beyond the average. The fact should be emphasized, therefore, that chronic alcoholism is secondary to some underlying mental or physical defect which is primary, and without which the chronic alcoholism would not exist."

With considerable trouble, Mrs. Tilton hits upon a reason for the abandonment of prohibition by all but one of the seventeen states which adopted it in the antebellum period. She concludes that the Civil war produced such lassitude and weakening of moral fibre that the license system slipped in again. The record demolishes this. True in some states prohibition was repealed or nullified by court decisions at early dates, but

¹ January 13, January 27, February 10, February 24, March 10.

not in a majority. Vermont and New Hampshire waited till 1903. Rhode Island, which adopted prohibition in 1852 repealed it during the Civil war, re-adopted it in 1886 and did away with it again in 1889. Connecticut tried it from 1854 to 1872; Michigan from 1855 to 1875; Massachusetts had it from 1852 to 1868 and from 1869 to 1875 before finally discarding it. Iowa adopted partial prohibition in 1855 and did not get full prohibition until 1884. Her mulct law, substantially a repeal measure, was adopted in 1893. Ohio had a somewhat similar experience. Maine, of course, has stuck to prohibition and her shame and scandal have spread throughout the civilized world. Here is the only commonwealth which has had a continuous experience with prohibition for more than half a century. Why do prohibitionists always "soft pedal" on Maine?

Massachusetts, her home state, bothers Mrs. Tilton, for she believes prohibition worked well there. She quotes statistics put before the public in poster form by the Associated Charities of Boston, showing arrests for drunkenness in that city in the last quarter of the last prohibition year and the similar period in the first year after prohibition; also some testimony from officials and others in several communities in favor of the law. If she had gone a little farther in her search for fact she would have found much more evidence, though not on her side of the case. Read what the governor of the state said:

"I have not full returns from the cities and towns where licenses have been authorized, but from returns furnished by the chief detective of the commonwealth, at the beginning of the present year, from 235 towns and cities, or from some more than two-thirds of the whole number, it appears that the whole number of arrests for drunkenness in those places was in the year 1874—25,740; in the same places, like arrests in 1876—18,696—showing a decrease of 7,044 between the last year of the prohibitory law and the first year of the license law, in 235 towns. (Special message governor to Senate, May 15, 1877.)

As to arrests for drunkenness in Boston the police commissioner submitted an elaborate table in his annual report for 1910. This showed the total arrests for drunkenness and the rate per 1,000 of such arrests to the whole population in each year from 1860 to 1910 inclusive. Space forbids the presentation here of this most interesting report but it perhaps suffices to say that, in respect to drunkenness the best prohibition year is far worse than a number of good license years; that the worst license year is far better than all but a few prohibition years; and that the prohibition period as a whole exhibits far worse conditions than the license period as a whole. In the same report the police commissioner shows that an astonishing proportion of the persons arrested for drunkenness in Boston come from the dry municipalities which surround that city.

The Dry Cities

ONE may only conjecture why the posters of the Associated Charities dealt only with the last quarters of two years when such a wealth of material data was convenient.

In her compilation of figures and opinions from a number of cities that have recently come under the prohibitory system, such as Seattle, Portland, Ore., Denver, Wheeling, W. Va., etc., Mrs. Tilton really makes her strongest point. But she fails to show that these glowing reports could also be made of many license communities and that the improved conditions are due in great part to the prosperity which has visited many places. This is particularly true of Denver, where war orders for metals have caused the reopening of mines shut down for

years and an unprecedented demand for labor. Seattle has enjoyed an unparalleled boom in shipbuilding and has been the port whence the huge cargoes of munitions were sent to Russia.

There are also many circumstances that can be cited in rebuttal. Portland, for instance, reports most dismal conditions, with 7,000 vacant houses, with general business stagnant, with advertisements of property to be sold for tax arrearages occupying sixty-four columns of a recent newspaper issue. From West Virginia come stories of jails crowded as never before with "bootleggers," with women and even children engaged in the traffic and of the demand, reported by the Associated Press, of the Mine Owners' Association for a beer and wine law, in order that their properties may be operated satisfactorily. It is, of course, easy to make a superficially favorable showing for prohibition in the first stages of the law's operation. After the surplus stocks of liquor give out and the machinery of law evasion gets to working there is often a different story.

Kansas, the Prize State

IN KANSAS, the bright particular star of the prohibition firmament, Mrs. Tilton finds her fondest hopes realized. The people are generally prosperous, health is good, some counties have no jail prisoners and both political parties are committed to the dry dogma. Kansas certainly ought to be prosperous for she has had bountiful crops for twenty years and has sold them at high prices. The health of her people ought to be good for they are mostly engaged in agriculture, the most healthful of occupations, and the state has no city slums or sweat shops. But the death rates of other states are lower. The insanity rate of Kansas is high and Mrs. Tilton in admitting this really should not gloss over it and then have us believe that the high rates of Massachusetts and New York are due to the legalized sale of alcoholics. The public schools of Kansas rank only twenty-fourth in the Union according to the Sage Foundation's grading; her state prison population is higher in proportion than that of her neighbor, Nebraska, according to the federal census bureau; her number of tenant farmers and of mortgaged homes is increasing, if we may believe the same authority; her population is decreasing according to her own state census and her manufactures have recently suffered a considerable decline as shown in a bulletin just issued by the census bureau.

The picture which Mrs. Tilton draws of general conditions in Europe would seem to show that those countries have advanced most in temperance which have discriminated in taxation and regulation between beer and natural wines on the one side and the spirituous liquors on the other. The fact that Great Britain, Germany, Austria-Hungary, France and Italy, to say nothing of other warring countries, serve regular rations of alcoholic beverages to their fighting men, shows that scientific opinion regards these not merely as harmless but beneficial. Otherwise, they would most certainly be banished from the armies.

With regard to the workings of the Gothenburg system in the Scandinavian countries Mrs. Tilton makes many observations, some of which are not in accord with others and several of which seem to have no particular bearing. It may be remarked that official investigations by the United States Department of Labor and a Massachusetts commission have resulted in conclusions directly opposite to her theories, and that the system has recently been successfully transplanted into Great Britain after extensive inquiry. She seems to try to obscure the remarkable fact that the consumption of spirits in Norway under the company system has been reduced from 6.67

liters per capita in 1875 to 3.64 in 1913 and in Sweden just about one-half during the same period. This she terms a small decline though it has not been matched by any other countries in the same length of time. She criticizes the fact that profits from the sale of drinks have been used to reduce taxes, but fails to mention that this has been against the law in Norway for almost twenty years.

The case against beer as stated by Mrs. Tilton is unconvincing. The scientific experiments of which she makes so much can be dismissed by saying categorically that they are not accepted by the scientific world as final. Nor need one stop to argue that an immoderate use of beer is harmful. But the real gist of her article is that the use of beer is in itself so bad that to substitute it for distilled liquors would not bring improvement even if the latter were wholly suppressed. In Finland, Norway and Sweden, just the opposite belief is held and reflected in legislation; moreover, fermented beverages containing not over 2.25 per cent of alcohol are free from taxation and general license conditions. Mrs. Tilton herself has shown that in these countries alone has a marked reduction taken place in the total consumption of liquor, and that measured by it they are among the most temperate countries in the world.

Beer and Temperance

IN THE United States, the increase in the popularity of beer has been coincident with a notable increase in temperance. Improvements in processes of refrigeration and pasteurization have resulted in gradually reducing the alcoholic content of American beer until now it averages $3\frac{1}{2}$ per cent. To become intoxicated on such a drink is really something of a feat.

Perhaps the most serious criticism to be brought against Mrs. Tilton is that she ignores the evils of prohibition—the hypocrisy, the dry-rot of morals, the vitiation of standards, where laws are not enforced; the fierce unreasoning intolerance, the demand for more and more drastic statutes, the surrender of governmental functions to irresponsible agencies, the persecutions and ostracisms in the name of righteousness. These things reflect that "prohibition state of mind" which Mrs. Tilton believes is so desirable for a community to acquire.

But the foregoing has not been written simply to demolish an argument for prohibition or as a plea for the continuance of the *status quo*. Nobody is satisfied with the present situation and the brewing industry, for which the writer may assume to speak, has long been concerned with measures to improve conditions.

The brewer is blamed for the present type of saloon and while this is not entirely just, he does recognize a measure of responsibility and is laboring to rid himself and the institution of the reproach that now attaches to both. In Ohio and Missouri the brewer initiated, conducted and paid the cost of movements which wiped out many disreputable resorts; in Baltimore and other cities he has directed "clean up" campaigns; he is cooperating closely in New York with the Committee of Fourteen and other civic agencies; in Newark and other places he is asking for sharp reductions in the number of licenses and for other reforms.

The brewer sees the necessity of going further, and making other sacrifices. He is aware that the saloon must undergo a radical change. It has performed a social function that no other institution has attempted with success, but it has appealed only to the male portion of the community. Obviously, it must become safe, and serviceable to women; must be hygienically clean, attractive in architecture and furnish-

ings; must lay less emphasis on the sale of alcoholic drink and must provide food as well; must in appearance, conduct and atmosphere strike a higher standard and make a more elevated appeal—in a word, must become a true social center.

Of course, the brewer cannot accomplish these and other necessary things alone. His own proposals are apt to be viewed with a suspicion, not entirely undeserved for there have been shortsighted, selfish men in his industry just as in others. But he is coming to put his hope in an awakened public opinion which, fortified with knowledge and animated with a sense of justice, will exert a force upon manufacturer, retailer, legislator, public administrator and consumer, which must result in better things.

How shall this public opinion be awakened? It is getting to be realized that in legislating upon liquor we have followed whim, fancy and prejudice and that often our theory has been far away from the fact. Hence has arisen a demand, voiced by magazines, newspapers and publicists, for a national survey of the drink question. The most frequent suggestion is that this inquiry be undertaken by one of the federal departments or by a special commission appointed by the President. In either case there is a presumption of ample authority to cover every phase of the subject and ample means to prosecute the work.

Precedents are abundant. In almost every European country, investigation has been deemed a prerequisite to legislation upon drink or any other social question. The Norwegian Alcohol Commission; the Swedish Temperance Society which receives aid from the public treasury; the British Board of [liquor] control which has a most important function of investigation and recommendation in addition to its authority of regulation; the great scientific societies of Germany and France, in receipt of governmental subsidies and reporting data and recommendations periodically, are some notable examples. In the United States we have had the country-life commission, the child labor commission, the industrial relations commission and others of federal inception. If a question of railroad rates is raised it is handled after investigation by our permanent Interstate Commerce Commission; if a reform of our banking system seems desirable an inquiry made by our monetary commission collates the facts and inspires the recommendations upon which legislation is based. And the drink problem has become national in aspect, a circumstance which is emphasized by the recurrent efforts to secure nationwide prohibition through the medium of an amendment to the federal constitution.

Politics, Science, the Trade

IT IS difficult to overestimate the value of full, authoritative data on the drink problem. With the facts before us and with an adequate interpretation we would be greatly aided to really unprejudiced and disinterested action with the public benefit in view. That is very difficult to get now. The politician either regards the liquor business as an unfailing source of supply for state and municipal treasuries, from which the greatest possible amount of revenue must be squeezed, or a convenient football to be kicked around amidst plaudits of the crowd. Science is divided into two schools, the one holding the least amount of alcohol to be a race-destroying poison; the other asserting that rational use is not only harmless but beneficial. The trade, not exempt from selfishness and not always withheld by scruple, is confronted by the radical prohibitionist who breathes only destruction.

Out of a national commission of inquiry may come a real, constructive and permanent solution of this great problem.

Breweries vs. Bakeries

A Rejoinder to Mr. Fox

By Elizabeth Tilton

"The world's food reserve is very low."—United States Agricultural Department, April 12, 1917.

WE STAND in a world of disillusionment, a world with forty million men under arms and civilization descending into hell. But these things are! Face fact and proceed, says the old Greek.

As I acknowledge the fact and begin to work at what I can do to help, there enters Mr. Hugh Fox, secretary of the United States Brewers' Association, with what truly seems to me (consciously or unconsciously on his part) mere twistings¹ of my plain statements in Turning off the Spigot. Shall I stop and go over it all again, in the three days that the SURVEY can give me to write an answer?

But our world is suddenly confronted with titanic war preparations and with the food famine looming nearer every day. We must increase our food supply. Would Mr. Fox's scheme help? Abolish distilled liquor only, he says; keep beer, serve it not at bars, but in innumerable cafés, with tables and chairs and music, where men can bring with them their women and children, and where all the family can drink together. In other words, let us abandon that great health asset (left us by grandfather)—a middle class that tends totally to abstain; let us be Germans—the average man there drinks from four to ten quarts of beer a day!

You see, Mr. Fox really believes that man must drink, and if the wives and children come too, the men will no longer over-drink. They do over-drink horribly everywhere where beer is used freely and by the family. But Mr. Fox hopes it will be different here.

Beer and Intemperance

TO ME it seems as if opening wide the beer gardens, with chairs and tables in the saloons, bringing the women and children along too, will simply in the end double, treble, quadruple the sale of beer here, as it has in Germany.

And I do not want to increase beer drinking here. I want to get rid of it as fast as I can, for since I wrote my articles for the SURVEY there has been added to the many good reasons for total abstinence already given, a new pressing reason—the need of increasing our food supply.

There is only one thing more brutal than a terrified world (like ours today), and that is a hungry world; and that is the world that is coming if the war continues. It is going to be a food war. Says Kenyon L. Butterfield, president of the American Association of Agricultural Colleges, "Prohibition for the duration of the war should be established for purely

¹About the figures of murders in Alabama: the figures came from the *Outlook*. I asked Mr. Pulsifer, of the editorial staff, if they were absolutely correct. I will go to the bottom of them at once and tell the results. In passing may I say the statement that the cities Memphis, Nashville, Charleston, Savannah and Atlanta, leading in homicides for 1915 were prohibition cities, is misinformation. Charleston did not go dry until January 1, 1916, Savannah and Atlanta until May 1, 1916. Up to then the latter two allowed beer but no distilled liquor. Curiously, I was in Savannah the other day and Dr. Brunner, secretary of the Board of Sanitary Commissioners, said: "Two years ago I had the personal liberty idea; I thought prohibition poppycock. But prohibition enforced is a mighty good thing, and we have got this mighty good thing right here. Look at my homicides reports:

"Homicides (Negro by Negro), 1915 (wet)..... 24
 "Homicides (Negro by Negro), 1916 (dry)..... 10."
 And eight of these ten occurred before May 1 when prohibition became effective. I also want to say that in the table in article II, the SURVEY for January 13, 1917, p. 426, Sweden's total consumption should read: Total 1851-1860, 6.70; 1861-70, 5.35; 1871-80, 6.23; 1881-90, 4.66; 1891-95, 4.47; 1896-1900, 5.38; 1901-5, 4.84; 1906-10, 4.33.

economic reasons." In short, we need today, at once, not only prohibition as hygiene for the boys in our training camps and for efficiency purposes in general, we need prohibition as a food conservation measure. This is only one step of the many that must be taken to ward off the specter of a hungry world, but it is one real step.

For two days now I have been getting together all the facts that show the food values that are practically wasted in brewing and distilling. The English have discovered that it takes 3,400 calories or energy-makers a day to feed a munition-maker or a soldier. Women and children can get on with about 2,500.

Now here are the calories or food values wasted in liquor. I am using matter compiled by Dr. Stewart Whittemore for the Associated Charities, Boston, 1913. The government has not recently, as far as we can ascertain, compiled statistics on brewing materials, so I use 1896 figures. To find out materials used in 1915, I increased the amount 66 per cent, that being our increase in production over 1896.

I find that we used approximately in brewing in 1915 (pounds): malt, 3,495,125,040; rice, 191,413,943; corn, 460,128,650; grape sugar, 63,979,560; hops, 58,165,083; glucose 45,505,637; gallons of glucose, 4,783,630, besides other materials of a nature not specified to the amount of 4,706,247 bushels, 232,429,685 pounds, 73,938 gallons. These I leave out of my computation, though they may waste much food value.

When I turn my pounds of known food materials into calories, please note how they look:

APPROXIMATE CALORIES OR FOOD VALUES IN THE ORIGINAL MATERIALS USED IN BREWING, 1915

Malt	5,662,102,564,800
Rice	310,090,588,200
Corn	752,310,342,750
Grape Sugar	115,163,208,000
Glucose	54,606,764,400
Total	6,894,273,468,150

These are calories or food values sufficient to feed the one hundred million people of the United States for twenty days. Or the food values of the essential materials used in 1915 in brewing would be sufficient to support 5,555,418 hard-working men for an entire year.

Coming to distilled liquors, I take the figures for 1911, the last I can find:

POUNDS OF MATERIALS THAT WENT INTO DISTILLED LIQUORS, 1911

	Pounds	Calories
Malt	194,556,576	315,241,653,120
Wheat	1,305,900	2,154,735,000
Barley	473,952	767,802,240
Rye	301,057,008	487,712,352,960
Corn	1,162,350,200	1,900,442,577,000
Oats	421,504	682,836,480
Molasses (gals.)	44,363,133	665,446,995,000
Total calories or food values, if materials had been used in original form,		3,372,448,951,800.

This is for 1911, but as our production has fallen about 22 per cent (1915) I deduct and find that the food values of materials used in distilled liquors in 1915, would, in their original form, have been as much as would feed 2,000,000 able-bodied men for one year. I find that that negligible item, wheat, about 20,000 bushels, would have produced 1,542,700 loaves of Hathaway's bread.

Adding together beer and distilled liquors, I find that we

used in 1915 in brewing and distilling, approximately enough calories or food values to support an army of over 1,000,000 hardy men for seven years. That is to say, there are calories in that material equal to doing this. They would, of course, have to be given in variety.

England finds that the 31,000 acres planted with hops, which have practically no nutritive value, would, if planted with oats and potatoes, yield food values that would support 180,000 people for a year. We have about 44,000 acres of hop-land, "and the distillers," says Dr. Whittemore, "sell their finished products for a price twenty-five times that which the cereals would have brought in the form of meal" (1912).

This is why I do not advocate beer gardens—man, woman and child drinking—as does Mr. Fox. I want to see war prohibition at once—as a matter of national honor to the thousands of boys suddenly immersed in an excited, abnormal world. I want to see it, too, as a matter of hygiene. The commander who would not allow saloons for our boys on the Mexican border was the one whose troops showed the lowest rate of venereal disease. I want to see war prohibition as a matter of efficiency. And now, in this food war, I want to see it as a matter of feeding the hungry.

But I want to see it come right, following organized total abstinence. The countries that have made the most headway against drink are Norway, Finland and Sweden. They have had the bulk of their people (70 to 80 per cent) under prohibition for fifty years. But behind has been the great movement for total abstinence.

Let churches solemnly give a rising pledge, at the call of their pastors, to abstain totally during war. Let clubs do this, chambers of commerce—let us flash a flag of that race hygiene ideal, total abstinence, and then let us strike, with this personal sacrifice behind it, for prohibition. The dries in Con-

gress will make a drive on liquor when appropriations are out of the way. Social workers, be behind that drive with strong total abstinence sentiment, and with strong letters to your congressmen, telling them that prohibition must be. To help, send to the Poster Campaign of the Boston Associated Charities and get their new posters telling of the food values wasted in liquor, or send to Mrs. George Whiting, 41 Kirkland street, Cambridge, Mass., and get food conservation post cards printed by the Unitarian Temperance Society. And when this prohibition comes, remember it is only a beginning, only blazing the trail for the virile ideal of total abstinence, and for better, cleaner, wider recreation facilities.

With the Brewers' Help

Mr. Fox, isn't this the better way, and won't you help?

We have got to take care of all the bartenders when prohibition comes. Perhaps we can all work together to make the transition easy. Never will there be so many new jobs as now for them to be transferred to. This is no time for technical and statistical investigation. This is a time for "getting together." Brewers, is there no way that your vast saloon properties can be organized into clean, soft-drink recreation places? Please think this over. We need you—without your beer!

In the meantime, let us all work for a nation of total abstainers and a world of total abstainers, supplemented by prohibition, making liquor less accessible to the boys and the weak and saving the vast grain supply now wasted in the making of liquor and beer. Remember Adam Smith, who said, "All labor expended in producing strong drinks is utterly unproductive. It adds nothing to the wealth of nations." Nor, we may say, does it add to the health, efficiency, clear- and high-mindedness of the nation.

↑ THE JAIL

← THE COURT HOUSE

THE SCHOOL ↓

WILLIAM F. FEAGIN, superintendent of education of Alabama, believes that "the public school building is the monument willed by the community to its childhood." He says: "This building for the young should not be repulsive but inviting, not somber but cheerful. Just a little thought and attention on the part of those who hold the life of children dear will convert a plain, cheerless and insanitary box into a beautiful, inspiring, sanitary schoolhouse. To this end I call upon you to observe the first of the four special days of this school year—Clean-Up and School Improvement Day."

The picture above of jail, courthouse and school all in one Alabama town, is, of course, exceptional. But Superintendent Feagin says that the greater number of school buildings in Alabama "are small, one-room structures set on pegs, weather-blackened, window-smashed, often with wrecked entrance steps and lockless doors." The annual clean-up and school-improvement day is, however, calling people's attention to these conditions and bringing about improvement in one locality after another.

COMMON WELFARE

A CONQUEST OF CROPS FOR THE WORLD

THE importance of an adequate food supply, especially for the present year, is superlative. Without abundant food, alike for the armies and the peoples now at war, the whole great enterprise upon which we have embarked will break down and fail. Not only during the present emergency, but for some time after peace shall have come, both our own people and a large proportion of the people of Europe must rely upon the harvests in America."

President Wilson's proclamation of April 15 summarized the appeal made throughout the land during the previous week by governors of states, federal officers, and patriots, for a food economy which will give to the United States and to the Allies what, with all its wonderful inventions, the present war has proved to be the most powerful arm of defense. An ample supply of sustenance will not only keep the army in condition, but it will preserve the vigor and efficiency of the hundred million or so behind the fighting line without which no dash and no brilliancy of military exploits is of the slightest use.

In this great problem of food economy, three demands stand out from among the flow of ideas and suggestion which have filled the newspapers during the last two weeks; demands for abundant production, for just and economical distribution, and for wise conservation.

The problem of increasing the supply is the most immediate since this year's growing season has already set in, and on the efforts of the next few weeks the fortunes of democracy will largely depend. Can the United States suddenly and greatly increase the yield of her farms? The answer will depend on the fulfilment of two conditions: there must be more than a patriotic motive to induce extraordinary investments in implements, manures, clearances, building of silos, superior seeds and more costly rotations; and the willingness of farmers to put their very best effort into the production of the largest and most valuable yields must be aided by a sufficient supply of

labor. Both conditions imply the need for assurances that added expenditures will be remunerative. It is not necessary that large profits should be guaranteed, but the great majority of American farmers are not men who can afford to indulge in speculation, and they must be given a definite prospect of being able to sell without loss.

Thus the creation of a food board by the federal government, headed by the man who, at the moment, enjoys the largest public confidence for such an undertaking, Herbert C. Hoover, president of the American Commission for Relief in Belgium, naturally came first among the measures adopted to control the interaction of production and distribution. Mr. Hoover, at present, is engaged in an inquiry in France, England and Italy, in cooperation with government departments, into the prospects of the coming harvest—which, of course, will influence prices in America—and the methods of regulating food control now in operation, especially with a view to control of prices and elimination of speculative congestion.

Already plans are being formulated, which no doubt will be published in the

near future, how minimum prices may be assured to farmers. It is probable that state agricultural and marketing commissions will play a prominent part in such a system.

In the meantime, the serious shortage in the world's food crops, as shown to exist in a recent report by David Lubin, American representative to the International Institute of Agriculture at Rome, together with the increasing withdrawal of man power from farming operations in the belligerent countries, not to speak of the actual destruction of crops by warfare on land and sea, should be sufficient to convince American farmers that the likelihood of falling prices for some time to come is exceedingly small and that probably at no time in American history has there been a safer opportunity for increasing investments with a view to larger yields.

FARMS, FARMERS AND FARM LABOR

"PATRIOTISM and profit should stimulate them," says the resolution unanimously accepted on April 10 at St. Louis by a great rally of farm journal editors and publishers, called by the National Agricultural Organization Society and presided over by Secretary David F. Houston of the United States Department of Agriculture. "The life of the nation hangs in the balance. The rewards for intelligent farm toil were never so alluring and certain. Every man in his own field must be the judge of methods."

While, therefore, it may be expected that the majority of farmers' organizations will gladly cooperate with the national and state authorities in encouraging more productive and more extensive farming, the shortage of labor, for the moment, has assumed a most serious character. The President has announced that "hundreds of thousands of men otherwise liable to military service will of right and necessity be excused from that service and assigned to the fundamental, sustaining work of the fields and factories and mines" and, while compulsory military service is yet under discus-

sion by Congress, has called "upon young men and old alike and upon the able-bodied boys of the land to accept and act upon this duty—to turn in hosts to the farms and make certain that no pains and no labor is lacking in this great matter." Already, in the state of New York, an effort has been organized by the State Agricultural Society to recruit a school-boy army for immediate mobilization.

DISCARDING SCHOOL BOOKS FOR FARMING

IF plans of the New York State Department of Education do not miscarry, New York will apparently be the first state in this country to follow the example of England, Germany and France to repeal or relax compulsory school attendance laws in order that boys may help to increase food production by working upon the farms.

"There is an imperative need for labor on the farms," John H. Finley, commissioner of education, was quoted as having said in the *New York Evening Post* April 13. "That need is immediate, and the schoolboys can help to meet it. If necessary, the Board of Regents will ask the legislature to authorize us to suspend the provisions of the compulsory education law in order to allow us to meet this emergency by permitting boys to be excused from part of their school work. The boys should realize that this is just as genuinely a patriotic service as any other."

A telegram in answer to a letter written by the SURVEY to Commissioner Finley declared that the commissioner favors suspension of the compulsory attendance law "during continuance of war, under regulation and control of the department of education." He does not favor the repeal of the law, it was said. The telegram added that "legislation is contemplated directing the department of education to take such action as may be necessary to make this effective."

Meanwhile, the *New York Times* declared on Monday that it had been announced at Albany that when the farm-

ers of the state come together in their various communities on April 21, in answer to Governor Whitman's call to learn about the need for increased production, they would be told of the plan of the State Department of Education to send schoolboys out over the state as "a farming army." Commissioner Finley was stated to have called meetings of village and district superintendents in each county to consider what the schools might do. These meetings were to begin on Wednesday of this week. Enroll-

POSTER CAMPAIGN,
11 MASON STREET,
CAMBRIDGE, MASS.

THE latest poster issued by the Poster Campaign Against Alcohol of the Boston Associated Charities (10 cents on linen, 5 cents on paper, 11 Mason street, Cambridge, Mass.). The Boston Associated Charities went on record last week in favor of war prohibition and will ask the other societies of Massachusetts to endorse the movement. Governor Capper of Kansas has responded to a request from Mrs. Tilton, chairman of the Poster Campaign, and has wired the governors of all the states to urge national prohibition upon the President as a measure of conserving food during the war.

ment blanks were to be issued, and it was expected that a full list of boys willing to begin farm work at once would be available in ten days. Boys who enter the service before the end of the school year will, it is planned, receive credit in the subjects they are studying.

The State Agricultural Society and other agencies will, under this plan, see that the boys are fairly treated, justly compensated and recognized as in the service of the state. The Military Training Commission has voted to accept farming as vocational training that can, in the meaning of the revised Wells-Slater law [the SURVEY, April 14, page 35] be accepted in lieu of compulsory military training by boys between sixteen and nineteen years of age.

During the first spring after England entered the war, and increasingly since then, school attendance laws were so relaxed that hundreds of thousands of boys and girls were excused prematurely from school to work upon farms and in munition factories. This experience was told in an article entitled *The Children's Bit in the War* in the SURVEY for February 3.

Another plan, favored by Dr. Claxton, federal commissioner of education, is to have groups of high school students from the large cities camp in the neighborhoods where labor is most needed, under their own teachers, and to be hired out to the farmers of the district singly or in small groups, school credits being awarded for satisfactory performance. The advantage of this plan is that educational oversight is retained and that the worst dangers of exploitation are avoided. While, in all likelihood, organization of these resources of juvenile labor will be too late to aid materially in planting, it should make available for the harvest season many thousand enthusiastic workers at a rate of pay which, while fair to the young laborers, will not be excessive for the farmers.

The giving of school credits for farm work under such circumstances is viewed with alarm by some educators. If the nation, in its hour of need, finds it necessary to abbreviate the school education given, at least it should not deceive itself into believing that practical work under employers who are not instructors is necessarily of an educational character. The vigorous plea of the National Child Labor Committee—that the children of America shall not "be sacrificed"—was quoted in the SURVEY last week.

In this connection, the suggestion of William R. George, founder and acting president of the George Junior Republic Association, that the census of the amount and location of the most important food products available which is being organized by the New York State Department of Agriculture, and possibly in other states, may largely be made by school children under the direction of

their teachers, deserves mention, because in this undertaking there is a much larger educational element.

Mr. George himself has tried the experiment in the West Dryden School, New York, and in the schools of Burlington county, New Jersey. There pupils have made an agricultural and population census of the community, collecting information concerning the number of men, women and children in each family, the number of acres owned or rented, the number of cattle, horses, hogs, poultry and other live stock, the amount of hay, oats, potatoes, wheat, buckwheat, corn and other grains grown, and other information. The plan was accounted a success.

FARM WORK FOR A SUMMER VACATION

BEFORE making wholesale inroads upon the school careers of the young in town and country, it is important to note, however, that the resources in adult labor are not yet by any means exhausted. One method would be that of utilizing for this patriotic purpose the vacations enjoyed by civil servants and others. Walter E. Kruesi, superintendent of the Public Employment Bureau of the city of New York, believes that of the 70,000 city employes, most of whom have vacations on full pay for two or three weeks, a large proportion are physically capable of, and might even benefit from, using that leisure period in the interest of agricultural production. Their vacations could be so organized, through the services of city and state public employment bureaus, as to give farmers continuous service and getting the maximum supply of help in the state when and where most needed.

The usual disinclination of farmers to employ city workers has to a considerable extent been overcome in Canada, where the vacations of clerks in a number of cities have been systematically organized with that need in view. Toronto alone is sending 5,000 men and boys to summer farm work.

A more immediate need is that of preventing the enlistment of men who have recently or in the past engaged in farm work and are at present of much greater national usefulness behind the plough than behind the gun. From the President's proclamation it would seem that wholesale exemptions on that score from the operations of compulsory military service are contemplated. But the suggestion comes from Charles B. Barnes, director of the State Bureau of Employment of New York and, in slightly different forms from a number of other states, that a more enthusiastic response and a better distribution of the labor available from this source would be secured if these men were actually enlisted and assigned to special agricultural corps, "wearing a uniform with all

SIR HORACE PLUNKETT ON OUR FOOD PLANS

SIR HORACE PLUNKETT, of an old Irish family whose peerage dates from the fifteenth century, is the founder of the Irish Agricultural Organization Society, which, since 1889, has united more than a hundred thousand Irishmen of all classes, politics and creeds. He has represented a Dublin constituency in the House of Commons for nine years and held high offices connected with agricultural development in Ireland.

In the midst of his busy life, Sir Horace has found time to engage in cattle-ranching in our western states, where he has acquired property interests, and is here at present on his seventy-fifth sojourn. His little volume, *The Rural Life Problem of the United States*, published a few years ago, is recognized as a standard work on that subject. He is at present recovering from a severe illness from which all readers of the SURVEY will wish him a speedy recovery.

From his hospital bed he sends the SURVEY the following comment on the report in our last issue [page 39] for "civil-military service" in food production:

"**N**OT long ago President Wilson called the attention of the world to the advantage of having the normal economic life of one great country undisturbed. Had Germany allowed this aspiration to be realized, the United States could have rendered no greater service to the stricken countries of Europe than to increase substantially its own food supply so as to have a large surplus available for export. Now that the republic has been drawn into the struggle, this same service appears to be the most immediately practical way of assisting the allied countries which are pouring out in a manner and to a degree unprecedented in human history, their life blood and their treasure.

"In thus supporting the cause which the United States has now been forced to make its own, it will be rendering no merely economic assistance. The so-called blockade has to be run. American courage, patriotism and determination will not balk at this enterprise; but it cannot be embarked upon unless it is accompanied by a far greater surplus food production than is needed to meet the domestic requirements of the United States in ordinary years.

"In these circumstances, I rejoice to see that the University of Illinois, speaking through the very competent dean of its agricultural college, Eugene Davenport, has prepared a plan for assuring this surplus. The plan will have to be worked out by the federal Department of Agriculture. But Mr. Davenport has prepared the ground by solving the chief crux of the problem. In a published memorandum which has not yet attracted the attention it deserves, he has boldly tackled the labor-shortage difficulty. It is easy for the government to assign a certain number of enlisted or conscripted persons to work on farms; but what is to be done when the farmer finds himself saddled with help which is either not adequately trained or unwilling to give a day's work for a day's pay? Dean Davenport proposes that the farmer should send the man back to his training camp, to which the laborer can at any time return if he is dissatisfied with the conditions of employment.

"I think the lesser difficulties of an adequate supply of farm machinery (especially motor tractors) and artificial manures should also be tackled under the federal plan for increasing the food production of 1917. I regard this service as being of such immense national and international importance that I welcome Dean Davenport's suggestion that the helpers in it should have some uniform or badge which indicates that they are helping the nation in the war."

HORACE PLUNKETT.

[Presbyterian Hospital, Chicago, April 11, 1917.]

the usual markings but so designed as to allow for the freedom necessary in farm work."

During the winter, when the demand for labor slackened, these men could be brought into the military camps and placed under military discipline. During summer they would be concentrated in agricultural camps, as proposed in the Illinois plan described in the SURVEY last week, and hired out to the farmers of the region at the wages locally current. Army pay might be made supplementary to these wages, or partly supplementary and partly used in aid of wages so as to enable the employment of laborers by farmers who at the present level of wages are unable to make use of their services at the full current rate. The payment of transportation by the government in itself would constitute an important saving to farmers in outlying regions.

Edgar L. Smith, head of the Farmers' Bureau, proposed the creation of an office under the War Department, to be

known as the commissioner of agricultural defense, one of whose duties it would be to mobilize and distribute the enlisted farm labor.

While, generally speaking, the movement for cultivating vacant city lots and back yards—even tenement roofs have been suggested—is of importance only as aiding to a slight extent the budget of the individual cultivators, and of no importance whatsoever to the real problem of national food production which can only be solved by giving the best possible conditions of production to the farmers of the country, large employers who also hold considerable tracts of land can materially benefit the country by arranging for the cultivation of that land by their own employes, under expert guidance. Thus some of the railway companies own parcels of land, sometimes extensive in the aggregate, which, waiting for future developments, can be made available immediately for raising small crops by their employes. The Brooklyn Rapid Transit Company

has made a beginning in this enterprise.

Charles W. Stockton, general counsel of the Wells Fargo Express Company, and others urge the direct employment by the federal government of farm labor for the cultivation of land which is now going to waste. Under his plan, a bureau of the National Defense Council, with subordinate bureaus in the counties and townships, would purchase fertilizers, farm machinery and stock wholesale and carry out improvements under the most approved systems of large-scale farming.

Discussions of plans and methods for utilizing approximately our hundred million acres of cut-over timber lands in the South to increase the nation's food supply have been held at the Cut-Over Land Conference of the South in which governors and other state officials and federal experts as well as land-owners, lumbermen and business men participated.

By a resolution introduced in the Senate on April 11 by Senator Frelinghuysen, of New Jersey, the Council of National Defense was requested to consider the advisability of establishing a commissioner of agricultural defense who should assemble all national, state and private agencies and mobilize farm labor for the production of larger crops.

Increased employment of prison labor for farming is proposed by Charles Bulkeley Hubbell, chairman of the New York Commission on Prisons. He believes that from 10 to 20 per cent of prison trusties could be made thus available with a saving of cost for their support to the state and a reasonable remuneration to the men themselves which would ensure high-class service. He also suggests suspension of the laws governing alien contract labor and the immediate introduction of 25,000 or more oriental laborers for a stated definite period.

The National Agricultural Organization Society, in a tentative plan presented to farmers' organizations throughout the country, declares that the guarantee of minimum wages to agricultural laborers is as important as that of minimum prices for farm products if an increased draft of farm labor into the industries of the country as well as loss through enlistment is to be avoided.

Gov. Walter E. Edge, of New Jersey, is asking land owners in the state, who have been liberal in offering estates for camp and other military purposes, to let the state have the temporary use of estates also for food production. Crops would be planted, cared for and harvested by an army of school boys and volunteers under the general supervision of the State Board of Agriculture but under the immediate oversight of the owners' gardeners, farm managers and estate superintendents.

PLANS FOR CONSCIENTIOUS OBJECTORS

WITH compulsory military service looming ahead, the Quakers of the country already have decided upon a plan to avoid having their traditional conscientious objection to war and military service mistaken for lack of patriotism and lack of willingness to make material sacrifices for the nation during war. The peace committee of the Philadelphia yearly meeting has elaborated a plan under which an expected army of probably 118,000 Friends, 123,000 Dunkards, or Brethren, 61,000 Mennonites, and others conscientiously opposed to war not affiliated with any religious organization who are of military age, should be drafted into a "farm labor league" to supply agricultural labor wherever needed at the regular army rates of payment. As they do not expect that the government will be able to make direct use of their services, they propose that under the direction of a government agency, they hire out their labor to farmers at the current local rate of wages and turn over to some relief work approved by the government the difference between this and the regular army pay. This is additional to a number of other services of national importance contemplated and, in part, already operated by the Friends.

One of the nation's greatest resources of potential farm labor may eventually prove to be the women, not only of the leisured classes, but also of various occupational groups not at present engaged in work of national importance. The Woodcraft League, which is establishing potato clubs all over the country, has secured the use of estates owned by its members and sympathizers which will largely be worked by women, probably on a cooperative plan.

The National League for Women's Service and the Women's Section of the Navy League have arranged with a number of high schools to train girl students for farming. The league is establishing an agricultural bureau in New York city and will provide scholarships at the Farmingdale Agricultural School for fifty women who wish to take up farming as a permanent occupation. Other groups of women in every part of the country, are considering the organization of women's farm work on a larger scale, if only for aid in temporary emergencies and in harvesting.

Lack of capital for improving output comes only second in importance to lack of labor. In New York state, the Agricultural Society, in cooperation with certain public-spirited men and banks, has secured a guarantee of \$10,000,000 for a loan scheme under which individual farmers of good repute will be able to borrow at 4½ per cent interest through the agency of a local committee composed of two members of the grange, or

other agricultural organization and, if possible, a banker. No mortgages will be asked.

It is stated that two and three times this amount can be secured, should the need arise. Probably, however, should the war continue longer than this summer, credit organization on a national scale will have to be devised to meet this need, since recent federal legislation did not cover the lack of farm credits for operating purposes which at once becomes apparent when the demand for increased productivity involves increased capital investments other than in land.

The regulation of prices and of distribution has as yet hardly been commenced, and the equally important phase of the problem, how the cost to consumers may be safeguarded without discouraging production, is hardly as yet discussed. The appeal for conservation of food made by the President and, oft in a somewhat exaggerated form, by men of lesser eminence, at the time of present high prices will only apply to a small proportion of the population. While there is much wasteful expenditure even at this time of high prices, that expenditure only indirectly consumes food by employing labor and capital which might more profitably be expended upon an increased food production. On another page of this issue, the exceptional instance, that of the national consumption of alcoholic liquors, is discussed by Mrs. Tilton.

According to the investigations of the United States Bureau of Labor Statistics, retail prices of food jumped 39 per cent in 1916, as compared with 1907, and 16 per cent in terms of real wages; that is, if the increase in wages is set off against that of retail prices. The Standard Oil Company, in making a voluntary increase in the wages of its refinery employes of from 10 to 15 per cent last week, amounting to about one and a half million dollars a year—the fourth increase made by the company during the past year and a half—realized that a greater rather than a lesser consumption of food by the workers of the nation is the need of the hour, if their efficiency is to be preserved.

WHAT THE CHURCH OFFERS THE NATION

A FOUR-FOLD program of emergency war work has been adopted by the Commission on the Church and Social Service of the Federal Council of the Churches of Christ in America, in charge of the Rev. Worth M. Tippy, the executive secretary.

This emergency program includes the enrollment of Red Cross members, the preparation of hospital supplies, the relief of children suffering in Belgium, Armenia and Poland, and the relief of families of enlisted men. The program is to be carried out in cooperation with

the Red Cross and of all other social and civic agencies concerned in war-time social service.

What Has the Church to Offer the Nation? is the title of a statement of principles with which Dr. Tippy prefaces a leaflet on The Church's Response to the Nation, which may be had of the council at 105 East 22 street, New York city. Dr. Tippy writes:

"As the United States enters the great war, the forces of the nation are mobilizing for the conflict. What is the place of the church in this hour of crisis and danger?"

"It is to spiritualize the nation; to keep the war a conflict for righteousness, liberty and democracy; to hearten and encourage the men who go to the front, and their loved ones at home; to build a greater fellowship of reconciliation, consisting of millions who, while fighting, will love their enemies; to wage this war with the determination to make an end of war; to so hate war as to be restrained in its glorification, noble as is this conflict, lest the hold of war upon the imagination of our youth be strengthened; to give itself unstintedly to the relief of the suffering at home and abroad, which the war has brought and will yet bring upon the world."

THE LITERACY TEST A BAR TO TYPHUS

THE 40,000 Mexicans living in El Paso, Texas—a number constantly on the increase—have brought about conditions of living and health which have long been recognized as a menace to the entire city. That some drastic measure of prevention must be taken was realized when the city health physician, Dr. W. C. Klutz, contracted typhus while actively engaged in keeping the disease from spreading, and died.

A conference was held of city and county officials and officers of the United States Public Health Service, and as a result Assistant Surgeon J. W. Tappan, of the Public Health Service, was loaned to the city of El Paso. He has been made public health officer and given the assistance of Dr. T. C. Galloway, who made an investigation of living conditions among the El Paso Mexicans.

The recommendation that every Mexican crossing the international bridge should take a hot bath and be thoroughly "de-loused," has been carried out for the past three months. But this did not prove as effective as had been hoped. Dr. Tappan found that some diseases, particularly typhus, had found a lodging place in the hovels of the Mexicans on this side of the river, so a new housing code was prepared which will materially improve conditions among the Mexicans and indeed in all lodging houses in El Paso.

The code provides particularly for more windows, more space to each fam-

ily, better toilets, more adequate water supply and particularly for public baths and public laundries. The last provision is made especially to guard against typhus, because the Mexicans wash their clothing in cold or warm water and it takes hot water to kill the typhus louse.

The typhus situation is by no means limited to El Paso. The presence of Mexican laborers in lumber camps makes the spread of infection a serious possibility in California and Arizona, as well as other parts of Texas. For the international bridge is by no means the only means of entry for Mexican refugees. At many points along its 2,000 miles the Rio Grande is so shallow as to allow easy passage. The difficulty of a 2,000-mile patrol is obvious.

The sudden increase of typhus infec-

tion is due to the disturbed condition of Mexico itself. For years typhus has been known to exist in the central plateau region, but rarely spread from that focus. During the past few years the migration of soldiers and their families and of refugees, with consequent misery and poverty and lack of sanitary measures, have resulted in the spread of typhus to all parts of Mexico. By the efforts of immigration and public health services and the Texas State Board of Health, it has, thus far, been restricted to Mexicans of the extremely poor class, and to a few cases of physicians and nurses who have come into direct contact with the patients.

Details of the disinfection process were given in a recent number of the public health reports by Surgeon C. C. Pierce,

of the Public Health Service, who was placed in charge of the Mexican border quarantine last summer.

The requirement of certificates of disinfection for all laborers who left a border town, and a similar certificate concerning the treatment of their baggage, will, it is believed, control the spread of typhus to the United States. Surgeon Pierce remarks that since the establishment of quarantine restriction some improvement has been observed in the appearance of passengers from neighboring Mexican towns as regards cleanliness of both person and clothing.

Also, the new immigration law will help, as it is expected to decrease the admission of Mexican immigrants through the regular channels along the border by 90 per cent. Very few will be able to pay the head tax of eight dollars, and only a small percentage will be able to read and write. The new immigration law, too, will be more effective than the housing code in preventing overcrowding.

TOLEDO VS. PENNSYLVANIA PRACTICE

THE trustees of Toledo University, the municipal university of Toledo, O., voted last week not to accept the resignation of Scott Nearing, dean of the College of Arts and Sciences and professor of social science. Professor Nearing has been sharply criticized during the past few months for his utterances on peace, several newspapers having insisted that the university was hampering its development by keeping him. He offered his resignation with the request that it take effect whenever the directors thought his continuance on the faculty became harmful to the university.

Professor Nearing, whose dismissal from the faculty of the Wharton School, University of Pennsylvania, in 1915, precipitated a nation-wide discussion of "academic freedom," wrote a letter of explanation of his attitude to the Toledo newspapers, in which he said: "Millions of people, the world over, are today seeking to overthrow German militarism. There are two methods of securing this result. The first way is to militarize all of the great nations. I am opposed to this plan because I believe that the dearest liberties of democracy must be sacrificed in the process.

"There is another method of overcoming German militarism—to promulgate a higher ideal than the ideal of militarism. . . .

"The only possible way to save the present-day world from militarism is to cut to the root of the problem and establish an industrial democracy, which, in its turn, may prove a beacon light to mankind. If we adopt militarism, we lower ourselves to the level of German militarism. If we adopt industrial democracy, we have an opportunity to raise

them to our new plane of justice and liberty. . . .

"I revere the government that represents democracy. I honor the flag that stands for liberty and justice. . . . Militarism is the madness of the past—dragging us down and destroying us. The spirit of brotherhood and good will among men is the voice of the future, calling us to a higher plane of life than humanity has ever known. To that future I have dedicated my life, and so I purpose to continue to the end of the chapter."

FEDERAL QUARANTINE ON ALL OUR BORDERS

IT IS reported that the quarantine station at Baltimore, Md., is to be transferred immediately to the federal government for administration by the Public Health Service. As the federal health service has been in charge for some time at the port of New York, pending the final negotiations between Albany and Washington for the purchase of this station, the transfer at Baltimore means that administration of quarantine at all ports of the United States is at last on a basis of uniformity and specialized preparation. Perth Amboy, N. J., Galveston, Tex., and Philadelphia still maintain stations of their own, but federal quarantine officers are on duty as well.

It has been frankly suggested that the state of New Jersey and other local administrations might, to advantage, expend the money devoted to quarantine for other phases of health work less adequately provided for. The possibility is by no means remote that troops, which have been in the *mêlée* abroad, will return to this country and will need the inspection of officers experienced in detecting exotic as well as common infections. The action necessary to insure such a quarantine guard will doubtless be quickened by this very practical necessity of protection against "evils that we know not of."

The value of federal quarantine was discussed in the SURVEY of January 8 and 22, March 4 and 25, 1916.

INSURANCE FOR AMERICAN SAILORS

THAT 100,000 merchant seamen of all nations have been killed since the war began is a statement appearing in a statement given out by Dante Barton, of the Committee on Industrial Relations. Mr. Barton points out that the number of American seamen who have lost their lives has thus far been small, but that now the risk is tremendously augmented.

In view of the immense importance of American shipping, Mr. Barton views the service of sailors on merchant ships as an exhibition of a very high degree of patriotism, and he suggests that the government ought to recognize the loyalty of these men by providing them a rea-

sonable insurance against the great risks they run.

"Is it not clear," asks Mr. Barton, "that these men who go down to the sea in ships (in this time of vastly added peril) should have insurance? Yet now they have none, and for the reason which President Franklin, of the International Mercantile Marine Corporation has given—that the risk is now so great that no insurance company will carry it. What irony, that all the financial burden of that hazardous and essential employment should fall on the poorly paid men who also give their lives! The vessels, which sometimes make several hundred per cent profits on their runs, are insured, but the seamen cannot be.

"Surely, the United States government—in loyalty to the seamen who are so valiant and loyal to it—should see to it that some way should be devised at once by which every seaman sailing from an American port shall carry, without cost to him, at least \$5,000 insurance, to be paid his relatives in case of his death, or to him in case of total or great disability. This demand, that has been voiced by the seamen's unions, should be considered a necessary incident to any just program of preparedness."

JOHN LAWSON A FREE MAN AGAIN

THREE years ago this week occurred the Ludlow battle in Colorado, followed by civil war and wholesale indictments of strikers. Few of the indicted men have been tried. By scores and hundreds, at different times, they have been dismissed. But always there remained the case against John Lawson, the strike leader, who just two years ago was convicted of murder and sentenced to the penitentiary for life. Last week the SURVEY reported the agreement signed between the United Mine Workers and the Victor-American Fuel Company, formerly its most bitter enemy in Colorado. Now comes word that the attorney-general has asked the Supreme Court to dismiss the case against Lawson.

John Nimmo, for whose death Lawson was sentenced, was a deputy sheriff, killed in the course of one of the pitched battles between strikers and deputies in the fall of 1913. It was not contended at the trial that Lawson had fired the fatal bullet, or that he was even on the scene of action. It was impossible to discover who had actually done the shooting. It was alleged by the defense that the man might have been killed by one of his fellow deputies. But Lawson was a member of the executive board of the miners' union, and the leader of the strike. He was convicted, therefore, "on the theory," as was explained at the time, that he was in charge of the strikers and, therefore, had, by inference, ordered the firing of the shot which resulted in the death of the deputy sheriff.

The judge who sentenced Lawson to the penitentiary, and who was later barred by the Supreme Court of the state from sitting in any further cases connected with the coal strike because he had been previously employed, in a minor capacity, by the coal companies, denied the appeal of Lawson's attorneys for a new trial. An appeal was then taken to the State Supreme Court on the basis of new evidence that was said to have been discovered, and also on the affidavit of a juror, who had voted to convict Lawson, that he had been coerced into so voting and had done so against his will. The case has been pending in the Supreme Court for more than a year, and in the meantime Lawson has been at liberty on bail.

WHERE HEALTH IS CHEAP AND COFFINS DEAR

A LETTER from Dr. W. W. Peter, of Shanghai, gives a glimpse of the China public health campaign through the eyes of two old Chinese women who were among the first arrivals at the big mat-tent erected to hold the throngs who came to hear and see. Over their heads was a covering of coarse matting on bamboo rafters and uprights, enough to keep off the sun but not the rain.

On three sides of the tent were hung many strange-looking pictures of well people and sick, clean homes and dirty ones, and of fleas, flies, hospitals, dirty streets and green grass. The two old women wondered and whispered.

"Can you see all of those pictures and things hung up on the walls? Let us go over there for a look," said the older woman. "My eyes burn and itch and I have to keep wiping them."

"My eyes are better now. I will tell you what those things are, for if we leave our seats someone else will come and then we shall have to stand. My feet would hurt unbearably if I had to stand long."

But before the younger woman had really started in her description of the things hanging on the wall, a woman stepped out to the front of the platform.

"Why, that is Mrs. Li, who can read characters like a teacher," whispered the older one. "What is she doing up there? The ticket said a 'foreign country man' was going to speak. And I never heard a foreign—" But Mrs. Li was speaking.

"Did you hear what she said? She spoke right out. I would die of fright if I had to stand up there like that and . . ."

Then the foreigner stepped up to speak. While Mrs. Li had opened the meeting, he could still feel the expectancy with which the women had come to that meeting. It was an event in their lives. Never before had they had such an experience. Why this mat-shed? Why all this advertising of the meetings and spe-

cial tickets which everyone had to have to get in? Who paid the foreign country man to come? Did he have a new kind of medicine to sell? What was under all of those things covered up with cloth? What was it all about?

They would continue to discuss this whole experience for many days after the meetings closed, the speaker knew. He told many facts well known—more or less—to white folk, which seemed more than extraordinary to the listening Chinese, about what not to feed the baby, and what flies do to make people sick.

By and by he came down from the platform holding a wire fly-catching box in which over 3,000 flies had been caught in five hours on the platform. When, with the box buzzing and black with flies, he passed down through the audience, the old lady and her friend carefully held handkerchiefs to their noses as they looked. They feared to recognize their old-time acquaintances.

When Mrs. Li asked the audience to stay and look at the pictures, they were more than willing. To be sure, it was past time for the noon meal, but that was a small matter. They had to stay and see all there was to see. It was all so new to them. They simply shook their heads and passed along, speechless.

Not a familiar thing did they see

till they found themselves standing before an enlarged picture of a common housefly—the kind they had heard about that morning. Now they were on solid footing. The picture measured two by three feet.

"Isn't that a fly?" asked the one with the poor eyes.

"Yes. That is a picture of a fly—the dirty kind the foreigner spoke to us about a little while ago."

"And as big as that!" exclaimed the first one. "Is that the kind of flies they have over where he comes from? Now I understand why he said, 'Flies kill people.' Of course in his country they must have many meetings and spend thousands of dollars to prevent flies. Maybe he came over to China to get away from such flies. We only have the little ones and they're harmless. Just think what it would be like if we also had flies as big as that! It would be most dangerous, and we would have to be very careful indeed."

Not that these two old women and every other one in the audience will go home and straightway make her home clean and sanitary. But all will talk about the meetings and the pictures, and the facts will slowly spread.

"The ferment of education," says Dr. Peter in closing, "in matters of health, will finally breed a holy discontent that is also wholesome."

Book Reviews

AN INTRODUCTION TO THE STUDY OF INTERNATIONAL RELATIONS.

By A. J. Grant, Arthur Greenwood, J. D. I. Hughes, P. H. Kerr and F. F. Urquhart. Macmillan and Co., Ltd., London. 207 pp. Price \$7.5; by mail of the SURVEY, \$1.

AN INTRODUCTORY ATLAS OF INTERNATIONAL RELATIONS

By Henry Clay and Arthur Greenwood. Maps by H. S. Hattin. Headley Bros.,

London. 74 pp. and 47 maps. Price 1 sh. 6 d.; by mail of the SURVEY, \$47.

NATIONALISM AND INTERNATIONALISM
By Ramsay Muir. Constable and Co., London. 229 pp.

INTERNATIONAL FINANCE.

By Hartley Withers. Smith Elder & Co., London. 184 pp.

THE EUROPEAN ANARCHY

By G. Lowes Dickinson. George Allen & Unwin, Ltd., London. 153 pp.

The British Council for the Study of International Relations was organized soon after the outbreak of the war, with Viscount Bryce for president. In spite of the warning of such men as J. A. Hobson, Ponsonby, and other liberals, the people of England, for at least a decade, had allowed questions of domestic reorganization, industrial and economic reform, to absorb all political interest. They could not be induced to take a more than casual concern in the country's foreign problems and relationships.

Especially is this true of the working classes whose historical reading had become

almost entirely confined to English economics, and whose interest in current affairs, except for tariff questions, was in the highest degree insular. The new council, therefore, while it has been able to make use of existing machinery for the diffusion of knowledge, especially the splendid study groups of the workers' educational association, had to build practically from the foundation.

Since there were not enough teachers sufficiently grounded in this new vital subject-matter, the first effort had to be that of creating an educational literature which could be rapidly assimilated, was authoritative and, as far as possible, covered the whole field. The five volumes named above, though coming from different publishers, are part of this undertaking. The council itself has contributed a large number of pamphlets, grouped in three series: Aids to study—dealing more especially with problems of British foreign policy; countries—brief de-

scriptions of constitutions and main political concerns of different nations; and foreign—translations of important foreign essays on European issues raised by or during the war.

The difficulty of producing a textbook for general study which would present the unanimous views of its members, the council apparently did not overcome. The nearest approach to it is the joint volume named first on the list above, containing essays by five authors, for which they individually alone are responsible.

PROFESSOR GRANT, of the University of Leeds, starts off with a scholarly history of war and peace during the nineteenth century. F. F. Urquhart analyzes the causes of modern wars and traces them chiefly to the prevalence of a purely static conception of the parts played by different nations in the progress of civilization and the resulting lack of a foreign policy designed to allow freedom of movement and of growth.

He points out, on the hand of many historical examples, that secret diplomacy must stand in the way of a moral relationship of one nation to another and, as a measure of greatest immediate practical importance, advocates the creation of a well-informed public opinion upon which a more democratic tradition of statesmanship may gradually develop, inspired by the same enthusiasm for righteousness which has reshaped the internal policy of modern states.

Mr. Hughes summarizes recent discussion on the nature and scope of international law and, without understating the many practical difficulties to be met in disentangling a system of international order from the tradition in foreign policy that "might is right," gives a hopeful forecast. Disillusionment with warfare itself will bring a readier desire among the nations to convert "the unconscious formation of customary rules" into "conscious formulation of law following upon debates in conference."

Arthur Greenwood, secretary of the council, contributes two essays which are gems of clear exposition, one on international economic relations, the other on international relations and the growth of freedom. While it would be difficult to single out from so concentrated a treatment of mighty subjects points of particular interest, it is worth mentioning that none of the contributors to this series advances panaceas as sure solvents of all present or coming troubles. They are not even pacifists of clear water. Greenwood, while a convinced free trader, does not look upon the establishment of international free trade, or even the throwing open of the British colonies to unrestricted foreign trade, as practicable in the near future.

The two problems which, it seems to him, must be tackled simultaneously, in order to get rid of economic rivalry as a danger to world peace, are the development of the world's resources without encroachment by any one nation upon the interests of another, and the control of cosmopolitan economic forces, such as high finance and trading combinations. Both require the establishment of international administrative authorities, acting under an international government—even though a government only for limited purposes—which is responsible in its turn to the democracies of its constituent states.

The strongest and most original member of this cinquefoil of interpreters is P. H. Kerr, editor of the *Round Table*, who offers a most suggestive and illuminating contribution on the political relations between advanced and backward peoples. In these he sees the probable "crux of all the great international controversies of the future." His main thesis is that the enthusiastic support for all revolutionary movements among backward peoples living under the rule of more advanced nations does not in itself form a considered policy which is likely to lead

either to world peace or to world progress. "To stand aside and do nothing, under the plea that every people must be left to manage its own affairs, and that intervention is wicked, is to repeat the tragic mistakes of the Manchester school in the economic world which protested against any interference by the state to protect workmen, women and children from the oppression and rapacity of employers, on the ground that it was an unwarranted interference with the liberty of the subject and the freedom of trade and competition."

To leave a backward people alone is to invite all manner of adventurers, both from within and from without, to make a bid for power and to use unscrupulous methods of exploitation when they have acquired it.

He admits that the government of one people by another may be undertaken for domination alone. But "where there is a sufficient difference between the levels of civilization of two peoples, the more civilized power will be driven in the interests of justice and humanity to step in and regulate, at any rate for a time, the effects of contact between the two." On this ground, he justifies British rule in India and elsewhere, pointing out that the most democratic country in the world, the United States, though lacking any aggressive purpose, also has been forced time and again to intervene and to remain in more or less permanent occupation.

Joint intervention of nations as a preventive of national oppression in nearly every case has proved disastrous. While it may end for the time the suffering and mutual strife among a backward people, it does not offer opportunities for shaping healthy relations between the advanced and the backward after the former have taken over the task of government.

How not only to introduce the elements of law and order, but to advance modern ideas without simply imposing foreign standards is the chief difficulty which the governing nation has to face. It is not easy of solution, and the author does not assert that Great Britain anywhere has solved it with complete success. But by her long experience as a colonizing power she has learned that democracy is a plant of slow growth. Merely to give a constitution to a people in accordance with modern ideas and then to leave the machinery of democracy to take care of itself is futile.

Racial mixture as a means of uplift he considers even worse, though in the light of history it would seem that at times and in places civilization has advanced pretty steadily through just this happening, and many of the most highly civilized peoples of today have resulted from intermarriage between races in different stages of cultural development. Taking this view, however, it is not surprising to find that the author advocates the greatest possible amount of segregation compatible with freedom of growth under institutions suitable to the respective needs of all as the principal remedy for the troubles arising from migration of races in different stages of development.

THE Atlas of International Relationships is probably the best that could be produced at a popular price, but it shares with other shaded line maps in newspapers and magazines the disadvantage of being disagreeable to the eyes and sometimes confusing. The writer remembers seeing some years ago at the Scala Theater in London a "moving" map of the Balkans, giving a minute or so to each century. That is about the only way in which the changing and shifting fortunes of the different races and nations can adequately be visualized. The introductory notes to this atlas, by Henry Clay and Arthur Greenwood, arranged chronologically under territorial head divisions, are concise, accurate, and useful for rapid reference.

Professor Muir, of the University of Manchester, has undertaken the most difficult part of this literary enterprise, attempting within a brief space to unravel the mysteries of western as distinct from eastern civilization, to explain and follow in its development the European conception of nationality, to show the slender bridge by which the old cosmopolitanism of the pre-nationalistic era is linked to the internationalism of our own time, and to point to the dangers which threaten the future of international world government.

So ambitious an enterprise is almost bound to fail, especially if it be taken into account that the volume is intended for popular reading, not for historians who might be expected to find their way through a jungle of historical allusions by the aid of current abbreviations. Thus Macchiavelli, in their minds, stands for certain well-defined ideas of state policy, whereas to the general reader who knows only a caricature of this man, the connection of his policy with the ideas of Treitschke or Nietzsche (with which he is no better acquainted) must appear sheer nonsense. Owing to this brevity, the statements of the author on the political meaning of the Renaissance and of the Reformation are also almost certain to mislead persons unequipped with previous intimate knowledge of these great movements.

In reading this book, we were reminded again and again that historical truth lies in a balanced emphasis almost as much as in mere correctness of statement. That emphasis, in part, is given by the relative length at which different subjects are treated and in part by changes in diction. Professor Muir's essay does not suffer from lack of balance, but it is distinctly marred by an overstatement of certain tendencies and an understatement of others which at times give his interpretations, seen at a distance, the color of extreme partisanship.

For instance, if a prince is placed upon a Balkan throne by one of the Teutonic powers, he at once becomes a "princeling." The Young Turk leaders, we are informed, were "corrupt" and their "high-sounding constitutional program was only a veneer for the old tyranny." "The principle of nationality, towards which western civilization had been unconsciously working during many centuries . . . at last, during the nineteenth century, obtained a clear definition and a general acceptance, everywhere save in Germany, Austria and Turkey." He speaks of the "hard Austrian dominion" in Bohemia and fails with a single word to allude to the infinitely harsher British dominion in Ireland and Russian dominion in Finland.

THE partisanship of Professor Muir, quite understandable and forgivable, of course, is important for two reasons: First, it may serve to answer the invective of French and English writers against recent German professorial publicity and persuade belligerents to be a little more charitable and recognize that nowhere can history be written, much less broad movements be interpreted, while the battle is on; second, it is exactly due to such prejudiced generalization as is contained in this volume that among ordinary educated persons history has come into such unfortunate disrepute as a branch of science—with the result that in August, 1914, there was not in England, and there is not in the United States now, any general appreciation for the origin and meaning of the political conflict which brought about the great war.

This is the more regrettable because Professor Muir, in the same short volume, gives some definitions and leading lines of thought which are of surpassing interest and light up whole centuries of happenings with understanding, as, for instance, when he abstracts the four main features of modern western civilization: nationality as the basis for the organization of a state; struggle for

unity consistent with independence; growth of liberty of conscience and of thought; and the conquest of the globe. Nationalism is well set in juxtaposition to racialism which "rests upon an utterly unscientific basis" (though we do not see why Grimm and his school should be singled out as responsible for this "pestilent doctrine"; we find it just as strong, for instance, among Jewish Zionists, pan-Slavs, and others who have never heard of Grimm); and the difference of the cosmopolitanism of the Catholic church and the new internationalism is made very clear.

HARTLEY WITHERS has long been known as a writer on finance of unusual breadth of view and economic understanding. To him was given the task of presenting the part played by finance in international relationships. He starts out with an elementary explanation of the function of capital, for the purpose, primarily, of answering certain socialists who either undervalue its importance or consider it altogether of evil. In this connection, he allows himself to fall into an overstatement of the advantages of saving to the commonwealth and, misunderstanding the main drift of their contention, indulges in attacks on such writers as Philip Snowden and Scott Nearing which are not altogether fair.

He does not answer the principal question raised by these socialist propagandists, why the reward of abstinence from immediate enjoyment which results in the accumulation of private capital should be perennial when every other form of reward for effort is limited in duration. He admits, however, that there may be theoretically valid objections to a system of inheritance which enables a large class of the population to live and thrive entirely on unearned wealth.

The main point made in the first part of this book is that financial exchanges between nations must always be based on actual exchanges of goods or services, "that all this paper wealth only acquires value by being ultimately based on some thing that is grown or made and wanted to keep people alive or comfortable." Incidentally, he mentions the curious results of the British social and fiscal legislation in the period immediately preceding the war. "Fear of socialistic legislation at home had the humorous result of making British investors fear to touch consols, but rush eagerly to buy the securities of colonial governments which had gone much further in the direction of Socialism than we had." But the eagerness of English and French investors to place money abroad was showing signs, early in 1914, of abating considerably. There is reason to believe that even without the additional stimulus of patriotic duty, a strong reaction in favor of home investment was coming about.

Then the war, of course, changed the parts played by old and new countries, several of the latter having become enabled by war profits to buy back their own securities and, in addition, to make large loans to their former creditors. As regards the trend of events after the war, the author is full of optimism. He believes that England can very quickly regain her former position by applying the lessons taught her by the war "about the number of people able to work, whose capacity was hitherto left fallow that this country contained, and also about the ease with which we can dispense, when a great crisis makes us sensible, with many of the absurdities and futilities on which much of our money, and productive capacity, used to be wasted."

Reviewing the history of great foreign loans, the author comes to the conclusion that, with very few exceptions, they did not have the nefarious influence on politics which is often assumed but, on the contrary, seem to have been quite unable to exert any appreciable pressure on the foreign offices concerned. As a general theory, the contention

that international financial entanglements lead to war is contradicted by history on almost every point. There is probably no factor in national life making more continuously for peace and international good will. On the other hand, the absence of a power which can be exerted to enforce justice to the creditor does, at times, render foreign loans dangerous by encouraging high-handed repudiations or evasions. For this reason, Withers advocated that lenders to foreign governments should insist upon a knowledge of the purposes to which the loan is to be put, such as would be superfluous in the dealings between lender and borrower when both live under the jurisdiction of the same state which can be relied upon to enforce just claims.

The fact that rewards in finance are greatest when the transactions are most unscrupulous, Withers does not dispute; but he points out that this is equally true of home trade, industry, and professional services. The remedy which he proposes is that the ordinary citizen should be more careful in his demands upon industry, commerce, and services and less greedy in his investments.

Somehow, this does not seem altogether sufficient; one feels inclined, rather, to look to some supernational control for a prevention of the worst abuses in international finance in the same way as civilized countries have more and more equipped themselves with machinery for the control of domestic trade and prevention of the worst abuses in domestic finance. Actual restraints on the export of capital, on the other hand, the author rightly contends, would not only offer almost insuperable difficulties of enforcement but would be hostile to the interests of the state itself which ordered them, since elasticity in the machinery of foreign trading is one of the best guardians of prosperity.

The author is optimistic also in his view on the economic damage inflicted by war. For the greater part, the things and services needed for the conduct of war have to be produced as war goes on; the destruction of accumulated capital is comparatively a small item. Consequently, the great increase in productive power through the lessons of the war may be set against such losses. What is really happening in Europe today is a general retardation of progress in the enrichment of human life, rather than an actual lowering of the stage already reached. He sees an incidental advantage in the enforced self-reliance of young and under-developed countries which results from the inability of their former creditors to keep them supplied, but does not seem sufficiently to realize the seriousness of the retardation in the industrial progress of the world which this entails.

G. LOWES DICKINSON has contributed to this series a readable and fair explanation of the causes of the present war, both cumulative and immediate. This does not prevent him, however, from allowing to pass some pretty harsh comment on his country's foes which is only slightly mitigated by a later statement that it was intended to represent "the impression made on an unsympathetic mind."

It is not true, for instance, that *Realpolitik* and Machiavellianism are synonyms or that Austria "continues its political existence by force and fraud, by the connivance and the self-interest of other states, rather than by any inherent principle of vitality." Nor can the critical reviewer let pass such easy generalizations as this: "The Germans are romantic, as the French are impulsive, the English sentimental, and the Russians religious." If, for instance, you arrange these adjectives in the order two, one, four, three, the statement still remains an approximation to truth.

One fact which this book brings out with great clearness is the close relation between fear and militarism. Whether it be the fear of the rising democracy on the part of oligarchies, the fear of French revenge for Alsace-Lorraine, the fear of being left behind in the race of armaments, or the fear of being handicapped by a short delay in mobilization to which we must assign prime responsibility for the occurrence of the European war, it is quite clear that with a little mutual confidence among the nations of Europe all the really important differences which led to it could and would have been smoothed out.

Another lesson, learned from a careful reading of recent documentary history, is that to speak of the German attitude is nonsense. During the last decade of diplomacy, there have been many different attitudes to identical questions on the part of the imperial government, partly because the Kaiser "is an unstable and changeable character," partly because "he does not always get his way," and partly because circumstances alter cases. The desire for a rapprochement with England in 1912 undoubtedly was genuine; the end of the Balkan wars showed no signs of a German desire of immediate military aggression. In July, 1914, an unfortunate chain of circumstances precipitated a war which many Germans considered inevitable and a few desired, but which, with less power in the hands of a few individuals, with a more single-hearted desire for peace, could have been avoided just as previous crises were allayed.

THE blame for the war, says Lowes Dickinson, rests on Germany, because the forces of militarism in that country were less controlled than in any other, because the obsession of fear had got a stronger hold of her statesmen than of those of other countries, because her soldiers, under her system of government, came more rapidly into control at the critical moment than in any of the other countries.

The author issues a strong warning against any attempt that may be made to establish permanent peace on the basis of a crushing defeat for the enemy. The idea that a nation will accept disarmament and a sentiment of good will—such as alone can lead to safety from aggression for the future—under the heel of a conqueror, he shows as wholly contrary to the lessons of history and to common sense. The permanent settlement depends not merely on the issue of the war, but "upon what is done or left undone by the cooperation of all when the war does at last stop." The general anarchy of Europe must be recognized as the background before which the particular wickedness of this or that government stands out in hideous relief.

But if that curtain is raised and the light of order and reason, of good will and comradeship is allowed to shine in upon the world, then the breakers of the law and peace of mankind will be revealed for what they are and dealt with in justice and unimpassioned severity.

BRUNO LASKER.

AMERICAN RED CROSS TEXT BOOK ON HOME DIETETICS

By Ada Z. Fish. P. Blakiston's Son & Company. 118 pp. Price \$1; by mail of the SURVEY, \$1.05.

"The problem of nutrition is one of growing importance, not only because of the increased cost of food, but because more and more we are coming to realize that a healthy body is man's greatest asset."

Following the thought expressed in the above quotation, the author of Home Dietetics has emphasized the means of avoiding illness rather than the ways of catering to it. She has suggested very concisely the important principles involved in the cooking

of food, and so far as possible has illustrated these principles by directions for the preparation of common articles of diet. It seems unfortunate that so little space could be given to food values. The subject-matter is general and suggestive rather than specific.

A unique and valuable feature of the book is the emphasis placed on the importance of hygiene which should be observed in the handling of food to prevent the spread of disease. L. H. G.

RUSSIA IN 1916

By Stephen Graham. Macmillan Company. 191 pp. Price \$1.25; by mail of the SURVEY, \$1.33.

A prompt answer to Mr. Graham has been given by the Russian revolution. He belongs to that class of English writers who took it upon themselves to whitewash the Russian autocracy and so misrepresent all those who had fought against it for more than half a century. I do not believe that anybody cares to know *now* anything about the devotion of the Russian people to Czar Nicholas II, or about his angelic disposition and his artistic soul. H.

FOOD AND HEALTH

By Helen Kinne and Anna M. Cooley. Macmillan Co. 312 pp. Price \$1.10; by mail of the SURVEY, \$1.22.

For some years teachers in rural schools who have had no training in home economics have been waiting for a text book on foods which contained the subject-matter in simple form and so arranged that it could be used in a one-room rural school. Food and Health, by Kinne and Cooley, is written to meet this need.

The authors center the lessons around the noon lunch brought from home and supplemented with some hot dish prepared at school by the children. The book is divided into four general sections: luncheons at school, the home supper, the home breakfast, and the home dinner. No attempt is made to correlate the instruction with other school work.

For boys and girls the book has added interest, because it tells of a particular rural school in Pleasant Valley which Marjorie Allen, John Alden and other children attend. C. N.

CRIMINALITY AND ECONOMIC CONDITIONS

By William Adrian Bonger. Little, Brown & Co. 706 pp. Price \$5.50; by mail of the SURVEY \$5.74.

Dr. Bonger is a Hollander, frankly socialistic, and sure that his book "will meet with many disapproving critics" on the American side of the ocean. This will undoubtedly be the case, since Dr. Bonger holds that the great mass of criminals differ only quantitatively from persons who never get into the courts; that the part played by economic conditions in criminality is preponderant, and even decisive.

Environmental influences of special potency are, according to the author, the present economic system, arraying individuals and classes against each other; long working hours; wide extremes in income; illness, unemployment and poverty; the disruption of traditional family ties; sexual crimes, and (treated last of all and briefly in the volume) degeneracy. The cure—so far as one is possible—is similar with well-known socialistic solutions.

This book is not one for continued reading, but rather for consultation. His collection of material on the influences of environment shows monumental diligence. It presents the richest available thesaurus of arguments for the powerful influences of environment.

Produced in part in requirement for a doctor's degree in Holland, Dr. Bonger's work holds a place, by contrast, with Dr. Healy's *Individual Delinquent*, and recent

American publications like those of Dr. H. H. Goddard and Dr. Bernard Glueck, who see in many manifestations of crime the strong influences of mental deviation. Dr. Bonger recognizes to no such extent the close relation of feeble-mindedness and insanity to crime. O. F. L.

MURDER

By David S. Greenberg. The Hour Publisher, New York. 626 pp. Price \$1.50; by mail of the SURVEY \$1.63.

Probably the title, and the fact that Mr. Greenberg is also author of the very interesting book, *A Bunch of Little Thieves*, which appeared some time ago—are responsible for the selection of a reviewer from the field of delinquency. Murder belongs to the field of criminological literature no more than does Brand Whitlock's *The Turn of the Balance*. But as literature, it is poorer than the latter in style, characters, situations and dramatic force. Some of the *dramatis personae* and much of the staging are unconvincing. As a revolt against society it fails the heroic and becomes rather nagging. It is unnecessarily long and filled with details that are interesting neither as literature nor as psychology, nor as sociology. The author's very intimate knowledge of institutional life and of East Side characters might have been used to better advantage. P. K.

STUDIES IN FORENSIC PSYCHIATRY

By Bernard Glueck, M.D. Little, Brown & Co. 269 pp. Price, \$2.50; by mail of the SURVEY, \$2.62.

Dr. Glueck has offered us in this second volume of the *Criminal Science Monographs* studies of cases seen by him, together with critical surveys of special literature belonging to the subjects he discusses. Over a score of case histories are given in more or less detail and are grouped as be-

longing to the four types of problems concerning which the author has gathered this material of great practical interest for criminologists. The book consists of a short preface which we wish might be read and appreciated by all jurists who hear criminal cases and by all officials who consider the question of pardon and parole. Then come five chapters on the main topics: Mental ailments of prisoners; courtroom aspects of the monomania for litigation—a form of insanity little known to the laity; a clinical study of simulation of mental disease; and the analysis of a case of kleptomania.

Dr. Glueck very wisely sees that a great deal more work has to be done on special topics in clinical criminology before foundations for radical reforms in court procedure and penal institutions can be safely laid. Studies of the kind that he has made we need in great abundance. Special types of characteristics and traits must be discovered and outlined with the greatest care that all may know and recognize them. Better than that, the genesis of these variations from the normal should be of chief concern to the student of the pathology of conduct. The path to better accomplishment in handling our offenders is to be blazed only by studies of what the offender is, plus equally careful studies of what caused him to be what he is.

Here, for example, is the chronic simulator. Through scientific investigation his type is determined; we trace what this given sort of an individual may produce in the way of a

career. But, after all, and in the long run of social adjustments, the genesis of his established peculiarities is essential for bringing about readjustment in the case—to say nothing of preventing such unfortunate reactions in other cases where similar backgrounds in experience or personal make-up may obtain. As the physician put it, the rational and efficient treatment of an ailment requires knowledge of its special etiology.

Dr. Glueck's point of view is brought out clearly enough in the following sentence taken from his preface: "One desires only to express the hope that the time is not far distant when our penal and reformatory institutions will likewise serve the purpose of clinics for the study of the delinquent, and that such clinical instruction will form part of the curriculum of at least every public instructor." Almost prophetic words, these, from the one who by the time his book was published was himself at the head of one of the principal efforts in this country to study prisoners. He was appointed director of the psychopathic department at Sing Sing.

Criticisms might be offered of minor points in the literary construction of this work, such as the lack of unity which has resulted from the author's obvious development of the different topics at separate times and his failure to work the material over into a sequence of coordinated chapters; and of his occasional carelessness in phraseology. But these have nothing to do with the main fact—the value of his work. Dr. Glueck, in painstaking fashion, throws light of much practical worth upon obscure places in the science of criminology.

WILLIAM HEALY, M. D.

ELIZABETH FRY

By Laura E. Richards. D. Appleton & Co. 205 pp. Price \$1.25; by mail of the SURVEY, \$1.34.

The utter inability of the reader to tell how much of this book is fact and how much is Mrs. Richards' (witness the scholarly letter written by the "screaming, swearing" women prisoners at Newgate, which is presented with no question as to its having actually been written by them) is its chief defect. My guess is that it will entrance many a child and tell him absorbing things that he will not learn in his school history.

The book is largely composed of extracts from the journals of Elizabeth Fry and her sisters, which account for the vividness of the picture it gives. Imagine the shock to one's reverence for the tradition that Elizabeth Fry has become, to read in her diary, written when she was seventeen: "Company to dinner. I must beware of not being a flirt, it is an abominable character; I hope I shall never be one, and yet I fear I am one now a little." And again: "I must not mump when my sisters are liked and I am not."

In the days of her fame, when the king and queen of France paid homage to her good works, this Quaker woman uttered one maxim in the course of a report on French prisons that might well be hung on the walls of our modern prison commission offices: "When thee builds a prison, thee had better build with the thought ever in thy mind that thee and thy children may occupy the cells." W. D. L.

THE NEW CITIZENSHIP

By Percy Mackaye. Macmillan Company. 92 pp. Price \$.50; by mail of the SURVEY \$.54.

Percy Mackaye's "civic ritual" of new citizenship and of the first voter, is perhaps a minor work from its author's standpoint. But it is an important contribution to American pageantry and to public ceremonial. In his eloquent preface the author says: "The form of the ritual developed itself from the simple precedents of the old American town-

meeting." There are symbolical persons, Liberty and America; the states are represented by powers; Jefferson, Franklin, Washington, Lincoln and one living president of the Republic speak in their own historic words. The new citizens are immigrants in the main, and Percy Mackaye has achieved a golden mean of suggestion: the immigrant cultures are given full honor and these inheritances are united in an American soul richer than any the world has known.

The pageant ritual is very simple and would permit of local additions in nearly every part of the country. The need to dignify voting and naturalization has become generally recognized. This civic ritual shows how this may be done, and in his preface and appendix, Mr. Mackaye gives forceful reasons why it must be done. J. C.

SOCIETY'S MISFITS

By Madeleine Z. Doty. Century Company. 255 pp. Price \$1.25; by mail of the SURVEY, \$1.35.

With the main thesis of Miss Doty's book—that the explanation of the criminality of many offenders is to be found, not in any inherent viciousness in the criminal himself, but in the conditions under which he grew up—all persons of experience in dealing with offenders and with penal institutions will agree. Society is becoming more and more conscious that a certain percentage of crime might be prevented were safeguards of va-

rious kinds thrown about young persons, particularly about dependent children.

Some criminologists believe that this percentage of crime is very large; others think that while it is by no means negligible, it is relatively much smaller than the percentage due to an impaired physical, mental or spiritual heredity, which would make a normal line of conduct, whatever the environment, dubious. Every attempt, however, to draw the community's attention to this need deserves hearty welcome.

But if public interest is to be roused to correct something, it must be made plain just what it is that is to be corrected. Miss Doty's readers will expect from her a further, more conclusive and definite statement as to present conditions in reformatories.

The dropping of self-government at Auburn, after only one attempt, seems rather disappointing, especially in view of the determination and spirit shown by the prisoners themselves. It is also surprising to find that the George Junior Republic is not mentioned in connection with the description of the Little Commonwealth in England, which was based on the idea and plan of the American experiment. This book presents the commonwealth as an English plan that America would do well to imitate.

Nevertheless, the book should stimulate a general determination to speed the day when every child shall have all possible assistance toward right living from the community. A. C.

be killed at any cost. This is the purpose revealed.

Now as to methods. "It has made this education compulsory." Meetings are to be either during or after school hours, as the committee may decide best. The meetings "shall avowedly admit these principles and facts as their motive." "The speakers shall be chosen with the knowledge that their views coincide with the spirit of these resolutions," and "At such meetings there shall be no debate." In other words, the children of Cleveland are compelled by law to listen to a one-sided, hysterical appeal to murder. Those who believe that Christ meant it when he said, "Peace on earth, good will to men" will not be allowed to speak.

To my mind this course seems hardly consistent with the high-sounding phrases elsewhere in the resolution, that "the prerequisite for defense is education," that "clear thinking is the need of the hour," and something about our "priceless heritage" obtained by "the sacrifice of our fathers." I had believed that that heritage was liberty, freedom of conscience and free speech. I can only believe that this action of the Board of Education of Cleveland is an unwarranted, intolerable effort to conscript the minds of our children.

SEDLLEY HOPKINS PHINNEY.

Cleveland.

MISPLACED CREDIT

TO THE EDITOR: I have just finished reading the report of the so-called church vice crusade in San Francisco, published by you in your issue of March 17. I confess to surprise that you, who I believe are usually careful in such matters, let such an article slip by into your ordinarily reliable news columns. I should hate to think that the little phrase in the last paragraph "Dr. Smith reports" explains the entire trend of this article.

The casual reader would be led to suppose that nothing previous to the action of the church federation, to which almost entire credit is given, had ever been done in San Francisco. Previous articles in your own columns during the past few years would belie this impression to your more regular readers—incomplete as even those articles have occasionally been.

In fact, the first paragraph of the article would almost seem to cast a slur upon any former attempts, especially those in connection with the legislative campaign carried out by the campaign committees for the Redlight Abatement Law, the Women's Christian Temperance Union, and other organizations. The Law Enforcement League is barely mentioned, and the wonderful pioneer work of Franklin Hichborn, Rev. Charles Lathrop and others is ignored. In the account of the publicity campaign and mass meeting (which, by the way, were relatively much more important than the more picturesque gathering of women of the underworld at the Central Methodist church which was so fully reported) the name of Bishop Walter Sumner of Oregon is not even mentioned. If it had not been for Bishop Sumner's presence in the city, his activity there, and especially his ringing address at this mass meeting, it is doubtful whether the results, even such as they are, would have been possible. Bishop Sumner, in spite of the rather conservative attitude of his denomination in California, spoke frequently on the subject while in attendance at a convention there, and had a two-hour interview with Mayor Rolph, solicited by the latter. Mayor Rolph later attended one of his lectures on the subject at the local seminary.

I feel that the names of Mrs. May Cheney, Julia George, Rudolph Spreckels, Warren Olney and Bascom Johnson should also be mentioned in any such report.

I should imagine that with the long expe-

Communications

SWAT THE FLY

TO THE EDITOR: This is the advertisement I put in our local papers ten days ago:

FRESH-KILLED FLIES WANTED!

I heartily second the *Intelligencer's* plea for swatting the flies early.

The suggestion to set the children hunting them is excellent.

In order to make such a hunt profitable for the boys and girls, I'll pay one cent apiece for the first 500 fresh-killed houseflies delivered to my garage by Doylestown boys and girls.

First come, first served.

LEIGH MITCHELL HORGES.
State and West streets.

The second day a farmer boy living near town telephoned me he had killed 700 flies in their third story that morning. He was not eligible, as he didn't live in town, but I paid him \$1 for the lot. It was worth much as a sample of what supplies the annual summer swarm. Within a week my \$5 was exhausted and still they came.

I think we might make some real headway against this death bearer if, about this time of year, newspapers or public-spirited individuals in every town and city would offer to pay for fresh-killed breeders.

I know of no better way of passing along the suggestion than by sending it to you.

LEIGH MITCHELL HORGES.

Doylestown, Pa.

A WORD TO SOCIAL WORKERS

TO THE EDITOR: Those who for years have been giving time, strength and money for the promotion of causes that they believe are developing the sense of solidarity and mutual good will, on which the success of democracy

depends, have been somewhat perturbed of late by receiving hurry calls asking what they are willing to contribute to their country in time of need.

To them the time of need has ever been present, and their work has been conscious service for the country they love and the democracy they believe in.

Yet wise leaders are the ones able to use tides of enthusiasm to promote ends for which they have struggled so often against indifference or opposition.

This country-wide census of both men and women offers great opportunities for securing recruits for the endless fight against evil conditions at home as well as abroad.

There is danger lest some social workers imitate the spirit of the elder brother in the parable of the Prodigal Son, and so lose the chance to cooperate with the newly aroused ardor of the heretofore indifferent.

EDITH M. HOWES.

Brookline, Mass.

MENTAL CONSCRIPTION

TO THE EDITOR: In view of your thorough article of March 24 on the declaration of principles and action of the Cleveland Board of Education as to school loyalty meetings, I feel that a few words must be said. In the first place, the action of the board was not unanimous, three members being opposed. In the next place, this action is opposed by the Socialist party and by most of the liberal elements of Cleveland.

The board tacitly admits its purpose when it speaks of "limiting the liberty of the individual for the welfare of us all." Reading further, we see that "voices and influences making for cowardice and national immorality are abroad in the land which must be killed at any cost." We see, then, that the liberty of the individual is to be restricted, and that influences making for peace must

rience which the SURVEY must have had with such matters it would have occurred to the editor that any statement involving such a bald assignment of credit as was included in the first paragraph of this article was likely to draw just such a letter as this, and perhaps many others. Only to an article containing such statements would I think of answering as I have above.

THOMAS D. ELIOT.

[Assistant Professor of Political and Social Science, State College of Washington] Pullman.

BE PREPARED!

TO THE EDITOR: Preparedness is the watchword of today. Unfortunately the popular association of the term is with the military forces, but it should be the motto of the peace forces as well. The old adage was, in time of peace prepare for war. Why should not the reverse also be true, and in time of war prepare for peace, be just as good a slogan? The reconstruction must come some time, why not be prepared for it?

The old order was from government to people, the spirit of democracy is from people to government. Which will be the policy of the reconstruction? The outgrown, warring governments of today are certainly not the fit source of reconstruction. They need reconstructing themselves to adjust to the internationalism and industrialism of the times. The world can never rightly solve its problems of today with the sword. The sword seemed to be the only effectual remedy in the old era of territorial conquest, but industrial conquest demands science and intellect. The man or the woman with the conquering mind instead of the conquering sword should be the hero and the heroine of the hour.

Within the past quarter of a century or a little more there are a number of organizations that have grown to be international—the Christian Endeavor, the Sunday School Association, the Y. M. C. A., Y. W. C. A., W. C. T. U., Socialists, the labor forces, Boy Scouts, the Woman's Peace Party—are examples that come to my mind on the spur of the moment. There are others of as vital importance. Why should not these international organizations get together and shake hands with each other in the interest of the world and from this source be gathered the members of a reconstruction congress or convention? If, say, three or five delegates were sent from each organization, there would be gathered together an assemblage of people quite as capable and efficient to give to the world a world court, a league of nations or a world constitution, which-

ever it may turn out to be, as any assemblage drawn from political sources.

Why not urge such a congress or convention while the nations are asleep to the needs of the people behind their bulwark of war? Why wait for the close of the war to create such a work "by the people" and "for the people"? At the close of the war, when nations lie wounded and bleeding and swamped by national debt, there will be a lot of time wasted and probably a number of delicate diplomatic questions will arise before such a congress can be gotten together from an official source. This plan would not only save time and diplomatic controversy, but might also serve as a means of terminating the war more speedily and give the peace advocates something tangible to rally around and offer in place of the sword for the world's advancement, thereby demonstrating the value of the new heroism, that to live for a cause is greater than the old heroism, to die for a cause.

LAURETTA M. ZEITLER.

Washington, D. C.

SOCIAL studies of delinquency, health, poverty and the work of visiting nurses made by Sidney A. Teller, head resident of the Irene Kaufmann Settlement, Pittsburgh, will be on exhibit during the National Conference of Charities and Correction in June.

THE Massachusetts Board of Education, in a recent report, recommends the establishment of a bureau under the direction of the board to provide facilities for training persons injured through industrial accident. The expense of such a bureau for the first year is estimated at \$17,000.

THAT Massachusetts is not planning to let down standards protecting child laborers during war may be indicated by the vote of 15 to 4, by which the state Senate passed a bill requiring children between 14 and 16 to attend compulsory continuation school four hours each week. Passage through the House is expected to be easier than through the Senate. The Massachusetts Teachers' Association carried on the campaign.

A SERIES of conferences in various sections of the country in the interest of improved rural schools and conditions of rural

IN WAR TIME

The present crisis has suddenly thrown new groups into social action.

They need consecutive access to information about the movements already working in the social field.

The SURVEY supplies just such information with special attention to the effect of the war crisis on community life.

Subscribers to the SURVEY are "strong" on personal service.

We urge you, as a subscriber, to bear these new groups in mind. It will be an advantage to all concerned if our readers will make a special effort to bring the members of these new groups and the SURVEY together.

We shall be glad to have your co-operation count towards your voting membership in SURVEY ASSOCIATES if you will but register with us as a SURVEY Circulator.

If you want to join, fill out the coupon below and send it back to us. We will then supply you with publicity material.

MAY WE COUNT ON YOU FOR THIS EXTENSION WORK?

CIRCULATOR COUPON

Fill this out and return it to us.

Please enroll me as a Circulator in the SURVEY's campaign for wider use of social information.

NOTE:—A SURVEY Circulator, in addition to being a subscriber himself, undertakes to secure four new \$3 weekly subscribers, or eight new \$2 once-a-month subscribers (or their equivalent). A SURVEY Circulator is eligible for election as a member of SURVEY Associates for one year, but assumes no financial liability, nor promises renewal another year.

THE NEW YORK SCHOOL OF PHILANTHROPY

EDWARD T. DEVINE, Director

A two-year course of training for social and civic work.

Spring entrance examination: May 5.

Application blanks and catalogue with information about fellowships available to college graduates will be sent on request.

105 East 22d Street, New York.

life is being held this year by the federal Bureau of Education. These are part of the nation-wide campaign being conducted by the Department of the Interior, of which the bureau is a part, for the improvement of rural life. It is the desire of the commissioner of education to have a good representation of business and professional men as well as educators take part in these conferences.

THE Bible Film Company, of Las Vegas, N. M., producers of religious motion pictures to be circulated exclusively among churches, Sunday schools, Y. M. C. A.'s, and similar institutions throughout the country, has created a board of censors. This board, which is inter-denominational in personnel, will, declares an announcement by the company, censor and finally pass upon every foot of the company's output.

ALL America Helps, a Union for Government Aid to War Victims, is the name of a new organization in California. It proposes to have introduced in Congress an amendment to the public buildings bill which would transfer to the relief of non-combatants in Europe the sum of \$35,000,000 now allotted for post-offices and court houses which are not needed. Elizabeth Gerberding, of San Francisco, is president.

RESEARCH studentships of a limited number and to the value of \$275 and tuition each, are announced by the Department of Social Investigation of the Chicago School of Civics and Philanthropy. Both lecture courses and field work are required and applications, accepted only from college graduates, must be filed by May 1. Information and blanks may be had of the school at 2559 South Michigan avenue, Chicago.

A CAMPAIGN for the Conservation of Human Life is proposed by the Federal Council of Churches. Preliminary announcements include a study of causes and conditions; acquaintance with agencies in the public health field and the cooperation of churches with them; the preparation of leaflets, social exhibits, motion pictures, textbooks and a monthly publication. The director is the Rev. Charles Stelzle, 105 East 22 street, New York city.

CHELSEA neighborhood, a community of 180,000 people on the lower west side of New York city, is to have a health census taken by regular agents of the Metropolitan Life Insurance Company, directed by Dr. E. H. Lewinski-Corwin, chairman of the health committee of the Chelsea Neighborhood Association, and Lee K. Frankel, of the company. Dr. Frankel directed the health surveys in Rochester, Boston and the state of North Carolina as well as that now under way in the rural districts of Louisiana.

WAR, says the *Legislative News*, published by the Public Charities Association of Pennsylvania, throws upon public and private charities a vastly increased burden of the mental and physical defectives at large in the community. "Why not conserve the resources so terribly needed for other purposes by providing opportunities for these unfortunates to help support themselves and at the same time prevent them increasing their kind? The Village for Feebleminded Women, at Laurelton, is one step in this direction. State farms for misdemeanants, to take them out of idleness in jails, is another."

MORE than 4 per cent of the children in the rural schools of a single county in California are mentally defective, according to a recent study of retardation. This is unusually high, though an earlier investigation had estimated the proportion of mentally

sand. In the rural districts, dissatisfaction on the part of the farmers with the government system of embargo on foodstuffs and of maximum prices and the difficulty of securing labor due to the high wages offered by industry, made for an increase in conservative, anti-government votes.

SOME interesting tendencies of the motion picture industry are suggested in the annual report of the National Board of Review of Motion Pictures. The development of the serial pictures was one of the characteristics of the year. A few of the companies showed a tendency to lay the emphasis on the story, rather than on the star. The tendency in subject matter was shown in the increased use of dramas and plays which had been successful and the fact that a number of novelists and dramatists entered the motion picture field. That public interest in motion pictures has increased was illustrated in the great amount of space given in newspapers to motion picture news and criticism. There was an increase the latter part of the year in the production of films considered by the review committees suitable for the family group and young people.

RECENTLY formed at Clifton Springs, N. Y., the Society for the Promotion of Occupational Therapy has as its officers: president, George Edward Barton, of Clifton Springs, formerly chairman of the Committee on Occupations at the Papenvoort Model School in Belgium; vice-president, Eleanor Clarke Slagle, director of the occupational experiment station of the Illinois State Society of Mental Hygiene; secretary, Isabel G. Newton, of Clifton Springs; treasurer, Dr. W. R. Dunton, Jr., of the Sheppard and Enoch Pratt Hospital, Towson, Md.; chairman of international committee, to keep in touch with other similar societies, T. B. Kidner, vocational secretary of the Canadian Military Hospitals Commission, Ottawa; chairman of committee on admissions, Susan C. Johnson, director of occupations on Blackwell's Island, N. Y., recently director of the technical division in the Philippines.

THE National Alliance of Employers and Employed is the official name of a new statutory organization under the British Board of Trade. For the present, its main function is to secure the reinstatement on satisfactory lines of soldiers and munition workers at the end of the war. At least part of its expenses are to be paid out of money provided by Parliament. The central board is to be composed to the extent of two-thirds of representatives of employers and employed, and the remaining third to be nominated by different government departments. The increasing rapprochement of capital and labor under the stress of war may be illustrated further by a manifesto recently issued by the British Council for Christian Witness on Social Questions and signed by more than a hundred well-known citizens. One of its clauses reads: "We believe that one main requisite for industrial justice and peace is the association of labor in the management of industry—at least so far as conditions of work are concerned. It is desirable that the special knowledge possessed by labor in regard to some of the conditions of industry should be available for the more efficient conduct of the business."

COMMERCIAL lyceum bureaus in Wisconsin, Minnesota and North Dakota have almost been put out of business by the entrance of the state universities into that field as an educational function. President Frank L. McVey, of the University of North Dakota, writes to the SURVEY that "so far as I know there is only one lyceum bureau operating in the state and it has only a few courses, less than half a dozen." During the present

This war has been declared in the name of liberty and democracy. Let us not undermine our own liberty and democracy by adopting

CONSCRIPTION!

The volunteer system is the only just, democratic, and effective means of raising an army.

Congress is considering a bill to draft an army of one million youths, between 19 and 25 years of age, presumably for service in Europe with the Allies.

Compulsory military service is unjustified:

It conscripts conscience. It forces a man to kill against his will. It makes adherence to personal religious conviction a penal offense. Those who refuse to serve are subject to court-martial and imprisonment.

True patriotism demands a united country. This principle will not unite the country in carrying on the war; it will divide it. Conscripted men may fight for territory, but only free men can fight for ideals.

Canada, with a population less than New York State, has raised 400,000 without conscription; Australia, with a population less than Illinois, 250,000 without it, and recently defeated conscription for over-seas duty by an overwhelming vote of the people. Even Germany has never conscripted men for over-seas military service.

Lieut.-Gen. Nelson A. Miles and other military authorities oppose conscription as unnecessary and ineffective. Volunteering is our American tradition. Volunteering can be controlled and guided to build up an efficient army.

Is our cause so weak that not enough men can be found to volunteer?

We believe the great majority of the American people are opposed to conscription and in favor of the volunteer principle. If that is your conviction, **HELP DEFEAT CONSCRIPTION NOW:**

1. By writing or wiring your senators, congressmen and the President.
2. By getting others to do so.
3. By getting organizations to take action.

ACT NOW. KEEP UP YOUR PROTEST UNTIL CONGRESS DECIDES.

CUT THIS OUT AND MAIL

session this university booked 123 courses with a total of 572 dates and estimates that it reached 120,000 people. While all the bureaus that were operating in Wisconsin in 1909, when the state university began its lyceum work, are still operating, "practically all of them," writes Louis E. Reber, dean of the University Extension Division, "have a very much smaller volume of business." In Minnesota, writes Richard R. Price, director of the General Extension Division, "it is probable that commercial bureaus are not reaching more than twenty-five or thirty towns this year, while we are reaching 137." Each of the universities offers its courses at low cost and the work is not always self-supporting.

THE photograph of the nurses graduating from the Naval Military Hospital Training School in Guam, which appeared in the SURVEY for March 24, was used by courtesy of the surgeon-general of the United States Naval Medical Corps. The credit line was by some oversight omitted.

PERSONAL AND PROFESSIONAL

FRANZ SCHNEIDER, JR., of the Department of Surveys and Exhibits, Russell Sage Foundation, has been assigned to the Community Health Demonstration in Framingham, Mass., to assist in the sanitary study of the city with special reference to tuberculosis. This study will continue for about two months, and will include a thorough analysis of ten years' vital statistics; test on birth registration; detailed analysis of the birth-rate and mortality of infants under one year, and computation of mortality rates for selected districts; an analysis of communicable diseases, case-rates and fatality; school and industrial hygiene and rural sanitation.

DR. EDWARD W. RYAN, who had charge of the American Hospital in Belgrade during the outbreak of typhus in Serbia last year, has been put in charge of sanitary and relief work at Saloniki in territory occupied by the Allies. Relief work is not permitted under American supervision in German or Bulgarian territory. With the immediate relief work, an attempt will be made to put on a permanent basis the sanitary work begun in Serbia two years ago under the American Sanitary Commission.

NEW BOOKS YOU SHOULD READ

BOYD CABLE WROTE

to us when we accepted his new book

GRAPES OF WRATH

that it might never be finished as part of it was written
WITHIN RANGE OF THE GERMAN GUNS

As uplifting as the terrible, slow swing of the Battle Hymn of the Republic from which the author takes his title, this tale of twenty-four hours in the life of four privates (one a Kentuckian) of the English line gives us a glimpse of the glory in the soul of man that pierces through the blind fog of war.

By the author of BETWEEN THE LINES and ACTION FRONT.

Net \$1.50

A STUDENT IN ARMS

By DONALD HANKEY. Introduction by J. St. Loe Strachey, Editor of the *London Spectator*. Net \$1.50

The *New York Tribune* says: For Americans the book will increase our conviction and resolve that our army must be a citizen army, based on universal service, and that the natural democracy of such a mingling must be fostered by every means in our power.

ONLY A DOG

By BERTHA WHITRIDGE SMITH. Net \$1.00

The *Ohio State Journal* says: The most tender and most sympathetic story that has been inspired by the present war is this, the autobiography of ARMY, an Irish terrier. The loyalty and the sublime faith of ARMY in a TOMMY even to death will move any heart. THIRD EDITION IN SEVEN WEEKS.

PARLIAMENTARY REMINISCENCES AND REFLECTIONS, 1868—1885

By the RIGHT HON. LORD GEORGE HAMILTON.

Net \$4.00

Lord George Hamilton's Parliamentary career began in the days of Mr. Disraeli and continued without a break until 1906. During that time there was no political or social leader with whom he was not personally acquainted. The reminiscences are not confined to Parliament, for Lord George's family connections and his various other appointments have given him exceptional opportunities for knowing the inner history of the past half century.

THE NOTE BOOKS OF SAMUEL BUTLER

Author of *The Way of All Flesh*, *Erewhon*.

With an introduction by Francis Hackett. Net \$2.00

They make in their entirety a more vivid picture of Samuel Butler than it is possible to obtain elsewhere; they are the most characteristic of his works, summing up and including everything else that he did, and may be best examined as the afterpiece to a varied and versatile career.

FIGURES OF SEVERAL CENTURIES

By ARTHUR SYMONS. Net \$3.00

The *London Times* says: These papers are aimed so directly at the heart of the subject that in each case they seem to show us something we had missed before. And it is always done as the poet knows how to do it; without display of knowledge or chain of argument, but directly, simply and fully. He has so fine an instinct for the aim and quality of each writer that the result seems effortless and brimming with truth.

GRAIL FIRE (A Novel)

By ZEPHINE HUMPHREY. Net \$1.50

The *Philadelphia Telegraph* says: It is a pleasure to turn to a book so beautiful, so quieting, so far above the "Earthly." Written with broad sympathy, an understanding of widely differing religious viewpoints, keen insight and humor.

IF WISHES WERE HORSES

By the COUNTESS BARCYNKA. Net \$1.50

The *New York Tribune* says: We have not often read a book more cleanly cut in its delineation of characters, or one which presents a more powerful lesson without a single word of preaching.

PETUNIA

By MRS. GEORGE WEMYSS. Author of *Jaunty in Charge*. Net \$1.50

A quaint story of a young woman who upsets the expectations of all her brothers by inheriting her father's entire fortune and then circumventing their plans for marrying her off by choosing a man for herself. The most notable thing about this charming piece of work is that the author achieves the very rare thing—atmosphere—in perfection.

EL SUPREMO

By EDWARD LUCAS WHITE. Net \$1.90
The Greatest American Historical Novel.

H. W. Boynton says in the *Nation*: *El Supremo* is a Historical Romance upon the great scale. A touch of genius gives to *El Supremo* the first notable work of this American storyteller, its unmistakable thrill for the reader. Mr. White has fashioned a story of unflagging interest and charm.

WOMAN

By VANCE THOMPSON, author of "Eat and Grow Thin." Net \$1.25

Rheta Childe Dorr says: In a new book called *Woman*, Vance Thompson has shouted so loudly that women will simply have to stop, and having stopped, will listen and approve. No woman could have written such a book. It had to grow out of the awakened conscience of man.

THE CALL OF THE REPUBLIC

By Col. Jennings C. Wise
Of the Virginia Military Institute

With an Introductory Note by Major General Leonard Wood

Net \$1.00

He brings out very clearly the new conditions of Organization involving all the resources of a Nation. It is a book which all Americans can read with profit, and one which, if heeded, will add much to National well-being and security. (From the introduction by General Wood.)

Postage Extra. At all Bookstores

A Watch That the People Want
—the New

Ingersoll

Waterbury

In the first place it's the size that is so much wanted today—especially in the cities—the smaller "12-size." Then the whole "get-up" of the watch is smart, stylish, up-to-the-minute in all the little features found in the high-priced watches.

But a watch is to keep time and meet practical requirements. Here is three dollars' worth of watch by the best Ingersoll standards. It's jeweled with four jewels at points of greatest friction. It is accurate; and it is sturdy, too. It isn't put out of business by a little rough handling that most watches won't stand.

As an added attraction you have the Waterbury "Radiolite" at \$4.00. The hands and figures are made of a new self-luminous substance containing genuine radium. This causes them to glow with a brilliance that lasts for ten years—probably much longer.

You can always tell an Ingersoll store by the display of Ingersolls in the window. There's one not far from you.

Waterbury
"Radiolite"

Americanization of the Jewish Immigrant

By Israel Friedlaender

TWO articles of prime significance at a time when the relationships of races of men and the integrity of family life are at stake as never before, are announced for the SURVEY next week.

The Nature and Uses of Social Evidence

By Mary E. Richmond

THE MAN with the hoe has a tremendous family—all the Boy Scouts. Page 97.

TO all the other don'ts for children, the National Child Labor Committee adds a pageful for those who may be sent out to work on the farms. Poor crops and weedy boys may result. Page 86.

ISRAEL PUTNAM, dashing off on his plow-horse to be the first to enlist, has no place in this war. Farmers are not wanted. Moreover he would have been beaten to it by the doctors. Surgeons, psychiatrists, health officers, sanitary engineers, dentists and plain physicians all have an assigned part. The plans of the medical branch of the Council of National Defense and of the National Association for the Study and Prevention of Tuberculosis. Page 87.

JACK and Jill went up the hill to watch a German boat. Jack begun to shoot a gun, while Jill—she got the vote. Page 97.

CONSIDER Mrs. Finnegan, left in a pretty pickle with all the children ailing, the grocery bill unpaid and at outs with the neighbors when Finnegan, somewhat under the influence, decided that his country needed him more than his family. A sample of civilian relief work. Page 90.

COMMISSIONER STRONG'S reorganization plan for the New York State Board of Charities is before the legislature with slim chances of enactment. The citizens' committee, supporting them, and the Catholic committee seem hopelessly split on the question of placing out children. Meantime the board itself has partially reorganized its work while standing pat on the form of organization and personnel. Page 92.

HEREAFTER all children committed to state institutions in Ohio will have a physical and mental examination, by a new bureau established for that purpose, to determine the appropriate hospital, school or home. A fruitful legislative session. Page 97.

EIGHT new committees are announced by the Council of National Defense which now has a commission, committee, advisory commission or sub-committee to deal with every current interest except baseball and peace. Page 94.

MRS. BACON'S housing program for Indiana is rounded out with a new law which applies even to the farmhouses of the Hoosier countryside that Riley sang. Some results of the recent legislature. Page 98.

TAMMANY congressmen kept the Democrats from making war prohibition a party measure, but the drys go marching on. Page 95.

WITH the cost of living as their sole argument and without even threat of a strike, the soft coal miners won a 20 per cent increase in wages and their hard coal fellows are expecting an equal raise. Page 100.

IF the New York labor law is to survive the attempts to break it down in the name of patriotism, the legislature must take an immediate adjournment. Page 96.

THOUGH a full fortnight has passed, the food problem has not yet been solved. Page 96.

SAN FRANCISCO charity workers are urging a separation allowance for soldiers based on the number of their dependents. Page 95.

A Plan to Safeguard Children in Farm Work

WHAT can the children of America do in this war to aid in the production of foodstuffs? Everyone is asking this question and not a few have come forward with answers. Some of these answers involve a relaxation of school attendance laws and give no assurance that young children will not be overworked, ill fed and poorly cared for generally. The National Child Labor Committee has worked out a plan to meet the need and at the same time to safeguard the children against neglect. The plan has two parts, one relating to children fourteen years old and over who may be hired out to farmers, the other relating to children under fourteen who would be a burden to farmers because of inexperience and youth. The committee asks: "Will you push this plan in your community?" Here it is:

FOR OLDER CHILDREN

To send any children to farms without knowing the actual need for them or without regulation would be wasteful and a hindrance to the farmers who do not want a horde of inexperienced laborers on their hands,

Therefore:

1. Create and appoint a state committee of school officials to confer with the state agricultural department and organizations of farmers to find out whether there is a real need of school children on farms.

2. If the need exists, draft a set of regulations, to meet the need and at the same time protect the children, such as these:

(a) Children 14 and over, only, to be permitted to work on farms for others than their parents and excused from school for this purpose from June 1 to October 1.

(b) Children thus excused not to be permitted to work more than 8 hours a day, or more than 6 days a week.

(c) Children thus excused must have special work permits, issued by the committee of school officials or persons authorized by them, showing that the child has been examined by a physician and is physically fit for work, permits to be issued only for farms known by the committee to be suitable places for the children to work.

3. The state committee of school officials should be responsible for the supervision of children at work on farms to see that regulations are enforced.

Transportation }
Feeding } should all be supervised.
Housing }

As to housing

It is advisable that children sent to farms to work should not be housed with the farmers.

It has been suggested that the Boy Scouts, for instance, can establish camps in a given farm district under scout masters. Local authorities will be glad to provide transportation from camps to farms, and the boys can work in gangs, in one field one day, in another the next, and return to camp after work. In this way both work and living conditions will be supervised and farmers will not have the responsibility and cost of housing them.

Similar camps may be established under playground directors, probation or school officers.

But be sure you know where the children live and how.

ENGLAND IS ALREADY WISHING SHE HAD NOT USED HER CHILDREN SO RECKLESSLY AT THE BEGINNING OF THE WAR

LET AMERICA LEARN BY ENGLAND'S EXPERIENCE

FOR YOUNGER CHILDREN

1. Organize teachers, boy scout leaders, playground directors, and others interested in child welfare, into a SUMMER AGRICULTURAL FACULTY.

2. Call upon holders of vacant village, city, or suburban properties to dedicate them for the summer to the raising of potatoes, corn, beans, or other vegetables, according to soil and location.

We have plenty of land in America. One-half of the City of New York is vacant of buildings.

Your state agricultural department will cooperate with you, if need be, to secure seeds and implements, or these may be provided for by local subscription.

3. Raise a small fund to hire these plots ploughed and roughly prepared for use.

4. Get a special resolution from your School Board providing that all children who register for this agricultural service under supervision of the Board and perform the work regularly, shall be given credit for it in lieu of regular school attendance from June 1 to October 1. *But allow no general school exemption that will turn children out of school without providing both occupation and supervision.*

5. Organize the children in classes and put them on the soil under direction of competent supervisors, the Summer Agricultural Faculty mentioned above, who will appreciate the limits of a child's strength and will not permit him to be overworked.

THE SURVEY

Medicine Mobilized

By Gertrude Seymour

OF THE SURVEY STAFF

ANNOUNCEMENTS of the first meeting of the medical branch of the Council of National Defense just held in Washington show an alignment of medical resources which, for extent and completeness, has perhaps never been equaled. It is a mighty gathering of clans, among whom the rousing word has been passing ever since the day when members of the first hospital units returned from their voluntary service abroad, having looked upon the face of war. Units for volunteer service abroad became permanent units at home, in no official organization, but in a readiness that has proved prophetic.

As long ago as November, 1915, a group of Albany physicians, known as the Clinical Club, began a course of study in military sanitation and hygiene. This course, now widely known as the "Albany idea," has been extended and put in pamphlet form for use by other medical clubs and societies.¹ Not only the facts of military medical organization and methods of sanitation are included, but problems are given for solution, affecting the proper use of local resources in an emergency; such as the protection of water-supply, should a given city suddenly become the base on which troops converge; or the means of caring for refugees, who might gather at a given point, and of protecting the local community from contamination; or again, the available hospital quarters and supplies for the wounded, should a battle occur nearby. Such acquaintance with local conditions through sanitary surveys and general health stock-taking obviously has a value far beyond the immediate necessity.

In April, 1916, a National Committee of American Physicians for Medical Preparedness was appointed by the joint action of the presidents of the American Medical Association, the American Surgical Association, the Congress of American Physicians and Surgeons, the Clinical Congress of Surgeons of North America, and the American College of Surgeons. A few days later, this committee of physicians presented its plans to President Wilson and offered its services to the federal government.

The organization and work of the National Committee of Physicians for Medical Preparedness is thus described in its circulars:

"To the committee was delegated the responsible duty of formulat-

¹ Address Dr. J. A. Cox, 35 Clinton avenue, Albany, N. Y.

ing plans whereby the civilian medical resources of the United States might be ascertained and effectively coordinated for such purposes as might be required by the federal government.

"The national committee organized, selected a chairman and secretary and an executive committee, and appointed a state committee of nine strong men in each state of the union.

"It is the fixed policy of this committee that all presidents and secretaries of the various state medical societies shall be members of their respective state committees during their incumbency in office. From the first it was contemplated that at the proper time the organization of the committees would be perfected in each county of the country. That time has now come and county committees are being rapidly organized. In each instance the state committees are expected to select the county committees and supervise their formation."

On the county committee also all medical interests and activities are to be represented. It has been requested that membership in each county unit shall include:

All members of National Committee of the Committee of American Physicians for Medical Preparedness, resident in the individual county; members of the state committee resident in or near the individual county; representatives of the United States Army, resident in the individual county; representatives of the United States Navy, resident in the individual county; representatives of the United States Public Health Service, resident in the individual county; representatives of the State Board of Medical Examiners residing in the individual county; representatives of the state or city public health service; ranking medical officer of the National Guard; president and secretary of the local Medical Officers' Reserve Corps Association, if there should be such an organization; deans of medical schools; president and secretary of the County Medical Society; president and secretary of any other important medical societies; medical director of the local Red Cross units; other representative medical men.

Specific duties will be assigned to state and county officials from time to time, in addition to the general unification of medical resources. Some of these specific duties already requested are the securing of applicants for the Army Medical Corps. At least 1,200 additional medical officers, it is said, are required at once; 20,000 or more medical reserve officers may be called for at any time; 350 officers are yet needed for the Navy Medical Corps; several hundred medical officers are needed for the Coast Defense Corps of the navy, and many medical officers are needed for the local National Guard.

During the past year this voluntary committee and its various subsidiary groups have achieved a distinguished success in the work planned. Some of the activities already completed or well under way are:

At least 20,000 medical men selected and classified according to their training and work.

An inventory of hospitals and other medical institutions.

Definite affiliation with the Red Cross, both in administration and in plans by which the local committees shall cooperate.

Special training in military medicine for senior medical students, for hospital groups in the medical officers' reserve corps, for dental students and others.

The standardization of medical and surgical supplies and equipment. The purpose of this work is to designate the articles essential to civilian and military medicine and surgery, so that in case the production of supplies were curtailed, manufacturers of both drugs and instruments might be able to focus their energy upon the articles absolutely essential.

Valuable information furnished by medical and other observers, who have worked in the war zones of Europe, is being gathered and classified.

Finally, presidents of important national medical organizations of the country have been requested to suggest to the medical section of the Council of National Defense the work which members of these organizations are best fitted to perform, and the way in which the societies' activities and resources might be utilized to best advantage.

In August, 1916, Congress created the Council of National Defense, described in the SURVEY of March 17. Upon the advisory commission the medical profession is represented by Dr. Franklin H. Martin of Chicago. Since each member of this commission is authorized to gather about him a special board, consisting of both government representatives and civilians, Dr. Martin appointed the following persons as a general medical board to cooperate with him, "in coordinating civilian military medical activities and to advise in regard to fundamental medical problems and in regard to the armed forces of the country":

Dr. F. F. Simpson, chief of medical section, Council of National Defense, vice-chairman; Surg.-Gen. William C. Gorgas, U. S. Army; Surg.-Gen. William C. Braisted, U. S. Navy; Surg.-Gen. Rupert Blue, U. S. Public Health Service, president American Medical Association; Col. Jefferson R. Kean, director of military relief, American Red Cross; Dr. William H. Welch, professor of pathology, Johns Hopkins University; Dr. William J. Mayo, Rochester, Minn.; Dr. Victor C. Vaughan, dean of University of Michigan Medical School, Ann Arbor, Mich.; Dr. Richard P. Strong, professor of tropical medicine, Harvard University; Dr. Edward Martin, professor of surgery, University of Pennsylvania, Philadelphia; Dr. George H. Simmons, editor *Journal of the American Medical Association*, Chicago; Dr. John M. Flint, professor of surgery, and dean of Yale University Medical School; Dr. Stuart McGuire, professor of surgery, Medical College of Virginia, Richmond; Dr. John Young Brown, professor of surgery, St. Louis University School of Medicine; Dr. Charles H. Mayo, president-elect, American Medical Association, Rochester, Minn.; Dr. Thomas Huntington, professor of surgery, University of California; Dr. H. A. Royster, president of the Southern Surgical Association, Raleigh, N. C.; Dr. Charles H. Peck, professor of surgery, University of New York; Dr. Winford Smith, superintendent, Johns Hopkins Hospital, Baltimore; Dr. Frederic A. Belsey, professor of surgery, Northwestern University, Chicago; Dr. George W. Crile, professor of surgery, Western Reserve University, Cleveland; Earle Phelps, sanitary engineer, Washington; Dr. Edward C. Kirk, dean of the Thomas W. Evans Museum and Dental Institute School of Dentistry, University of Pennsylvania.

The extensive and valuable work of the Committee of Physicians is being continued under the direction of the Council of National Defense.

At the Washington meeting of this general medical board, referred to at the beginning of this article, preliminary reports on two important problems were presented. One of these reports concerned medical schools and was presented by Dr. J. M. Flint of the Yale Medical School. Ways in which Dr. Flint believes the medical schools can help in the present situation are: By preparing to graduate senior medical students promptly in case of need; by urging graduates who can be relieved of their obligations as internes in civil hospitals to enroll for military service. Again, medical schools may consider the Italian plan, according to which base hospital units, organized from the Red Cross, carry with them the clinical faculty and students of their local personnel. By this means practical help is rendered to the army and navy, and instruction is continued at the base. Also, in special cases fourth-

year students might substitute service in a base hospital for the hospital year at home when opportunities for instruction in such a hospital offer.

Said Dr. Flint:

"In your efforts to solve the urgent problem before this board and assist the surgeon-general in supplying an adequate number of medical officers for the army and navy, it is important that this country should not repeat England's blunder at the outbreak of the war in permitting the disorganization of the medical schools either by calling the faculties into active service or sanctioning the enlistment of medical students into any of the line organizations. Ordinary foresight demands that we face the possibility that the war on which we have entered may last for years. Medical schools to supply trained men for the future as well as the present emergency must be kept in active operation under any circumstances.

"While aiding to the uttermost in overcoming the present shortage of men, the necessity of keeping the source of supply open emphasizes the importance of conserving our raw material. Therefore, men now in college looking forward to medicine as a career should be made to understand that it is their patriotic duty to the nation at this time to continue their studies and enroll in the medical school of their choice. Furthermore, no medical student who has not completed three years of medical work should be permitted to give up his course, as the country needs his trained and not his untrained service."

The second report made to the general medical board was that on hospital preparedness, by Dr. Winford H. Smith, of Johns Hopkins Hospital. He recommended that the board communicate at once, by telegraph or letter, with all general hospitals of one hundred beds or more, urging that in view of the present need hospital authorities reorganize their present staff with a view to releasing as many men as possible, and report to the general medical board. Another recommendation was that a selected list of hospitals be prepared with reference to size, location near terminal facilities or strategic points, as, for instance, those along the Atlantic and Pacific coasts and the borders. Information should be obtained at once as to what facilities these hospitals could place at the disposal of the government; their possibilities of expansion; whether they have convalescent branches, and the ease with which water, heating and sewerage connection could be made in the event of expansion.

The ultimate need of facilities for medical and surgical work made Dr. Smith's third recommendation. Hospitals especially equipped for neurological and orthopedic and other services should be listed and brought into cooperation at once. The information gathered on all these points will as soon as available be placed in the hands of the surgeon-general. One practical advantage of this committee's work, as Dr. Smith pointed out, would be the part it would play as buffer between the surgeon-general and his staff and the large number of those who may have pet projects to urge.

The task of standardizing supplies and determining articles essential to the medical service began when more than 150 manufacturers of medical and surgical supplies assembled in Washington last week at Dr. Martin's call to confer with the Advisory Commission and officials of army, navy and Public Health Service. The manufacturers will at once make a survey of material on hand and means of increased production of specified articles. The list of such articles is being compiled in twenty sub-headings. Orthopedic supplies are to be indicated by specialists in orthopedic practice; similarly special articles needed in dentistry, eye work, neurology, contagious diseases, hospitals, pharmacy, nursing, etc.

The instant general response to these official preparations is indicated by the stirring news notes appearing in medical journals. "Ambulances for the New York Red Cross," "Johns Hopkins chosen as a great base hospital," for instance. "Massachusetts provides the first hospital unit for treatment of mental and nervous diseases." "The New York State Department of Health is assembling its division of laboratories

as a mobile unit to establish diagnostic service at any point; the services of the 1,000 health officers of the state have been offered to the military authorities and accepted by the adjutant-general to aid in preliminary examinations of recruits." "Special meeting of the Michigan State Medical Association to organize for service." "Harvard University has offered to the federal government for use during the war its Jefferson and Crufts Laboratories. The first is one of the best equipped in the country; the second is devoted to wireless and radio experiments."

The Maryland branch of the Committee on Medical Preparedness has devised a practical plan to conserve the practice of physicians who may enlist for active service. Doctors who attend the patients of those called into service are pledged to turn over to the physician in service or to his family one-third of the fees collected in such attendance. By this means the patriotism of the physician is recognized and practical assistance is given his family, while at the same time his practice is kept from being scattered.

At closer range, this organization may be illustrated from the city of Boston where the local committee of defense is in close cooperation with the Boston chapter of the Red Cross and the committee on public safety. The description is furnished to the SURVEY by Dr. Richard P. Strong:

"Provide for mobilization of medical resources. Medical personnel should constitute at least ten per thousand of the strength of the prospective army the state of Massachusetts will provide.

"The establishment of units of reserve officers and reserve officers' training camps through the state.

"The establishment of courses of instruction for civilian practitioners of medicine on duties of medical officers in war, on military medicine and military hygiene.

"The establishment of courses of training camp instruction, and obtaining of medical officers of the army in such centers where classes of instruction are organized.

"Physical examination of men of Massachusetts for military service between the years of eighteen and forty-five, and the exclusion of the physically unfit. (During the recent mobilization of the militia on the Mexican border, the proportion of men disqualified as physically unfit in a number of states reached from 30 to 40 per cent of those mustered in. In instances where the regiments were moved to the border, the government was put to the expense in each case of equipping a useless man, transporting him to the border, subsisting him while there, and returning him to his home, all through failure of the medical officer to maintain a high standard of physical requirement. Frequently this was due to lack of time for making the examination.)

"Organization of efficient sanitary personnel for the prospective army of the state. (During the recent mobilization the sanitary personnel of the organized militia was not even sufficient to provide fully for the service at the front; that is, the service with regiments, field hospitals and ambulance companies, consequently there were no medical officers available for the supervision of the construction of new hospitals and none to assign to such hospitals, or to hospital trains, or to medical supply depots, and none to assign for making physical examinations and special sanitary inspections. The functions of sanitary inspectors should comprise not only the correction of faulty conditions about camps and the giving of expert advice on sanitary matters, but also teaching all of the duties pertaining to medical department administration in the field.)

"Organization of ambulance companies and of motor ambulances and field hospitals. (There should be at least four of these to every prospective organized division of troops.)

"Enaction of the necessary legislation making smallpox and typhoid and para-typhoid inoculations compulsory for the men of Massachusetts of military age who have passed the military physical examination.

"Organization of stations for such inoculations of such individuals, and establishment of laboratory stations for the preparation of the prophylactics.

"Organization of hospital train (with personnel) of reconstructed Pullman cars in sections of ten cars which will accommodate 160 patients.

"Establishment of medical supply depots in the state. Preparation of lists of medical supplies needed and of such supplies available in Massachusetts.

"Provision for mosquito bars for the prospective army. (During the recent mobilization the quartermaster department found it im-

possible to purchase sufficiently large quantities of mosquito netting in the United States to supply our militia.)

"Preparation of list of buildings available for base hospitals, including a statement of necessary changes and repairs for each building.

"Selection of camp sites and the preparation of the same, including the procurement of water, installation of water and sewer systems, construction of roads, temporary kitchens, mess shelters, latrines, bath houses and store-houses for the storage and safe-keeping of supplies either for forces drafted into service or for interning prisoners."

The main theme of the coming conference of state health officers with the surgeon-general of the Public Health Service will this year be the coordination of federal, state and city health agencies for increased efficiency during the war.

Plans of the Tuberculosis Association

IN RESPONSE to the call for cooperation with national organizations already in the health field, the first announcements to local associations have been issued by the National Association for the Study and Prevention of Tuberculosis. Dr. Charles J. Hatfield, executive secretary of the association, in a letter announcing to the local associations a war program, says that the plans thus far developed by the national association include, first, a survey of the institutional resources of the country for the care of tuberculous soldiers; second, a report upon the control of tuberculosis among enlisted soldiers and sailors, especially prepared by Dr. Herman M. Biggs, Dr. George M. Kober and Dr. Hatfield; third, the selection of a corps of tuberculosis experts to work in cooperation with army and navy departments in the examination of recruits, and in the treatment of tuberculosis in sanitation camps, special hospitals and elsewhere. This third detail is urged as of special importance, and each society asked to give a complete list of physicians in its community who are qualified to serve in the capacity of tuberculosis experts.

For a plan of using to the fullest possible extent the special administrative machinery of the anti-tuberculosis societies, directions are given in the further memorandum of the national association:

"The anti-tuberculosis associations of the country, numbering all told over 1,500, with more than 200 of them employing full-time secretaries, represent an administrative force that might well be utilized to great advantage in the war.

"The matter of giving relief to tuberculous soldiers and their families will probably occur to many anti-tuberculosis associations as an immediately needful step. The national association wishes to call attention to the fact that the American Red Cross, through its special committees on civilian relief, will have charge of all campaigns for raising funds for soldiers and sailors and their families who need relief, and also of administering such relief. Associations are urged to cooperate with such committees, and where there are no chapters of the American Red Cross, to make arrangements, with the Department of Civilian Relief of the American Red Cross at Washington, D. C., for the formation of special committees or for such other arrangements as may be satisfactory to the Red Cross.

"Anti-tuberculosis associations of the country employ or are in close touch with other agencies that employ nearly 5,000 nurses engaged exclusively or on part time in tuberculosis work. Associations are asked to consider using this large force of nurses to care for tuberculous soldiers. As part of its general plan, the national association is recommending home treatment in conjunction with sanatorium care. Visiting nurses skilled in tuberculosis work can perform great service either on the basis of so much per visit or by offering their services free to the government. For the present it is advised that the public health nurses doing tuberculosis work do not enter active service under the American Red Cross, since their special training enables them to perform particularly valuable service in connection with home nursing of tuberculous soldiers.

"Anti-tuberculosis societies may also help in an educational way, by furnishing literature, leaflets, booklets, etc., dealing with tuberculosis, to men in military camps; by furnishing to each soldier who enlists from his home city or state a special booklet of information, so prepared that it will be of use to the soldier as a memorandum book or otherwise; by furnishing lecturers, exhibit material, motion pictures, etc., for the soldiers in camp; by cooperating with state and federal officials in furnishing special placards and sanitary supplies, such as paper cuspidors, paper handkerchiefs, etc., that may be of value in the control of tuberculosis.

Reference has already been made to the need for expert service in diagnosis and treatment of tuberculosis.

"No other groups in the United States are so familiar with physicians who are thus qualified as are the anti-tuberculosis associations, both state and local. As the demand for enlistment increases, the experience of other countries at war demonstrates that the supply of skilled physicians who are competent to treat and diagnose tuberculosis will be taxed to the limit. Every effort must be made to protect the enlisted men of the United States army from the fatal experience of some of the European armies in relation to tuberculosis.

"Anti-tuberculosis associations, through the administrative machinery at their command, may be able to contribute to the increase of the food supply. Through their visiting nurses, secretaries and other machinery, the anti-tuberculosis associations may perform a vital function in educating the people of their communities in the proper use of food and the control of waste. This may be done either directly or through cooperation with other agencies already engaged in this work.

"By cooperating with the Boy Scouts, the United States and state departments of agriculture and various other groups that are interested in taking boys of high school age to the country for use as farm laborers, the anti-tuberculosis associations may perform a great service, though it is not desirable that anti-tuberculosis associations devote their major efforts to a work of this character.

"Similarly, anti-tuberculosis associations may perform a more direct function in relation to the food supply by organizing the

labor of arrested cases of tuberculosis either in cooperation with existing sanatoria or in separate farm colonies. It would be feasible in some communities for groups of arrested cases to be placed upon farms adjacent to the cities, where, under medical supervision and proper direction, they could cultivate the land to their own betterment and that of the community as a whole.

"A final capacity in which the anti-tuberculosis societies of the country can serve to good advantage, is by bringing the utmost pressure to bear through their local representatives in Congress and any other possible way upon the federal and state authorities to recognize the seriousness of the problem of the control of tuberculosis. That there is a growing recognition of this problem is evidenced, but that a further and more careful consideration of all that the control of this disease demands must be proved, is equally evident. It is desirable, therefore, that anti-tuberculosis associations promote public opinion concerning the desirability of barring any man who has tuberculosis from the army, and of the government's assuming full responsibility for the control of this disease, in case it does develop among soldiers.

"Whether this government is called upon to send a large expeditionary force to Europe or not, the mobilization of hundreds of thousands of troops will, without doubt, greatly increase the seriousness of the tuberculosis problem both in the military and the civilian population. Anti-tuberculosis associations are urged therefore not to curtail their normal functions any more than absolutely necessary, but on the other hand to press forward, utilizing the war-interest as a channel for focusing more clearly than ever before the attention of the public upon the problem of tuberculosis."

The Task of Civilian War Relief—II

The second of a series of articles based upon a course of lectures upon civilian relief now being delivered in New York with the sanction of the American Red Cross by Porter R. Lee of the staff of the New York School of Philanthropy. The articles are being written by Karl de Schweinitz of the New York Charity Organization Society

THE United States army wants men. But unavoidably in taking men it takes also husbands, fathers, brothers, sources of family income and sources of family advice. This may or may not have a bad effect upon the life of the household. A business does not necessarily become demoralized in the absence of even the senior partner. The added responsibility is a challenge to the other members of the firm. They may actually conduct affairs more successfully than before.

So it is with the families of men at the front. Some mothers, indeed most mothers and wives, adapt themselves to the change in their circumstances. Others, lacking experience, perhaps not having the qualities of management and executive ability needed for the direction of the household, perhaps without friends upon whose judgment they can rely, find their new burdens too heavy.

The nation has taken from them more than a source of income. More must therefore be required of the nation than the award of a separation allowance. If the ultimate victory rests with the country whose people are happiest, most healthy and of the sturdiest character, then the home of the soldier must not be allowed to suffer because he cannot be there to contribute his judgment, advice and experience. It is the task of the civilian relief worker to do this work in his place.

But there are many families who are able to help themselves infinitely better than can anyone the Red Cross can send to them. How is the family who requires assistance to be distinguished from the family who does not?

At best it is only within a comparatively limited group that we can make this differentiation. Of the needs of the majority of families we cannot hope to know. They succeed in meeting their financial obligations by supplementing the soldier's pay with savings, credit and assistance from friends. Sometimes they may not be so successful in supplementing his contribu-

tion to the management of household affairs and to the education of the children, but about this we are not likely to learn unless there comes a serious disorganization of the family life.

There will, however, be a large number of women who, for many reasons, will not be able to keep their homes solvent with the sole aid of the remittances from the soldier's pay envelope or of the separation allowance arranged for by the government. These mothers will either make application to some organization like the Red Cross civilian relief committee, or neighbors and friends learning of their difficulties will make this application for them.

The request will be for money. Nothing or little more may be required. Again, there may be need of all the personal work, judgment and counsel that the committee can summon. It is impossible to lay down any rule and say that those who fall within its provisions should receive the fullest measure of service that the social worker can give and that those who fall without should not. What really determines the amount and kind of help a family needs, in addition to financial resources, is the extent of its ability to adapt itself to the situation which the absence of the husband and father has brought about. But adaptability is not conditioned by income or standard of living. Hundreds of families with a high standard of living and with abundant income lack it. A certain physician, whose practice is among well-to-do families, recently employed a social worker to assist some of his patients to make social adjustments that were necessary to a cure. Who does not know households the whole life of which might be changed for the better if only a competent social worker could be introduced to them.

There is, indeed, no short cut to finding out how much help a family needs. One of the privileges of being human is that each one of us is unique. One can generalize when one has to do with things, but when it becomes necessary to make a decision about an individual that decision must depend upon his individuality—the elements which make him different and

his situation different from the person and situation of every other individual in the world.

To know whether and how much to help a man one must know the man. Acquaintance is the only way of determining what service a family needs. The better acquainted one becomes the more satisfactorily does one find this question answering itself.

On a Friday afternoon nearly three years ago, Mrs. Annie Finnegan applied to a bureau for money to pay the rent. She said that her husband had gone to England to enlist.

The social worker in charge of the bureau had now apparently to decide whether she should supply this pleasant, almost attractive, young woman with the money she required, whether she should offer her any additional help or whether she should do nothing at all. What the social worker really determined—it was scarcely a question of determination; training and experience made her course of action almost instinctive—was to become better acquainted with the soldier's wife. Indeed, her acquaintance had already begun. Before she had promised to call to see Mrs. Finnegan the next day—the rent was not due until Monday—she had learned that Mr. Finnegan had been a street car conductor and that the company owed him fifteen dollars which his wife had been unable to collect. She had also gathered that the problem of helping this family might not be a simple one, for it became evident that Mr. Finnegan had been intoxicated when he left for England.

The impression that Mrs. Finnegan might need much more than money was confirmed during the visit the following morning. The home was suffering because Mr. Finnegan had not been fulfilling his obligations. Mrs. Finnegan owed the grocer nearly thirty dollars and it was not longer possible for her to obtain credit. Her husband had just started work after an interval of idleness. Some time before he had been so brutal to her and had been intoxicated so often that she had made complaint to a magistrate, who had placed him under probation.

Mrs. Finnegan showed the effects of this sort of life. She was not strong. Her youngest son—she had four children—was also pale and delicate. Mrs. Finnegan, however, had already begun to make plans for supporting herself by obtaining work at a publishing house where she had formerly been employed. With all her courage she was plainly overwhelmed by the desertion of her husband, who had gone away without telling her where he was going.

Getting Acquainted with Mrs. Finnegan

THIS conversation—the social worker would have called it a first interview—was forwarding the acquaintance between the two women in two ways. In the first place, it was giving the social worker an insight into the character of Mrs. Finnegan and her problems. In the second place, it was giving Mrs. Finnegan a feeling of confidence in the social worker, a feeling that of course the social worker encouraged by her genuine interest and sympathy.

When she left Mrs. Finnegan, this growing acquaintance had already indicated certain definite tasks for her. She must see that the family had food and that the rent was paid. She must go to the British consulate and apply for a pension for the family. She must try to obtain the money which the street-car company owed Mr. Finnegan—not an easy task, for the company naturally would object to giving it to anyone except the man himself, even though that person represented their employe's wife.

Apparently the man had been more a liability than an asset. Still, in fairness to him, she ought to look up his record with

the street-car company. She ought to visit the houses in which the family had recently lived. What was the attitude of Mr. Finnegan's family toward his wife? Now that he was gone, would they be a help or would they perhaps nag her, accuse her of having driven him to enlist, and thus add one more to her worries?*

Mrs. Finnegan had also mentioned a kindergarten which her son Joseph had attended for a time. Ought not the social worker to see the teacher? Teachers usually get close to the lives of their pupils. Through this teacher the social worker might become better acquainted with the needs of the family.

The British consul informed the social worker that Mr. Finnegan had enlisted as a single man. It would therefore be necessary to make proper identification and to fulfill other necessary requirements before a separation allowance could be granted to Mrs. Finnegan. He suggested that a certain patriotic society might be willing to pay the allowance in the interval. To this the society, at the solicitation of the social worker, agreed.

A Liability Turned into an Asset

AFTER a great deal of negotiation, the money due Mr. Finnegan was obtained from the street-car company. His record there had not been bad, but his sister spoke of him as a black sheep and clearly showed that they would do all they could to help his wife with friendship and goodwill. If their brother had been a liability they at least would be an asset to his family. The social worker, in furthering her own acquaintance with Mrs. Finnegan, had brought her relatives closer to her and had thus strengthened the life of the home.

At an address where the Finnegans had formerly lived, the social worker found a Mrs. Brandon who turned out to be Mrs. Finnegan's oldest friend in America. They had come to the states from the same town in Ireland and had been intimate friends until recently, when they had become estranged through the gossip and meddlesomeness of a common acquaintance. Mrs. Brandon said that she would be glad to renew the friendship and when next the social worker called to see Mrs. Finnegan she found the two women together.

The kindergarten teacher, whom the social worker next visited, thought that adenoids were affecting Joseph's health. She had never been able to persuade his mother to have them removed. The social worker, however, in the course of a growing acquaintance with Mrs. Finnegan, readily arranged for this operation. Then, as the baby apparently was not thriving, she took the little girl and her mother to the milk station. The physician said that Mrs. Finnegan ought not to go to work—she had planned to seek employment again at the publishing company—but ought to stay home and nurse the baby.

Although Mrs. Finnegan was not anxious to do so, the social worker persuaded her to follow the doctor's advice. Mrs. Finnegan, indeed, had by this time learned that she could always depend upon the counsel and good judgment of her friend. Without losing any of her self-reliance, she now always turned to the social worker for guidance before undertaking any important step.

Thus the growing acquaintance between the two women opened to the social worker more and more possibilities for service. When she had finally completed her task the children, once delicate, were well. Their mother said that she was better off than when her husband was with her because she now had a regular income. First the patriotic society, then the British government had contributed an allowance. Mrs. Brandon, a friend whom Mrs. Finnegan feared she had lost, had been restored to her, the back pay from the street-car com-

pany had been secured. The health of the baby and that of the mother, too, had been conserved by the timely acceptance of the doctor's advice.

Perhaps the greatest accomplishment of all was the establishment by the social worker of that pleasant relationship which enabled her to do for this household those many things—impossible to record—which in the more intimate life of the country a capable, kindly neighbor runs across the street to do for friends who have had "a run of hard luck."

The first family that applies to the civilian relief committee may present just as great a field for service as did Mrs.

Finnegan. There is only one way to tell, and that is to learn to know the family. In the first interview—that is, the first real good talk that one has with the family—one will find a dozen different things that need to be learned or to be done before one can feel justified in discharging a family with no help other than money. Surely, the wife and children of a soldier are above all other women and children entitled to the most painstaking, sympathetic and understanding work that we can offer. No possible opportunity to be of assistance should be overlooked. And the only way to make certain of giving this maximum service is to get acquainted.

Reorganizing the State Board of Charities in New York

By Winthrop D. Lane

OF THE SURVEY STAFF

AN event long looked for occurred last week at Albany. A bill giving effect to Commissioner Strong's report on state charitable administration was introduced into the Senate of the New York legislature. This is a matter of high importance not only to 37,000 dependent children in private institutions of the state, but to thousands of feeble-minded and other wards as well, and to the technique of charitable administration throughout the country.

It will be remembered that Charles H. Strong, a special commissioner appointed by Governor Whitman, made sweeping recommendations last November for the reorganization of the State Board of Charities and for the abolition of several other boards and commissions. Some of the groups and individuals favoring his recommendations, and some of those not favoring them, have been trying since the appearance of the report to get together on a legislative program giving effect to its main features. The story of their negotiations is a story of utter failure to agree. Meanwhile, the legislature is within a few weeks of closing and there is slight chance that any headway will be made at this session.

While Mr. Strong's investigation was still the indirect cause last summer of ill feeling and crimination, a hundred New York citizens came together and announced that they would stand behind the mayor and his commissioner of public charities, John A. Kingsbury, in the efforts of these officials to have the care of dependent children in private institutions improved and the state board made a more effective body. Promptly a committee of thirty prominent Catholic laymen came together also and announced that they would stand behind the institutions. George W. Wickersham, former attorney-general of the United States, was chairman of the executive committee of the citizens' committee, which called itself the Citizens' Committee on Dependent Children, and Robert S. Binkerd, secretary of the City Club, was secretary. William D. Guthrie, John G. Agar, Frederick R. Coudert and Adrian Iselin were among the members of the other group.

Governor Whitman urged these unofficial groups to agree, if possible, upon legislation based on Mr. Strong's report. Formal and informal conferences began at once. The citizens' committee early declared that it would not insist upon full enactment of every detail of Mr. Strong's recommendations, but there were, it said, two things it did insist upon. These

were the reorganization of the state board into a vigorous and aggressive body, and the creation within the board of a special bureau or agency to develop the policy of placing out children in family homes.

The committee of Catholics was not entirely convinced, however, of the wisdom of this placing out. Neither it nor the state board thought that the latter needed reorganization. So matters dragged. Then the board began to draft bills embodying its own ideas of what ought to be done.

These bills, said members of the citizens' committee when they saw them, went only part way. They restored to the board some of the lost powers that Commissioner Strong had said ought to be restored, but they did not provide for that reorganization of the board upon which Mr. Strong had predicated the increase of power.

The board's bills restored to the board power to make rules for the reception and retention of inmates in state institutions (the board now has that power for private institutions), they abolished the useless commission on sites, grounds and buildings, and they rendered clear the power of the board to pass upon plans for new almshouses and public hospitals. But they made no internal changes in the board itself. Not only did the board remain a board of twelve unpaid members, but it remained the same twelve, appointed in the same way, serving for the same time, with the same absence of qualifications specified in the law. In short, nothing was done to make the board a more expert, a more vigorous or a more enlightened body.

In a final effort to come to some agreement a special conference was called for March 17. At this conference the board replied to criticisms of its own bills by declaring that these bills embodied all of the "important" changes recommended by Mr. Strong. The matter was discussed in all its phases. No apparent headway was made and the gloom of a seeming deadlock descended upon the meeting. Then Mr. Binkerd came forward with a drastic compromise. He did not say that the citizens' committee had agreed to the compromise, but he threw it out for discussion.

Mr. Binkerd proposed that the governor be given power to appoint to the board immediately three members-at-large, to be additional to the present membership; that as the term of one member expires each year this member be not replaced,

so that the board would in a few years be reduced to eleven or nine; that the directors of the two new bureaus recommended by Mr. Strong, one for mental deficiency and one for dependent children, be paid between \$6,000 and \$7,500 a year and that they either be members of the board or not, as might be worked out afterward.

The board turned the compromise down cold. All effort at agreement thus came to a standstill. The meeting adjourned and the citizens' committee set immediately about drafting a bill embodying its original ideas of what ought to be done. This measure is the one introduced last week by Senator Mills.

The state board is entirely reorganized in this bill. Instead of a board of twelve unpaid members, one residing in each judicial district of the state and three in New York city, as now, it becomes a board of nine members, appointed by the governor, three of whom are to be paid and six unpaid. Instead of holding office for eight years, members are to serve during good behavior and until removed by the governor on notice for cause. The governor is to designate the president, and this official is to be paid \$7,500 a year. The two other paid members are to be chairmen of the two new bureaus created by this act, one a bureau for mental deficiency and one a bureau for dependent children. The chairman of the first is to be paid \$6,000 a year, the chairman of the second \$5,000. The board is required to hold one regular meeting each month.

At least one of the members must be a woman. Under the present law no special qualifications are required. Under the new, one member must be a penologist, one an educationist, one a physician with special knowledge of tuberculous diseases, one a general practitioner with experience in the work of hospitals and dispensaries, one a physician with special training in psychiatry, one a lawyer, one a specialist in the care of children in private institutions and in foster homes, and one a person generally conversant with dependency and the several forms of poor relief. The physician with special training in psychiatry is to be chairman of the bureau for mental deficiency, and the specialist in the care of children is to be chairman of the bureau for dependent children.

The president becomes the chief executive officer of the board. In him are vested the fiscal powers now belonging to the fiscal supervisor of state charities, an office which Mr. Strong found tending to control policies as well as expenditures and which, along with the commission on sites, grounds and buildings, is abolished by this bill. The president is to represent the board "in the discharge of its duty to seek adequate appropriations for maintenance and new construction at existing state institutions and for the extension and improvement of the inspection service over public and private institutions subject to the supervision of the board."

The chairman of the bureau for mental deficiency is to supervise the state institutions for the mentally defective in regard to the care of patients, and in general is charged with the enforcement of laws relating to mentally defective persons

and epileptics. He is authorized, with the approval of the board, to license private institutions for the mentally defective. He is specifically charged with conducting research into the "medical, social and economic relations of mental deficiency."

The chairman of the bureau for dependent children is to direct the work of the board and its officers in regard to delinquent children not in state institutions and in regard to dependent children. His work will consist largely in seeking to improve standards in the care of dependent children. He is specifically charged with promoting the "placing-out of normal dependent children in superior free or boarding homes," and such homes are to be subject to the supervision of the board.

The state board is given power to enforce its standards of care in private institutions by a change in the general municipal law. Payments by counties, cities, towns and villages to private institutions are conditioned upon the issuance of a certificate by the board that its rules are complied with. At present these payments are conditioned only upon compliance, without a certificate of the board being required.

These comprise the major recommendations of Commissioner Strong. The story, however, does not end here. While these events have been taking place the state board has already achieved a measure of internal reorganization at the suggestion of its new secretary, Charles H. Johnson. These changes have already been provided for in the general appropriation act and have been approved by the governor.

The changes recast the board's machinery into the following six divisions: the chief clerk and division of statistics, which existed in other forms before, and the new divisions of children, mental defectives and delinquents, adult wards and medical charities. Each division has a chief at the head, for whom a salary of \$4,500 was asked but who was given by the legislature only \$3,500. The divisions come into existence July 1. Six standing committees of the board are created to correspond to these divisions.

It is intended that the division chiefs shall exercise two main functions, those of bringing institutions up to the highest possible efficiency, and of studying the social aspects of the problems confronting them and working for preventive measures.

The board has secured four new inspectors, bringing its total up to twenty-two. Since January 1 it has had four investigators conducting a study into the causes of delinquency and dependency in Oneida county. This is part of what it hopes to make a state-wide investigation.

The board itself, it will be seen, is not changed by these alterations. All hope of securing such a reorganization seems to be centered upon the bill now before the legislature. The bills drafted by the board itself, already referred to, have not been introduced, and counsel for the board declares that they will not be pressed at this time. The measure drawn by the citizens' committee has been referred to the Senate Committee on Finance, and various interested organizations are preparing to push its passage at the present session.

COMMON WELFARE

PLANS OF THE NATIONAL DEFENSE COUNCIL

EIGHT national committees have been created, under the general supervision of the Committee on Labor organized by Samuel Gompers as one of the Advisory Commission of the Council of National Defense. These committees, with their respective chairmen, are: Wages and Hours, Frank Morrison, Washington; Mediation and Conciliation, V. Everit Macy, New York; Welfare Work, L. A. Coolidge, Boston; Women in Industry, Mrs. Borden Harriman, Washington; Information and Statistics, Frederick L. Hoffman, Newark; Press, Grant Hamilton, Washington; Publicity, Edward T. Devine, New York; Cost of Living and Domestic Economy, S. Thurston Ballard, Louisville.

Thus far the scope of the work of only a part of these committees has been defined. No final decision has been reached as to the problems to be studied by the committees on Women in Industry, Information and Statistics, Press, and Cost of Living and Domestic Economy.

The committee on Wages and Hours will have four sub-committees, in this order:

1. Government regulations: a. General rules; b. special rules (to cover overtime, night shifts, Saturday afternoon and Sunday work, federal or state enactments); c. model federal labor law (to establish uniform labor conditions); d. analysis of state laws and incorporation of best provisions in one model.

2. Standards of working conditions: a. For federal and state laws (lighting, drinking water, ventilation, sanitary devices, etc.); b. Specifications by munitions board (welfare requirements under which munitions and supplies shall be made); c. Administration of labor laws.

3. Trade Agreements in Industry: a. Trade conferences, national and local.

4. Coordination of employment agencies: a. Employment; b. mobilization of women for industrial service; c. sources of supply of workers.

The Committee on Mediation and Conciliation has thus far agreed that

its work shall deal with national, state and local or plant machinery for adjustment of disputes. Thus in plants operated by the government, and in those where government supplies are produced, there will be adjustment boards under the supervision of this agency.

Welfare work, as defined by the Labor Committee for the purposes of this undertaking, is the "maintaining and improving of the working and living conditions of employes; it is especially applicable to mines, railroads, factories, stores and public institutions." Types of employes to be considered are: a. Industrial; b. public; c. soldiers and sailors and their dependents; d. field-mechanics in active service.

A sub-committee on general welfare conditions for men and women workers will deal with industrial safety and with sanitation. Under the term industrial safety is included accident prevention, structural safety, fire protection, and protection against dust and fumes—all of these factors to be taken up in connection with transportation, mining, commercial, industrial and government establishments. Sanitation is an omnibus term applied to sewerage, ventilation, and light for the shop, the industrial town and the public generally; to drinking water, wash-rooms, drying-rooms, lockers, hospital service and medical supervision, to seats, rest periods for women, rest rooms, laundries, women's elevators, lunch rooms, diagnostic clinics, industrial clinics, industrial diseases, fatigue, personal hygiene, domestic hygiene, home nursing, food values, house-keeping efficiency and other matters related to physical health.

Other sub-committees on welfare work will take up vocational education, housing, recreation, public education in health matters, cooperation through federal, state and municipal boards, and issuance of standard guides to employers as to welfare requirements under which munitions and supplies shall be made. A separate sub-committee will seek to correlate the work of various national organizations covering welfare activities.

Publicity is to be given in a campaign of education on the labor problems involved in the war.

RED CROSS CIVILIAN RELIEF ORGANIZATION

AS a step toward preparing itself effectively to give relief to the dependent families of men joining the colors, the American Red Cross has created a new position within its department of civilian relief to be known as the director of family relief. Eugene T. Lies, who for five years has been general superintendent of the United Charities of Chicago, has been appointed to this position and has been granted a leave of absence to accept the call. He begins his work, with headquarters in Washington, this week.

Meanwhile plans are being laid for a national campaign for funds with which to support this relief work. At a meeting held in Washington last Saturday, called by President Wilson and attended by a score of prominent men throughout the country, a committee, of which Cleveland H. Dodge, of New York city, was elected chairman, was named to take charge of the campaign. Six vice-chairmen were named from as many cities, and these with a number of others constitute the executive committee. This committee, it was announced, would meet in New York city April 25 to perfect plans.

The campaign will probably end with a special Red Cross day next month, to be designated by presidential proclamation. Secretary Baker attended the meeting in Washington and told of the War Department's plans for assisting the dependent families of soldiers and sailors, but said that additional relief would be needed in many cases and it was here that the Red Cross must assist. It was pointed out at the conference that the finance committee probably would operate in two ways, nationally, and through the local Red Cross chapters, of which there are now 460 and which are increasing at the rate of several a day.

The new director of family relief will be the executive officer in the administration of this assistance. Red Cross chapters will be required to use people trained in family rehabilitation in administering it. The country will be divided into districts and a supervising director will be appointed in each district. These direc-

tors will report to the director of family relief in Washington.

Another important new service being organized by the Red Cross is that of the Red Cross relief reserve. This is to consist of a large number of trained relief agents who will enroll and hold themselves in readiness to respond to a call for their services. This reserve is somewhat analogous to the enrollment of nurses by the Red Cross. Those who enroll will be used both in disaster and war relief and will be expected to respond, if it is practicable, whenever they are called upon to do so. The organization of this reserve is in the hands of J. W. Magruder, general secretary of the Baltimore Federated Charities, who has been loaned to the Red Cross. Mr. Magruder is also organizing a number of new institutional members of the Red Cross.

ARMY PAY BASED ON SIZE OF FAMILIES

MEANTIME the San Francisco Associated Charities has come forward with a plan which its president, O. K. Cushing, is urging upon Secretary Lane, Senator Hiram Johnson and Congressman Julius Kahn of California, who is the ranking Republican member of the House Military Affairs Committee and is in charge of the administration conscription bill.

Mr. Cushing and Katharine Felton, secretary of the Associated Charities, propose that, if possible, no married men be enlisted; that the government grant an allowance of \$30 a month to a man's dependent wife, father or mother with \$10 additional for each dependent child; that the money be paid out directly by the government to the families without administration by any intermediate body or visiting by representatives of the government or of private agencies or funds.

This, they contend, is the only democratic way for a democratic country to care for its soldiers; there is no merit in giving them part pay, part allowance and part charity—to expect them to serve in the army for less than a living wage any more than if they were serving as letter carriers. Nor can they find any excuse for visiting an enlisted man's family without invitation any more than if he were at work for a private employer. To the objection that such a plan might interfere with the spirit and fact of patriotic sacrifice, they would reply that a man who gives or offers his life has made the supreme sacrifice—no man can do more—and he should not have the financial sacrifice of his family's standard of living added to it.

To the general idea of an adequate government allowance based on the number of a soldier's dependents, Ernest P. Bicknell believes the Red Cross would give hearty assent. The San Francisco plan would leave to the Red Cross the care of exceptional families

Hy Mayer's contribution to the health survey of the Chelsea Neighborhood Association in New York city

in which, through sickness, accident, child-birth and the like, the allowance would not suffice, or for the care of more distant dependent relatives whom the government might feel it could not support.

The government is committed to a policy of barring married men from the army, and Secretary Baker has authorized the discharge of married guardsmen, except men who have an income or a business that will support their families. There will remain, however, some married men who are bound to enlist, the married regulars, some men with dependent fathers and mothers and the likelihood of many young married men being accepted after the first volunteers and the youngest class under the proposed conscription, the percentage of unmarried men of course declining rapidly with every year after twenty and the number of dependents as rapidly increasing. Already some militiamen's families are being cared for by the Red Cross—twenty-five in New York county—and some army families by the regular army relief fund.

Congressman Kahn is opposed to enlisting any married men; English experience shows, he says, that a young man with a promising family costs the nation more than a general.

The San Francisco plan is interesting in its departure from the established federal pensions to follow the widows' pension practice of payment according to the number of dependents. And, from another point of view, it would be a striking innovation for the government, as an employer, to pay those who serve it according to their needs rather than the going rate of pay—a family wage distinguishing between the numerous Joneses and the childless Robinsons.

TAMMANY LEGISLATING FOR THE NATION

LAST week the Democratic caucus came within an ace of adopting national prohibition during the war as a party measure. It had, in fact, so acted by a vote of 87 to 60, when the Tammany congressmen from New York threatened to bolt and the caucus voted to await action by the President.

Opposition by these and by some other representatives of the wet states of the Northeast is believed to be all that stands in the way now of federal action. Backfires in this section of the country are being lighted to overcome it.

Through Elizabeth Tilton, chairman of its Poster Campaign Against Alcohol, the Boston Associated Charities has called upon chambers of commerce, churches, social workers and others in the wet states to wire or write their congressmen. In Boston, big business men have been enlisted in numbers to make up the delegation of war-prohibitionists whom Governor McCall has agreed to receive officially. In New York, Mary K. Simkhovitch, head worker of Greenwich House and president of the National Federation of Settlements, has called a meeting for Friday night to line up the settlements. The Federal Council of the Churches of Christ in America has sent the President an urgent message, signed by Gov. Carl E. Milliken, of Maine, the Rev. Frank Mason North and the Rev. Charles S. Macfarland, in behalf of the 18,000,000 church members in its constituency. Governor Capper, of Kansas, reports that only two governors have refused to join him in his plea to Congress to shut down the breweries and distilleries during the war—Lowden, of Illinois, and Ferguson, of Texas. Colonel Roosevelt has endorsed the move.

At Washington, the members from dry states are said to be ready for a determined drive on alcohol as soon as the more urgent war legislation is enacted. The Council of National Defense is reported to be favorably disposed.

THE WORLD AND ITS FOOD SUPPLY

ACCORDING to Mr. Hoover, the total stock of food available in the allied countries is not sufficient to last until September if America continues its present rate of production and consumption. Hence the most effective participation of this country in the war is to see that as large a surplus of food as possible becomes available for export.

In the matter of added cultivation, the efforts noted in last week's SURVEY have become more crystallized. Secretary of Agriculture Houston on April 20 informed the Senate that enlargement and cooperation of the demonstration forces of the government and the states and of the experts in home economics was being worked out. These merely aid, of course, the measures already undertaken by the great farming organizations to secure maximum yields. In the South, the principal result of this campaign, which emphasized a steady educational effort dating back over a quarter of a century, has been that a largely increased number of farmers are abandoning the one-crop system.

The labor shortage is still everywhere the crux of the problem. So far no mobilization of farm labor on a national scale has matured, though the Department of Agriculture and the Department of Labor are cooperating to bring it about. It has become apparent that the question is not one merely of transference or of preventing farm laborers from enlisting. New forces must be brought into the field, if this year's production is to be of normal size, not to speak of additions to the cultivated area. The latter is strongly advocated by Secretary of the Interior Lane, who urges the adoption by Congress of a "bill to stimulate the production of food upon private and public lands within reclamation projects." There are over 700,000 acres of such land upon which, the department claims, water may be placed this season.

Since the chief reason for the idleness of these tracts is shortage of labor, the bill provides for the creation of a voluntary War Maintenance Corps of farmers moving from field to field with as many gang-plows, harrows and seeders as can be bought or borrowed. "In this way, with adequate machinery and competent farmers, one man can do the work of twenty or more in a day."

As to an increase in the efficiency of farmers and farm laborers, there are reports from many states that the services rendered by state departments of agri-

culture, experiment stations, agricultural colleges and county agents are much more appreciated now than is usually the case. Patriotism is serving as cure for conservatism. In South Carolina, the merchants have been enlisted by a Commission for Civic Preparedness for War to sell seed at reasonable prices, perhaps at cost. A special committee of Negroes has been appointed by the governor.

Additional adult labor, in spite of the many appeals made, does not seem to be forthcoming to any extent for this planting season. In the meantime, the organization of child labor is proceeding rapidly. The National Child Labor Committee's plan for safeguarding children is given on page 86 of this issue.

How to secure for the farmers an adequate return and at the same time prevent excessive prices is a problem so closely bound up with that of production that the two can hardly be discussed separately. Gov. Lynn J. Frazier of North Dakota, recently elected on a farmers' vote by the Non-Partisan League of that state, is strongly of opinion, speaking for the farmers, that government regulation of both farmers' prices and retail selling prices is a necessary precaution against speculation and the coining of fortunes out of the country's need by middlemen. George W. Perkins, chairman of the Mayor's Food Supply Committee, New York city, starting at the other end from a study of the consumer's interests, has arrived at much the same conclusion.

Already an investigation made by Health Commissioner Robertson, in Chicago, shows that speculators in that city are cramming warehouses in an effort to corner certain foodstuffs. The practice of the large dealers had an immediate effect upon consumers, who started to lay in such large stores that

retailers, for their own protection and that of their regular patrons, were obliged to impose quantity restrictions.

EFFICIENCY AND THE LABOR LAWS

DESPITE the experience of England, which indicates clearly that excessive overtime in munitions factories is not a war-time economy, the movement for breaking down the labor laws goes steadily on. Of four bills introduced at Albany last week as emergency war measures, three would remove labor restrictions. One suspends the railroad full-crew law for the duration of the war. Another provides that children of twelve years or older may leave public schools from April 1 to November 1 of each year during the war and for two months after its termination, to work on farms. The third restrains the Industrial Commission from enforcing the labor law if, after investigation, it shall appear that its enforcement would interfere with the effective prosecution of the war.

Opponents of these bills make it clear that they stand for the effective prosecution of the war—that is exactly their reason for opposing the bills. The labor of children, they declare, leads to national weakness, instead of strength; English experience shows that a breakdown in labor standards means loss of efficiency. To be sure, the bill proposes that the laws shall be suspended only if it appears that their enforcement will interfere with the war, but since we know, they argue, that enforcement of the laws will not have that effect, why give the Industrial Commission power to suspend them?

In this connection attention is called to a significant statement of Secretary Daniels made last week in response to an inquiry from Prof. Irving Fisher, president of the American Association for Labor Legislation: "It is of great national concern," said Secretary Daniels, "that at the outset of war this country shall maintain a scientific program of legal protection for workers in the interest both of maximum production and human conservation. We must not permit overzeal to lead to the weakening of our protective standards and hence to the breaking down of the health and productiveness of labor."

On March 23 when the entrance of the United States into war appeared imminent the executive council of the American Association for Labor Legislation issued a public announcement warning against the danger "that men may be sacrificed to materials in the erroneous belief that unrestricted endeavor increases output," and outlining the essential minimum requirements "for the protection of those who serve in time of stress the industries of the nation." This was followed by a conference at

BACK FROM SIBERIA

PATRIOTS' DAY PARADE IN NEW YORK

A few soldiers, some women and thousands of boys and girls, marched down Fifth avenue on the anniversary of Paul Revere's ride. Boys in the cadet corps of private and church schools carried guns. Boys from the public schools and Boy Scouts in seemingly endless files carried hoes and rakes under the banner, "Every Scout Will Feed a Soldier"

Washington with the Secretary of the Navy, who declared that protective standards for workers who serve their country will be maintained at all costs.

WAR-TIME GAINS OF THE SUFFRAGISTS

PRESIDENTIAL suffrage was granted to women last week by the legislatures of Michigan and Rhode Island, and Nebraska is expected to follow suit in a few days. Votes-for-women thus has not only spread in neighborly fashion from state to state—Illinois to Ohio to Indiana to Michigan—in the past four months but leaped overland to the Atlantic seaboard itself.

It was as a war measure of democracy and justice that Gov. R. L. Beeckman urged suffrage on the willing Rhode Island legislature, and that Senator Walsh, of Montana, proposed it for all women in the United States at the hearing on the Susan B. Anthony resolution before a Senate committee on April 20. And Jeannette Rankin made her first appearance before a committee of either house to plead against the state-by-state plan of enfranchisement of her sex. She analyzed the difficulties presented in the constitutions and the legislative procedure of the states, and declared that New Mexico, the home of Chairman Jones, of the Senate Committee on Woman Suffrage, has a constitution which is vir-

tually beyond human possibility of amendment on any subject. Three-fourths of both houses of two successive legislatures, and three-fourths of the vote of every county in the state must approve any change.

Carrie Chapman Catt, speaking for the National American Woman Suffrage Association, asked the committee not merely to report favorably upon the resolution, but to prove their desire to make an immediate and determined fight in the Senate for the passage of the resolution at this time. She brought to the hearing the flags of 22 countries, including parts of the British empire, that have gone ahead of the United States in recognizing the political rights of women, and in each case by act of the central government. Mexico and Russia were the latest to grant suffrage, and even Hawaii, she declared, had adopted a full suffrage law which had been sent to Washington for ratification by Congress, and which had been "buried in some forgotten pigeon-hole." Disfranchisement, she argued, cheapened women in their own eyes and in the eyes of the government, and hence lessened their efficiency in war time. She asserted that "today the women—the greatest force our nation possesses for the creation of public sentiment—are asked to mobilize their forces in aid of a government which has wronged them."

Senators Shafroth, of Colorado; Ken-

drick, of Wyoming; Thomas, of Kansas; Thomas, of Colorado, and Smoot, of Utah, spoke for the resolution, Senator Thomas, formerly chairman of the committee, taking occasion to express his disapproval of the tactics of the National Woman's Party.

In view of the agreement of party leaders that none but war measures shall be considered during the present special session, it is doubted whether the suffrage resolution will come to a vote this year.

OHIO ACTS FOR THE PUBLIC WELFARE

OHIO'S eighty-second General Assembly, now adjourned, has, by a forthcoming report of the Ohio Institute for Public Efficiency, taken important steps toward dealing with "the underlying causes of poverty and crime and to promote the general welfare of the state."

The commission to study health and old-age insurance, previously noted in the SURVEY, has an appropriation of \$25,000 for use in the preparation of its report for the 1919 session. The governor is reported to be giving unusual care to the selection of the seven members of the commission, who will be announced when the act becomes operative in the summer.

Eleven new cottages, to house 650

patients—an increase of 30 per cent—are to be added to the Institution for the Feeble-minded, and 600 additional patients at the Hospital for Epileptics are provided for. Building and equipment were provided for the new Bureau of Juvenile Research, which, with the cooperation of mental clinics throughout the state, will make mental and physical examinations of all committed children and send them to the institution best fitted to meet their needs. The bureau was created two years ago, but has been almost inoperative for lack of funds.

Amendments to the workmen's compensation act increase the maximum death benefits from \$3,750 to \$5,000, the minimum from \$1,500 to \$2,000 and extend the payment period from six years to eight. Another act gives the Industrial Commission authority in unusual cases to pay from the state insurance fund more than the present \$200 for medical services and care. By increasing the per capita amount paid by the state to public schools for classes for the blind, more vocational training can be given and boards of education may board out blind children. An abatement and injunction law, similar to the pioneer Iowa statute, was passed.

The fifty-four-hour law for women was amended to prohibit work more than nine hours a day (except Saturday, ten), six days a week or fifty hours a week. The act is broad in its application, covering not only factories but telephone and telegraph establishments, restaurants, mercantile establishments and the distribution and transmission of messages. But the canneries are completely exempted from its provisions.

Courts of domestic relations, now ex-

isting in Hamilton and Montgomery counties, were authorized also for Lucas, Mahoning and Summit counties. A state board of education was created to enable the state to cooperate with the federal government under the vocational education act. A commission was appointed to establish an institution for crippled children. The release, parole and probation of all state prisoners was placed in the hands of a new Board of Clemency. Inmates of children's homes were required, wherever possible, to be sent to the public schools; where not possible, the institution school is placed under the control of the board of education. The granting of presidential suffrage to women has been previously noted.

INDIANA'S NEW SOCIAL LEGISLATION

STATEWIDE prohibition which, properly enforced, "will greatly lessen the state's burden of vice and degeneracy," is placed first in the summary of social legislation issued by the Indiana Board of State Charities. The so-called unfit dwelling-place law, applying even to the most solitary farmhouse, supplements the law of 1913, which applied only to incorporated cities and completes the housing program of Albion Fellows Bacon, "the tireless champion of 'the homes of Indiana'." And Mrs. Bacon, be it noted, is enfranchised, together with all the women of the state, except for the offices named in the state constitution.

In the field of medical social service, the law providing for the registration of cases of tuberculosis is so amended as to be more readily enforced. Following the

filing of a petition, the people are given the right to vote on the establishment of county tuberculosis hospitals, supplementing the earlier law which permitted counties to unite in district sanatoria, and cities of less than 10,000 population are given permission to assist private hospitals.

The jurisdiction of the contributory delinquency law was made to apply to girls of 18—hitherto 17—and, under specified conditions, the records of juvenile courts and correctional institutions are to be obliterated in the cases of persons under 21 years of age. The state's policy is declared, by statute, to be to abolish contract labor, a combination of the "state use" and "state account" systems of convict labor being established for the three institutions for men. Institution farming and gardening are to be extended.

Dependents from other jurisdictions must, under the new deportation law, be reported to the Board of State Charities and returned to their places of legal settlement. Joint purchasing of institutional supplies is authorized "whenever such purchases shall be deemed advisable," and an emergency maintenance fund of \$350,000 is placed in the hands of the governor together with \$300,000 to buy land and extend the industrial activities of any institution. The insane hospitals get a quarter million dollars for extensions. Out of a total of some seven million dollars available for institutional purposes in the next two years, the state board points out that more than half is for provision for mental defectives.

CLINIC FAMILIES AND BIRTH CONTROL

THAT ignorance of methods of controlling birth is not only a great factor in producing large families but also causes many abortions, is indicated by a study just made public by Dr. Morris H. Kahn, chief of the clinic for heart diseases at Mt. Sinai Hospital, New York city. For several years, as physician to the tuberculosis clinics of the New York city Department of Health, he has been quietly giving information about contraceptives to the poor women with whom he came into contact in the dispensaries of the department. In doing this, "I ignored," says Dr. Kahn, "section 1142 of our penal code." This section makes it a misdemeanor not only to sell or give a contraceptive to another person but even to describe "such an article."

While dispensing this information, Dr. Kahn gathered certain information about these women. Of 464 who came under his observation, 192 knew of no contraceptive methods whatever. The remaining 272 knew of one or more methods, more or less effectual. More than one-half of those who were ignorant—104—had a history of abortions,

with a total of 202, or an average of nearly two abortions each. Of the 272 women who were acquainted with contraceptives only 72, or about one-fourth, had had abortions. These had had 122, or an average of 1.7 each.

"I doubt," says Dr. Kahn, "if any physician will prove himself selfish or ignorant enough to withhold any knowledge he may have on birth control from his patients."

GROWING PAINS AND HOUSING REFORM

BROOKLYN'S growing pains have caused a split in the ranks of housing reformers. At a hearing at Albany, Lawrence Veiller announced that he had resigned as secretary of the Tenement House Committee of the Charity Organization Society—the pioneer committee—and declared in substance that it had become a reactionary body willing to please real estate owners at the expense of tenement dwellers.

The split came over the Lawson bill, amending the tenement house law to permit three-family use of old dwellings. Brooklyn is full of such buildings. No longer desirable for single families, in sections not yet ready for tenement buildings, they are becoming lodging houses, with the familiar social and moral evils which have been studied for years by South End House, Boston. And they are, in fact, used to a considerable degree by tenants who, sub-letting a floor, do much if not all of their cooking on the premises. One of the arguments urged in favor of the Lawson bill is that it would place the supervision of such houses in the Tenement House Department.

Brooklyn as well as New York housing committees have now approved the bill, and the New York committee has issued a statement through its chairman, Paul D. Cravath, stating that while "living conditions in the converted three-story dwellings permitted by the amended Lawson bill will be by no means ideal," a majority of the committee "has voted not to oppose the bill in its present form."

"As pointed out in the committee's earlier statement, the chief objection to the Lawson bill in its original form was that it permitted the conversion of three-story private dwellings into three-family tenement houses provided with 'unsanitary air-shafts totally inadequate in size to provide sufficient light for the toilets that are to open upon them' and which, serving several apartments, may easily become channels for the communication of disease.

"This objection has been met by amendments which in effect provide, that in the case of such converted dwellings not more than forty-seven feet in depth (exclusive of bay windows and existing extensions) the following arrangement may be adopted in lieu of the

usual inner court arrangement: a. The bathroom and toilet of the first story apartment to be lighted and ventilated from the outer air (usually from the rear); b. the bathroom and toilet of the top story apartment to be lighted and ventilated either by a window to the outer air or by a suitable skylight as now permitted by law; c. the intermediate (second story) apartment to be lighted and ventilated either by a window to the outer air or by an air-shaft not less than three feet wide and having a horizontal area of at least fifteen square feet, which shall begin at the ceiling of the second story bathroom and extend through the top apartment to the roof and serve no other purpose and have no other openings.

"A majority of the committee believe that such an air-shaft, serving the bathroom and toilet of but one apartment and extending through a single story, would not be seriously objectionable. . . .

"Behind all these questions lies the radical question as to the wisdom of legislation intended to encourage the conversion of existing three-story and basement residences into three-family apartments. . . . A majority of the committee believe that it is to the interest of the community that it be made economically possible to convert them into three-family tenement houses provided with fire-escapes and other essential safeguards for the protection of life and health and subject to inspection and regulation of the Tenement House Department. . . .

"A minority of the committee, however, while giving weight to these considerations, are, nevertheless, opposed to the introduction of the air-shaft, even if confined to shallow dwellings not more than forty-seven feet in depth and serving only a single bathroom and toilet; and their opposition is due not only to the inherent objections to the air-shaft, but to their fear that its introduction into three-family dwellings, however safeguarded, may lead to pressure for legislation authorizing its use for deeper dwellings and to serve more than one apartment, which all the members of the committee would deem objectionable."

DR. SACHS' NAME OFFICIALLY CLEARED

THE memory of Dr. Theodore B. Sachs and his administration of the Chicago Municipal Tuberculosis Sanatorium have been officially cleared in a report just made by the Finance Committee of the Chicago City Council. Friends of Dr. Sachs in every rank of social work and medicine have, of course, realized that the charges were part and parcel of the spoils of politics which took charge of the sanatorium at the opening of Mayor Thompson's administration, forced Dr. Sachs' retirement and led to

New York Charities Directory 1917

This encyclopedia of social work in New York describes the activities of 1,500 churches and 1,300 social agencies, including national organizations. The date of incorporation, the purpose, the scope, the personnel, and the work of most of these agencies are stated.

The Directory contains, also, a name index of 5,400 persons engaged in social and religious activities and a topical index in which the names of the charities in New York are listed in groups, according to the nature of their work.

Cloth; 8vo; 500 pp. Price, \$1.00 postpaid. Charity Organization Society, 105 East Twenty-second Street, New York City. A few copies of the edition of 1916 remain. They may be had for 50c. each.

HEADWORKER — HOSPITAL SOCIAL SERVICE DEPARTMENT

Competent headworker wanted for social service department in a large New York hospital; organization includes twelve paid workers, undergraduate pupil nurses, district physicians, and volunteer Auxiliary. Graduate nurse with executive training preferred. Knowledge of German desirable, but not indispensable. Apply to Dr. S. S. Goldwater, 1 East 100th Street, New York City.

The Minimum Cost of Living

WINIFRED S. GIBBS

Lecturer on Household Economics, Teachers College, Columbia University

Miss Gibbs' book is a study of 100 family budgets, selected from the records of her ten years' work in New York City with the Association for Improving the Condition of the Poor. It shows how items in the family income were made the basis of instruction in foods, diet, sewing, etc., and estimates the minimum on which a family may live. Charts are included, showing the "budget book" used by the Association. "No corrective is more effective than a record of an unwise expenditure," says Director Burritt in his Introduction. Under terms of contract with the publishers, the A. I. C. P. has a number of copies for sale to social workers at the special price of fifty cents. Address orders to

ELIZABETH PATTEN, ENGLEWOOD, COLO.
Price, prepaid, 10c

•The SURVEY will publish next week the third article in the series on The Task of Civilian Relief Work. Readers are urged to call these articles to the attention of volunteer social workers and Red Cross members.

his suicide as a protest against the rape of the institution by contractors and political doctors [the SURVEY, April 8, 1916]. But they welcomed the official report. That, together with other improvements in the Chicago situation, have made it possible to drop the work of the Committee of One Hundred citizens who have watched over the sanatorium and worked to clear Dr. Sachs' name.

The committee's secretary, Frank E. Wing, will go shortly to Rochester as secretary of the United Charities. Following his work on the Pittsburgh Survey and as a science teacher, Mr. Wing went to Chicago in 1908, serving two years as superintendent of the Tuberculosis Institute. He followed Dr. Sachs, then president of the institute, into the city service and was business manager of the sanatorium during its building and until he, too, was caught by the politicians and tricked out of his place through a juggling with the civil service law.

MINERS' WAGES FOLLOWING FOOD UPWARD

SOMETHING new in the industrial history of America—a 20 per cent increase in wages in spite of a wage contract that has a year still to run and as the result of a friendly conference instead of a strike—was brought about last week by representatives of the operators and the 225,000 miners in the bituminous coal fields of Indiana, Ohio, Illinois and western Pennsylvania. Immediately after, arrangements were made for a similar meeting in the anthracite field where the agreement has two years to run.

These conferences have grown out of the great increase in the cost of living. It was announced by the union that the miners were making no threats and that there would be no strike if the operators refused to grant the increases.

At the close of the conference, John P. White, president of the United Mine Workers, contrasted these orderly negotiations with the turmoil in England soon after the outbreak of war. There, it will be remembered, the workers were caught between the rising prices on one hand and the denial of the right to strike on the other. At the same time it was known that colossal profits were being made by coal operators, and consequently in the summer of 1915 there was a strike of 200,000 Welsh coal miners, despite the law which established compulsory arbitration and forbade all strikes. To restore peace in a vital industry, the government overlooked the infraction of the law and brought pressure on the employers to grant the miners' demands. The action just taken has greatly improved the relations between the operators and the miners union, and will avert, it is believed, all danger of a stoppage of work during the war.

CALENDAR OF CONFERENCES

Items for the next calendar should reach the SURVEY before May 19.

APRIL AND MAY CONFERENCES

ART OF THE UNITED STATES, Second Conference of Federal, State and Municipal Departments of Philadelphia, May 15. Sec'y, Andrew Wright Crawford, Room 119, City Hall, Philadelphia.

BOYS' WORK CONFERENCE, Buffalo, N. Y., May 22-24. Sec'y, C. J. Atkinson, 1 Madison avenue, New York city.

CHARITIES AND CORRECTION, Connecticut State Conference of, Meriden, April 29-May 1. Sec'y, John D. Strain, Meriden, Ct.

MEDICAL ASSOCIATION, American, New York city, June 4-8. Sec'y, Dr. Frederick R. Green, 535 North Dearborn street, Chicago.

MEDICAL MILK COMMISSIONS, American Association of, Brooklyn, N. Y., June 1-4. Sec'y, Dr. Otto F. Gejer, Ortiz bldg., Cincinnati, O.

MEDICINE, American Academy of, New York city, June 4-5. Sec'y, Dr. Thomas W. Grayson, 1101 Westinghouse bldg., Pittsburgh, Pa.

Imported and Domestic Lingerie at McCutcheon's

Reg. Trade Mark

May is the month when our Lingerie department is more than usually well prepared with the newest and daintiest articles in Lingerie.

This year we have gathered together in many respects the largest and most complete showing of Lingerie we have been able to exhibit for years. This includes Imported and American-made goods, but particularly those of French manufacture.

Our new stocks from Paris are here; a very wide variety including the latest models which, though not greatly different from those heretofore shown, are sure to please.

Boudoir Gowns, Caps, Brassieres, etc., from the simplest styles at moderate prices to the more elaborate and costly, in satisfying variety.

Children's Wear

The Underwear and Dresses for Children, of which we show a very comprehensive assortment in sizes up to ten years, are all sturdy, sensible, well-made little garments in good taste.

The Dresses are made of our own Linens, Chambrays, Japanese Crepes, Dimities, etc.

Suits for boys up to five years of age, also of Devonshire Cloth, Linens, Ginghams, etc.

Write for illustrated Booklet, "Special Attractions for May"

James McCutcheon & Co.

To Survey Associates and all Survey Readers:

681 members of Survey Associates renewed their \$10 cooperating subscriptions in the six months ending April 1; 108 Survey readers enlisted for the first time as cooperators;—789 old and new to give us momentum in entering upon the second half year of our fiscal and publishing year now begun.

The break with Germany and the declaration of war "to make the world safe for democracy" are putting to the test as never before the social resourcefulness of the nation. The experience, craftsmanship and effectiveness of American social agencies and movements are an asset in the situation. To interpret their constructive and patriotic employment, to bring out human needs and values at a time when social vigilance is needed if ever to prevent waste and weakness in the national economy, and to afford an open channel for discussion of the social bearings of situations and issues as they develop, are tasks before the SURVEY.

We are in position to render public service for which, conceivably, all that has been wrought into this adventure of ours in cooperative journalism has been so much preparation. To illustrate, the American Red Cross is reprinting and distributing the series of three articles on the Canadian Patriotic fund printed in the SURVEY in March.

We believe that we can look for vigorous backing in strengthening the hands of local and national social movements, by bringing dependable information and mutual counsel to widening groups of Americans eager to serve.

If you are not sharing in the Survey's fellowship, let us hear from you this month—the first of a new volume—the beginning of the second half of our publication year—the threshold of a great obligation and a great opportunity.

SURVEY ASSOCIATES, Inc., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

MARKET GARDENERS might give us pointers on Americanizing immigrants. In transplanting grown plants, or even seedlings, they keep as much as possible of the old soil, and they crowd down the new soil so that the roots shall have full contact with the nourishing earth. For the first day they protect the leaves from withering sun and slashing wind. Now with immigrants, Dr. Friedlaender tells us, the trouble is lack of equilibrium; with transplanting to the New World we must bring as much as we can of the old culture and of the protective social customs and relationships. Page 103.

CONSCRIPTION is adopted as the policy of the United States in raising an army of one million men in addition to the regulars and the militiamen. Only the conflicting details in House and Senate bills remain to be worked out. Army pay is doubled. Married men, those necessary in industry, including agriculture, and conscientious objectors who are church members, are exempt. Page 120.

SOCIAL SETTLEMENTS have agreed on five major planks in a war platform. Page 111.

SOCIAL WORK, for its own uses and for all those who have to make decisions about men and women, is working out a technique in the seeking and use of evidence. It is not bound down by scientific fact, as is medicine, nor by rigid rules and antipathy to credible hearsay, as is law. A discussion of it by the dean of case workers. Page 108.

ORGANIZING its forces in every state, the Consumers' League proposes to watch over and preserve the women and children called on for war sacrifices. Page 122.

WAR DISEASES of the old sort, such as typhoid and measles, sent a soldier to the hospital, where he either got well or died. But the war diseases of this war are social diseases—tuberculosis, syphilis, alcoholism—which cripple the man and follow him back into his family and his community. Dr. Biggs, home from France, reports on the sickening toll of tuberculosis among an indifferent people when war has run up an already high death rate. Page 112. A new committee has been organized to crystallize into action the widespread desire for war prohibition. Page 121.

THE SURVEY

The Americanization of the Jewish Immigrant¹

By Israel Friedlaender

CHAIR OF BIBLICAL LITERATURE, THE JEWISH THEOLOGICAL SEMINARY OF AMERICA, NEW YORK.

THE Jewish immigration into the United States has for more than a generation proceeded in the main from the lands of eastern Europe, which in the course of the great world war have served as the battle-ground between Teuton and Slav. Competent observers of European conditions are strongly of the opinion that Jewish immigration from the same territories will at the close of the war assume even larger proportions than prior to it. Crippled by the terrible ravages of war and famine, of both of which they have borne more than their fair share, caught, as in a vise, between the conflicting aspirations of Russia, Germany and Poland, the Jews of eastern Europe will, in the judgment of these observers, turn their hopes to these shores where they may be assured of a free human existence, as part of the American commonwealth.

Be this as it may, at this serious hour in the history of our country, when America is engaged in the process of self-determination and is taking stock of the human and material resources at its disposal, the question of the adaptation of the immigrant population to the American environment calls for calm and careful consideration. And the Ameri-

canization of the Jewish immigrant forms by no means the least important phase of this great problem.

In discussing the question of the Jewish immigrant in relation to the American environment, I propose to dissociate it entirely from the general question of Judaism, about which there exists an infinite variety of opinion and emotion no less among the Jews than among the non-Jews. Laying aside

Oil Painting by Max Fabian

EMIGRANTS

all personal convictions and associations on the subject of Judaism, I shall endeavor to view the problem before us from a position which is far removed from the battlefield of controversy: from the point of view of the humanitarian who is interested in the Jews, not on account of his racial or religious kinship with them, but as a section of humanity to which he is bound by no other tie except that of a common mankind.

It would lead me too far afield to enter into a discussion of the immigrant problem at large. It will suffice for our purpose if we start from the premise which will be granted by all: that the solution of the immigrant problem consists in making the immigrant *cease* to be an immigrant, *i. e.*, in common parlance, in making the immigrant, who is a stranger in our gates, feel as if he were at home, in transforming him

¹ This article was written before the Russian revolution.—THE AUTHOR.

into a happy and useful member of the new environment. As applied to the immigrant problem in this country, it means the Americanization of the immigrant, in the best and loftiest connotation of this term.

The solution of this problem is a twofold one: on the one hand, it is of an external nature. We must endeavor to acquaint the immigrant with the conditions of the new land and to enable him to fight successfully in the struggle for existence, so that he may obtain and assume his rightful share in the benefits and responsibilities of the country which he has chosen for his abode.

Equilibrium Lost by Transplanting

THE second solution of the problem is of an internal, or spiritual, character. Perhaps it may best be formulated as the attempt to restore the equilibrium of the immigrant. Equilibrium has been defined as "a condition of equal balance between opposite or counteracting forces." In the life of the body, the most important sense, without which animal life is practically impossible, is the sense of equilibrium, that sense, as has well been said, "by which we have a feeling of security in standing, walking, and, indeed, in all the movements by which the body is carried through space." In spiritual life the equilibrium of man, with the possible exception of a few geniuses, is the product of the social forces of his environment. As long as man remains within his natural surroundings, he is endowed with that sense of equilibrium—whether we call it habit, tradition or association—which gives him the feeling of security in all functions of life. For the environment dictates to him his form of speech, shapes his thoughts, colors his sentiments, determines his manners and customs. In the case of the immigrant, *i. e.*, of the man who has been detached from his accustomed environment, this equilibrium is disturbed. He is deprived of the constant, though unconscious, guidance of his social group, and the result is the same as in the life of the body when the sense of equilibrium is impaired. He loses his feeling of security; he reels; he is swayed to and fro by the slightest touch of the new environment; he becomes unnatural and unhappy. Unless he be a man of exceptional ability, the most valuable in him, his personality, the outcome of long years of breeding and training, is destroyed, and he is in danger of becoming a moral wreck, a menace to himself and a menace to his neighbors.

The solution of the problem, therefore, must consist in the restoration of his equilibrium, in the recreation of a social environment for him which, amidst the puzzling conditions of the new land, would offer him that spiritual anchorage with which his former environment had provided him; in making him again the unit of a social group, the mandates of which he could obey, and in enabling him to regain the sense of security which had formerly guided him in all the functions of life.

The Jewish immigrant problem in its internal or spiritual aspect—its external phase, which is a matter of common agreement, may well be left out of consideration—is essentially the same, except that it is greatly aggravated and complicated by the peculiar conditions of the environment from which the Jewish immigrant comes. For it is obvious that the greater the divergence between the old and the new environment of the immigrant, the greater must be the disturbance of his equilibrium. The English-speaking immigrant, or the Scandinavian, and the German, whose former environment is culturally similar to our own, find it comparatively easy to adapt themselves to the new conditions of this country. The Italian, the Slav, the Syrian find this adaptation increasingly difficult.

Now it may be asserted, without fear of contradiction, that in no case is the contrast between the old and the new wider and deeper than in the case of the immigrant Jew. For the Jewish immigrants who in their overwhelming majority hail from the lands of ancient Poland, from western Russia, Galicia and partly from Roumania, come not only from countries whose general civilizations are vastly different from that of our own land; but they come, in addition, from a purely Jewish environment, which in itself is radically different from the non-Jewish environment of the country in the midst of which it is situated. In most of the towns from which the Jewish immigrant hails the Jews form the bulk of the population and live entirely apart from the non-Jews. There are localities—some of them the writer remembers from his early associations—in which the only non-Jewish resident is the *Shabbes goy* (the gentile who assists Jews in their domestic arrangements on the Sabbath day) and in which the approach of the Sabbath is still heralded on the market place by the Jewish beadle.

It is absolutely essential for us to realize the full character of this Jewish Ghetto environment if we may ever hope to solve or even to mitigate the difficulties confronting the Jewish immigrant. It is generally known and taken for granted that the sum and substance of Jewish life in the former environment of the immigrant Jew is the Jewish religion. This to a large extent is correct, but it is necessary to bear in mind that religion, as conceived by Judaism and as carried to its extreme consequences in the development of Polish Judaism, is infinitely more than what is associated with it in the modern world. Religion, from this point of view, is co-extensive with that which, in modern parlance, goes by the name of social and cultural life. Judaism, in this formulation, regulates practically all the functions of life, even those which the Christian would never think of associating with religion, such as food and drink, as well as the manners and customs of every-day life. As a result of this development, the immigrant Jew possesses his own language, or rather languages. For, while he uses Yiddish as a vernacular, he employs Hebrew not merely as the language of prayer and study but also, to a very considerable extent, as a medium of literature and correspondence. Both languages (Yiddish to a lesser degree than Hebrew) are regarded by him as part of his religious tradition. He wears in his homeland his own form of dress which is no less hallowed by religious associations.

Religion Dominating Social Life

IN A word, religious tradition dominates the entire range of his social life, which is thus, except for the external points of intersection with the economic and political factors of the outside world, wholly and exclusively Jewish.

This all-embracing influence of the Jewish religion is even more marked in the domain of his cultural activities. For, in a country in which compulsory education is unknown and in which the striving of the Jew for general culture is cruelly hampered, Jewish education is limited, almost by force, to the study of Judaism, as represented by the Bible and, still more so, by the Talmud and post-Talmudic literature. The extraordinary love of learning which, inculcated by Jewish religious tradition, is characteristic of eastern European Jews to a truly astonishing degree, and the one-sided limitation of these intellectual endeavors to the literary sources of Judaism have resulted in the evolution of a peculiar Jewish mentality and, if I may use the expression, of a peculiar Jewish sentimentality, which marks off this type of Jew from his Christian fellow-citizens as well as from his coreligionists in other lands.

True, in recent times a large number of Jews in eastern

YOM KIPPUR [DAY OF ATONEMENT]

Europe have drifted away from the religious moorings of Judaism and have become indifferent and even hostile to religion. But it would be a serious mistake to regard this estrangement from the Jewish religion in the light of the western European or American tendency of Jewish assimilation. These radicals or free-thinkers are, in most cases, just as keenly interested in the preservation of Jewish distinctiveness as are the old-fashioned orthodox Jews, except that what the latter regard as a mandate of the Jewish religion, the former justify by the authority of Jewish nationalism.

This Jewish isolation which, as has been pointed out above, covers the whole domain of life, has undoubtedly bred grave defects which considerably mar the complexion of the immigrant Jew, such as pettiness, suspiciousness, hypersensitiveness and hyper-cleverness, excessive individualism, lack of organizing ability, disregard of externalities, often resulting in uncouthness and uncleanliness, and other shortcomings of this kind. But it has at the same time been productive of positive characteristics, which to the outsider are perhaps less palpable, because, unlike the others, they do not lie on the surface, yet are of immense intrinsic value and far more than make up for his defects: his extraordinary mental vigor, his unconquerable thirst for knowledge, his boundless respect for learning, his passionate love of liberty, his profound sense of justice, his power to endure suffering, his frugality, his genuine warm-heartedness, and a variety of other virtues which are best evidenced by the fact that his enemies openly justify their cruelty by his enormous superiority over the native population, a superiority which he has been able to maintain in the face of inconceivable misery and persecution.

It may now be realized in what a terrible conflict the Jew-

ish immigrant must find himself when, having left his Ghetto environment, he suddenly emerges on the shores of the new world. Not only are the external conditions of life in this country diametrically different from those he had left behind—the inner forces of life, the social and cultural influences, are no less conflicting. For the ideals which underlay the whole social stratification in his old environment were primarily of a Jewish character: Jewish learning and Jewish piety, *i. e.*, knowledge of the Jewish religion and the observance of its practices. These qualifications, far more than wealth, determined the position of the Jew in his social group and provided the incentive for his rise and progress.

Mangled Souls in Our Ghettoes

ON ARRIVING in this country, the immigrant discovers that they are not only valueless, but that they are a hindrance and sometimes a nuisance in the eyes of his fellow-men. We are horrified by the sight of physical cripples. But were it given to us, by some kind of spiritual X-rays, to perceive the fractures in the souls of men, we would be a thousand times more horrified by the sight of the untold numbers of mangled human souls which are writhing in inexpressible suffering in the midst of our Jewish immigrant population. No one except he who has an intimate knowledge of the conditions of old-fashioned Jewish life in the Ghetto can adequately appreciate the excruciating mental agony which the immigrant Jew must experience when, for instance, for the first time in his life he is forced to violate the God-given command of abstaining from work on the Sabbath day, or to transgress any of the Jewish regulations concerning food which in his eyes are clothed with the authority of the Divine will. Nor can the outsider fully

realize the inexpressibly tragic gap which opens up in the soul of the immigrant when he discovers that what he has held sacred and dear in the past is valueless, and less than valueless, in the eyes of his new neighbors. The result of this conflict is in innumerable cases a complete loss of equilibrium and the destruction of that feeling of moral and mental security without which man is degraded into a beast, and life becomes a meaningless and brutal discharge of mere physical functions.

The Social Life Left Behind

THIS change of environment has also another aspect which is more specific but which deserves mention in this connection because it is a prominent feature of the activities of the Americanizing agencies in this country. I refer to the social life of the immigrant in the narrower sense of that term. In the Ghetto, with all its economic misery, ample provision was made for the recreational phase of life. Social life, in the sense of sociability, strange though it may sound, was perhaps nowhere so fully developed as in the Ghetto. The Beth Hamidrash, "the house of study," and, in the provinces in which the sect of the Hassidim (pietists) prevail, the Klaus or "meeting house" formed the social center of the community where the Jews met day in and day out not only for mental recreation by studying jointly the sources of Judaism, but also for social entertainment in the form of friendly chats and, very frequently, of common meals, generally accompanied by singing and even dancing. The Jews of the Ghetto, in very truth, lived up to the biblical adage that man doth not live by bread alone but by what proceedeth from the mouth of the Lord. For, while they often lacked bread, they found supreme comfort and happiness in the study and contemplation of the word of God. As one who has had occasion to observe, at close range, the social and recreational aspects of Jewish life not only in the heart of the Russian-Jewish Ghetto but also in the leading Jewish communities of western Europe and America, I make bold to assert that modern Judaism, with all its wealth and splendor, has nowhere been able to produce even the shadow of a substitute for that invigorating and ennobling joyousness which the immigrant Jew found provided for him in the Shiur (Talmud course) given at the Beth Hamidrash or in the Shalosh Seudoth (the Sabbath afternoon meal, mostly consisting of bread and herring) arranged in the Hassidic "meeting house."

On arriving in this country, the Jewish immigrant finds himself deprived of all these social stimuli. He may still cling to the outward forms of Judaism, if he can. But the spirit which gave them life and meaning has gone. Judaism had been to him like a beautiful painting, delighting his soul by the warmth of its colors and the loftiness of its composition. Now he discovers that the colors are rapidly fading, and that all that is left to him is nothing but a crude and colorless canvas, without beauty, meaning or comfort.

This change of environment would perhaps not be so painful to the immigrant if, on arriving in the new land, he were to find a uniform and firmly settled culture into which, with some effort on his part, he might become assimilated. This, however, is not the case. Life in the large American cities, and particularly life in New York, is neither uniform nor definitely settled. The immigrant cannot help being utterly confused by the disharmony and instability of the new environment. It is a matter of common knowledge that, when coming in contact with a new culture, men are invariably apt to notice and to imitate that which is superficial and, therefore, least valuable in it. This fact is well known to every student of the history of human civilization. One need only think of the effect of French culture on the native masses of the Le-

vant or of English culture on the inhabitants of India. In the interior of British South Africa one may come across natives in a state of complete nakedness except for a silk hat and a colored waistcoat which they evidently regard as the sum and substance of English civilization. The immigrant Jew, with all his mental agility, and with all his traditions of an ancient culture, can only see the superficialities of American life and, not being steadied by the equilibrium of his own heritage, he seizes upon them as the true manifestations of the new environment.

While he does not, and, indeed, cannot perceive the great ideals underlying the American commonwealth, he quickly enough notices those negative, though accidental features which lie on the surface of American life: The hunt after the dollar; the corrupt state of politics; the hankering after publicity; the drift toward materialism; and he is forced to the dangerous and cynical conclusion that America—and here I merely repeat what one may frequently hear from the lips of Jewish immigrants—is the land of bluff; that religion, morality, politics, learning are a sham; and that the only thing of value and power in this country is almighty mammon.

The result is obvious. The immigrants with a nobler fiber, in whom the traditions of the old environment are firmly rooted, are bitterly disappointed. They turn away with disgust from the new environment, which is utterly misconceived by them, and—here again I refer to a phrase current among this type of Jewish immigrant—they deprecate the memory of Columbus for having discovered America, where their hopes for a happier and loftier existence have been cruelly deceived. Thousands of these immigrants would be happy to return to the old country if external conditions permitted them to do so.

The others, however—those who are of a cheaper mental grade—are quickly reconciled to the new state of things and, throwing off the former restraints of Judaism, are ready to play the game. They enter fully into what they believe to represent American life and bring to bear upon it their innate cleverness and resourcefulness.

What then is the remedy for the evils attending this radical change of environment on the part of the Jewish immigrant—evils which, if not checked in time, may give rise to serious and complicated problems? To my mind, there is only one remedy: the restoration of the equilibrium of the Jewish immigrant. It goes without saying that we must acquaint the immigrant with the conditions of the new land, not only to strengthen him in his struggle for existence but also to enable him to realize the true foundations of American life and American culture. But it is just as important, if not more important, because more promising of results, that we make him again a social unit, that we recreate his natural environment for him.

Tempered Americanization

WERE IT possible to make the Jewish immigrant a completely new man by uprooting all his previous traditions and habits and by turning him into a full-fledged member of the American environment, one might feel inclined, looking at the problem from the purely humanitarian point of view, to recommend the process of uncompromising Americanization. Although even in this case, from the same humanitarian point of view, one would greatly regret the tremendous waste of mental and moral energy which this hot-house transformation is bound to entail, to the detriment of this country, which depends for its progress on the best that its citizens can contribute to it. But the Jewish immigrant, like all other human beings, cannot be made a new man. The human soul is *not a tabula rasa*. The impress of centuries is indelibly stamped

upon it, and no mechanical process can undo the organic development of many generations.

Hence the only solution left to us is to reconstruct, or rather to help the Jewish immigrant to reconstruct, his old environment, to reawaken and reinforce the social influences of his former surroundings, so that they may once again provide him with guidance and inspiration, that he may once more possess the sense of equilibrium, that feeling of security which makes a man a normal being and his life a normal process.

It may be argued against this view of the problem that the remedy proposed might stand in the way of the Americanization of the immigrant which, as Americans, we must all have at heart. But such an argument is fallacious. The influences in this country making for Americanization are so extensive and so powerful that, whatever procedure we may choose to adopt, the Americanization of the immigrant can only be retarded; it certainly cannot be checked. But even if the handicap to the process of Americanization were real, it would be infinitely less harmful than the dangers lurking behind a de-Judaized and superficially Americanized Jewish immigrant population. The writer for one, and here again he is speaking purely as a humanitarian, prefers the kaftan-clad old-fashioned Jew, with his unattractive appearance and ungainly manners, whose whole life is dominated by the ideals and mandates of an ancient religion and civilization, whose mind has been cultivated by the subtleties of the Talmud and whose conduct is regulated by the restraints of the Shulhan Arukh, to that modernized amphibious creature, the gaudily attired, slang-using, gum-chewing, movie-visiting, dollar-hunting, vulgar and uncultured, quasi-Americanized "dzentleman."

Old Environment in the New World

It is obvious, therefore, that our method of Americanization—an Americanization which is constructive and not destructive—must consist in restoring the impaired or destroyed equilibrium of the immigrant Jew by enabling him to recreate for himself his former environment. It is not enough that we tolerate his old Jewish associations; we must call them forth where they are dormant and strengthen them where they have become weakened. Of course, we do not wish to reproduce the old Jewish Ghetto in the new land. Nor does the Jewish immigrant desire it.

The immigrant Jew who flees to this country as a haven of refuge and is anxious to throw in his own lot and that of his children with the new land is fully alive to the obligations imposed upon him by American life and citizenship. Those who are intimately acquainted with the life of the immigrant in his old and new home and do not base their judgment on ignorance and superficial observation are frequently amazed at the readiness with which the immigrant Jews make concessions to the American environment. With few exceptions, even the most conservative and most backward among them are happy and proud to entrust their children to the American public school, although in their old country they had shunned the secular school as a de-Judaizing agency. They have scarcely touched these shores when they throw off their ancient costume which in eastern Europe is the peculiar mark of their race and is hallowed by the traditions of centuries. They are eager, perhaps more so than other immigrants, to acquire the English language, and though they themselves may fail in these endeavors, they watch with delight the linguistic progress of their children.

In a word, the immigrant Jew does not object to the modifications in his old mode of life which are necessary to harmonize it with American conditions. But he insists, as he has a right to insist, that these modifications do not encroach

LEISURE HOUR

on the essential character of his religious tradition. We must then adapt the immigrant Jew to the new environment, but we must do so cautiously, gently and sympathetically, ever alive to the dangers of a rapid and artificial Americanization which may destroy old values without building up new values in their stead.

And it is just as obvious that those entrusted with the task of Americanizing the Jewish immigrant must be men and women who know and understand him. It would seem preposterous that we should have to insist on such a truism were it not for the fact that in the practical execution of the work of Americanization this simple demand is so frequently disregarded. A person who would set out to cure the bodily ills of his fellow-men without an adequate knowledge of the structure of the human body would be scorned as a quack. But where human souls are concerned, it would almost seem as if ignorance were bliss. Constructive Americanization must be based upon knowledge. Only an intimate acquaintance with the life of the Jewish immigrant in his old and in his new environment, only a full understanding of his mentality and psychology, and an adequate appreciation of his traditions and associations may succeed in bridging the terri-

ble chasm between his past and present, in creating a proper outlet for the immense stores of energy that lie dormant in him, and thereby transforming him into a happy and valuable citizen of our great republic.

The humanitarian method of dealing with the problem of the Jewish immigrant may perhaps be best illustrated by a striking utterance of the late Yiddish writer, Sholom-Aleichem, a subtle observer and powerful portrayer of Jewish

immigrant life. Addressing himself to those who are engaged in Americanizing the Jewish immigrant, he reminded them of the fact that the biblical injunction commands us to *love* the stranger. To pity him is not enough. Pity may suffice in the case of animals; it cannot satisfy the needs of human fellowship. It is only by loving the stranger that we may ever hope to solve the delicate task of transforming his soul without destroying it.

Nature and Uses of Social Evidence¹

By Mary E. Richmond

DIRECTOR, CHARITY ORGANIZATION DEPARTMENT, RUSSELL SAGE FOUNDATION

FROM the beginning of his task the social case worker deals with testimonial evidence in a way shaped by the end for which it was obtained; namely, the social treatment of individuals. As he proceeds he often finds himself in need of more knowledge as to the weight which should be attached to the social evidence he has gathered. Are there rules of evidence, principles of choice, that can guide him in selecting from a group of unassorted observations and testimonies those which he can rely upon from those which must be accepted "with a grain of salt"? If so, are these principles peculiar to social work, so that its practitioners will be obliged to dig them out from their own experience alone, or may they hope to find them already identified in law book or laboratory?

That there are such rules to guide the social worker is intimated by a correspondent who had gone from a charity organization society to a society to protect children from cruelty. He writes:

As a result of my experience both with Charity Organization Society and with Society for the Prevention of Cruelty to Children investigators, there seems to me a weakness in the training of the Charity Organization Society district secretary, who from the nature of her duties is constantly required to weigh evidence but who has not got clearly in mind the fundamental differences between different classes of evidence and their different values. I do not now refer to the nice discriminations; those I am content to leave to trained lawyers to squabble over. Not only would the co-operation with a Society for the Prevention of Cruelty to Children be at once improved but evidence as it stands in a Charity Organization Society investigation would be increased in value and reduced in bulk. I confess to considerable impatience at times when I find district secretaries of some and even of great experience apparently *valuing every statement equally and then adding the items together to find a total.*

Many will share this correspondent's impatience with such arithmetic. Nevertheless, no considerable group of social case workers—whether in a society to protect children or a charity organization society or anywhere else—seem to have grasped the fact that the *reliability* of the evidence on which they base their decisions should be no less rigidly scrutinized than is that of legal evidence by opposing counsel. On the other hand, the question of admissibility, the rules for which were framed mainly to meet the average juryman's lack of skill in testing evidence, does not enter into the weighing of facts as gathered by an agency all in whose service are, or can be, trained to this special task. Skill in testing evidence, as leading to such proof as social workers need, is in no way dependent upon a knowledge of the legal rules of admissibility. Social evidence, like that sought by the scientist or historian, includes all items which, however trifling or apparently irrelevant when regarded as isolated facts, may, when taken together, throw light upon the question at issue; namely, as regards social work, the ques-

tion what course of procedure will place this client in his right relation to society? Many an item, such as a child's delayed speech, for instance, may have no significance in itself, whereas when considered in connection with late dentition and walking and with convulsions it may become a significant part of evidence as to the child's mentality.

Social evidence, then, has an advantage over legal evidence in that it can include facts of slight probative value. Without this advantage social case work would not be possible, since the problem of the orientation of a family or individual is far more complex than the single question as to whether or not a litigant or a defendant is to be penalized. Moreover, facts having a subjective bearing, like that of delayed speech just instanced, are especially characterized by their cumulative significance. Variations between people in mental endowment, in "personality," display themselves ordinarily not in a few conspicuous acts, but in a trend of behavior evidenced by innumerable trifling remarks or by a succession of decisions and impulses each unimportant in itself. Evidence of this cumulative sort therefore, is essential wherever, as in social work, decisions rest upon intimate understanding of character.

In examining the reliability of evidence, social case work should make its own application of universal tests; and, coming late to the task, should be able to profit by the experiences not merely of law, but of history and of natural science. The various professions apply rules of evidence for arriving at truth, each according to its own special conditions. The scientist uses controlled experimentation because he works with material which may be brought under complete control. He may, for instance, till half of an orchard whose physical conditions, soil, grade, exposure, etc., are the same throughout. If the tilled half bears much better than the untilled, he concludes that tilling increases the product of fruit trees. When, however, the farmer in the fable digs in his orchard for buried treasure, and in place of gold finds his promised fortune in an unprecedented yield of fruit, he probably draws no causal inferences whatever.

Should a social worker have the task of showing whether the farmer's labor had paid or not, he would get the testimony of the farmer, of his family, and his neighbors as to the previous care of the trees; their evidence as to any other measures of improvement he might have taken, such as pruning, thinning out, etc.; their recollection, corroborated by governmental reports, of weather conditions, pests, etc., of preceding years. He would take account of hearsay evidence, of persistent rumors, of the general appearance of the man's farm and home. As a result, the social worker might establish or discredit the value of tillage in this instance with a fair degree of probability.

Suppose on the other hand some decision in a law court should turn on the question whether or not it was his tilling of

¹ A chapter from Miss Richmond's work, *Social Diagnosis*, published this week. Copyright, 1917, by Russell Sage Foundation.

the soil that had brought the farmer an increased yield of fruit. The court would deal in the main with the same facts as the social worker, namely, with the testimony of witnesses, with government reports, or with an inspection of the premises; the difference would be that a court would guard with scrupulous care the admission of hearsay evidence and would exclude rumors; that it would, in short, hold each witness to a responsibility for his statements, allowing him in the main to say nothing of which his own knowledge was not first-hand. This evidence might or might not satisfy the court beyond a reasonable doubt that it was justified in concluding that tillage had increased the farmer's yield. But these restrictions upon evidence are necessary in law because of the obligation the judge is under of sifting evidence for a jury who are liable to allow undue weight to items which have small value as proof.

The common difference between the point of view of social worker and court stands out in the following instance of alleged parental neglect:

SOCIAL EVIDENCE WHICH LED A CASE WORK AGENCY TO ASK COURT ACTION THROUGH A SOCIETY TO PROTECT CHILDREN

REASONS WHY THE SOCIETY TO PROTECT CHILDREN BELIEVED THAT THE COURT WOULD NOT ACT

1. Three rachitic children aged seven, five, and three years; the oldest could not walk at all at four years; the second and third had bowed legs and walked with difficulty at three years old. Although the oldest child has been three and a half years in a hospital, where it was sent by a social agency, the parents omitted to take the other children to the dispensary for examination and advice. The social worker made seven calls to urge them to do this. They assented each time, but were increasingly resentful at what they regarded as an intrusion into their private affairs, and did nothing. The social worker construed this as parental neglect.

1. "No doctor has yet made a definite statement as to the serious result of failure on the parents' part to follow directions in the treatment of these children." A court would not accept a layman's judgment even on so obvious a matter as extremely bowed legs, because this might establish a precedent which in most instances would work badly. A layman's opinion in such a case as this is a less responsible one than a doctor's, since the latter's professional standing is involved in his statements. Even with a physician's statement "it is very difficult to make such neglect the basis of a case in court." The father supports his family, the mother gives good care as she understands it. The court, fearing that doctors may disagree, hesitates to force a debatable treatment upon well-meaning, if ignorant, parents. One might venture to predict that courts will more readily consider neglect of this sort as they grow inclined to take common sense risks instead of resting on the letter of precedent.

2. This family has lived for six years in two tiny rooms on the top floor. Although their tenement rooms are sunny and clean, the children do not get sufficient exercise or air. The parents refuse to move, as the rent is small.

2. The sunniness of the tenement and the fact that the mother keeps it clean would prevent a court from regarding these cramped quarters as evidence of culpable neglect. Public opinion would not uphold the court in making an issue over home conditions that were not considerably below the ideal held by social workers. The social worker often forgets this.

3. A year and a half after having been urged to have the two younger children examined, the mother took the youngest child to the hospital and promised to bring the second child. Eight months later she had not done this.

3. "While it looks as if the family had been neglected in years past, either deliberately or through ignorance, or both, the situation today is not clear." The oldest child is still in the hospital, the youngest has received hospital care, and the mother has promised to take the second child to the out-patient department. With this evidence of good intentions, a doctor's statement (see 1) would be necessary to satisfy a court of present neglect.

Here was a deadlock. In asking court action on the ground of parental neglect the social worker was in effect calling upon the court to accept his interpretation of the evidence as establishing the fact of neglect, and to order the children to be submitted to physicians for treatment. The court, on the other hand, as interpreted by the society to protect children, would require the physician's testimony as a link in establishing the fact of neglect and would be unlikely to act until the social worker himself had done the thing he was asking the court to do; namely, confront the case with a doctor. It would seem to a layman as if in such a case the court might safely summon the parents and child into court, admit the child's bowed legs and the social worker's efforts to persuade the family as evidence, and put this father and mother on probation to consult any reputable doctor they chose.

It is clear, then, that whereas social evidence is distinguished from that used in natural science by an actual difference in the subject matter, it differs from legal evidence not in the sort of facts offered, but in the greater degree of probative value required by the law of each separate item. The additional testimony which the court would have asked in the instance cited was not different in kind from what the social worker already had.

In short, social evidence may be defined as consisting of any and all facts as to personal or family history which, taken together, indicate the nature of a given client's social difficulties and the means to their solution. Such facts, when duly tested in ways that fit the uses to which they are to be put, will influence the diagnosis of physical and mental disorders, will reveal unrecognized sources of disease, will change court procedure with reference to certain groups of defendants, and will modify methods in the school class room. To a certain extent social evidence is already exerting this influence, but the demand for such evidence is likely far to outstrip the supply during this next decade.

The Wider Use of Social Evidence

SCATTERED and tentative as they still are, the signs of such coming demand are nevertheless unmistakable; the uses of social evidence in the older professions are beginning to multiply, as the following illustrations will show:

A specialist in the *diagnosis of feeble-mindedness* committed two difficult girls to custodial care, largely on the facts supplied him from first-hand observations by a children's aid society as to the characteristics of these girls and of their families. The "stream pictures" furnished in summaries of two case records, covering two years in one instance and nine in the other, were his most conclusive evidence.

The nature of these stream pictures may be gathered from Dr. W. E. Fernald's discussion (*American Journal of Insanity*, April, 1909) of the evidence needed by the psychiatrist for making a diagnosis of mental defect. Some of this evidence, although obtainable by social workers, is of course medical in character, that is, delayed dentition, late walking, delayed speech, a history of convulsions in the first few years of life, the presence of degenerative stigmata. Much of it, however, is precisely the slight but cumulative evidence which social workers habitually gather as bearing on disabilities; namely, facts of family and personal history with special reference to the period of infancy and early childhood, a relatively long continuance of untidy habits (of childhood), the public school grade in relation to age, inability on the part of the patient to apply himself continuously either in school or in any other occupation without constant supervision. In some cases with only slight intellectual defect, the inability to "make good" socially will be a deciding factor in the diagnosis.

All of this information, including the medical, should be

given in the history of a client which the social worker is preparing to submit to a psychiatrist.

Social Work and Medicine

THE contributions of social work to medicine are not confined to the diagnosis of feeble-mindedness. *Medical diagnosis and treatment* are beginning to show the influence of the social evidence gathered in the medical-social departments of hospitals and dispensaries. Also the children's courts of the United States owe their existence to social workers. These courts supplement legal evidence by social. Not only have the courts come to recognize the value of a more liberal inclusion of imperfectly relevant evidence in disposing of child offenders; they are growing to feel that even the method of gathering this evidence has an influence upon the welfare of the child. They believe that such investigation should be inspired not by the ambition to run down and convict a criminal but by a desire to learn the best way to overcome a boy's or girl's difficulties. The need of modifying in these courts the usual legal procedure is thus commented upon by Flexner and Baldwin (*Juvenile Courts and Probation*):

The best interests of the child make it necessary for the court to consider hearsay and other evidence of a more or less informal kind which would ordinarily under strict rules of evidence be excluded. It is of the utmost importance that the court should avail itself of just the kind of evidence that the investigator [the probation officer] presents. If it should finally be determined that the laws as drawn do not permit the introduction of such evidence, express provision should be inserted in the statutes allowing its use.

Another court having its origin in needs brought to light by social work is the court of domestic relations, which may in time be merged with the children's court. It suffers at present from inability to secure and use the necessary social evidence. This experiment, like many others, will continue to fall short of full usefulness until social workers develop the diagnostic skill that will enable them to offer to the court authenticated and pertinent information. The following is a case in point:

A court of domestic relations sentenced a man for desertion and non-support on the testimony of his wife. The wife then applied to a charity organization society for relief for herself and four children. The district secretary, assuming that on the face of it this convicted man was good-for-nothing, asked her committee to arrange for assistance to the family. It was with reluctance that the secretary, at the suggestion of her committee, agreed to make what she regarded as a superfluous investigation of the man's side of the story. This inquiry, however, brought statements from employers, former neighbors, relatives, etc., which showed that the trouble lay not with the man, who was a decent enough fellow, but with the woman, who was probably mentally unbalanced. Instead of voting relief, therefore, the district committee asked the judge to release the man.

In short, the secretary in question would hardly have been qualified to persuade a court of the helpfulness of social evidence, while she herself was capable of treating an inference—that as to the man's character—as if it were an evidential fact.

Many educators, even though not thinking in terms of social work, are recognizing their need of obtaining *social histories of pupils* and of giving differential treatment based upon them. The social worker's method they sometimes take over with little understanding of its details. For instance, Madame Montessori in her *Pedagogical Anthropology* makes a plea for differential treatment of pupils and gives a whole chapter to the question of securing the biographical history of the pupil and of his antecedents, but she apparently has little conception of the varying reliability of the different sources from which such social evidence must be had, or of the tests that could be applied to assure reliability.

Stuart Courtis, of the New York Committee on School Inquiry, who starts with an effort to test, by measurements based upon arithmetical alone, the efficiency of school and children,

arrives finally at two interesting conclusions: First, that life histories alone can make plain the play of those hidden forces which are constantly modifying the results of educational effort; and second, that where marked differences in the social life of the different types of children exist, those differences must be reflected in school methods. For reasoning cannot be taught from a text alone. "Reasoning is a process of adjustment to a situation, and only as children have experienced the fundamental characteristics of a situation can they intelligently make the necessary adjustments to it."

The beginnings of social case work in a field closely allied to education, in *vocational guidance*, serve to illustrate how, in the enthusiasm of promoting a new discovery, the need of social evidence may be overlooked. In this line of endeavor (though not in some others, where the illustration may still serve as a warning) the oversight was only a temporary one. The first volume of advice (*Choosing a Vocation*, Parsons), addressed to what were to be known as "vocational counselors" gave specimen interviews for their instruction. One of these is with a lad of nineteen in Boston who comes for vocational guidance and says that he wants to be a physician. The following is a part of the counselor's printed report:

He was sickly looking, small, thin, hollow-cheeked, with listless eye and expressionless face. He did not smile once during the interview of more than an hour. He shook hands like a wet stick. His voice was husky and unpleasant, and his conversational power, aside from answering direct questions, seemed practically limited to "ss-uh," an aspirate "yes, sir," consisting of a prolonged *s* followed by a non-vocal *uh*, made by suddenly dropping the lower jaw and exploding the breath without bringing the vocal cords into action. He used this aspirate "yes-sir" constantly, to indicate assent, or that he heard what the counselor said. He had been through the grammar school and the evening high; was not good in any of his studies, nor especially interested in any. His memory was poor. He fell down on all the tests for mental power. He had read practically nothing outside of school except the newspapers. He had no resources and very few friends. He was not tidy in his appearance, nor in any way attractive. He knew nothing about a doctor's life; not even that he might have to get up any time in the middle of the night, or that he had to remember books full of symptoms and remedies.

The boy had no enthusiasms, interests, or ambitions except the one consuming ambition to be something that people would respect, and he thought he could accomplish that purpose by becoming a physician more easily than in any other way.

When the study was complete, and the young man's record was before him, the counselor said:

"Now we must be very frank with each other. That is the only way such talks can be of any value. You want me to tell you the truth just as I see it, don't you? That's why you came to me, isn't it—not for flattery, but for a frank talk to help you understand yourself and your possibilities?"

The Incomplete Diagnosis

"WHEN the study was complete!" Psychologists realize now that tests of memory, like most other mental tests, must be repeated to eliminate accidental factors; but assuming that the counselor had made the psychological tests with care, he still has ignored many factors, which though not measurable by tests would yet modify the social diagnosis. He tells the boy that he cannot be a doctor, that he might succeed in some mechanical or manufacturing industry, that he must cultivate a cordial smile by speaking before a glass, that he must read solid books, study to prepare for citizenship, and so on. Such unconstructive vocational guidance the counselor apparently supposed to be a form of social treatment. Had he used his opportunity to acquire social evidence as well as psychological, he might have instituted treatment that would have struck at the root of the boy's difficulty. Here is a boy who has been attending the evening high school for several years. Has he been employed during the day; if so, at what? Is this work of a kind that would account, in part at least, for his failure as a student? Are there removable causes not only for his lack of success but for his physical condition as well? In the

case of such a boy, should not a medical diagnosis precede vocational advice? What are his home surroundings? Have his parents plans for him or aptitudes of their own that would suggest possibilities in him? Are any of his family already known to some of the hundreds of social workers in Boston? If so, a summary of this social work experience might be suggestive.

The book containing this illustrative interview was written to aid vocational counselors, presumably busy men. Nevertheless the question as to what a boy is to do with his working days for years to come is too vital a one for such summary disposal. The interview here quoted, ignoring the possible aid of other specialists, professes to be complete in itself, whereas a few letters and telephone messages to employers, teachers, confidential exchange of information, and the boy's parents, together with a reference to a competent physician, would have brought to light social and physical factors which contributed to the boy's ill success, and would have indicated how to remove them.

The counselor dealt with symptoms only. He assumed that an examination of the boy as regarded his appearance, speech, and mental reactions, during that brief cross-section of time, would give all the data necessary for treatment. Only to one who was all-wise and all-knowing could a single examination have been thus fruitful.

Variations of these same ideas crop up in unexpected places. Scientific shop management has accepted the principle of studying the *personal traits of the individual workman* and of basing his advancement upon such study, but for lack of social technique its present application of the principle is often too

crude and sometimes too undemocratic to illustrate our theme.

It would seem that social evidence is beginning to receive recognition. The endeavors of social workers are bringing to light ways of thinking and doing that prove useful in quite other fields. The fact that law, medicine, history and psychology, in their effort to break new ground, have been opening the same vein of truth, shows a growing demand for the kind of data that social practitioners gather. The absence of any generally accepted tests of the reliability of such evidence, however, still keeps this new demand itself ill defined and unstandardized. Personal histories which might appear sufficiently authenticated to a shop manager might strike a neurologist as inadequate for conclusions, while they would certainly be open to objections from a court. Progress on the social side of these several fields of endeavor will be hastened as social workers subject their own experiences to a more critical and searching analysis.

It was not to be expected that industry, or education, or jurisprudence, or medical science, or preventive social legislation should wait, before they developed in harmony with the thought of today, until the arts of social diagnosis and treatment had caught up. All of these went forward in their several ways, but their very advance has emphasized the need of skill in this never art. Technique has not occupied the attention of the social workers themselves so much as has the rapid development of new social specialties, some of them ill considered, perhaps, but all following inevitably upon that flowering of social ideals in this country which belongs to the last fifteen years. The time has now arrived to take fuller advantage of these new developments.

A Settlement War Program

By *Mary K. Simkhovitch*

PRESIDENT NATIONAL FEDERATION OF SETTLEMENTS

ON April 24 I sent out a letter to the settlements of the country affiliated with the National Federation of Settlements, asking their opinion in regard to the following program:

1. National prohibition as a war measure in order to increase the food supply. (This will release millions of bushels of grain.)
2. Continuing the general social activities of the settlements which make for civilization. (Early in the war juvenile delinquency increased owing to the neglect of counteracting social agencies. In Canada the settlements which abandoned their regular work in the early part of the war reverted to it as their absolutely necessary and distinctive patriotic service, and they even increased their work.)
3. Opposition to any efforts leading to the breakdown of existing protective labor legislation. (The experience of countries at war being that industrial protection is a most important element in national efficiency.)
4. In granting government contracts for the furnishing of soldiers' clothing, preference to be given to firms using the protocol. (Or such other measures as would hinder the employment of sweated labor.)
5. Adequate compensation to soldiers, that those dependent upon them may not become objects of charity. An American standard of living for soldiers and their families must be maintained.
6. Opposition to a tax on sugar—a special hardship on the families for whom we are in some sense the spokesmen.

Replies indicate in general an acceptance of this program. All the settlements, without exception, feel the absolute necessity of continuing their distinctive work.

Americanization must take place through constant contact and fellowship if it is to be genuine and effective. Those who sincerely desire Americanization should be the very ones to be staunch supporters of the settlements at this time.

Prohibition as a war measure was favored by all—even by the few who would not favor it in times of peace. A few of the settlements indicated in their replies that they believed that discretionary powers should be given communities to abrogate existing labor legislation where deemed absolutely essential as a war measure; but most of the settlements felt that such discretionary power, while it might be advisable from a theoretical point of view, would be most risky to undertake as a practical measure. Some of the settlements felt, and, as it seems to me, wisely, that it would be better to word No. 6 in a more general way, as follows:

That such taxes should be avoided as fall on general articles of consumption.

Several of the settlements indicated their conviction that governmental control of food supply is necessary.

It would be fair to sum up the result of this referendum to the settlements as follows:

1. National prohibition to be favored as a war measure.
2. The absolute necessity not only of not decreasing the social activities of the settlements, but also of increasing them at this time.
3. Opposition to the lowering of such labor legislative standards as exist, or, if changes are made, that they should be surrounded by adequate safeguards.
4. The American standard of living to be the standard by which compensation to soldiers and their families should be measured.
5. Taxation on general articles of consumption to be avoided.

President Tucker, of Dartmouth, in his interesting article on settlements, in the May number of the *Atlantic Monthly*,

concludes with this statement: "In the searching trial through which we are now passing I believe it will be found that after the public school, the social settlement has been the most direct and effective agency at work for the coherence and the integrity of the nation."

Organized labor can speak for its own group, but for the great mass of wage-earning people, who have no other spokesman than ourselves, we claim the right to be heard at this time.

Tuberculosis in France¹

By *Hermann M. Biggs, M.D.*

COMMISSIONER NEW YORK STATE DEPARTMENT OF HEALTH

THE military operations in Europe during the great war now in progress have presented a remarkable experimental confirmation on a large scale of certain fundamental facts with relation to the development and extension of tuberculosis, facts which most of us have long believed to be true but which have often been disputed.

I would refer first to the conditions under which tuberculosis has developed in the army and among the civil population of the countries at war, and the methods of extension of the disease and also to the conclusions which may be drawn from what has occurred with reference to its epidemiology. It may be said in passing, that all of the great epidemic diseases which have acted as deadly scourges to the armies in the field in most former wars have been brought practically under control by the application of modern preventive measures. Typhoid and typhus fever, smallpox, cholera, bacillary dysentery, cerebro-spinal meningitis and similar diseases have prevailed only in certain isolated localities at certain definite times when and where the application of preventive measures had been ignored, neglected or been rendered impossible because of existing conditions.

So far as I know, tuberculosis has never before played a very large part in the sanitary history of any great war, but it is playing such a part in the present struggle. While most of us have believed and strongly maintain that the modern popular anti-tuberculosis campaigns so widely carried on in this country, and in Great Britain and Germany, and the public health measures which have been adopted in most English-speaking countries, have been responsible for the steady and continuous decline which has taken place in the rate of sickness and death from this disease—I say, while most of us have strongly believed this to be the fact, this opinion has been vigorously opposed. The conditions in Europe lend strong confirmation on a very large scale to our views.

For many years in England an active anti-tuberculosis campaign has been carried on, and there has been a steadily and constantly decreasing death rate from it. The death rate from pulmonary tuberculosis there now is about 1 per 1,000 of the population, as compared with 1½ in New York state and 3 in France. England has the lowest rate of any of the great countries of the world.

¹In contrast to England, France had done practically nothing before the war for the prevention of tuberculosis. Such anti-tuberculosis movements as had been undertaken had been local and sporadic in character and had been solely the result of private initiative. The sanitary authorities have never taken official cognizance of the disease and notification of it is not

A distinguished gentleman connected with a mission to France impressed me greatly in a recent conversation by speaking of the work of reconstruction that is going on in France at this time. In the very midst of her terrible struggle, France is rebuilding her cities and villages, replacing her old structures and replanning her city life.

And so, too, our work of civilization must go on and must, indeed, be increased at this time in the interest of the very ideals for which we have gone to war.

required anywhere in France even now. There have been no provisions for institutional care, of either early or advanced cases, and but few dispensaries.

At the beginning of the war there were in the whole of France only 1,000 sanatorium beds for tuberculosis and these were in private institutions. There were no provisions for the care of advanced cases excepting as they were received in the general wards of the general hospitals. You will remember that this method of care was prohibited more than twenty years ago in New York city.

The death-rate from tuberculosis in France has been continuously high, and especially high in the cities, and has decreased slowly and but little. For the whole of France before the war it was nearly 3 per 1,000 and in many of the cities it was much higher. In some cities, as for example, in Havre, the death-rate last year was more than three times that of New York city and the tuberculosis death-rate alone of Havre was equal to 40 per cent of the total death-rate from all causes in New York city.

With such conditions existing among the civil population of France in 1914, it would have been possible to have anticipated to a large extent the precise results which have followed. With pulmonary tuberculosis thus widely disseminated in the general population, France mobilized a great army with great rapidity and without thorough physical examination of those enrolled. Under the stress of the situation such examinations were impossible and, consequently, a large number of early, latent and arrested cases of pulmonary tuberculosis were mobilized. Many men thus enrolled in the army rapidly developed pulmonary tuberculosis in the preliminary training camps, while still more broke down with active disease when subjected to the strains and hardships incident to life at the front.

I think few of us realize how different are the living conditions imposed on the troops by modern warfare from those obtaining in most previous wars. They are absolutely unlike those which we are accustomed to associate with an army in the field. We think of armies as living in tents in the open air under the best hygienic conditions—at least, so far as light, fresh air and life in the open are concerned. In France during the present war quite the reverse of this has been the case. The troops, instead of living in tents and in the open air when they go to the front, live in trenches, often wet and always damp and cold, or they are in dugouts underground, still more damp and colder. When relieved from duty in the front fighting lines, they are billeted in peasant houses in towns and villages, or in farm houses and outbuildings near the front, in very much overcrowded rooms without ventilation or fresh air or sunlight, and even with very little diffuse

¹ See page 123.

daylight. These peasant houses in France are provided with few windows and doors and these are rarely open, owing to the strong national aversion of the French people to fresh air.

In other words, the French troops are at all times, excepting when on the march, living under unfavorable hygienic conditions, those under which this disease is especially likely to be transmitted.

Generally speaking, the peasants from whom the soldiers are largely drawn are not cleanly; the results, as I said, are exactly what one would have anticipated—the development of tens of thousands of cases of tuberculosis among the troops. By the end of December, 1915, 86,000 soldiers had been returned to their homes with active tuberculous disease. In February of this year it was estimated that about 150,000 had thus been returned and more are constantly being discharged for this cause.

The history in France has been repeated, I believe, from such data as are obtainable, in Austria, Hungary and Russia, and to a less extent also in Germany. Only England has not suffered to any great degree and this is because: First, of the low prevalence of the disease in the civil population of England previous to the war; second, because the army was mobilized deliberately, careful physical examinations were made and those applicants who had suspicious histories or signs were excluded; and third, because the English troops live under distinctly better conditions at the front than do the French, because as a nation they are fond of fresh air and the outdoor life.

What has occurred in the army has occurred also among the prisoners of war, especially in Germany, who have been greatly under-nourished and over-crowded and have lived under the most unhygienic conditions. It has also occurred among the French and Belgian refugees and among the civil prisoners of war in Germany and, to a less extent, in the general civil population of all the countries at war. All the medical reports which have been received from all of these countries record a great increase in the number of cases of tuberculosis in all classes of the population, especially among the young; and there is the added history of many cases in whom the disease had long been arrested that had again broken down and in whom the disease has again become active.

How enormous the problem is in France one begins to realize when we attempt to estimate the number of cases, as nearly as may be, which would be found in various groups of the population of France if war were to be terminated at once.

We have, first, about 150,000 discharged soldiers with tuberculous disease. Second, it has seemed to me that an estimate of 3 or 4 per cent of the cases of tuberculosis among people who formerly lived in the departments of France which have been in German occupation would be a very conservative estimate. As this number before the war was about 4,250,000, we may perhaps safely say that there are at least 125,000 more cases among these people.

Two Million Refugees

REMEMBER in the departments of France which are occupied by the Germans, or were until the recent retreat, there were before the war about four and one-quarter million people. About one-half of these, two million people, fled from their homes before the first German invasion and after the battle of the Marne and the establishment of the western lines, which have been so long held. These refugees were scattered along the front and in the villages and towns nearest their previous homes, and a good many of them remained in Paris, which was not far from the front. At one time the German army was only fourteen miles from Paris, and even

during the past winter the nearest point of the lines was only about forty miles from Paris.

These two million people have been living in the villages and towns near the lines under the most unfavorable conditions. They are homeless, absolutely without resources and dependent entirely upon charity organizations for their living, and there has been an enormous amount of tuberculosis among them, how much, of course, it is impossible to determine accurately.

Aside from these there are about two and one-quarter million people back of the German lines, civilian prisoners in Germany, who are living partly in their homes, partly in concentration camps and partly deported into Germany. All of those in the middle age of life, both men and women, practically all of them between the ages of 15 and 45, have been deported into Germany, and the rest, young men or old, were either in concentration camps or in their homes. Of these, large numbers were being returned from time to time to France, either as they became ill and in bad physical condition and were a serious burden upon their captors, or when some military operations which were being contemplated had rendered it desirable to evacuate the portion of the territory they occupied.

One in Four of the Refugees Infected

WHEN we were there, about one thousand a day were being returned through Switzerland by Avion and Geneva, and these people came back in the most deplorable condition. Of the 20,000 of these civilian prisoners returned, it was said that 5,000 were suffering from tuberculosis. They returned in the middle of the year 1915, in July and August. They had been back of the German lines for about eight months and the majority of them had never had their clothes off from the time they had been taken from their homes. They had been kept in Germany and had been returned to France wearing the same clothes which they wore when they left France seven or eight months before. You can readily imagine the condition of these people; the estimate that 5 or 6 per cent were suffering from tuberculosis is probably very conservative.

Third, there are now between 350,000 and 400,000 French prisoners of war in Germany. It seems wholly conservative to estimate that at least 5 or 6 per cent of these are suffering from tuberculosis—the French estimates run as high as 30 or 40 per cent. This would give over 20,000 more cases.

Fourth, there are now probably more than four million men in the active army of France and cases are still being discharged from the army. It is perhaps safe to estimate that at least $\frac{1}{2}$ of 1 per cent of men in the army are suffering with the disease, or will be at the termination of the war. This would give 20,000 additional cases.

Fifth, there were more than 100,000 deaths annually from tuberculosis of all forms in the whole of France before the war. If we estimate the number of cases in the civil population on the basis of deaths occurring annually, and allow two cases for each death from tuberculosis of all forms, there would have been 200,000 cases of the disease in the total civil population before the war. But more than one-quarter of the total population has already been accounted for in the groups previously considered; *i. e.*, in the civilian prisoners in Germany, the prisoners of war in Germany, the refugees and those who have died from wounds or in battle. These latter, we are informed, numbered up to February 1,350,000. All of the groups thus referred to number more than 10,000,000, or more than one-quarter of the total population of France.

It does not seem likely that the cases of tuberculosis in the civil population have decreased since the war began and an estimate of 150,000 in the 30,000,000 not accounted for would

not seem to be excessive. There would, therefore, be altogether probably not far from 500,000 cases of tuberculosis in France to be dealt with if the war were to be terminated at once. An estimate of 400,000 cases would seem to be really conservative.

To deal with these, there are available in France at the present time, first, in the so-called sanitary stations which have been provided since the war began and in the special hospitals and sanatoria for tuberculosis, about 11,000 beds. It is hoped before the end of the year to increase this number to 15,000 or 16,000. Second, there are a few dispensaries, well organized, well equipped and administered—perhaps a dozen in all—and a few more small dispensaries which have done comparatively little work. Third, there are practically no trained nurses or trained social service workers, but there are a few women who have been or are being given three months' courses of training at the present time at the Laennec Hospital. Fourth, there are but few physicians in France who have given any special attention to the tuberculosis problem—hardly more than a dozen—very few who have had sanatorium experience and still fewer who are familiar with the tuberculosis work of others.

The situation thus is certainly a very serious and threatening one—400,000 cases of disease and practically no facilities for caring for them or supervising them.

The French government has in part realized the situation and is trying to meet the problem by the establishment of well-organized dispensaries in all the populous regions of France, with trained or partially trained social service workers attached to them to visit the cases in their homes. The machinery for the establishment of these dispensaries has been created under a special law, and the cost of the administration has been apportioned under this law on the municipalities,

communes, departments and the state. The application of the law, however, is not mandatory. Local initiative is depended upon to establish these institutions and this will certainly be lacking in many of the localities which seriously need them.

In Havre, while we were there, although the death rate last year from tuberculosis was $5\frac{1}{2}$ per 1,000, the tuberculosis dispensary which had been in operation previous to the war was closed, because there was no physician to operate it and no nurses and workers available. There is urgent need for physicians and nurses, but it is essential that both of these speak French. Dr. Loir, the health officer of Havre, told us that in that city with a population of about 140,000 before the war, there were at the present time only seventeen physicians, or one to 8,000 of the population. A similar condition exists to a greater or less extent everywhere in France.

The contrast between the present situation with reference to the tuberculosis problem as it exists in England and as it exists in France is most striking and most instructive. France has suffered from the war infinitely more than England has thus far. Great Britain has raised an army of over 5,000,000 men and no new or serious tuberculosis problem has been created, while France has a problem of such magnitude that it even threatens the future vitality and economic development of the French people. In England the tuberculosis problem had been efficiently met before the war; in France, on the other hand, practically nothing had been done.

It is not, therefore, because measures for the prevention of tuberculosis are wanting or inefficient that tuberculosis has become such a serious problem in so many European countries, but it is simply because the well-tried measures have not been applied, both before and since the outbreak of the war, in an efficient way.

Foreign Students in America

By Charles D. Hurrey

GENERAL SECRETARY, COMMITTEE ON FRIENDLY RELATIONS AMONG FOREIGN STUDENTS,
NEW YORK CITY

“WHAT is going to happen to me in the event of war between the United States and Germany?” recently inquired an anxious Turkish student in one of our American colleges. “Remittances from Constantinople are delayed and may be cut off entirely,” he continued; “if I am not interned, I suppose I shall have to quit college and go to work for my living; do you know where I could secure a position?” He is one of 6,000 foreign students in the United States, but he has given expression to the anxious fears of several hundred of his colleagues.

In American educational institutions there are at present 175 students from the German Empire, 45 from Turkey, 110 from Mexico, 30 from Bulgaria, fully 1,000 from Japan, 1,500 from China and 1,200 from South and Central America. According to the Directory of Foreign Students recently published, the following institutions enroll the largest number of foreign students:

Columbia University, 193; University of Pennsylvania, 183; Harvard University, 175; University of Illinois, 140; Cornell University, 138; University of Michigan, 134; Howard University, 119; University of California, 107; Massachusetts Institute of Technology, 104; Rensselaer Polytechnic Institute, 90; American International College, 78; Yale University, 73; Dubuque German College and Seminary, 72; New York University, 70; University of Chicago, 62;

Ohio State University, 62; Tulane University, 62; Leland Stanford University, 60; George Washington University, 58; University of Maryland, 55; Tuskegee Institute, 54.

For a period of two years, 250 Armenian students have received no communication from home save the reports of devastation and massacre. Scores of Russian students are still waiting for some hopeful word from relatives in the thick of the fight.

The patience and the silent suffering on the part of many of these students is a stimulus and rebuke to American college men and women. We have recently heard of a Russian woman student in the middle West who, in addition to maintaining herself in college, has earned sufficient money by selling life insurance to enable her mother and sister to start for this country. A few weeks ago I talked with a foreign student who is working as a fruit peddler and hod-carrier; he had studied for two years in the universities of Belgium and is now making a brilliant record in one of our prominent municipal universities.

In these trying times future leaders of many nations are in need of our sympathy and support. Some are eager for an opportunity to earn money during the summer vacation, others need a temporary loan of a few dollars, a few are in ill health and discouraged. All would welcome an invitation

FOREIGN DELEGATES AT THE NORTHFIELD STUDENT CONFERENCE OF THE Y. M. C. A.

to our American homes. Nothing could be more offensive than to treat them as objects of charity; they are ambitious, cultured young people representing influential families, and many of them enjoy the support of a government scholarship; but unless their needs and problems are brought forcibly to our attention they will return to their homelands impressed by our selfishness, arrogance and prejudice.

The Committee on Friendly Relations Among Foreign Students, with offices at 124 East 28 street, New York city, is endeavoring to serve these representatives from abroad by ascertaining their wishes and difficulties and promptly relating them to persons and agencies which can be most helpful.

It is very important that assurance of friendship be given to all students representing the nations with which we are now at war. In our conversation, correspondence, and in all that we write or speak as well as through deeds of kindness, we can reveal a spirit of brotherhood and good will. In a number of universities groups of foreign students under the leadership of competent guides have inspected settlements, playgrounds and various welfare institutions; this effort has resulted in giving knowledge of the genius and method of America's institutions for social betterment.

A few weeks ago the foreign students in the city of Baltimore were entertained in a beautiful country home near the city; the Japanese students of Boston recently enjoyed a visit to a large dairy farm, and several Latin-American students accepted an invitation to inspect a modern office building. Three hundred and thirty foreign students representing thirty nations were received last June in student conferences conducted by the Young Men's Christian Association. Among these students, who were entertained as guests of American friends, were the brother of the president of one of the Latin-American republics, the nephew of a former prime minister of China and many other future leaders. It is the unanimous testimony that these ten days of work and play with hundreds of America's best students and professors have made a

profound impression in favor of international brotherhood.

Employment in offices, homes, factories and on farms during the summer has been found for promising students who otherwise would have been unable to complete their education. In Chicago, Philadelphia, New York, Boston and other cities hikes and excursions under able leadership have afforded opportunity to inspect manufacturing plants or places of historic interest. In at least one university a group of foreign students was invited once a week to a private home to spend the evening in discussing American etiquette and idiomatic expressions. Many clubs, churches and societies are taking advantage of the opportunity for addresses, concerts and entertainments which can be given by foreign students. Information regarding the activities and problems of foreign students in America is to be gained from such magazines as the *Chinese Students' Monthly*, official organ of the Chinese Students' Christian Association in North America, and the bi-monthly *Japanese Student*.

Future promoters of trade, captains of industry, university presidents, diplomats and builders of international friendship are now with us as students. The Japanese ambassador in Washington and the Japanese representative at the Court of St. James were fellow-students at De Pauw University a few years ago. The Chinese minister in London is a graduate of Cornell University, China's minister in Washington of Columbia, the vice-speaker of the Chinese Senate of Yale, the Chinese minister in Berlin of Virginia, the Chinese minister of finance of Yale, and the private secretary to the president of China of Pennsylvania. The brother of the king of Siam is studying at Harvard, and the son of the president of the Imperial University in Tokyo is following in his father's footsteps at Yale. The ambassador from Mexico is a graduate of Massachusetts Institute of Technology.

Winning the confidence and esteem of such men is an expression of wise statesmanship, sound business sense and genuine religion.

Nature's Dwarfs

Stunted Trees from the Seed that Fell on Stony Soil Close Kin of the Chil- dren of the Slums

By *Albert A. Hansen*

DEPARTMENT OF BOTANY, PENNSYLVANIA STATE COLLEGE

DURING a recent visit to New York city, the writer had occasion to go into the slum districts. The day was ideal; the bright sun had lured thousands of children into the street, for the municipality had furnished them with no other convenient playground. One could hardly help noticing the puny, stunted growth of many of these thin, underfed youngsters. The children of the poor are usually an ill-fed, poorly nourished portion of humanity; the result of this malnutrition is plainly indicated in the undersized and stunted condition of their bodies. How can these diminutive children hope to grow into vigorous and healthy manhood and womanhood?

While traveling along the rocky shores of Lake Superior during the past summer, the writer found similar conditions of poverty existing among plants. Growing upon the bare rocky ledges, many plants were struggling hard for life, fighting an uneven battle against the insufficient supply of food which nature had allotted to them in this bleak and dreary situation. The most noticeable feature of this unfortunate flora was the undersized condition of practically all the plant inhabitants. Here, indeed, was nature's slum! The shrubby cinquefoil, which under ordinary conditions becomes a fair-sized shrub, was here reduced to a tiny plant barely three inches high. Asters and goldenrods which grew in glorious splendor and profusion a few yards away from the rocks, shrank into diminutive plants of almost insignificant proportions. Here among the barren rocks even trees could be found waging a bitter struggle against the adverse conditions of nourishment which was their unhappy lot. Seeds which in rich soil could develop into magnificent individuals, as evidenced by the forest not far distant, here in the rock crevices had become merely dwarfed and stunted eccentricities of nature.

In this lilliputian forest, the writer found a miniature spruce tree, scarcely a foot high, whose annual rings numbered eighteen. What tragedy had marked these eighteen years of toil and struggle against the harsh environment! Each annual ring bore mute evidence of the fierceness of the uneven contest; the trunk of this undersized tree was so small that the eighteen rings could be seen only by the aid of a hand lens. Not far distant, in a shallow crevice almost devoid of soil, grew a tiny but perfectly formed arbor-vitae, fourteen inches high. Sections of its stocky little trunk were carefully cut with a razor, but the annual rings were too small to be accurately counted with the hand lens. The services of a microscope of high power revealed the startling fact that this miniature individual was in reality a tree of mature age, since over fifty annual rings could be counted. Surely the zenith

of this marvelous natural dwarfism had here been reached!

Further diligent exploration, however, was rewarded with the most remarkable tree which it has ever been the good fortune of the writer to behold. In a tiny rock fissure, barely an inch wide, grew an arbor-vitae of perfect symmetry, about six inches high, whose adult condition was attested to by the perfect little cones on the uppermost branches of the crown. Under normal conditions the arbor-vitae is a tree of imposing size, growing from forty to seventy feet in height. Harsh indeed must have been the environment which caused its starved progeny to reach maturity when the plant was only half a foot in height.

The main factor which produced these natural curiosities was the lack of proper nutrition. The food contained in the scant crevice soil was insufficient to mature a tree of normal

THE environmental conditions must have been very severe which permitted this arbor-vitae to grow to a height of barely a foot in over fifty years. The annual ring count discloses the age. The curious little arbor-vitae at the top of the page is really a mature tree, as is shown by the fruit which may be seen on the upper branches. The cones bear perfect seed. The entire tree is about twice the size of an ordinary watch.

size. In consequence of these conditions of extreme poverty the unfortunate little pygmy trees never exceeded a seedling in size.

That adverse conditions do produce dwarfs in nature is a fact that is verified in fields other than those just described. The Shetland pony was reduced in size because of the harsh and adverse conditions to which it was subjected on the cold and barren Shetland Islands. Lack of nutrition has exacted the toll from this diminutive member of the equine family, until it has become so dwarfed in size that it is used as a plaything for children.

It may be asked why anyone should feel concerned about a mere question of size. Almost everybody knows persons of small stature who are in perfect health and, on the other hand, giant families which are the victims of hereditary disease. It is quite true that the factor of shortness in itself does not indicate a state of disease; often it is due to selection, either unconscious—as in the case of unusually small families—or determined—as in the case of many types of lap dogs which are the result of generations of the most careful breeding. The instances here considered, however, are not examples of size reduction by breeding. In their case, stunted growth is a symptom of organic malformation caused by lack of food and an unfavorable environment. They do not by any means exhaust the list of examples which nature furnishes of dwarfing attributable to malnutrition and other adverse conditions.

The general principle that nature punishes any infraction of her laws, as illustrated by the three cases previously considered, is capable of a practical application. If the farmer desires strong and vigorous crops he must feed his plants. Without the proper plant foods, whether they be supplied by the application of commercial fertilizers or proper crop rotation, the land cannot yield an abundant return of large and

Orr in Chicago Tribune

HOW ABOUT BABIES?

healthy plants. If the gardener desires his garden to produce a robust flora, he must pay attention to the feeding of the inhabitants, and his efforts will be richly rewarded.

Nature could present us with no stronger argument for the proper nutrition of her living progeny than is so powerfully brought to our attention by these dwarfed products of the rocky, barren and desolate shores of Lake Superior.

The Task of Civilian War Relief

The third of a series of articles based upon a course of lectures upon civilian relief now being delivered in New York with the sanction of the American Red Cross by Porter R. Lee of the staff of the New York School of Philanthropy. The articles are being written by Karl de Schweinitz of the New York Charity Organization Society

III

THE nation may know precisely what it wants to have done for the families of men who enlist. It may insist that no home suffer unnecessarily because of the absence of one of its members in the army. But beyond the payment of a separation allowance the country is not likely to know what steps should be taken to accomplish what it thinks ought to be accomplished for families in need of special assistance.

This is the function of the trained Red Cross civilian relief worker. To help a family handicapped by the loss of a father to maintain a normal standard of living requires as special a kind of knowledge as does the building of the house in which the family lives.

Who is there who does not know what sort of house he would like to have, who could not even tell a contractor how he would like to have it look? Few indeed, however, are the people who could put the house together. That requires a particular kind of technique. A sick man may desire health ever so ardently but without some one who through experience with hundreds of other sick persons understands the

method of cure he cannot take the steps necessary to achieve his purpose.

Similarly one may know that the ideal for a family in trouble is to get out of trouble and to achieve all the health, self-dependence and self-reliance of which it is capable, but this does not mean that one understands the steps by which that ideal can be attained. Such knowledge comes only after training, only after one has had the benefit of experience, both personal and vicarious, in helping many families out of trouble. It is because such a body of experience exists that the Red Cross civilian relief worker knows how to proceed, knows what to do next, in discharging the obligations of the country over against those families who may be in distress by reason of the mobilization of troops.

To understand this method one need merely consider that most common instance of human need—the man who appears at the back door and asks for money. Such a man, call him Albert Gough,¹ came to the office of a certain

¹ The story of Gough appears in more detail in *Social Diagnosis* by Mary E. Richmond, published this week by the Russell Sage Foundation.

bureau, said he was stranded and asked for help in getting to a town in another part of the state where he had formerly lived. The social worker to whom he had been sent might have done one of three things. She might have given him something to eat or money to get something to eat; she might have dismissed him; she might have bought him a railroad ticket.

The First Step to Get Acquainted

TO HAVE given the man something to eat would have only meant that a meal or two later he would have been obliged to apply to somebody else for assistance. To have dismissed him would have accomplished nothing for him and to attempt to buy railroad tickets for all who asked would be an undertaking indeed. There was one more possibility. She might have found work for him, but without knowing more about him she could not conscientiously have recommended him for a steady job and temporary work would merely have postponed his need a day or two. Besides he might refuse to work.

What the social worker did was to have a talk with the man. Among other things he told her that he was fifty-three years old, that sixteen years before he had left his home which was with his two sisters and that he had since supported himself by making and selling water colors. He mentioned the name of a firm in another city with which he had been employed, and also the name of the man whom one of his sisters had married.

Having gained Gough's confidence the social worker persuaded him to go to a lodging house where he was able to work for his board and lodging. She wrote to his former employer to inquire about his ability and she asked a bureau in the town in which he had formerly lived to try to find his sisters.

The letter from the employer told little about the man, but the bureau in the other town succeeded in discovering his sisters. Meanwhile Gough's actions caused the social worker to doubt his sanity. She learned that he had been in an institution for the insane and through correspondence with the state board of insanity discovered that he had left the sanitarium just ten days before. He was pronounced harmless and reasonably trustworthy. It was decided that inasmuch as his sisters were willing to take care of him he might safely make his home with them and the family was reunited. Incidentally, had Gough through his own efforts succeeded in reaching his native city he would probably have not been able to find his sisters for they had moved to another part of town and only a painstaking and clever search enabled the bureau to discover their new home.

The social worker did not do these various things by chance. They did not occur to her at the moment. She proceeded as training and experience had taught her to proceed. Her method is substantially the method which the Red Cross civilian relief worker must follow if she desires to be of real service to the families who need her assistance.

The talk which the social worker had with Gough she called a "first interview." This interview was more than just a beginning. It was held in order that certain definite things might be accomplished. As a doctor cannot do much for a patient who has no confidence in him, so a social worker cannot hope to help a family or an individual unless they have confidence in her. Moreover she cannot successfully undertake any measures of assistance unless she knows what the family's plans for themselves are and what they think about their predicament. The social worker in her interview with Albert Gough learned the name of a former employer and the name of his married sister. This was not an accident. The social

worker hopes in a first interview to find this out and also the family's previous places of residence, the name of the church with which the family is connected and the address of the school which the children attend.

This information is not obtained by coming before the family with a schedule to be filled out after the manner of a census taker. Nor does the social worker win the confidence of the family by telling its members that that is what she wants. The method of the social worker here is not unlike that of an accomplished hostess who draws out a bashful guest and interests him in talking about himself; and if it is true that often the guest leaves convinced of the amiability of his hostess and conscious of having enjoyed himself, so also the family finds itself placing reliance upon the social worker and discovering relief in meeting with some one who has a sympathetic interest in their troubles.

The social worker sought out Gough's sisters for him and learned that they were willing to give him a home and assume responsibility for looking after him. Here, too, she was following a well-understood method. Both as a source of helpfulness and as a means of interpreting a family's character and needs relatives are important. Frequently all the plans for a family's welfare depend upon the relations, their peculiarities, their strengths and their weaknesses. Furthermore, when one has come to know a family's kinship one has enlarged in a measure one's acquaintance with the family itself. Relatives indeed frequently explain their kindred. Often, too, they are already trying to help the family and without cooperation with them the social worker would be struggling at cross purposes.

In negotiating a loan bankers are said to pay as much attention to a man's character as they do to the collateral he offers. A laboring man's work record is both his character and his collateral. It is the most important asset he possesses. For this a prospective employer or an employment bureau inquires first of all. If it is important to them it is also important to the social worker. Frequently the employer knows about the health of his former employe and often he can be induced to reemploy him or to give him help in other ways. Social workers seldom consult the present employers of men in whom they are interested. There is always the danger that the man's job and his future may be jeopardized by an injudicious inquiry.

Getting Facts Without Gossip

THUS also it is unwise to talk with neighbors. Rather than do this social workers go to the family's previous addresses. The value of such a visit appears in the story of Mrs. Finnegan, which was told in the SURVEY of last week. In a house where Mrs. Finnegan had formerly lived was found an old friend from whom through the meddlesomeness of an officious neighbor she had been estranged. The news of Mrs. Finnegan's trouble led to a reconciliation. Incidents of this sort do not always happen. Ordinarily the visit to the previous address is just one more step in the process of becoming acquainted with the family.

Albert Gough gave the social worker only the slightest hint of his insanity. She learned about his recent discharge from a sanitarium by communicating with the state board of insanity. Public records, vital statistics, marriage records, property records and the records of public institutions are invaluable in bringing the worker to a better understanding of the person she is trying to help. Just as the knowledge of Gough's mental weakness affected the whole problem of his care, so the record of a marriage or a death may be of the greatest importance in the care of some other person.

Whenever there are children in a family the school should be visited. Misfortune at home may explain to a teacher the reason for a boy's ineptness, and again upon the scholarship of a child may depend largely the character of the plans which the family and the social worker may make for his future. The school teacher can often give helpful information about the health of the children.

What the school is to the child that and a great deal more may the church be to the family. The pastor has probably known the household for years. His assistance may help to make the man stop drinking or to prevent the son from growing wild. In recreational and spiritual opportunities, in material relief, and as a social center the church is a source of aid that no social worker can afford to overlook. Incidentally, of 2,960 families under the care of the New York Charity Organization Society during a certain period last year only two were not affiliated with any church.

Social agencies are another means of assistance to the social worker both for the insight they may have into a family's needs and for what they may be able to do to help that family. In nearly every large city there is a social service exchange or a registration bureau from which the social worker may learn by inquiry whether any other social agency in addition to the one which she is representing has had anything to do with the family which she is trying to help.

The first interview, relatives, former employers, previous addresses, public records, school, church, social agencies—though not necessarily in this order—are the procedure of the social worker in helping a family. And as she consults one after another of these means and sources she finds her acquaintance with the family and her understanding of its needs increasing. More than this with each person whom she approaches she accomplishes one thing more for the family so that her plan for its welfare becomes not something fixed and unchangeable but rather a development which with each visit becomes greater and more inclusive.

This then is part of the method which social workers have found to be effective in their work with families. And as human nature is the same everywhere despite the fact that no two individuals are alike, this method is applicable whenever it becomes necessary to help anybody. With it the work of civilian relief can become a ministry effective and kind.

To be sure this procedure must not be followed blindly. Much of the method just described did not apply in helping Albert Gough. It may not apply in every detail to many families of soldiers. The heart and substance of the method, however, is this, that wherever there is a person or organization which may be able to give information or help of any kind to a family, that person and that agency should be visited and that help and that information obtained.

THE CHALLENGE

By Paul Lyman Benjamin

The Toiler speaks—

"I will give my hands—my hands
Knotted with strain and toil,
Torn with labor of all the lands,
But you—will you give your spoil?"

The Student speaks—

"I will give my brain and my soul,
I will not wince at pain;
I will pay to the full the toll,
And you—will you give your gain?"

The Clerk speaks—

"I will give my life—nay breath,
Oh, God, I have no more;
I will laugh at a grisly death,
But you—will you give your store?"

The Poet speaks—

"I will give my dreams and my songs,
I will write with the sword;
I will challenge kings for these wrongs,
And you—will you give your hoard?"

The Young Man speaks—

"I will give my youth—this youth,
The glad, full flush of health;
I will kindle the torch of truth,
But you—will you give your wealth?"

The Mother speaks—

"I will give my sons—these sons,
All—all that I hold;
I will give my flesh for the guns,
And you—will you give your gold?"

COMMON WELFARE

CONSCRIPTION ADOPTED BY CONGRESS

WHEN it came to a vote on April 28, both houses of Congress decided by overwhelming majorities in favor of the draft as against the volunteer plan for raising the million or more recruits to the United States army in addition to the regulars and the National Guard.

As sent to conference committee of the two houses, both of the draft bills provide for an increase in the regular army to 287,000 men, and an increase in the National Guard to 625,000 men; and they further authorize the President to raise 500,000 men by selective conscription and an additional 500,000 men if needed. The Senate bill, in addition, provides for the recruiting of three additional cavalry regiments for patrol duty on the Mexican border and permits the raising of one army division under Colonel Roosevelt's volunteer plan for immediate service in France.

As the result of concerted attack made in the House upon the plan of fixing the age limits for conscription at 19 and 25 years respectively, the House made the age limits 21 and 40 years, and the Senate 21 and 27 years respectively. All male citizens and male persons who have declared their intention to become citizens are, within these age limits, to be subject to draft.

For the enforcement of the draft the secretary of war is authorized to establish tribunals, the majority of whose members shall in all cases be civilians. Their number and location—whether in each voting precinct or assembly district or larger political division—is left to the judgment of the War Department.

Exempted classes include the vice-president, the legislative, executive and judicial officers of the United States and of the states, members of established religious organizations whose creeds oppose all war and clergymen of all denominations. The Senate bill also exempts theological students who have partially completed their courses.

Provisional exemptions, to be determined by the President, cover government employes in arsenals, navy yards,

armories, custom houses, the postal service and persons engaged as pilots and mariners in the merchant marine, or in industries including agriculture, found to be necessary to maintain the military establishment; the President may also exempt all persons having dependent families where such dependency makes it inadvisable to draft the supporting male member, and those found to be morally or physically deficient; also such persons employed in the service of the United States as the President may designate.

While the President may, by executive order, remove all of the provisionally exempt classes from the possibility of draft, it is considered likely that this action will be left to the tribunals, so that the circumstances of each particular case may be made the basis for a draft or release.

The House voted that the rate of pay of all enlisted and drafted men should be \$30 a month—twice the present rate. The Senate bill calls for a payment of \$29 a month. This is a victory for the trade union members who criticized the under-payment of the troops.

Prohibition of the sale of liquor to officers and enlisted men in uniform, and authorization to the President to regulate the sale of liquor near military camps, is a Senate amendment, adopted as a substitute for another Senate amendment which forbade the selling or giving of intoxicants to a soldier.

SOLDIERS' PAY

THE Council of Defense for California endorses the principle of federal separation allowances and is strongly insistent upon a minimum allowance of thirty dollars monthly each for wives and dependent mothers and ten dollars monthly for each dependent child, and urges the "Survey" to give this endorsement publicity.

JOHN R. HAYNES,
Chairman Relief Committee,
Los Angeles.

SMALL NATIONS LEAGUED TOGETHER

A LEAGUE of small and subject nationalities has been formed, with headquarters in New York, "to establish a permanent congress of the small, subject and oppressed nationalities of the world; to assert the right of each nationality to direct representation at the peace conference following this war, as well as at every international conference held thereafter for the discussion of questions affecting its interests; to present the case of these nationalities to the world; to emphasize the importance of restoring to these nationalities the right of self-government as an indispensable condition for world peace; and to promote a better understanding among all nationalities in America and thus broaden the basis of American culture."

The idea of such a league, conceived independently in at least three places, arose partly from the intense interest of the foreign-born and of their mutual sympathies in the struggle for national existence which the present war has brought about in so many different regions of Europe and Asia, and partly from a perception of the similar nature of the call for relief which has come from those smaller countries which have been maimed by the "steam-roller" progress of contending armies.

It is intended that the delegates to the council of the league shall, as far as possible, be chosen from among their most eminent representatives in this country, whether American citizens or not. There is not, at present, contemplated any special pressure upon the government of the United States or of any other individual power, but rather preparation for joint participation in the counsel of the nations when such counsel is resumed.

"The principle of 'no taxation without representation' is gaining new adherents almost every day," say the secretaries of the league, Vincent F. Jankovski (Lithuanian) and Marion A. Smith (Scottish-American), "yet at the international conferences the great powers to this day fail to recognize the right of direct representation in them of the subject nationalities."

ies, the peoples of which are frequently burdened at such conferences with new axes, indemnities, loss of territory, dissection of nationality into several parts, without their consent, and are subjected like chattels to transfer from one power to another."

Incidentally to its principal aim, the league hopes to promote better relations among the various peoples which, for political or economic reasons, have taken refuge in the New World. "Lack of acquaintance with each other and with Americans has created prejudice and a tendency to clannishness; frequently, the true spirit of democracy is overlooked." To avoid anything in the nature of encouraging separatism within the United States, the league hopes also to enroll Americans and American representatives of nations which do not come within the classification of "small" or "subject." It feels greatly encouraged by the speeches of President Wilson of January 22 and April 2, in which he referred to the equality of nations upon which lasting peace must be founded—not an equality of territory or resources, but of right. The purposes of the league will not be fulfilled with the end of this war, however favorable that may prove for Poland, Ireland, Bohemia and other subject nationalities, but will remain until all nations, however insignificant in size and population, will be secure in their freedom under a world democracy.

THE NEW COMMITTEE ON WAR PROHIBITION

LEADERSHIP in the movement to secure national prohibition, as a war measure of economy and efficiency, has been assumed by the newly organized Committee on War Prohibition, with Prof. Irving Fisher of Yale as president, ex-Gov. Eugene Foss of Massachusetts as chairman of the executive committee and William F. Cochran of Baltimore as treasurer. The vice-presidents are Dr. J. N. Hurty, health officer of Indiana; Prof. Edward A. Ross of Wisconsin, Pres. W. F. Slocum of Colorado College and Dr. Harvey W. Wiley.

The committee's slogan is "Save 11,000,000 loaves of bread a day." Its immediate object is "to secure prohibition of the manufacture and sale of alcoholic drinks as a war measure, with no attempt to commit the country to prohibition permanently. The immediate work of the committee will be to educate the public upon the need and benefit of such a measure as a war provision, to encourage the growth of an already strong public sentiment in its favor, and to see that this sentiment expresses itself at the most effective times and to those upon whom decision in the matter depends."

War prohibition the committee holds to be a necessity, "first, as a means of conserving immense quantities of food material now consumed in the manufac-

A POSTER for the Belgian Red Cross by Spencer Pryse, the English artist who has contributed his work to many good causes. One of his earlier posters for Belgian relief was reproduced in the SURVEY for December 4, 1915

ture of alcoholic drinks; second, as an immense factor in bringing the production of the nation to the highest efficiency; and, third, as a vital means of preventing venereal disease in our army and navy."

Professor Fisher and ex-Governor Foss are also the organizers of a Memorial for National Prohibition, prepared before this country entered the war. It is to be presented to Congress in two large volumes containing the signatures of 1,000 prominent business men, bankers, college professors, physicians, journalists and others in all parts of the country. The text of the memorial follows:

In view of the scientifically proved unfavorable effects of the use of alcoholic beverages even in small quantities;

And in view, therefore, of the colossal physical, mental, moral, economic, social and racial evils which the manufacture and sale of alcoholic liquor entail;

And in view of the inadequateness of all methods hitherto employed to check or regulate these evils;

And in view of the great and rapid growth of public knowledge and sentiment on this subject as shown by anti-alcohol agitation

and legislation through most of our national area;

The undersigned believe the time has come for the federal government to take steps looking to the prohibition in the United States of the manufacture, sale, import, export and transport of alcoholic liquors (with the understood exceptions for medical, sacramental and industrial purposes).

SPECIAL HOSPITALS FOR WAR SHOCK

REPORTS from the European battle fronts of the large number of cases of shock and various nervous disorders resulting from the terrific noise of exploding shells as well as from prolonged tension, give special interest to the latest announcements from the National Committee for Mental Hygiene. Dr. Thomas W. Salmon has been appointed chairman of a sub-committee to furnish to the government psychiatric units of from 30 to 100 beds near the largest concentrations of troops.

Dr. Salmon has just returned from an investigation at the Mexican border. He found that mental diseases were approximately three times as prevalent among the troops at the border last

the labor commissioner, on request of the governor, to suspend the law limiting the hours of work of women and children. A joint resolution proposed in the Iowa legislature, authorizing the governor in case of a serious labor shortage to suspend the child labor law, was defeated. From Massachusetts comes word that a bill has been drafted after a conference between legislative leaders, the governor and members of the Public Safety Committee, which "will give the governor and council authority to suspend temporarily in case of need the operation of state laws relative to the hours of labor and Sunday work, so that war orders may be filled in haste in case of extreme need." Similar efforts to break down existing laws are reported from Wisconsin and Oregon.

Responding to this challenge and declaring that "the Consumers' League is confronted by the gravest crisis in its history" and that there is danger lest "its

summer as among the adult civilian population of New York state. During the Spanish-American war the insanity rate in the army rose from 8 to 20 per one thousand.

Special hospital wards and the attendance of trained psychiatrists will go far to facilitate the recovery of the soldiers and will also aid the general hospital work by removing different elements from their wards. The first unit has been provided for by Anne Thompson of Philadelphia, who has given \$15,000 to defray the expenses. This initial unit has been formally offered to the government.

With Dr. Salmon, Dr. Pearce Bailey will serve; also Dr. Stewart Paton, Dr. Lewellys F. Barker, Dr. A. M. Barrett, Dr. G. Alder Blumer, Dr. Owen Copp, Dr. George R. Kirby, Dr. August Hoch, Dr. Adolph Meyer, Dr. William L. Russell and Dr. William A. White.

In New York, the State Hospital Commission has offered to establish a mental clinic or dispensary, with staff, at each of the larger military camps in the state. The Mental Hygiene Committee of the State Charities Aid Association will cooperate.

WATCHMEN ON THE WALLS OF LABOR

THAT certain interests in many parts of the country have been eager to take advantage of the recommendation of the Council of National Defense—that the legislatures give the governors power to modify the labor laws—is clearly indicated by reports from various states. So far, however, the other recommendation of the council—that no modification or suspension be authorized except when particularly asked for by the council—has been disregarded.

Vermont has passed a law allowing

achievement of a quarter century may be largely undone in a few weeks in the effort to speed up our national industry," Florence Kelley has sent out an appeal and a program to members and friends of the league, of which she is secretary.

There are many indications, says Mrs. Kelley, "in the present wave of patriotic fervor" of a widespread breakdown of the labor law. She mentions the bills, described in the SURVEY of last week, which at this writing are still pending in the New York legislature, and calls attention again to the situation in Connecticut where women are employed ten hours at night.

"In the light of the English experience," says Mrs. Kelley, "it is clear that whatever emergency measures may be unavoidable in the United States (such as the executive order allowing ten hours of work instead of eight in ship-yards on account of shortage of labor) should be exceptional, and strictly temporary, and never precedents applying in any field beyond the one in which each is issued."

She urges that as a legislative program every effort be made to:-

1. Preserve statutes prescribing short working hours wherever they exist;
2. Maintain the present minima of sanitation and safety.

The letter points out that even in the most prosperous times of peace, health departments, school boards and placement bureaus are insufficiently equipped. But "in war they are always and everywhere placed financially on a starvation basis." As a working program, therefore, for women who "cannot enlist for active service on ships and in the trenches," Mrs. Kelley suggests:

1. That they lend their aid to federal placement agencies for women and girls in the maintenance of standards in establishments to which they send employes.
2. That the local consumers' leagues make investigations and suggest better methods, preferably by engaging a trained investigator.
3. That inquiries be made especially in communities where war supplies are being manufactured, with respect to safety and sanitary arrangements and housing facilities in the community.
4. That wherever the present laws are relaxed, leagues cooperate with the officials and see to it that periods of overtime are limited and subjected to continuous investigation.

Finally, Mrs. Kelley urges that old-established principles be faithfully supported and maintained. The work for the Saturday half-holiday in retail stores must be continued. There is special need for voluntary home and school visitors on account of the high cost of living, which "is making serious inroads on the health of school children. . . . It is impossible," she continues, "to overestimate the need that we keep especially the soldiers' children in school by means of scholarships where necessary.

"We must strive to encourage enlightened public care for dependents so that there may be no mothers of young children tempted to try to work in manufacture at night and care for them by day. In the tremendous demand for labor this is a real danger. The widespread new interest of inexperienced relief workers threatens that day nurseries may be instituted to encourage mothers to enter industry.

"It is naturally not proposed that every league should undertake every one of the suggestions in this letter. Long experience proves, however, that there is an inexhaustible fund of good will in all communities, and ours is the especial opportunity of affording it every possible outlet within our field of activity in this tragic epoch. In the coming strain upon the nation the workers will bear the heaviest part. It is for us to see that they shall not be uselessly sacrificed."

"HYSTERICAL DEMANDS FOR ECONOMY"

THUS Howard E. Coffin, member of the Advisory Commission of the Council of National Defense, characterizes the misguided patriotism of those who preach indiscriminating saving. "Some states and municipalities are stopping road building and other public work. General business is being slowed down because of the emotional response of the trading public to these misguided campaigns for economy; savings are being withdrawn from the banks; reports show that some people have begun to hoard food supplies, and thousands of workers are being thrown needlessly out of employment. All this is wrong."

The psychological effect of this country's entry of the war, in this respect, is almost identical with that noted in England in August, 1914. In spite of an unprecedented demand for workers in the munitions industry and the withdrawal of vast numbers through mobilization and recruiting, whole industries became needlessly disorganized and whole trades unemployed because misguided corporations believed that the demand for goods other than war materials would stop or seriously diminish, wholesalers reduced their stocks to a minimum, and both manufacturers and tradesmen abstained from normal alterations and extensions of their business and became infected with the germ of fear which gave to their business policy the aspect of a rout rather than of a wise conservatism.

Public bodies, though not directly affected by business fluctuations to the same extent, are nevertheless influenced by the prevalent atmosphere; and, as a result, there was for a time a danger of wholesale suspension of public improvements and other works of no immediate urgency. The Local Government Board and the national leaders of public policy

"It's always fair weather when good fellows get together".

had the same difficulty which Mr. Coffin and his colleagues seem now to experience here in persuading the local authorities that the abandonment of works already commenced was not only unnecessary, but often wasteful and, if it resulted in throwing men out of work, positively harmful.

The Mayor's Committee on Unemployment in New York, which recently made a study of the relation of public employment to fluctuations in private employment, came to the conclusion that it is the business of a city "in executing permanent improvements, the appropriations for which have been sanctioned, to discriminate in the allotment of funds from current revenue and from corporate stock in accordance with the respective urgency of different expenditures, with the avoidance of waste from loss of interest incurred by delays in bringing improvements into use, with the cost of borrowing, of labor and of materials, and, finally, with the state of the labor market and the rate of unemployment prevailing in the city; and that, other considerations apart, the city's expenditure upon such improvements be made as far as possible inverse in total volume to the general rate of employment in the city."

Mr. Coffin says: "Unemployment and closed factories, brought about by fitful and ill-advised campaigns for public and private economy, will prove a veritable foundation of quicksand for the serious work we have at hand." From the experience of the belligerent countries, he foresees that the demands of most of the

national industries and upon public utilities will be increased, not diminished, by war. While it lasts, the added activity of the nation in military and naval preparedness, in shipbuilding and food production, will bring more money into circulation, and, for a time at least, stimulate the demand for all manner of products which are not directly needed for the prosecution of war. A disarrangement of the commercial and industrial machine would have disastrous consequences. "State activities, road building, public works, private industries, all must go on as before. Business must be increased, labor employed and the country kept going strongly ahead as a successful economic machine. We must have successful industries if successful tax levies are to be received."

TUBERCULOSIS AT HOME AND ABROAD

"WAR conditions will intensify all the problems which social workers meet in their work with families," said Porter R. Lee, at a meeting of the Association of Tuberculosis Clinics held in the New York Academy of Medicine. Dr. James Alexander Miller, who presided, called attention to the crisis faced by tuberculosis clinics in the city: First, by the probable withdrawal of workers, medical and social, for national service; and second, by the deflection of funds—not deliberately but under stress of new conditions. In family work, Mr. Lee continued as he pleaded for continued interest and support of the clinics, the cost of living will mean closer planning,

more suffering than ever before, and an economy where in tuberculosis cases economy should least be practiced—in foods. The withdrawal of men from many homes, the probable exemption from school attendance given to school children, and the general unsettling of standards, Mr. Lee pointed out as grave elements in the present situation.

Dr. Hermann M. Biggs, state commissioner of health, spoke of conditions as he had seen them in France during his recent study abroad. Dr. Biggs' address is reproduced on another page of this issue.¹

In closing, Frederick L. Hoffman of the Prudential Life Insurance Company spoke of the race element in tuberculosis. Race pathology had not been given sufficient attention, he believed. Race and heredity count in the spread of tuberculosis even more than occupation, his observations showed. Statistics that point to a high incidence of tuberculosis in low-paid occupations sometimes forget to give the equally high or higher incidence in the highly-paid trades. Strongly Mr. Hoffman expressed his belief that people would not

¹ See page 112.

forget the work of tuberculosis clinics or allow it to disintegrate. One luxury surrendered, he said, would more than pay the cost of supporting this work.

MOONEY'S PART IN FOREIGN RELATIONS

AT almost the moment last week that a mob of radicals in Petrograd was making a demonstration in front of the American embassy, because of the alleged execution in the United States of "a Socialist named Mooney," Judge Franklin Griffin of the Superior Court in San Francisco, who in February sentenced Thomas J. Mooney to be hung, was telling the district attorney who prosecuted him that he ought to take steps toward a new trial for Mooney.

Ten people were killed in San Francisco and forty-five injured by the explosion of a bomb during the "preparedness" parade on July 22, 1916. Four men and a woman, all connected in one way or another with the labor movement, were indicted by the grand jury. Warren K. Billings, former president of the Boot and Shoe Workers' Union of

San Francisco, was the first of the five to go on trial. He was convicted last December of murder in the first degree and sentenced to a term of life imprisonment. Mooney was found guilty in February and sentenced to be hung May 17. Unless something happens to prevent, he will be hung on that day.

But something has happened which has already led Judge Griffin to insist upon a new trial for Mooney, and something that is likely to have a very serious effect upon the testimony of the prosecution's star witness. F. C. Oxman, an Oregon cattle man, testified that he was near the scene of the explosion on the day of the parade, and that he saw Mooney and the other defendants with a suspicious looking suitcase. It was largely on the testimony of Oxman that Mooney was found guilty. It has recently come to light, however, that Oxman endeavored to bring an old acquaintance from Illinois to corroborate his testimony by stating that he saw Oxman at the point where he claims to have been during the parade of July 22.

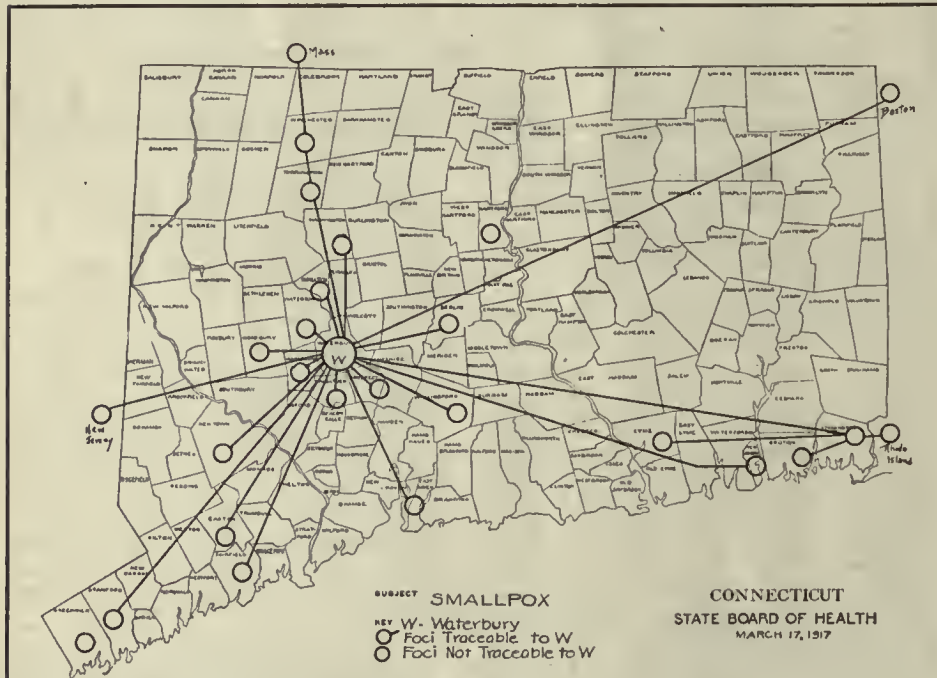

It is now admitted by the prosecution that on December 14, 1916, Oxman wrote to F. E. Rigall at Grayville, Ill., as follows: "I have a chance for you to come to San Francisco as an important witness. You will only have to answer three or four questions and I will post you on them."

On the eighteenth he wrote again to Rigall, offering to furnish expenses and saying: "You will only have to say you seen me on July 22 in San Francisco and that will be easy done." On December 25, he wrote to Rigall's mother, offering to furnish her transportation to California.

Rigall went to San Francisco in response to these requests, but did not take the witness stand. On hearing of the Mooney verdict he is said to have wired to Assistant District Attorney Conlin, "Congratulations on your victory. I believe my testimony will secure Mooney a new trial." He then offered to the defense the letters written him by Oxman.

The San Francisco *Bulletin* has been looking up Oxman's record and states that he was engaged in fraudulent land deals in Indiana several years ago. Oxman has signified his willingness to go to San Francisco to meet the charge of attempting to secure perjured testimony.

It was after the Oxman letters had been brought into court that Judge Griffin expressed the belief that there should be a new trial. He is reported to have interrupted the protests of the assistant district attorney to say, "I don't want any technicalities. This is no time for technicalities. A man's liberty is at stake. I have stated my position, and it is the one way to serve justice. As nearly as I can learn, there has been no denial of Oxman's authorship of these letters. I

SMALLPOX EPIDEMIC FROM A SINGLE IMPORTED CASE

THE map prepared by the Connecticut State Board of Health shows how from a center in Waterbury smallpox has spread this past winter in all directions, even beyond the state lines. A colored girl from North Carolina was the first case in Waterbury. Since that city was, as a whole, opposed to vaccination, the disease made rapid headway, according to Commissioner Black. More than fifty school children had smallpox before January 1, when vaccination was made compulsory; not one has had the disease since that time. The Waterbury Health Department has spent \$20,000; the citizens have spent fully as much because of the epidemic; adding to this the loss of time, it is said to have cost Waterbury fully \$100,000. The state of Connecticut spent not less than a quarter of a million dollars before the epidemic was fully controlled. Bridgeport, New Haven and Hartford, cities of larger population than Waterbury and only about thirty miles distant, have escaped infection. Vaccination is required in all three as a condition of entering school. The epidemic as a whole is reported as a mild form

believe you gentlemen should go at once to the attorney-general and ask that the trial be referred back to the Superior Court. If the district attorney does not take this action, it will be my duty to take it myself."

New evidence has also come to light, it is said, tending to discredit the chief witness in the Billings case.

As this goes to press District Attorney Fickert has taken no action in the case beyond denouncing Fremont Older, editor of the *Bulletin*, which first printed the Oxman letters. He has given out a statement implying that Older had knowledge of the bomb explosion and threatening to bring him before the grand jury.

DAYLIGHT SAVING BEFORE CONGRESS

SENATOR CALDER on April 17 introduced the bill drafted by the National Daylight Saving Association, which provides for setting back the clock by approximately one hour for the whole country during five months of summer. The bill has been drawn on the example of similar laws adopted in Great Britain, France, Germany, Austria, Italy, Holland, Denmark, Norway, Sweden and Portugal. It is strongly supported by the leading commercial organizations of the country, by the American Federation of Labor and by various public authorities. The President in January endorsed the general principle.

So many extravagant claims have been made for daylight saving as an economic and social measure that a certain amount of opposition was bound to develop. It does not, for the great majority of the workers, transfer a work hour from the hottest part of the day to a cooler one. It does not add to the time available for recreation—unless the extra hour is taken from those normally devoted to sleep. It does not appreciably diminish, in the summer months, the amount of industrial work carried on in artificial light and is not, therefore, likely to lessen the number of industrial accidents.

For the great bulk of the urban population, the measure means that one hour of those given to recreation is transferred from artificial to daylight. And this, it need hardly be argued, is a material gain. The advantages are well summarized in a report of the special committee on daylight saving of the Boston Chamber of Commerce, which groups them in three classes—health, morals and social welfare; efficiency; economy.

As regards health, there is evidence that sleep during the dark hours of night is sounder and more beneficial than in the early morning hours. It may be feared, however, that to some extent the extra hour will come out of those usually given to sleep, and a new danger to health would result. The main benefit to health would come from the extra

hour available for outdoor recreation. A letter from the Cleveland Chamber of Commerce states that the adoption of eastern time in that city last summer, representing the putting back of the clock by approximately one hour, resulted in 2,000 more men playing baseball and 1,000 more persons playing tennis each evening.

Still more important, with the high cost of living, is the opportunity for putting in an extra hour after the day's work on growing vegetables.

The Boston chamber, and many other advocates of the scheme, would prefer to see it applied all the year round. Only thus would all its potential social advantages become effective. It would then really lessen occupational work under artificial light, enable work girls to start home before dark, lessen eye strain for school children and make it possible for a larger proportion of city workers to commute without having to make both journeys in the dark, thus giving a new incentive to the relief of city congestion.

The strongest objection to the plan is derived from its compulsory character and the needless self-deception, as some think. However, the experience of this as of every other country has shown that voluntary action on the part of individual firms or even single cities is too difficult to realize, because, in the matter of time, we are too closely interlinked

in our daily life to permit of the use of unrelated clocks and time schedules.

The principal immediate economy, even under a restricted application of the plan for the summer months only, will be in the saving of illuminants. In Vienna, where it was in operation from April 30 to September 30 of last year, it is estimated that 158 million cubic feet of gas less were consumed in home lighting and 14 million less in street lighting. Evidence before the parliamentary committee in England, before the daylight-saving act of last year—just renewed for the present year by order in council—was passed, elicited the following estimates of saving: Sheffield domestic consumption of gas, \$58,320; London County Council tramways, \$48,600; London and Northwestern Railway, \$447,120; the whole country about \$12,500,000. The German *Bundesrath* introduced the scheme after being told that it would mean an annual saving of approximately \$34,179,200; and in Austria, \$17,089,600 (for the summer months only). In Cleveland and Detroit, which adopted the plan last summer, about \$200,000 each was saved in consumption of illuminants.

The Chamber of Commerce of the United States points to other economies. With our present normal time schedule, municipal investments in recreation and parks are more wasteful than they need be—too many of our parks are empty on

ROYAL BAKING POWDER

Saves Eggs

In recipes for cake, muffins, corn bread, etc., fewer eggs may be used and excellent results and healthful, appetizing food obtained by using an additional quantity of Royal Baking Powder, about a teaspoon, in place of each egg omitted.

WAFFLES

1½ cups flour
2 tablespoons corn meal
1 teaspoon salt
1 tablespoon sugar

3 teaspoons Royal Baking Powder
1 cup milk
1 egg
2 tablespoons shortening

The old method called for 3 eggs

DIRECTIONS—Sift flour, corn meal, sugar, salt and baking powder together into bowl; add milk and melted shortening. Beat in yolk of egg and fold in well beaten white. Bake on hot waffle iron lightly greased.

Booklet of recipes which economize in eggs and other expensive ingredients mailed free. Address Royal Baking Powder Co., 135 William Street, New York.

Royal Baking Powder is made from Cream of Tartar derived from grapes, and adds none but healthful qualities to the food.

week days because the bulk of the population has not time to make use of them in daylight. There would also be better opportunities for parents and children to spend time together in outdoor pursuits, and, incidentally, social intercourse generally would benefit.

FAMILY LIMITATION CENTERS IN CHICAGO

FOR some months it has been known to the newspapers in Chicago that a Citizens' Committee on Family Limitation had been formed, but very little was given out for publication beyond the names of the members, who consisted of a few university professors and their wives, three physicians, two lawyers and some men and women well known for philanthropic work. The first definite piece of information was an opinion given by the attorney general, Edward J. Brundage, in response to an inquiry of the committee, who wished to know whether it would be contrary to the law for a physician to give instruction as to birth control, when it was sought and in his opinion required.

The letter sent to Mr. Brundage recited certain typical cases which the members of the committee believed to justify the giving of advice and instruction and to illustrate the sort of need which appeals to the committee as genuine and deserving relief:

A woman, twenty years old, married two and one-half years, one baby two years old and another nine months old; husband earning twelve dollars a week. She is not at all robust and has very high ideals as to care of children and proper housekeeping. She comes and begs for advice.

A woman, thirty-five years old, has seven children; husband for years has done only a little work through the summer months and the rest of the time the family is supported by charity. The woman is worn to a thread and the children are little, puny, undeveloped things. She comes and begs for advice.

Mr. Brundage's comment on these cases is:

It seems to me that in cases of the character described, the matter of the giving of such advice is very largely discretionary with the physician, and that there is nothing in the statute which would prevent his giving advice relative to such matters in those cases in which it is his judgment that the physical health and welfare of the mother require that she be not subjected to the risk and strain of pregnancy and child-bearing. . . . There is no such statute in this state as in that of New York which forbids and penalizes the giving of advice or information relative to the prevention of conception.

The cases cited were chosen carefully by the committee to avoid any charge of exaggeration or overstatement; any one, it believes, who has had experience with poor people could relate instances far more dramatic and moving than these.

[Continued on page 128]

Will You Volunteer?

to help keep before people in these swift days the cause of the common welfare, which has been fought for by devoted folk in many a tenemented, unawakened town and in many an indifferent and unknowing countryside—and must still be fought for, in war as in peace;

the kindness, patience, insight, courage and organized effort which have won many a signal victory for human advance;

the enemies still to be beaten—poverty, misery, vice, crime, greed, ignorance and unconcern;

the pitfalls of relaxation of social and industrial standards;

the illuminating experience of individuals, groups and communities all over the country in meeting the call of emergent social service to state and nation;

the counsel of those social and civic leaders who long have been in the thick of the struggle;

the vision of a fraternal human race emerging from out the welter of the world war.

Will you volunteer

to help make your fellowman a little more thoughtful for the common welfare; your community a little more conscious of its needs and their remedies; your nation a little stronger; your world a little more liberal?

Will you enlist

A New Work On Correction
and Penology

THE OFFENDER

By **BURDETTE G. LEWIS**
New York City Commissioner of Correction

WHAT shall we do with The Offender—formerly called The Criminal? This book gives the latest results of modern science and practical experience in the largest Department of Correction in the world. Here is a constructive picture of the whole field, the dangers of youth, the responsibilities of society, the police, the courts and the physician.

"A solid and permanent contribution to the subject. A sane, informing and inspiring word where it is so easy to indulge in narrow and emotional exaggerations. Its historical perspective, its conservation of the good in old methods, its eager application of every appraised new idea ought to render it at once a brake and a dynamo. * * * I am convinced that a thorough study of 'The Offender' will prove of incalculable advantage to those dealing with offenders, to the offenders themselves and to society in general."—*Rufus P. Johnston, Chairman, Board of Parole, N. Y. City Reformatory.*

[Continued from page 126]

The decision of the attorney-general makes it possible for the committee to proceed at once to start centers for the giving of instruction as to birth control, patterned after those of Holland, where physicians hold clinics and advise those who come to them for help. The general principles of this movement will be explained and advocated in public meetings, but instruction will always be privately and individually given. There will be no general distribution of printed instructions, for the committee believes that when advice of this kind is given out indiscriminately and without conference there is great danger that those who need it most, the very ignorant, may through lack of understanding, use it in such a way as to produce disastrous results; if the movement is to be kept on a high plane it is essential that the teaching be carefully given to each individual and by a physician.

Above all, the committee holds it is necessary to teach not only the people seeking advice, but the general public that there is the greatest difference between the prevention of conception and the production of abortion, for the latter is a crime, unless it is done for the sake of saving the mother's life; there seems to be much confusion on this point even among educated people, perhaps because state laws commonly treat the two procedures as if they were equally criminal.

A movement conducted according to these plans is not expected to progress rapidly, but it is believed that it will go on without setbacks and that the avoidance of harmful results to the patients and of confusion and undeserved condemnation on the part of the public will more than make up for the lack of widespread propaganda and publicity.

Just recently the committee sent to the papers a statement of the principles signed not only by the members of the committee, but by a large number of well-known citizens, including seventeen prominent physicians, lawyers, ministers, journalists and social workers. The statement begins with the following paragraph.

We believe that the privilege of having children carries with it the responsibility for the happiness and welfare of each child. We contend, however, that it is inconsistent to preach the importance of healthy, well-developed families to parents who are denied the knowledge whereby they can determine the size of the family for which they are to care. All too frequently, as a result of parental ignorance or helplessness, undesired children are born to ill-health and misery or are destroyed before birth by parents who feel themselves driven in desperation to this terrible recourse. Owing to fear of legal restrictions, real or fancied, and to general misunderstanding as well, the knowledge which might remedy these evils is withheld from great numbers in the community.

The Growth of a Creed

An anti-theistic pamphlet by
ELIZABETH FATTEN, ENGLEWOOD, COLO.
Price, prepaid, 10c

Among those who signed the statement are:

Dr. Isaac A. Abt, Mrs. Joseph T. Bowen, Mr. and Mrs. William F. Dummer, Dr. John Favill, Prof. and Mrs. James N. Field, Mrs. Walter L. Fisher, Dr. Alice Hamilton, Mrs. Charles Henrotin, Max Loeb, Judge and Mrs. Julian W. Mack, Prof. and Mrs. George H. Mead, Allen B. Pond, Mrs. Julius Rosenwald, Prof. Graham Taylor, Dr. Rachele Yarros and Prof. and Mrs. Frank R. Lillie.

The Chicago committee does not intend to court publicity, but hopes for a gradual change in the attitude of the public toward this long-forbidden subject.

SOCIAL ACTIVITIES OF THE CITY OF MOSCOW

THE idea of Moscow as a city of semi-Asiatic lethargy is much exaggerated to say the least, to judge from reports just received in this country of its present activities for the social welfare. The city is planning for this year a campaign of advance in work for children. A special committee has been appointed to organize a central home for dependent children, two smaller homes, a residential industrial school, a bureau for the boarding out and supervision of children placed with private families, and a bureau for the tracing of parents and restoration of children to them. The latter has been necessitated by the influx of refugees.

The city established a public employment bureau in 1914, in a large building next door to one of several municipal lodging houses. During 1915, the bureau's first complete year, 77,855 persons applied for work and 56,813, 76 per cent, were placed. During the first six months of 1916, 36,686 persons applied, and 29,304, 74 per cent, were placed. In addition, the municipality operates a separate public employment bureau for skilled labor, which maintains five branches. In this department, 42,685 applied for positions, and 28,447 were provided with work.

Plans have been completed for a large model tenement, to be built by the city, at a cost of about \$342,000, on a site valued at \$380,000, given by private philanthropy. This is the first municipal housing enterprise in Russia; it is actually under construction, but its completion has been delayed by the war. It is to contain 551 rooms, exclusive of kitchens, and to be equipped with library and nurseries. Other similar houses are being built, partly from private and partly from public funds, including one nearing completion begun by a gift of Mme. M. G. Mikhailova. The city also participates in the administration of the Solodnikoff tenements, model houses erected some time ago from a fund given by G. G. Solodnikoff to provide dwellings at low rents.

Owing to the patriarchal spirit which,

Diversified Investments For Your Present Funds

Successful, experienced investors agree that for utmost safety it is advisable to select investments secured by properties of varied character and location.

We have an exceptionally broad list of diversified 5½% and 6% securities in denominations of \$100, \$500 and \$1,000 suitable to the most exacting requirements. We offer and recommend for your present funds four bond issues secured by these different classes of property:

Established Industrial Property—Company's earnings largely in excess of principal and interest requirements.

Farm Land—Well located and under profitable cultivation.

Improved Chicago Real Estate—Large value, ample earnings and strong ownership.

Natural Resources—Power plant in successful operation. Substantial cash investment behind the bonds.

All these recommendations are based on long experience, complete investigation by our experts and outright purchase. Write for circular No. 9820A, giving details.

Peabody, Houghteling & Co.

(Established 1865)

CHICAGO

until recently, has prevailed throughout Russia, private charity has been on a scale surpassing that of most other European countries. Yet the city council of Moscow last year spent nearly a million dollars in public charity, divided as follows: Workhouse, \$280,000; almshouse, \$215,000; outdoor relief, \$144,000; children's home, \$101,000; free tenements, \$75,000; unclassified, \$88,000.

There is every likelihood that in the future public work for social betterment in Moscow will receive a further stimulus from increased participation of women in municipal work. According to a cable received by the *Chicago Daily News*, the Moscow League of Equal Rights for Women, in collaboration with representatives of working women and labor deputies, has issued a manifesto, in which other claims besides that for equal franchise stand out prominently.

"Women must be promptly admitted to the ranks of factory inspectors, lawyers, notaries, and in general to all branches of the public service." They demand "the abolition of all discriminative laws concerning the social evil that degrades the human dignity of women"—a protest more especially, it would seem, directed against vice segregation and the "yellow ticket," the symbol of police registration. Equal pay for equal work, measures for the protection of child workers, equal peasant rights under all future agrarian reforms, the appointment of women commissioners, both in government and municipal departments affecting the interests of women, are other parts of the program.

A TEN-YEAR PROGRAM FOR THE INSANE

SELDOM has a state faced the problem of its insane so frankly as New York has just done in creating a Hospital Development Commission, which is to work out a comprehensive ten-year program and make a study of the proper care of the feeble-minded. The commission is composed of the state engineer, the chairman of the State Hospital Commission, the state architect, the chairmen of the Senate Finance Committee and Assembly Ways and Means Committee, two members to be appointed by the governor, and one legislator who must be a minority member of a financial committee of the legislature and is to be named by the minority leaders of Senate and Assembly.

The commission is to investigate the capacity of the present state hospital buildings; to consider the future policy of the state in the care of the insane, and whether advisable to make it part custodial and part hospital; to adopt a general plan of hospital development, taking into consideration proximity to centers of population, healthfulness and other matters; to devise and adopt a plan

SOCIAL DIAGNOSIS

By MARY E. RICHMOND

For six years Miss Richmond has been studying and gathering material for this book. It represents not only the product of her long and varied experience in charity organization work but also the best thought and practice in every form of case work. It is an exposition of the technique of social work with families and individuals. The case method is largely used, 458 case illustrations and citations from the experience of social practitioners being included in its pages.

Written primarily for persons who intend to make social work a profession, this textbook will also be indispensable to students of social conditions—teachers, judges, doctors, employment managers, clergymen, and all others who must make decisions affecting the welfare of individuals.

Cloth; large octavo; 511 pp. Price, \$2.00 net; postpaid, \$2.10.

Order from PUBLICATION DEPARTMENT, RUSSELL SAGE FOUNDATION - - 130 East 22 Street, New York City

not only for the normal increase of patients during the next ten years, but for a moderate surplusage of accommodations when the plan is completed. It is to estimate the probable cost of this plan in detail, considering each hospital site as an entity and submitting a plan for its development to a predetermined capacity. Each year it is to recommend to the legislature an expenditure equal to one-tenth of the cost of the entire plan. When investigating the proper care of the feeble-minded "with the purpose of devising a plan for its solution," the personnel of the commission is slightly changed.

Many facts concerning present overcrowding in hospitals for the insane, and the lack of a coordinated development of such hospitals, are already well known. The commission will have, however, an important opportunity to determine more definitely general procedures and policies in relation to the type of buildings and the size to which various hospitals ought to be developed. Its recommendations, also, with regard to a definite program of expenditure, coming from a commission that includes authoritative members of the legislature on financial matters, are expected to carry great weight. It is understood that the commission will report to the legislature early in the session of 1918, but apparently the bill introduced and

pushed by Senator Henry M. Sage provides for its continuance until the ten-year program is completed.

Appropriations totalling \$1,297,724 for new construction at state hospitals for the insane are provided in this bill and in the general appropriation bill, also signed by the governor. In addition to these amounts, which are available this year, the bills authorize contracts amounting to \$1,636,745, making a total of \$2,934,469 of appropriation and authorization for these hospitals. The appropriations for this year are the largest made by the state in several years and will go far toward relieving the present overcrowding of 6,000 patients. Hospitals in the metropolitan district, where overcrowding is greatest, get the largest amounts.

For new construction at state institutions for the feeble-minded and epileptic, total appropriations of \$614,500 are made available this year and contracts for \$529,600 are authorized. Letchworth Village gets the greatest share of these amounts. Four cottages are under construction there and eight new ones will be built from this year's funds. In all, 890 beds will be added to the state's provision for the feeble-minded. This resulted largely from an energetic campaign by the New York Committee on Feeble-mindedness and the State Charities Aid Association.

FOR NATIONALIZING THE NEIGHBORHOOD

RINGING response to the call for real democracy among the nations was given by John Collier, of New York, in sounding the opening note of the second National Community Center Conference held last week at Chicago. It re-echoed in the varied discussions which filled almost every hour of five days, excepting the intermissions planned to show the 300 delegates Chicago's great equipment for local community work.

The 300 came from twenty-six states. They represented all forms of community centers and tributary agencies—schools, playground and recreation centers, settlements, boards of education, open forums and labor forums, many kinds of clubs, boy scouts and pioneers, and some churches, with many individual attendants—doctors, educators, ministers, social workers and public officials.

Much of the spirit and many of the distinctive features of the community center work itself, including folk singing and dancing, characterized the program, the heading of which described it as "a gathering up of forces, a revaluation of national ideals, a vision of the future." Wide range was given to the topics discussed and the discussion of them. The changes rung on the dominant note of democracy varied as high ideals, fundamental principles, insistent standards and

RECREATION EQUIPMENT

Playground and social center directors and leaders, park commissioners and superintendents, civic improvement committees, managers and trustees of childrens' institutions, social settlement workers, and manufacturers interested in employees' welfare will find this directory convenient and helpful when planning and ordering recreation equipment.

Medart Playground Apparatus

MEDART MEDALS. As a means of elevating the standard of physical efficiency, more and more cities throughout the country are employing Medal Tests for Playground activities.

Medart Medals, of gold, silver and bronze, are furnished free with Medart Playground Equipment. These medals are of intrinsic value and will be cherished by the children receiving them.

The Medart Efficiency Tests have been carefully worked out and they can be adopted in whole or in part, as they may suit local conditions.

WRITE FOR CATALOG "W". It explains the Medart Medal System, as well as being a recognized guide on Playground Equipment.

Fred Medart Mfg. Co. ST. LOUIS, MO.

Gymnasium Outfitters—Steel Lockers.

multifarious details were dealt with. Perhaps the publicly-supported, equipped and controlled center work, done under the auspices of school boards, park and playground commissions and public welfare boards, with the active cooperation of local organizations, was most in evidence. But the volunteer workers and private agencies, such as the social settlements, the Immigrants' Protective League, the Civic Music Association, the labor union officials, people's institutes, open forums and educational institutions furnished their full share.

One practical result of the conference, suggested by Mary K. Simkhovitch, of New York, is a clearing-house joint-committee for the exchange of information, suggestion and prompting in which it is hoped to bring into advisory relation with each other the officials of the Community Center Conference, the Playground and Recreation Association, the National Federation of Settlements and the Open Forum Council, whose spheres of activity have many points of common interest.

The conference became a permanent organization, with a general council and departmental and regional divisions, to give national scope to the promotion and standardizing of community center work.

The Open Forum Council held its fourth annual meeting in connection with the National Community Center Conference. Its separate sessions were largely devoted to giving national scope and organization to the open forum movement. Under the leadership of George W. Coleman, of Boston, out of whose Sagamore Sociological Convention the Open Forum Council grew, the Chicago meeting was representative both in its membership, which came from widely scattered cities and states, and in the diversity of the points of view freely expressed by those whose community of interests was the promotion and safeguarding of a free democracy.

The program wasted no time in asserting the right to free thought and speech, but was planned to conserve the dynamics and illuminate the methods of the forum movement. Reports of the practical operation and valuable results of local open forums inspired all who heard them with the value of the movement. The next meeting will be held with the original forum at Cooper Union New York city.

THE WAY TOWARD A PEACE THAT SHALL LAST

American Relation to the World Conflict and the Coming Peace the question discussed at the twenty-first meeting of the American Academy of Political and Social Science at Philadelphia, was substituted several months ago for the less timely topic originally planned. sions, "the speakers represented all gradations of thought from the pacifist to the militarist.

"Yet, although these words were used with freedom during the meetings, it was to be noted how very little significance might be attached to them, for certain it was that the ideas of some of those who called themselves militarists differed not at all from some of those who called themselves pacifists, while the reverse was equally true."

The meetings were divided into six sessions, each forming a carefully laid step in the progress towards the final meeting at which the question was America's Participation in a League for the Maintenance of a Just and Durable Peace.

The task of the speakers of the first session was really to interpret the recent historic events leading up to the entry of America into the war and if possible to crystallize public opinion on that event. Two clear-cut ideas were presented. One would see the cause of international hate as due to the conflicting interests of governments. Autocratic government must ever have different aims and ideals from democratic government. Therefore, we may never expect peace until a democratic government supersedes the autocratic, imposed if necessary by an outside force. Only between similar governments can lasting agreements be made, because only between such can there be unanimity of thought.

The other proposition was that international hate is engendered by conditions more fundamental than by different ideals expressed by different forms of government. One people have indeed no means of knowing the type of government best suited to the needs of another people. Hate arises not from different governments, but from unequal and conflicting economic interests. Therefore, to attain international accord, it is not sufficient to change the outward form of government, but we must replace hate with love, while this can be done only by removing the cause of hate—unequal economic opportunity.

At the second meeting there was general agreement that America has an obligation as the defender of international right, but the question of the concrete course of action by which that obligation should be met was answered by no great unanimity. Various familiar methods which America may use were gone over, but no scheme new in itself was devised.

At the next two meetings, which both discussed a Just and Durable Peace, the two attitudes of militarism and pacifism were most clearly set each against the other. The former demanded a peace which would result from a fight to the finish and an imposition of the ideals of the conquerors upon the conquered. Nor was there any doubt as to who would be

CHICAGO SCHOOL OF CIVICS AND PHILANTHROPY

1917 SUMMER SESSION, JUNE 20—JULY 27

General Course for Social Workers

Four Credit Courses: *First Year*—Methods in Social Work; Social Economics. *Second Year*—Principles of Case Work; Municipal Problems. *Field Work* with one of the social agencies of Chicago. *Visits of Inspection* to the important social institutions in or near Chicago. *Open Lecture Course*—Social Agencies in a Modern City.

Special Course for Playground Workers

Folk Dancing, Gymnastics, Games, Story-telling, and other technical classes held at Hull-House

Fifteenth Year Opens October 1, 1917

For information, address The Dean, 2559 Michigan Avenue, Chicago

Associates

OF THE

American-Scandinavian Foundation

One object of this international organization is to bring all those who are interested in Sweden, Norway, and Denmark, or the social experiments, inventions, literature, and art of these countries, into close connection with reliable sources of information. To this end the Foundation publishes:

THE AMERICAN-SCANDINAVIAN REVIEW, a handsome illustrated magazine, full of interesting information relative to Scandinavian subjects.

SCANDINAVIAN CLASSICS, a series of finely-printed books, planned to include the greatest literary monuments, ancient and modern, of the North. Two volumes are published every year. The series now includes works of Strindberg, Björnson, Holberg, Snorri, and others.

SCANDINAVIAN MONOGRAPHS, a series of large works of a scholarly nature, including "The Voyages of the Norsemen to America."

You are invited to become an Associate of the Foundation. It costs only \$1 a year, and brings you regularly "The American-Scandinavian Review" free. Sustaining Associates, who pay \$5 a year, receive in addition the two volumes of the "Scandinavian Classics" each year free. Application blanks may be obtained by writing to the Secretary of the American-Scandinavian Foundation, 25 West 45th Street, New York.

the conqueror or as to what those ideals are or should be. This presentation of a method of obtaining peace had the advantage of being definite and tangible.

The idea put forth by the other group is more difficult to express concretely. Peace could not permanently be attained under existing conditions they held; a new international law is necessary, framed with the concurrence of all those affected by it and differing from the old international law in that there would be vested in some responsible body power to enforce the law. Those who heralded this view were somewhat inclined to overlook the present difficulties or at least to minimize them. True, many pacifists admitted freely the necessity for American participation in the present conflict, but they were unwilling to admit that for the future any good could flow from the present system by which

each nation is permitted to adjust its own international difficulties in its own peculiar way.

What the definite terms of peace should be was discussed but briefly by any of the speakers, indeed most seemed studiously to avoid this question throughout. The most bellicose militarist seldom raised more than the general cry of "Germany shall repay," and even when a bolder speaker attempted to settle terms of peace or fix new boundaries of nations his statements were received with no great seriousness by the audience.

The fifth meeting considered the Rights of Small Nations. Viewed in a historical way it would seem that small nations have never enjoyed any extended rights. Even when their rights have been admitted by the great powers of earth, those same powers have failed

The Metropolitan Life Insurance Company

has just closed its most prosperous year. By this is meant the most prosperous year, not alone for the corporation, but for the policy-holders, who have owned it since it became a mutual company.

Notable progress was made in the reduction of the expense of Industrial insurance. The ratio of Industrial insurance expenses to premium income is far lower than has ever been shown by any American or English industrial insurance company, and its lapse ratio is the lowest in its history.

Some very interesting facts have been developed in its summary of the business.

It paid a policy claim every 41 seconds of each business day of eight hours, during the year.

Its average payments were \$266.05 a minute of each business day of eight hours.

It paid 701 claims per day on an average the year through.

It issued or revived 8,304 policies a day on the average, amounting to \$1,969,823 of insurance.

Every day it paid to policy holders, or set aside as reserve, \$376,827.40.

Its assets increased on an average every day \$220,509.26.

On December 31, 1916, its whole number of policies outstanding was 16,952,769 for the great total of \$3,482,431,996.

to act as though these rights really existed. One speaker made very pointed reference to the treatment our own country has given to those South American republics for which we profess to have high esteem. A new code of international morals seems necessary in regard to small nations if we wish to prevent them from being exploited.

The final session, toward which all the other meetings had worked as a climax, might have led to the belief that discussion of America's Participation in a League for the Maintenance of a Just and Durable Peace would have agreed on a league of nations as the logical way to prevent war. But such an arrangement would not prevent war, one speaker admitted, for such a league must be held together by treaties, and no treaty, however well forged, can be anything but a weak link in a chain to bind the nations together. Treaties have been broken and treaties will be broken, for with our present international morality, the needs of a sovereign state always take precedence over any rules set forth in a paper treaty. Our own country has been scarcely more careful of her treaty obligations than other nations.

An arbitration court will not be effective, for no nation will submit to such a court any subject concerning her national honor. A greater trust in God was urged by one, that our present-day soldiers may go forth for American ideals with the same trust in divine guidance as did our ancestors. We may never attain peace while we continually go armed against one another; only by universal disarmament may war be stopped, was the keynote of another. Neither convinced his audience.

There was, however, Mr. Reeves reports, one note of hope for the future which was clear and practicable. It came as a historical sketch of the progress of civilization. The speaker showed that individual interests have been consolidated into communal interests and these in turn into still larger units. So a league of nations will not only prevent war, but will unify the individual interests of all its members; one step more in the process which civilization has made and is making. The duel, once considered indispensable because it concerned a point of "honor," is now discredited. So war, even in case of "national honor," may become equally discredited when the interests of the nation are merged into the larger world interest.

"This may not satisfy the impatient reformer who demands a speedy panacea for all social ills," says Mr. Reeves, "but the student of world movements who knows that any progress is made only by slow and painful steps sees in this interpretation the possibility of arriving at last at the goal towards which he is willing to work long and patiently—the goal of universal peace."

The High Cost of Living

THE increasingly high cost of living can be reduced at once only by the application of Domestic Science, which shows how to lessen the food bills, how to save time and labor, how to keep the family in health, how to manage all the details of housekeeping in the best and easiest way. Domestic Science makes the work of the housekeeper an interesting profession instead of deadening drudgery.

The correspondence courses of the American School of Home Economics were prepared by leading teachers, especially for home study. They have been tested, proved by over 15,000 housekeepers, teachers, institution managers, etc.

The attractive illustrated 100-page handbook of the school, "The Profession of Home-Making," will be sent on request. Address a postcard or note—A. S. H. E., 519 East 69th St., Chicago, Ill.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

"None genuine without
Trade Mark"

Excelsior Quilted Mattress Co.

MAZDA

*"Not the name of a thing,
but the mark of a service"*

Instead of one manufacturer's spasmodic development of his product, MAZDA Service substitutes a systematic, all-inclusive study of incandescent electric lamps for several manufacturers.

—The Meaning of Mazda—

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

JOURNÉE NATIONALE DES TUBERCULEUX

ANCIENS MILITAIRES

THE GREAT SPRING DRIVE

France, always suffering from a high death-rate from tuberculosis, has found her situation infinitely worse from the cases among the soldiers and the deported civilians of the northern provinces. But she has turned on her foe and started a campaign of help and education, in which the poster shown above plays a part.

PAMPHLETS

CIVICS AND RECREATION

- A PROGRAM OF POLITICAL DEMOCRACY AND CIVIC EFFORT. By H. S. Gilbertson, 381 Fourth avenue, New York city.
- NATION BUILDING. By J. S. Woodsworth. Publicity Commissioner, Province of Manitoba, Winnipeg, Man.
- THE HOME DEFENSE LEAGUE. By Henry Jay Case, secretary to the Police Commissioner, New York city.
- PROPERTY EXEMPT FROM TAXATION IN THE FORTYEIGHT STATES. By William E. Hannan. University of the State of New York Bulletin, Albany, N. Y.
- FIRST STEPS IN COMMUNITY CENTER DEVELOPMENT. By Clarence Arthur Ferry. Price 10 cents. Department of Recreation, Russell Sage Foundation, 130 East 22 street, New York city.
- THE CHARTER OF THE CITY OF DAYTON, OHIO. C. E. Rightor, director Dayton Bureau of Research.
- REPORT OF THE RECREATION CONDITIONS AND PROBLEMS OF GALESBURG, with Recommendations and Suggested System. By James Edward Rogers. Playground and Recreation Association of America, 1 Madison avenue, New York city.
- SOCIAL WORK IN DIXIE. By William T. Cross. Secretary and Treasurer National Conference of Charities and Corrections, 315 Plymouth Court, Chicago. Single copies free on request.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

England Has Done It

INDUSTRIAL peace was an absolute essential of war. Munitions, food, shipbuilding—every war-time activity depended on a regular output of the necessities of life. And output depended on the morale of the labor forces. How labor was given a hand in the management of industry may go down in history as one of the great achievements of these times. The story of it told by

Arthur Gleason, in The Survey Next Week

"SOLDIER BOYS" they are in fact as well as in song, with a boy's eager zest for play and adventure. Secretary of War Baker has organized a committee in which repressive measures, against liquor and vice, will be supplemented by a positive program of recreation in charge of the great lay bodies in the recreation field—the playground men and the Y. M. C. A. Page 137. Chaplains who can play baseball as well as preach are sought by the Federal Council of Churches. Page 147. And the Oregon social hygienists are out with a demand for keeping the new army free of venereal disease. Page 145.

FRIENDS have organized to furnish patriotic service for all conscientious objectors, whether or not they are church members. They urge that social work shall not be dropped for the new forms of emergency work. Page 146.

WAR CRIPPLES as well as the victims of industrial accidents may share in the new bureau for vocational re-education proposed by the Massachusetts Board of Education. Page 145.

FARMERS are canny folk concerning their own share in the proposal to feed the world by putting school boys at farm work. City boys, and particularly boys under 14, are not wanted, nor are girls. However much of a lark it might prove for the youngsters, it would not furnish the dependable labor that is needed. Page 142.

FOOD, clothing and fuel for men and feed for beasts are set off as a class by themselves—"necessaries"—in the administration food bill and made subject to complete government control. Planting, cultivating, shipping, milling, distributing, selling may all be taken over by Uncle Sam and by him put in the capable hands of Mr. Hoover. Page 142.

PROHIBITION, under this permissive bill, may be established by the President if he finds it necessary. But the war-prohibitionists are out for stopping the manufacture and sale of all liquor until peace comes and then—well, peace is a long way off. The economic arguments advanced. Page 143.

PRESIDENT WILSON and Attorney-General Gregory agree that the federal government has no policy of abridging democratic rights, such as free speech and assembly. Numerous arrests, however, have led to the organization of a defense league, to furnish lawyers to defend free-speech cases, and of a legal aid bureau to discover and investigate such cases. Page 144.

MINNESOTA enacted into law a child welfare program that comprises pretty much all of the recommendations of the state commission which has been studying the subject. Social legislation, won or lost, in various states. Page 147.

DOWNRIGHT statistical evidence on the relation of hours of work to factory output is furnished by a shoe factory. The number of shoes per man per day increased with a decrease in the working week from 55 hours to 52. Page 138.

WHAT the widow needed wasn't so much money as a helping hand over the hard spots—sympathy and advice. That's friendly visiting. And friendly visiting is what the civilian relief workers will chiefly have to do. Page 140.

TRAINING for civilian relief work is offered by all the schools of philanthropy and by several charitable societies. Page 146.

ECONOMIC PRIZES

FOURTEENTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, Chairman
Professor J. B. Clark, Columbia University
Professor Henry C. Adams, University of Michigan
Hon. Theodore E. Burton, New York City, and
Professor Edwin F. Gay, Harvard University

has been enabled, through the generosity of Messrs. Hart, Schaffner & Marx of Chicago, to offer in 1918 four prizes for the best studies in the economic field.

In addition to the subjects printed below, a list of available subjects proposed in past years will be sent on application. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee, but any other subject chosen must first be approved by it.

1. The Economic and Social Effects of the Civil War.
2. Commercial Treaties and the American Tariff.
3. Methods of Changing Tariffs in Other Leading Nations.
4. Recent Tendencies toward Tax Reforms Appearing in State Tax Commissions.
5. The Meaning and Application of "Fair Valuation" as Used by Utility Commissions.
6. The Working of the Adamson Eight-Hour Law.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set.

A First Prize of One Thousand Dollars, and A Second Prize of Five Hundred Dollars

are offered to contestants in Class A.

A First Prize of Three Hundred Dollars, and A Second Prize of Two Hundred Dollars

are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of \$1,000 and \$500 of Class A to undergraduates in Class B, if the merits of the papers demand it. The committee also reserves the privilege of dividing the prizes offered, if justice can be best obtained thereby. The winner of a prize shall not receive the amount designated until he has prepared his manuscript for the printer to the satisfaction of the committee.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. No paper is eligible which shall have been printed or published in a form to disclose the identity of the author before the award shall have been made. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1918, to

Chicago, Illinois

In the Rookies' Playtime

Plans for the Recreation of Soldiers in Training

By Bruno Lasker

OF THE SURVEY STAFF

WE often speak of our "soldier boys" with a paternal pride which would seem to indicate a care for their welfare no less pronounced than that of parents who, in selecting the best schools for their children, in watching over the company they keep, and in providing them with the best opportunities for wholesome good fun, do everything in their power to hold off possible evil influences on their mental and moral development. Yet one of the most deplorable chapters in military history is that which reveals the unconcern with which great armies of young men have been exposed in the training camps and in the field to every kind of temptation. Perhaps equally great has been the unconcern for the welfare of the folks among whom, for the time being, their lot was cast.

"The greatest evil to society," Dr. M. J. Exner concludes his report on prostitution in its relation to the army on the Mexican border, "results from the shattered ideals, lowered standards, sensualized minds and perverted practices which are brought into home life and society by these men who represent in large measure the cream of the young manhood of the nation."

To Secretary of War Newton D. Baker belongs the credit of having first conceived the full responsibility of the nation to her "soldier boys" not only when on duty but also when on leave; and not only to the soldiers but also to the civilians among whom they settle for varying periods. A study of the experience of England and France, in this matter, and of the United States army on the border, convinced him that too much in the past has been left to chance and that new standards are required in a field of operations which too often has been looked upon as inconsequential. As a first step, he appointed to advise him a commission on training camp activities under the chairmanship of Raymond B. Fosdick, of the Rockefeller Foundation, who recently studied conditions at the border. Associated with him are Joseph Lee, Boston, Playground and Recreation Association of America, Lee F. Hammer, Recreation Department, Russell Sage Foundation, Dr. Joseph Raycroft, director of physical education, Princeton, Malcolm McBride, Cleveland, Charles P. Neill, former com-

missioner of labor statistics, Maj. Palmer E. Pierce and Thomas J. Howells, Pittsburgh.

While in some respects the plans of the committee have not as yet matured, the government has already, in an executive order signed by President Wilson on April 27, given official recognition to the Y. M. C. A. "as a valuable adjunct and asset to the service." Emphasizing the efficacy of the services already rendered by the association in the past to the happiness, content and morale of the personnel, the order enjoins officers "to render the fullest practicable assistance and cooperation in the maintenance and extension of the association, both at permanent posts and stations and in camp and field." The President himself sent the association a cordial appreciation of its activities and influence.

The Y. M. C. A. expects that the duties which it has undertaken will involve the erection of about two hundred buildings in the army camps throughout the country, each to serve a brigade and to have a staff of five secretaries. In addition, the experience of the border has taught the need for a mobile force of secretaries, equipped with automobiles, to serve outposts. Already valuable work is being done to bring cheer to the men who guard bridges and munition plants, taking to them books, writing materials and words of inspiration. One such unit often covers a considerable number of detachments and, as may be imagined, is received with delight by the men on their lonely posts of duty.

In addition to the thirteen officers' training camps, which probably will become part of the general system of training camps later on and where the erection of Y. M. C. A. buildings on permanent lines has already been commenced, there will probably be an immediate need for complete services in some twelve camps for the mobilization of the national guard and, when the draft bill becomes law, in camps accommodating half a million recruits. It is not impossible that before the end of the summer the Y. M. C. A. will be charged with the responsibility for a million men in camps, not counting those in barracks, who also have to be provided with all the aid which the organization can give. To enlarge its work in keeping with such a task, the association has commenced to

raise a fund of \$3,000,000 for the present year. Among the larger gifts toward it so far received is one of \$50,000 by the United States Steel Corporation.

For the personnel, the association is able to draw upon the men who have acquired experience in this work and a thorough knowledge of all its requirements, other Y. M. C. A. secretaries and ministers, professional and business men, and upper class college students qualified for such service to whom, if necessary, a special training will be given before assignment to definite responsibilities.

The Y. M. C. A. does not, however, possess a monopoly of recreational and religious activities in the training camps, though naturally the commanding officers prefer so far as possible to work only with one organization. Athletic activities usually are in the charge of an officer who works in close cooperation with the association secretary in the organization of inter-company and inter-regimental events. The buildings of the Y. M. C. A. are, so far as ever practicable, placed at the disposal of denominations which desire to arrange for formal services; and cordial relationships with the clergy and officers of these denominations have, in practically every case, been established.

The educational work, in some of the camps, is likely to be of considerable scope and variety. In one camp, last year, no less than twenty subjects were being taught, ranging from the three R's to history and philosophy. This, of course, entails a close cooperation with local schoolmen upon which, on the strength of its past experience, the association has every right to count. What is entailed in providing wholesome recreation for an army may be illustrated by an item of 3,000 checkerboards as part of the material that went to the Mexican border. Writing utensils, books, sometimes apparatus for the provision of ice water, entertainments and games of many kinds, especially moving pictures and pianos, are among the equipment which will be systematically distributed.

A new type of monitor building, signifying further improvements upon the existing permanent camp buildings of the Y. M. C. A. (as illustrated in the SURVEY for November 25, 1916) is being planned. It will provide for living quarters for the secretaries and a number of small study and conference rooms at one end of the large assembly rooms, shut off from their noise and bustle. At the other end of the building there is a series of classrooms which can be thrown together to increase the capacity of the main hall. The moving picture apparatus is so located that it can be used to entertain either 500 men in the assembly hall or, through an aperture in the wall, 5,000 outside.

To formulate plans which will make the camp Y. M. C. A. a clearing house for every useful social and recreational effort which may be offered by other local and national organizations, a war work council of 100 has been appointed of which William Sloane is chairman and J. S. Tichenor the general director.

The other national organizations represented on Secretary Baker's advisory committee, and a number of others which have offered their whole-hearted cooperation, including the Y. W. C. A. and the W. C. T. U., will not only aid the Y. M. C. A. in this camp work, but will endeavor to mobilize the social forces in the centers near the training camps. The preliminary program, briefly, includes measures for

(1) control over excise conditions in and around the training camps for the purpose of effectively preventing excessive opportunities for indulging in alcoholic drink and prostitution;

(2) the provision of recreational facilities in the camp, already referred to; and

(3) the provision of recreational facilities outside the training camp for the twofold purpose of safeguarding soldiers from temptations when on leave and of preventing the degeneration of social life in the neighborhood of the camps, which so easily results from the concentration of large numbers of more or less irresponsible young men around towns and cities where their presence calls forth an enthusiasm often venting itself in undesirable and dangerous forms.

This last named aim is perhaps the most far-reaching, as it is the most novel, since it will include an endeavor to stimulate natural family and group contact between the townfolk and the soldiers. Instead of remaining strangers with no special concern for the well-being of the people (and especially the girls and women) among whom they seek relaxation from their duties, the men will be individually sought out by those who share with them some interest or are fellow members with them of some inter-local organization. Churches, lodges, trade unions, vocational, athletic, musical and other common interests will be brought in to play a part in this adjustment.

In addition, the local authorities and private organizations which provide more promiscuous recreational opportunities will be aided and encouraged to adopt the best methods suggested by the experience of the competent national organizations and their agents and, if necessary, in enlarging their activities under approved leadership. By these several means it is expected that the evils of intemperance and immorality so commonly and so unnecessarily associated with large encampments can be greatly reduced if not altogether eliminated.

Hours and Output

Some War-Time Testimony in Favor of a Short Work-Day

By John A. Fitch

OF THE SURVEY STAFF

Our whole experience tends to justify the shorter-hours movement. We are absolutely convinced that it is right for the community as a whole, because we feel sure it would increase the net productivity of society.

THIS statement from an executive of a company employing over 4,000 men in the manufacture of shoes and which five months ago reduced hours of labor, has a force and a significance that is unusual now that demands are being made for an extension of working hours as a war-time economy.

Those who have given any attention to working hours in industrial plants know that long hours of labor are not economical either in peace or in war. One has only to investigate the experience of the Commonwealth Steel Company, of Granite City, Ill., the Cleveland Hardware Company, J. H. Williams & Company, of Brooklyn, a firm in which the secretary of commerce, William C. Redfield, was for many years a partner, the Ford Motor Company, of Detroit, the steel industry of England, the building of ships for the United

States navy—to mention only a few of the many examples that are available—to become convinced that a short work-day—even an eight-hour day, results in increased production.

The letter published herewith adds to this volume of testimony and it is the more valuable because the experiment has been made in these very days of stress, which to the thoughtless afford justification for a breakdown in labor standards. It is hard to escape from the inexorable logic of the facts as presented by the executive whose responsibility is for the maintenance of productive efficiency.

Here is the letter, written last month:

During the first week of December, 1916, our company voluntarily reduced the hours of labor in its entire system of factories from fifty-five hours per week to fifty-two hours per week.

This change was put in effect at a time when the conditions in our factories were such as to furnish excellent data as to the result of such a reduction in hours on the production of a large number of employes.

In the period before the change was made:

1. We had built up production to what was regarded as approximately maximum, each plant having reached a production in excess of any previous period.

2. Each plant was laid out with the maximum number of machines in the space available.

3. There was an employe on practically every machine in the system.

4. Over 95 per cent of the productive payroll was on standardized piece work.

5. All of the plants were running smoothly under a routing system in which delays due to lack of material were practically zero.

6. No new factories were in process of organization.

7. No material changes were being made in the character of the product.

8. No new machinery or processes tending to increase per capita output materially were being installed; what few changes were being made would tend to increase slightly the productive difficulty of the product.

9. Standard production load was such that "going out early" was almost unknown; here and there a few special departments were working overtime occasionally.

Our system of factories may be divided into two general classes:

1. Supply factories where material is cut or prepared and fed to the shoe factories.

2. Seven shoe factories where the product is assembled.

As the seven shoe factories are operated under a standard system, the conditions are comparable with those of sister ships in the navy. Production is routed into and through these factories in what we call "sheets," each sheet constituting a half-day's and eleven sheets a week's production. When the hours of labor were decreased in December, 1916, it was decided to make no reduction in the standard sheet or half-day quota. The plan was to determine after trial what reduction, if any, would prove necessary as a result of the shorter hours.

We have operated under the reduced hours for four months. It has been found unnecessary to reduce standard production; actual production has not decreased. The following table shows the changes made in standard production since the first week in December:

Date	Factory Symbol	Production changed		Reason
		From	To	
Mar. '17	MC	212	200	To offset increase in a difficult portion of production
Apr. '17	MC	200	212	Former production resumed
Mar. '17	ME	288	275	To facilitate improvement of product
Mar. '17	ML	250	262	Factory gaining in actual production
Feb. '17	MD	288	275	To offset an increase in more difficult part of product
Dec. '16	MN	238	250	Increased production
	MP	175	175	No change
	MT	108	108	No change

Under the production system in use any department falling behind standard production to such an extent as to be one-half day behind schedule would automatically cause what is called a "dropping of sheets" and a reduction in the standard production for the particular factory involved. This event has not occurred; in fact, the writer, who has been in general charge of the production system in this company for over ten years, believes that at no period in its history have we had so little trouble with the production system as during the winter of 1916 and 1917, this, too, in spite of the fact that we have had more difficulties arising from outside our plants than heretofore, namely:

1. Shortage of material.
2. Railroad traffic disturbances, resulting in unexpected delays in materials.

Our organization would regard the above data as ample to justify the general conclusion that we have lost no production as a result of shortening hours. To reduce it to an absolute certainty, however, we have taken from our actual records data for the two months preceding and the months following the reduction in hours, namely:

1. Actual number of employes on the payrolls.
2. Actual production shipped.
3. Comparison in the unit representing the productivity per employe per working day.

These figures cover the combined production of the seven shoe factories (sister assembling plants) and result as follows:

Period	Total number of employes	Productive unit per employe per day based on pairs shipped
October and Nov. '16 (Working 55 hours)	3986	8.91
Dec. '16 and Jan. '17 (Working 52 hours)	4105	9.00
Feb. and Mar. '17 (Working 52 hours)	4170	9.02

Notes:

(a) Number of employes includes both productive and non-productive; non-productive payroll, however, is carefully standardized and changes in it during this period were infinitesimal.

(b) Of productive payrolls 95 per cent plus is piece-work.

(c) Employes classified by sex: Male, 60 per cent; female, 40 per cent (based on previous estimates, but percentages fluctuate only slightly).

(d) During the winter months there were several bad epidemics of colds and grippé, tending to increase production losses from absence.

(e) A shortage of available labor made employment conditions difficult.

The writer is firmly convinced from this and other similar experiments that long working hours are not only an economic loss to the community as a whole, but that there is ample evidence to indicate that even inside factory walls there is no net profit in running on a schedule much over eight and one-half hours per day. There are so many complex factors entering into the production of the individual employe and particularly into the production of employe groups that the old theory of proportional production per hour is absolutely untenable.

Our experience has been that overtime work is decidedly undesirable as a method of increasing production. Our policy is to discourage it in all departments. Toward this end we have made it a rule for several years to pay 50 per cent extra for all piece-work done during overtime hours. We permit overtime work ordinarily only under the following conditions:

1. To quickly offset breaks in continuous production.
2. Where only a small number of employes are affected.
3. For short periods.

To sum up, our whole experience tends to justify the shorter-hours movement. We are absolutely convinced that it is right for the community as a whole, because we feel sure it would increase the net productivity of society. We believe it is right for the individual factory unit because we have come to realize that even in an individual plant the real problem is to get the maximum amount of work done by a given thousand people, not in a day, in a week, or in a year, but in a lifetime.

The Task of Civilian War Relief

The fourth of a series of articles based upon a course of lectures upon civilian relief now being delivered in New York with the sanction of the American Red Cross by Porter R. Lee of the staff of the New York School of Philanthropy. The articles are being written by Karl de Schweinitz of the New York Charity Organization Society

IV

PEOPLE have never been worth so much as now. The longer the war continues its wastage of human material the more valuable do men and women become—men and women, that is, who in ability, character and physique are sturdy and sound. Every person matters—and surely most of all the families of soldiers and sailors. To maintain their fitness is a national obligation.

When such a family is found to be in need the civilian relief worker must do more than attempt to provide for its support. She must also think in terms of health, education and that indefinable element—character, standard of living, stamina—which we have in mind when we speak of a family as being of good stock. These things are vital in every household. To the family that is in distress they present themselves as complicated problems. In many respects, however, they appear similarly to the family of a widow and to the wife and family of a soldier, for in both homes the absence of the father is likely to be the immediate cause of need.

The civilian relief worker will, therefore, find suggestive the experience of social workers in helping widows with children. To assist such families to maintain a decent standard of living it is essential to know the condition of the woman's health, her qualities as a mother, as a manager and as a wage-earner. It is necessary that the ability of the widow as a wage-earner be understood not because the social worker starts with the assumption that a widow should work. Probably she ought not to work. Possibly her children will demand her full attention. On the other hand, it may be desirable that she do a day or more of work a week. For many women this offers a welcome break in the monotony of a tenement-house home. She may want to work. If she does work it is important that her capacity be known in advance.

What are her own plans for her family? It would be disastrous indeed for the social worker to prepare to help a family without knowing what that family was trying to do to help itself. Whenever possible it is advisable to adopt the plans which the widow has thought out for herself. It is a means of stimulating self-reliance and of preserving in her the sense of responsibility for her own future. If two plans are equally good, the plan conceived by the family should be pursued.

Although the man is absent he is still a part of the family. If he is dead, his illness and the circumstances of his death should be ascertained. Suppose he had died of tuberculosis, for example, would not that have a decided bearing upon what ought to be done for the health of the mother and children? Or suppose that an accident caused his death, would one not want to try to secure compensation for them? These problems in caring for the families of soldiers will be simpler than with the family of a widow, both because the causes of death are more restricted in number and because access to military records will be possible.

The earning power of the man, his occupation and his

quality as a workman are one indication of the standard of living to which the family has been accustomed. Furthermore, a knowledge of what sort of man he was and of what was his influence at home is essential if anything is to be done toward making up in some measure to the family the things which in his character as father he supplied.

Social work builds for the future. Thus acquaintance with the health of the children must be had. Their records in school should be ascertained. Their individual characteristics should be understood and their aptitudes, their special talents, should be known. The social worker, in other words, must be prepared to give vocational guidance. She must have whatever background of information may be necessary to enable her to help the children start life aright.

How was the family supported before it came to the attention of the social worker? Means of support that have been valuable thus far may perhaps be continued in the future. Moreover, the manner in which the household has been maintained may be an indication of the resourcefulness of the mother. Lastly, it is important to understand what, as Miss Richmond has phrased it, the family was at its best. The aim of the social worker is to lift the family that has fallen into misfortune up to a satisfactory standard of living. The question that interests her, therefore, is whether this means restoring the family to something it has known before or to an entirely new standard. If the first is true the task may be easier than if new things must be attempted. Under any circumstances, a knowledge of what the family was at its best will influence decidedly the procedure that is to be followed.

Many of the things that ought to be known about the mother, the father, the children and the family as a whole will appear in the first interview which the social worker has with the woman. Often, also, through this first talk other means of acquiring an understanding of the situation will present themselves. In the article in the SURVEY for May 5 the value of consulting relatives, former employers, previous addresses, public records, school, church and social agencies was explained. As the social worker extends her acquaintance in this way she will find her appreciation of what the family is and what it can become increasing.

To obtain this insight into the problems of the household one must be careful to avoid bias. One must weigh evidence. One must take into consideration the prejudices of those who offer information.

Thus the relatives of a certain widow urged that the home be given up and that the children be sent to institutions. They said that the mother was a poor manager. They added that they would have nothing to do with her because she had not been grateful when they paid the expenses of her husband's funeral. They had even offered to take care of two of the children, but the mother did not want them to go because she did not wish them to be brought up as Protestants.

These statements the social worker discounted, for she knew that the relatives were not of the same religious faith

as the widow. Because of this, they were not kindly disposed toward her. The relatives were, however, correct when they said that the mother was careless about the regularity of the children's school attendance. The social worker herself had seen them at home when they ought to have been in the classroom. Few qualifications are more necessary to the person who desires to work with families than this ability to weigh evidence, to consider the source of information and to withhold judgment until the correct inference can be drawn.

One must also be careful not to allow any rumor prejudicial to the character of the family to stand without investigation. People are unfortunately quick to allow themselves to be prejudiced by even the flimsiest sort of evidence against the integrity of a neighbor. Therefore, if a rumor exists it must be followed to its source. If untrue it can be stopped and if true one will know the facts and be able to act intelligently.

A school teacher found that an article had disappeared from the schoolroom in such a way as to make it seem that it had been stolen. She wrote a letter to the mother of the girl whom the evidence apparently pronounced guilty. The mother did not answer the letter and accordingly the school teacher felt confirmed in her opinion. She told the story to a social worker, who had just been called upon to help the family. The straightforward and simple thing for the social worker to have done would have been to speak to the mother, but the school teacher in giving the information had asked that no use be made of it.

Some years later, however, when the girl ran away to be married the story of the theft immediately suggested itself to the social worker. There is nothing necessarily wrong in an elopement, yet the unconfirmed story of the stolen article made the manner of the girl's marriage appear to be far more significant than it really was.

Incidentally, this story illustrates the importance of not allowing oneself to be hampered in the use of information. The records of the civilian relief committee should be carefully guarded. The affairs of the families which come under its care should be considered as confidential but, at the same time, the social worker should retain the right to use her knowledge whenever she believes that this use is important to the welfare of the family.

It must not be inferred from this that the chief purpose of the social worker in visiting former employers, relatives and other persons connected with a family is to obtain information. Just as the social worker must understand the capacity of the family, so also she must learn what those who know the family can do to help it. And the help she seeks is not merely

financial. Often she may not even need this. Always, no matter what other assistance she desires for the family, she is searching for the aid of personal influence.

There are few people who are not stimulated to better things by example or by a desire to please someone whom they admire. It is much easier to try to make good if there is some particular person who is interested in seeing one make good. If there is no such person in the family acquaintance-ship and relationship, the social worker frequently tries to introduce someone to the family who can have this sort of influence. This someone is called a friendly visitor.

Thus there was introduced to the widow who, as described above, was careless about the school attendance of her children, a woman of middle age, a sane, practical, level-headed woman, who had always done her own housework and had had a family of children all of whom were now grown. This woman soon won the friendship and confidence of the widow, and, where others had failed, readily persuaded her to keep her children in school. When housework began to seem like drudgery to the widow and her oldest son became unruly, it was the friendly visitor who from her own experience gave advice about the boy and encouragement about the house-keeping. She gave nothing else except some stockings and mittens for the children, which she knitted while spending an afternoon every now and then at the widow's home. Yet, although she contributed only her interest and her influence, so strong a friendship bound the two women that she became perhaps the most vital factor in the widow's life. The helpfulness of such a friendly visitor should be a valuable suggestion to the civilian relief worker.

Another form of influence not to be overlooked is that of the church. The widow just described became careless about her attendance at church and about the attendance of her children. The social worker wrote to the woman and urged that whatever one's religion was one ought to observe it. The woman was a Catholic. The social worker was in the employ of a non-sectarian organization and was herself a member of the Society of Friends, but she recognized the importance of the influence of church life in helping a family out of trouble.

Here, too, the ordinary course of social work has its lesson for the civilian relief worker. If her object is to maintain the fitness of the families of the men who are fighting for the nation, she must understand fully all the problems affecting their lives, spiritual and moral as well as economic and social, and in providing for their physical needs she must not neglect those other things which though less tangible are more fundamental.

FROM AN ELEVATED TRAIN

By *J. M. Batchelor*

A GLOOMY street in sunlight, nor does dark
 Disguise its dreariness; the windows stark
 Of wholesale houses, cavernous and bare,
 Show dust-smear'd panes before the pallid glare
 Of cold lights high within. An endless row
 Of street-lamps, rising tall, wan brightness throw
 And heavy shadows, sharply angled, cast
 On faces that go by in throngs as fast
 As scattered bits of paper whirled away
 In swollen gutters on a rainy day.

COMMON WELFARE

WHAT FARMERS THINK OF BOY LABOR

PROTECTIVE laws for children had been modified as a part of the general war program in only two states up to May 7, so far as the National Child Labor Committee was advised. In Iowa the governor has been given power to suspend the child labor law in case of emergency. In Pennsylvania the State Board of Education has issued a statement authorizing the withdrawal from school of children of twelve years or older to work on farms. In New York a bill giving the commissioner of education discretionary power to suspend the compulsory education law passed the Senate last week and is scheduled to come to a vote in the Assembly this week. In many other states similar action is being urged, but in many of them the legislatures having adjourned, there is no possibility of the repeal or suspension of the child labor laws.

In order to get the viewpoint of the persons most concerned—after the children themselves—the National Child Labor Committee has sent a questionnaire to grange officers throughout the country. The answers that have so far come in indicate that farmers do not want or need city or town children. Of the replies received to date, which cover fifteen states, 62 per cent say unqualifiedly “No,” to the question, “Are city school children wanted to work in your district?” An Illinois farmer writes, “City school children would be of no use in this section. Farmers are in need of adult help, eighteen years and over.” The Minnesota State Grange master says, “City boys, unless trained, are of no use to us. Nearly all the work is carried on by either gas or horse power, and I find they do not understand how to drive a horse or handle machinery.” The secretary of the Vermont Grange replies, “Vermont is a dairy state. No children are employed or wanted to my knowledge.” The four officers of the Pennsylvania Grange agree that children are not wanted to any extent. “Some demand for boys,” says the master, but the state treasurer says, “We do not think school children of the large cities would be of sufficient help to warrant the undertaking.” “The

tending of small corn is a delicate business for a citybred child,” says an officer from the cornbelt of Illinois, “while haying and harvest would be too heavy work for one not accustomed to labor in the hot sun.”

Of those who mention the lowest age at which a boy is useful, 64 per cent say fourteen or over. Those who mention the need of children say they are wanted for berry picking or truck gardening, but only 12½ per cent of all the answers say, without qualification, that children are wanted on the farms. The conclusion of the National Child Labor Committee is that to send school children to farms without careful investigation of the actual need for them in a given district would be foolish and an embarrassment to the farmers, that boys under fourteen and girls are not wanted, and that all farm labor must be supervised to avoid waste and inefficiency.

“We are convinced,” says Owen R. Lovejoy, general secretary of the National Child Labor Committee, “that the place for the children is in their homes, in school and in home gardens under supervision, and that the farmers are the last people who want an army of inefficient, inexperienced laborers on their hands. The grange officers show a clear knowledge of the fact that child labor is the most unskilled and uneconomical labor there is. I hope no one will be so foolish as to attempt to send children to the farms in any district without first seeing that the farmers want them and that they are to be properly safeguarded and supervised.”

“AND THEY DID ALL EAT AND WERE FILLED”

ARRIVAL in the United States, on May 3, of Herbert C. Hoover, recently appointed head of the food committee of the Council of National Defense, coincided with the introduction in Congress of the administration's food control bill by Chairman Lever of the House Committee on Agriculture. As sent to his committee it deals not only with food, but with many other necessities of life. The first section of the bill reads:

That by reason of the existence of the state of war there is a national emergency, and it is essential for the national security and defense further to assure an adequate supply and equitable distribution and to facilitate the movement of foods, feeds, shoes, clothing, fuel, other necessities of life, and articles required for their production, hereafter in this act called necessities, for the government and people of the United States, and to protect them against injurious speculation, manipulations, and controls affecting such supply, distribution and movement. For such purposes the powers, authorities, obligations and prohibitions hereinafter set forth are conferred and prescribed.

Based thus upon the war powers conferred in the constitution, the bill authorizes the President

to purchase, provide for the production or manufacture of, or otherwise to procure necessities; to store them; to dispose of them by sale or otherwise, on credit or other terms at cost, including the expense of packing and transportation; and to require any person having any necessities at his disposal, in an amount in excess of his reasonable individual needs for a reasonable period, to furnish the whole or any part of such excess to the government in such quantities, at such times, and at such prices as shall be determined by the President to be reasonable. . . .

This action is to be taken by the President whenever he shall deem it necessary as a means of securing an equitable distribution of necessities, or of preventing speculation and unreasonable enhancement of prices.

Not only does the bill thus authorize the complete nationalization of the production and distribution of the necessities of life, but it provides for the fixing of maximum and minimum prices, under similar conditions of national emergency. The measure declares that

the government of the United States hereby guarantees every producer of any merchantable necessities produced within the United States for which a minimum price shall be fixed by notice in accordance with this section, that upon compliance by him with the regulations prescribed by the President, he will receive for such necessities, produced in reliance upon this guaranty, a price not less than the minimum therefor as fixed pursuant to this section.

This permits the President to guarantee to the farmer a minimum price for each of his crops, as an incentive to increased production of food this year. Hearings before the Senate Committee

on Agriculture have developed the fact that the government experts favor a minimum guaranteed price of \$1 a bushel for corn, \$1 for potatoes, \$5 for beans and probably 75 cents a bushel for oats. A price of \$1.50 would have been guaranteed for wheat, but the season has advanced too far to permit of any additional sowing of that cereal as a result of such minimum price. The other crops named may still be planted.

This bill also authorizes the President to prescribe regulations governing the production of necessities; to compel railroads to carry such necessities in preference to other goods; to regulate exchanges so as to put an end to manipulations of the market; to limit or prohibit the manufacture of grain into alcoholic beverages; to lay import duties as a means of preventing the "dumping" of foreign-made goods on our market.

Nor is this all. The measure authorizes the secretary of agriculture to prescribe the standards of grade and of packing of foods; to license and regulate the number of food storage plants; to prescribe the percentage of flour to be milled from wheat, and to regulate the proportion of wheat and other flours to be used in the making of bread.

Despite the assurance of Representative Lever that the powers conferred by the bill are not to be used unless necessity shall be established for their use, the measure is accepted in Washington as the first part of a national program for meeting the food crisis. If it is adopted—and present indications are that it will pass with few important modifications—it will clear the way for the creation of a food-distribution system which will begin at the farm gate and extend to the door of the retail dealers. Then, if retail merchants and butchers fail to meet the government's expectation that they will serve efficiently under price-regulation, the new system will lay its hand upon the vast retail business as well.

Under the terms of this proposed act, the United States government is enabled to follow the example set by Australia in response to the demands of her workers that a degree of stability be maintained between wages and the cost of necessities. Farmers can be assured of a fair price for their crops; necessary middlemen can be assured of a living wage in the form of commissions; retailers can be guaranteed a reasonable profit for their work; consumers can be made secure in the price of commodities by each of these steps of regulation, and can themselves be paid a wage calculated upon the knowledge that the market for the agricultural and industrial output of the country is adequate and steady.

Back of this framework of regulation there are numerous plans for improved processes, for better handling of foodstuffs, and for the placing upon the market of a better quality of foods.

Mr. Hoover has begun the organization of the machinery which will be required to regulate the distribution of necessities for the entire nation. The Department of Agriculture is working upon the problems of increased production of foods and of more economical use of foodstuffs. Should Congress pass the Lever bill with the authorization to the President of the absolute powers which it proposes, Mr. Hoover will presumably become the agent of the Council of National Defense and indirectly of the President in putting an end to speculation in food, clothing and fuel.

At the request of Secretary of Agriculture Houston there was introduced in the Senate on April 30 the Gore resolution, which appropriates \$25,000,000 to be used by the Department of Agriculture "to provide further for the national security and defense by stimulating agriculture and facilitating the distribution of agricultural products."

This measure will be taken up after the Lever bill has been disposed of. It provides for an immediate investigation into the "demand for, the supply, consumption, costs and the basic facts relating to the ownership, production, transportation, manufacture, storage and distribution of foods, food materials, feeds, seeds, fertilizers, agricultural implements and machinery, and any article required in connection with the production, distribution or utilization of food."

It also grants broad powers of control of the food storage and distribution industry to the department and authorizes the department to purchase and distribute seeds to farmers in cases of emergency.

The Senate adopted, on May 3, the joint resolution offered by Senator Smith, of South Carolina, authorizing the President to spend \$10,000,000 in securing and distributing to American farmers a supply of nitrates as fertilizers. These nitrates will be imported from Chile, and will be sold for cash to the farmers.

Meanwhile the war council has considered, tentatively, the pooling of the food resources of the United States and Canada, in order that the problem of feeding the home and overseas populations may be met the more effectively. The week finds these plans still in the embryonic stage.

THE ECONOMICS OF WAR PROHIBITION

IN its grant of authority to the President to regulate or prohibit the use of grain in the manufacture of alcohol, the Lever bill falls a long way short of the desires of the war prohibitionists. They are at work for outright prohibition of the manufacture and sale of all alcoholic beverages during the war, as provided in the bill introduced

by Congressman Randall. Their task is greatly complicated by the action of the Democratic caucus in rescinding its war-prohibition vote and agreeing to pass only legislation advocated by the President—action which the *Searchlight on Congress* holds to be a plain evasion of its duty by Congress at the behest of a few wet congressmen from New York and Massachusetts. The prohibition campaign, therefore, must take the form of showing President Wilson that an overwhelming body of public opinion in all parts of the country desires war prohibition and is eager to have him ask it of Congress.

War prohibition, as distinct from other forms of national prohibition, is a purely economic move; for its immediate purposes, it disregards everything except the conservation of man power and food at a time when both are greatly needed. The cost of alcohol in bushels of grain has been discussed in every state and reported in earlier issues of the *SURVEY*.

Last week the Committee on War Prohibition, of which Prof. Irving Fisher, of Yale, is president, took up other aspects. In a statement on Modern War and Prohibition, which it gives out, Maj.-Gen. William Harding Carter, U. S. A., says:

... The public is far better advised today than ever before concerning the effects of the habitual use of intoxicants in producing criminal, insane and untrustworthy men and women and degenerate children. Prisons, asylums and public reformatories furnish continuous and abundant evidence along these lines. The increasing undiscipline of Americans has been observed and noted by investigators and students for many years. This is evidenced in lack of respect for parents, for the aged, for officers of the law and for the law itself. It has also been a uniform observation that these conditions become aggravated whenever and wherever intoxicating liquors are habitually used.

Confronted by these facts, we are about to undertake the creation of a large army of the people and to prepare it for participation in the most gigantic struggle in the history of wars. . . . That temperance has won a lasting victory is attested by the large increase in territory covered by prohibition laws and in the drastic regulations governing the employment of men in dangerous occupations, when individuals may be and often are responsible for the lives of others. If this applies in the operation of railroads and great industrial establishments, how much more should it apply in the cases of the officers and men called to the colors to uphold the honor of the nation and to defend its material interests. . . .

Under the title, Shall We Lose with Liquor or Win Without? Allen Rogers attacks the problem from the point of view of the American Chemical Society. Alcohol, he shows, is an essential in the manufacture of ether and other vital medical supplies, in explosives and as fuel. "The great industry of alcohol-beverage manufacture must bow before the demands of the nation in its time of crisis. This is no sentimental demand

—nor religious, nor even moral—it is the demand of the nation's chemists, based upon scientific analysis," says Dr. Rogers. "Don't close the breweries and distilleries. Transform them" to make the product vital at this time.

Other aspects are discussed in a statement by Prof. Thomas Nixon Carver, of Harvard. All those who grow grain can sell their product at high prices, he argues—even barley, which is used very little as human food, may find a ready market as feed for stock. Hop-growers may have more difficulty than others in adjusting themselves, but they can readily turn their land to other uses and "can easily make a living even though they make smaller profits than from hops."

As to the men employed in the liquor trades, Professor Carver holds that at a time when we "are to put two millions of men into the army and navy, a few million more into the production of military supplies, and at the same time increase the production of foodstuffs, the great and all-absorbing question is where we shall get men—not what we shall do with our surplus men." We are talking of putting high school boys on the farms and committees everywhere are organizing to find new sources of labor. "If these committees take hold of this problem, every man now employed in any branch of the liquor business will find another job waiting for him. Some highly trained and technically skilled men may not be able to turn their training to equally good account elsewhere. That is one of the chances of war which we all must take. Many industries besides the liquor business are going to be badly upset by the war. That, however, is one of the least of the burdens of a great war."

The remaining economic aspect—the loss of tax revenue through prohibition—has scarcely been touched upon, perhaps as a result of its failure in state campaigns; wherever the people have been ready for prohibition, they have brushed aside the loss of revenue as irrelevant in the face of the great gains which they hold will follow prohibition. General Carter touches on it briefly in his statement: "After many years observation of the effects of drink upon our soldiers, it is the unhesitating opinion of the writer that the proceeds of governmental taxation of stills and breweries, is, to say the least, no compensation for the misspent lives and stunted brains of those who are addicted to drunkenness. If it requires war-time prohibition to insure an absolutely sober and dependable army, we should have it, and the sooner the better."

As an offset to the stand of the wet congressmen from the North and East, the committee and other agencies are giving publicity to statements in favor of war prohibition by various bodies, by

prominent business men, such as John D. Rockefeller, Jr., and Frank A. Vanderbilt, president of the National City Bank, New York city, and by former President Taft, who is chairman of the Yale Committee of Seventy-one which proposes to have a dry commencement at Yale and to persuade other colleges, through their alumni, to follow suit.

At a hearing in the Boston State House, representatives of 300 granges and other bodies urged war prohibition. The Rev. Paul Revere Frothingham presided and among the speakers were ex-President Charles W. Eliot, of Harvard, who put strongly the connection between drink and venereal disease; Bishop William Lawrence, who believes the change of public sentiment the past month has been so enormous that prohibition would undoubtedly get enforcement; Maj. Henry Higginson, who spoke as a veteran of the Civil War; Professor Carver; John B. Moors, president of the Boston Associated Charities; Jessie Hodder, superintendent of the Sherborne Reformatory for Women, who is sending her only son to war; and Dr. Walter E. Fernald, of the Massachusetts School for the Feebleminded at Waverley, who said: "I believe national prohibition during the war necessary to avert economic and military disasters which may destroy our civilization."

FREE SPEECH AND PEACEABLE ASSEMBLY

PRESIDENT WILSON announced last week in a letter to Lillian D. Wald, head resident of Henry Street Settlement, New York city, and others who had written to him regarding what they conceived to be a threatened war-time invasion of the rights of democracy, that he had the matter in mind and hoped he would act "at the right time" in the spirit of suggestion. The President said:

The letter signed by yourself and others under date of April 16 has, of course, chimed in with my own feelings and sentiments. I do not know what steps it will be practicable to take in the immediate future to safeguard the things which, I agree with you in thinking, ought in any circumstances be safeguarded, but you may be sure I have the matter in mind and will act, I hope, at the right time in the spirit of suggestion.

The sentiments which "chimed in" with the President's own feelings were expressed in part as follows:

Even by this time we have seen evidence of the breaking down of immemorial rights and privileges. Halls have been refused for public discussion; meetings have been broken up; speakers have been arrested and censorship exercised, not to prevent the transmission of information to enemy countries but to prevent the free discussion by American citizens of our own problems and policies. As we go on, the inevitable psychology of war will manifest itself with increasing danger, not only to individuals, but to our cherished institutions.

What we ask of you, Mr. President . . . is to make an impressive statement that will reach not only the officials of the federal government scattered throughout the union, but the officials of the several states and of the cities, towns and villages of the country, reminding them of the peculiar obligation devolving upon all Americans in this war to uphold in every way our constitutional rights and liberties. . . . Such a statement sent throughout the country would reinforce your declaration that this is war for democracy and liberty. . . .

Among those who signed the letter were Herbert Croly, editor of the *New Republic*; Matthew Hale, the Progressive leader in Massachusetts; Judge Ben B. Lindsay, of Denver; Charles J. Rhoades, of the Federal Reserve Board of Philadelphia; Jane Addams; Paul U. Kellogg; Rabbi Stephen S. Wise and others.

Moved by similar alarm at what they term "the first casualties of any war"—free speech and peaceable assembly—a group of prominent men and women have formed the American Legal Defense League. They are drawn both from those who favored and those who opposed a declaration of war against Germany, and their object is to defend in the courts "constitutional liberties in any part of the United States." The league has already appeared in a number of cases tried in New York city.

The league has headquarters at 261 Broadway, New York. The first name on its board of advisors is that of Charles S. Whitman, governor of New York. Other names are:

Oswald G. Villard, president of the *New York Evening Post*; Charles C. Burlingham, lawyer, New York city; Judge John F. Hyland, County Court, Brooklyn, N. Y.; Leonard D. Abbott, president of the Free Speech League of America; Prof. Henry R. Mussey, Columbia University; Owen R. Lovejoy, secretary, National Child Labor Committee; Prof. Emily Green Balch, Wellesley College; Gilbert E. Roe, lawyer, New York city; Lillian D. Wald; Moorfield Storey, lawyer, Boston, and others.

The league will defend accused persons free of charge unless they are able to pay. It plans to secure the services of attorneys throughout the country. Already twenty-five have said they would try cases. It hopes to hear of cases needing attention through existing organizations, both of a militarist and pacifist character. A Legal First Aid Bureau has been formed in New York city to discover and investigate such cases, with headquarters at 70 Fifth avenue. At present the league is supported by contributions, but it may try to establish itself on a wide membership basis.

The principal cases in which the league has appeared for the defendant or been interested are those of Stephen Kerr, arrested for disorderly conduct when speaking in Madison Square, New York, and accused of using the phrase, "you skunks of Americans," though he

denies it; Henry Jager, accused of talking against conscription and of applying improper language to a man who had testified against him; George L. Glison (pen name "Shiloh") arrested for distributing pamphlets during the "Wake Up, America" parade; Helen Boardman, a writer, and Katherine B. Anthony, a social worker and author of *Mothers Who Must Earn*, who posted signs reading "No conscription—thou shalt not kill," and were put under bonds to keep the peace; and Loewe De Boer, a citizen of Holland, a graduate of Yale and Leyden universities and a writer on American colonial history, who engaged in a conversation on internationalism near a recruiting station and was sent to Bellevue Hospital for observation as to his sanity. De Boer was released several days later after the Dutch consul had testified to his personal acquaintance with him.

Glison, Kerr and Jager were each given six months in the workhouse and the last two were refused bail. "The severity of sentence in these cases is unheard of," declared Harry Weinberger, general counsel and executive secretary of the league, "and the bail offered (\$5,000 in the case of Jager) is regarded as more than sufficient in cases of highway robbery and burglary."

Whether these are sporadic cases or whether they show a concerted policy on the part of municipal authorities to curb the free expression of opinion has not been made clear. On April 3, the grand jury then sitting in New York county passed resolutions declaring that "it is the duty of every citizen not only to display his own patriotism, but to be on notice to see that his neighbor neither says nor does anything to reflect upon or weaken the power of constituted authority." The grand jury declared that "it views with dismay and reprobation the tolerance shown to assemblages in the public parks, squares and streets," and instructed the district attorney to procure authority for the commissioner of police to stop such practices and to prepare a bill making "any seditious utterance a crime punishable by a severe penalty." Either in pursuance of these resolutions or upon complaints received from citizens the Police Department has increased its watchfulness for utterances of a so-called objectionable nature.

Meanwhile, a letter from Mr. Weinberger drew the following reply from Attorney General T. W. Gregory:

So far as I know there have been no encroachments by any federal authority on the right of free speech or of free press. If, as alleged by Mr. Weinberger, any "halls have been refused for public discussion, meetings have been broken up, speakers have been arrested, censorship has been exercised," etc., such action has not been under any federal order and, if they have occurred, are not matters over which the federal government has any jurisdiction.

TO SAVE THE ARMY FROM VENEREAL DISEASE

DURING the first eighteen months of the European war one of the great powers had more men incapacitated for service by venereal disease contracted in the mobilization camps than all the fighting on the front."

Quoting this and other evidence as to the seriousness of the problem of prostitution which confronts the United States in the mobilization and training of a million and a half men, the Oregon Social Hygiene Society has appealed to the Council of National Defense for official precautionary action.

It asks that the council call upon Congress to establish a division of educational hygiene under Surgeon-General Gorgas of the army, with a trained executive in charge, and having an appropriation of \$300,000 to \$500,000 for a comprehensive educational campaign throughout the army and navy. As an alternative plan it asks that the President appoint a commission which shall be given such an appropriation for this work. It asks also that Congress forbid prostitution within a given distance of all camps.

Under the heading, Shall Prostitution Follow Our Army? the society gives these reasons for drastic action to prevent the entrance of the social evil into army camps and into the navy.

"First, because the experience of European countries has shown that prostitution is one of the most serious, if not the most serious, of army problems. . . . 'The number of syphilitics in the army [Austrian] must certainly be several hundreds of thousands. . . . Since the war began, a total equivalent of sixty divisions have been temporarily withdrawn from the fighting for venereal diseases' (Vienna report, *Journal of American Medical Association*). . . .

"Second, because prostitution was a serious problem on the Mexican border in the summer of 1896. (1) 'As soon as the order to mobilize went forth, the vice interests . . . also began to mobilize their forces and to move them to the border.' (Exner, *Social Hygiene*). (2) 'Vice districts were established especially for the soldiers.' (Exner. See also *Literary Digest*, November 18, 1916.) (3) 'Prostitutes were extensively patronized.' . . .

"Third, because venereal diseases, resulting from prostitution, spread more rapidly through the nation in time of war. This condition tends to make the army and navy problem more serious. . . .

"Fourth, because the venereal diseases cause serious complications in later life, and because these diseases will be spread among innocent women and children when the war is over.

"Fifth, because prophylactic measures, while helpful, are insufficient. . . .

"Sixth, because commercialized prostitution is unnecessary.

"Seventh, because it is easily possible to prevent in large measure commercialized prostitution and venereal disease.

"Eighth, because drastic (i. e., immediate and powerful) action is necessary because a large amount of disease in the army originates in mobilization camps and home barracks."

Medical authority and evidence is cited, in the brief, in support of each of the eight contentions made. The brief is now before the medical division of the Council of National Defense, Senator Chamberlain, chairman of the Senate Committee on Military Affairs, and others responsible for the carrying on of the war.

TRADE TRAINING FOR THE INJURED

THERE is timeliness in the report just made by the Massachusetts Board of Education on special training for injured persons. At the moment the United States is entering war the board, after investigation, proposes that a bureau be established "for the training and instruction of persons who, through industrial accident or industrial disease, have suffered the loss of or injury to a limb, or other severe injury, and whose earning capacity has been destroyed or impaired thereby, for the purpose of re-establishing or increasing the ability of such persons to earn a livelihood."

The board was instructed a year ago to undertake an inquiry into this subject. It interpreted its instructions as referring primarily to industrial accidents. Nevertheless it secured testimony and help from people who have been at work on the problem of training crippled soldiers in Canada and in Europe. Its recommendations, therefore, have an application to the injuries that will be sustained by our own citizens on the battlefields of Europe.

The board was not able to determine definitely the number of people in Massachusetts who, under present conditions, are in danger of becoming unemployable because of industrial accident. Estimates vary from 500 to 2,000 yearly. It did find, however, that there is in that state "a large problem of rehabilitating injured workers through scientific methods of discovery of aptitudes, organization of means of training, development of agencies for placement in industry, and rendering assistance to the handicapped while adapting themselves to the demands of a new position." What is true of Massachusetts is probably true also of other highly industrialized states.

Although nearly all states make provision for training the blind, the board found no national or state-aided institutions for training the injured. There are a number of private institutions for training cripples, but these are frequent-

ly designed especially for children. It discusses several typical agencies for training disabled workmen and soldiers in foreign countries.

There are five stages in the treatment and rehabilitation of persons seriously injured, if they are to be restored to industry as self-supporting workers and citizens, the board finds. These are the period of surgical treatment, of convalescence and mental adjustment, of training, of placement, and of physical adjustment to the demands of the new position.

An act has been drawn by the board to establish the new bureau it proposes. This bureau should, it thinks, maintain such additional agencies as may be necessary to instruct, train and place in employment injured persons whose earning capacity has been destroyed or impaired. The bureau should be under the board of education and should issue bulletins containing information about choosing an occupation, obtaining training and securing employment. Such a bureau, says the board, would only be an extension of a state policy already in operation in reference to the blind.

WAR-TIME TRAINING AND PROGRAMS

FOLLOWING the lead of the New York School of Philanthropy, training courses in civilian relief work have been established in a score of cities, and a special section on social problems of the war is announced by the National Conference of Charities and Correction for its meeting next month in Pittsburgh. Edward T. Devine is chairman and Ernest P. Bicknell vice-chairman.

The section has been arranged to discuss the war as it affects social work and conditions without scrapping the program carefully built up before the break with Germany. There is to be, moreover, a special meeting the afternoon of June 11 at which William Howard Taft will address the conference on the League to Enforce Peace. Frederic Almy, president of the conference, points out that the league's program has to do with the period after the present war and that, in accordance with its practice established for many years, the conference will not expect to take a position for or against this or any other proposal laid before it.

Civilian relief training courses in all the cities from which the SURVEY has received announcements are based on the regular case work of charity societies applied directly to the situation which is expected to develop as the result of experience in Canada, on the Mexican border and, to some extent, abroad. In the professional training schools for social workers and the Red Cross classes organized by charitable agencies, stress is laid on required field work under the direction of experienced agents. The

result is expected to be a considerable body of volunteers with some understanding of the principles involved and a bit of experience resulting from the field work—minutemen of charity. The size and details of the task they may be called upon to perform depend, of course, in large measure, upon how effectually Congress keeps married men out of the army and what provision it makes or fails to make for the dependents of soldiers.

In the Chicago School of Civics and Philanthropy, the special lectures on emergency war relief follow after a course on the principles of case work and another on the background of social work. Sophonisba P. Breckinridge, of the school faculty, is giving a closely related course in the University of Chicago which, together with courses on food conservation and production, and on first aid, are made a part of a special program of war service for the women students of the university.

The leading social agencies of Boston are represented on a committee which is acting in an advisory capacity to the Boston School of Social Work (which forms a department of Simmons College) in its course on First Aid in Social Service. Elizabeth L. Holbrook of the Associated Charities is in charge of the class conferences and assignments to field work. The Pennsylvania School for Social Service, Philadelphia, follows very similar lines and, in common with the others, is giving its course under the auspices of the local Red Cross.

In Scranton, Pa., thirty-five students are at work under the direction of Maurice Willows, general secretary of the Associated Charities, who is also one of three men in charge of the newly organized civilian relief department of the Red Cross. In Yonkers, N. Y., a course is given by Mary J. Van Hook for the local chapter of the National League for Woman's Service, with the cooperation of other local agencies.

The Denver Federation for Charity and Philanthropy is establishing a class. And among a great many special war-time college classes may be mentioned that on emergency aid by Prof. Susan M. Kingsbury, Carola Woerishoffer professor of social economy at Bryn Mawr.

Of interest in this connection is a dispatch received by the *Christian Science Monitor*, in which Neville Chamberlain, British director of national service, emphasizes social service as an occupation for volunteers. While recognizing the value of part-time work by women prevented by domestic duties from placing their whole time at the disposal of the country, he urges that further help from volunteers is needed in social work carried on directly by the state and by local authorities or partly supported by them, such as care com-

mittees, boys and girls clubs, infant welfare agencies, war pensions and disablement committees, canteen service for munition workers, rest huts for soldiers and sailors.

On the other hand, he pleads for voluntary workers in services which must be rendered for the whole working day, or which can be rendered better by whole-time workers, including the voluntary aid attachments to auxiliary hospitals and civil as well as military nursing which requires a period of preparation and probation.

PRACTICAL PATRIOTISM FOR OBJECTORS

REPRESENTATIVES of the three separate Quaker organizations, the Five Yearly Meeting, the Hicksites, and the Arch Street Yearly Meeting (Philadelphia), have come together to form a Friends' National Service Committee for the purpose of directing the energies of those men and women who, though unable on conscientious grounds to take part in military or civil war service, desire to cooperate with the government in meeting the new tasks of social service arising from the country's state of war. The committee consists of five delegates each from the three organizations and has empowered an executive committee of four, Alfred G. Scattergood, Arabella Carter, L. Hollingsworth Wood and Lucy Biddle Lewis, to formulate plans of active service.

Following the example of English Friends, the committee is contemplating the formation of an ambulance corps for service at home or abroad if a real need for it should develop. The idea of a Friends' farm labor corps, already previously announced (see the SURVEY for April 21, page 70) has been received with much approval throughout the country. Their formation has, for this reason, been delegated to local committees which are actively engaged in enlisting conscientious objectors for this service, whether members of a religious organization or not.

The committee is particularly anxious that Friends already engaged in social work of permanent value shall not, under a mistaken conception of patriotic duty, neglect it for the sake of swelling the ranks of the new social crusaders.

"We are united," says a resolution unanimously adopted by the Friends' National Service Committee, "in expressing our love for our country and our desire to serve her loyally. We offer our services to the government of the United States in any constructive work in which we can conscientiously serve humanity. We encourage freedom of thought and of speech to carry on as far as the law will allow open forums and to encourage the press to state both sides of a question at issue. We recom-

mend that at all times, in all things, we exercise and advocate self-control and the application of enthusiasm for service for constructive ends."

EFFICIENCY FOR THE ARMY CHAPLAINS

THE selection of chaplains for the greatly enlarged army and navy is being made a matter of highly selective processes and of close cooperation among the constituent bodies of the Federal Council of the Churches of Christ in America.

"The chaplaincy is not a political office, not a soft snap, not an easy salary or a pension for life, and is no place for people who make failures in other types of ministry," says the Rev. Clyde F. Armitage, associate secretary of the Commission on the Church and Social Service of the Federal Council.

The federal council is cooperating with the secretaries of the Army and Navy De-

partments in the discovery and selection of capable men. A large number of applications from some of the denominations are now on hand, and it is evident that there will be no opportunity for other than the highest grade men. We have been in conference with the denominational committees concerning chaplains and are cooperating with them in such a way as to give every chaplain the backing of a united Protestant church. We have generally agreed that no candidate shall receive endorsement unless he fully meets the strict requirements set.

We expect also that the man shall have prepared himself with a thorough college and theological seminary education. It is quite essential that he shall have had some pastoral experience and that he be an organizer as well as a preacher. A chaplain finds awaiting him no official board, no group of deacons, no organization of any kind. He must be a man of resource and must build his work in many cases against the indifference, and in some cases against the opposition of the officers.

We prefer also that the men becoming chaplains be of an athletic type, capable of supervising the recreations of the enlisted men. Preference shall be given to those who desire to enter the chaplaincy as a life work.

guarding of her rights and those of her child. A Bureau of Child Welfare is created in the Board of Control and local county Boards of Child Welfare are authorized in the various counties of the state to cooperate.

The law relating to illegitimate children is shaped on the principle, expressed in the statute, that the child born out of wedlock is entitled to the same degree of care and nurture as though he were legitimate. The father's obligation, in any event, cannot be settled without the approval of a court having jurisdiction. Supplementary to this, it is made a felony and hence subject to extradition, to abscond after issue is conceived of fornication.

Maternity hospitals and infant homes must now be licensed and properly supervised by the Board of Control and that board must investigate homes in which children are to be placed, and visit within ninety days after the entrance of the child into the home. The surrender of children under fourteen years of age is restricted. Adoption proceedings are now subjected to careful scrutiny by the board, and no child can be adopted until he has remained in the proposed foster home for six months.

The so-called mother's pension law has been rewritten, its provisions enlarged, and standards of administration established in the light of the experience of our own and other states. The juvenile court law has likewise undergone a thorough process of recasting at the hands of persons intimately acquainted with the juvenile court problems. The scope of the law, the machinery of its procedure, and the spirit of its text have been put on a solid and liberal foundation.

In many respects Minnesota now has as soundly progressive laws relating to children as will be found on the statute books of any state in the union.

Social Legislation

For the Children of Minnesota

By *W. W. Hodson*

SECRETARY, MINNESOTA CHILD WELFARE COMMISSION

OF the forty-three measures submitted to the state legislature by the Minnesota Child Welfare Commission, thirty-five were enacted into law with but few and unimportant changes. The success of so large a number is especially heartening because the legislature considered, during the session, 2,300 measures of which 78 per cent failed of passage. With possibly three exceptions, the child welfare program constitutes the record of social legislation for this session.

Earnest people in this state have long labored to secure a commission for the revision of laws relating to children. At two preceding sessions of the legislature, efforts were made to bring this about, but without result. Finally Governor Burnquist was urged to appoint such a commission, which he did, and twelve persons were selected to serve. Work was begun in September, 1916, under the leadership of Judge E. F. Waite, of the Juvenile Court of Minneapolis. Funds were raised by popular subscription throughout the state.

After as careful and thorough study as time could permit, a report was made to the governor in February of this year, in which forty-three bills were submitted for consideration. In the legislature, a joint committee, appointed by House and Senate to consider the recommendations, reported out for passage forty-one of the original forty-three proposals. It should be noted in passing that the strategic advantage of a joint committee and a favorable report by it cannot be overstated. The measures were introduced in each chamber as committee bills bearing the sanction of men from both houses. As "two-name paper" is better than one, the moral is pointed and the tale

adorned. One cannot refrain from further suggesting that the euphonious title of "child welfare" was not without value and the few who found it necessary to oppose the interests of children squirmed vigorously. Catchphrases are fortunately not always misleading nor of evil purpose.

Of the forty-one measures approved by the joint committee, six were withdrawn before the bills came up for final passage. The opposition to these developed such strength that it was feared the whole scheme would be jeopardized. So it was necessary to discard a proposal relating to the regulation of marriage, which provided, among other things, that five days should elapse between the application for and issuance of a marriage license. Two bills allowing inheritance by illegitimate children from the father where paternity has been adjudged were sacrificed to a vague but strongly prevalent fear of blackmail. A measure regulating street trades by prohibiting them to boys under twelve and requiring boys between twelve and sixteen to have licenses met the bitter resentment of all newspapers in the cities affected. Because of it those papers closed their editorial columns to the entire body of child-welfare legislation. Two other measures including a revision of the child-labor law were withdrawn to meet the needs of the situation.

Of the measures passed none is of greater importance than one which gives the state Board of Control powers of legal guardianship over children who may be committed to its care. Complete responsibility is centered in the board, and it is given broad powers of action. Special emphasis is laid, in this law, upon the care of the unmarried woman approaching motherhood, the safe-

PRISON PROGRESS IN NEW JERSEY

NEW JERSEY, by act of her legislature just adjourned, enters the list of states that are dissatisfied with their methods of controlling and managing state charitable institutions. A commission of five persons has been created not only to investigate conditions in such institutions, but to inquire into ways of "centralizing authority or control over all such institutions, the transfer of inmates," and other questions of improvement. New Jersey now has a department of charities and correction with a single commissioner at the head. Governor Edge has appointed the commission of inquiry.

The exposure of conditions at Trenton prison by the Prison Enquiry Commission and the reforms that followed have already been noted. This commission has been continued for another year to investigate other penal institutions. An unusual county jail bill was passed, giving authority for employing jail prisoners and establishing a wage system. Wages must not exceed fifty cents a day, and may be paid to a prisoner's dependents. A judge of common pleas is empowered to parole any jail prisoner under rules made by the court whenever work can be found anywhere in the county.

It is made a misdemeanor for a person "knowing himself or herself to be infected with a venereal disease" to marry, and the reporting of cases of venereal disease to the Department of Health is required.

The State Labor Commission was given authority over sweatshops, and the Department of Labor authority relating to home work manufacture, in times of epidemic.

Another measure provided for two women members on boards of managers of state hospitals for the insane in addition to the present membership. The sale of cigarettes to minors under eighteen was prohibited.

The college girl asks :-

"What is open to me?"

The business man asks :-

"What can you do?"

The way for her to meet the demands of modern business is explained in

Women and Work

By HELEN MARIE BENNETT
Manager Chicago Collegiate Bureau
of Occupations

In view of the wide-spread tendency to criticize the college girl as a business woman, this book has an important message both for the critics and the criticized. It is a personal, philosophical discussion of the relations of a college girl to her vocation.

HEALTH MEASURES KILLED IN INDIANA

THE Indiana legislature, some of whose enactments were noted in the SURVEY for April 28, killed the "chiropractic bill," which would have given to an examining board, separate from regular medical practice regulations, the licensing of "chiropractitioners." But it also killed the bill providing for all-time county health officers; the bill that would have greatly aided the control of infectious diseases by providing medical examination of school children. Not even a commission to investigate health insurance was secured—much less insurance itself. Measures were killed that aimed to control venereal disease, to prohibit the sale of habit-forming drugs, and to require health certificates for marriage licenses.

The report pictures a gory session. Verily, as Dr. Hurty, Indiana state officer of health, says, "the education of the people is a slow process. But," he adds, "public education is a surer foundation for public health than law-making."

VERMONT STATE GOVERNMENT REORGANIZED

THE primary concern of the Vermont legislature was with administrative reorganization of the functions of the state government. The governor, who for fourteen years had been the state auditor of accounts and had thus had the opportunity of gaining an unusual amount of knowledge of state affairs, laid down a complete plan for reorganizing and regrouping administrative functions.

The central feature of the plan was the organization of a board of control to have a general control over all boards, departments and institutions. As enacted, the law provided for a board to consist of the governor, state treasurer, auditor of accounts, director of state institutions and an additional member appointed by the governor. This board holds monthly meetings and has general powers of oversight over all state departments. The employment of all assistants by any department is subject to the approval of this board, as is also the pay of all officers and employes whose pay is not fixed by statute. Departments of government are required to make monthly reports to this board showing the work done and the money expended, and a summary of these reports is to be furnished to the newspapers. The Board of Control, together with the chairmen of the Finance Committee in the Senate and the Ways and Means Committee and the Committee on Appropriations in the House, constitute a committee on budget to prepare the budget for submission to the legislature.

Other measures which were part of the reorganization plan provide for a commissioner of agriculture, who takes over the duties of several departments formerly doing work relating to agriculture and the commissioner of industries, who takes over the work of the Industrial Accident Board and the factory inspector. The office of state engineer is also created, and the office of insurance commissioner.

The director of state institutions is a new office created to take over the work formerly done by the Board of Penal Institutions, trustees of the State Hospital for the Insane and trustees of the State School for Feeble-minded Children. He is also authorized to establish, with the approval of the Board of Control, detention farms, where persons now confined in jail may be detained. Provision is made for a reformatory for women at Windsor, where the women prisoners now sent to the house of correction and the state prison will be confined.

Another measure which formed part of the governor's program was that which provided for a board of charities and probation.

This is an unpaid board which is given supervision over such dependent, neglected and delinquent children as may be committed to the board by the juvenile court and has power of investigation over all public charities. It takes over the work of the Probation Commission and administers the probation law of the state, for which purpose it may appoint deputy probation officers. It is also the duty of the board to investigate the administration of the poorhouses of the state. In this connection it may be noted that an offer was made to the state of a large farm to be used as a state home for dependent children and the legislature gave full power to the Board of Control to act as to the advisability of accepting the home.

Benefits under the workmen's compensation act were somewhat increased and made more specific, and the administration of the law was given, as above noted, to the commissioner of industries. An act was passed making the child labor law conform to the provisions of the federal act.

Measures directly relating to war were the appropriation of a million dollars for the National Guard and for aid to dependents thereof; the codification of the laws relating to the militia; an espionage act; an act prohibiting the granting of second-class liquor licenses (bottle licenses) while the United States is at war; and the law providing that the commissioner of industries may suspend the law regarding hours of labor of women and children while the United States is at war.

Among the measures relating to public health were an act authorizing counties to establish tuberculosis hospitals; an act relating to the practice of chiropody; a net weight law; an act providing for the cleanliness of food establishments and giving large powers to the State Board of Health relative thereto; an act providing that food standards promulgated by the federal Department of Agriculture should be the legal standards for Vermont; the pure ice-cream law; an act permitting the State Board of Health to conduct an educational campaign for the prevention of venereal diseases; an act appropriating money for the establishment of wards or hospitals by the state for the treatment of tuberculosis; an act prohibiting the sale of drugs or other commodities containing wood alcohol.

A woman's suffrage measure provides that women who pay taxes may vote in local elections, which includes a vote on the question of granting liquor licenses.

JOHN M. AVERY.

NEW HEALTH ADMINISTRATION FOR OHIO

TO abolish the State Board of Health and substitute for it a public health council of four members and the state commissioner of health was the proposal made to the Ohio legislature by Senator Howell Wright. The measure passed in the Senate without a dissenting voice; in the House after a sharp partisan fight, and was signed by Governor Cox, who, according to the *Ohio State Medical Journal*, will probably appoint the new council before June, when the system takes effect.

Under the new law the commissioner is given broader powers than formerly were conferred upon the secretary. "The governor and his advisers," says the *Ohio State Medical Journal*, "are now engaged in scouring the country for a high-grade man." Comparison with the recently enacted law of Illinois at this point is decidedly in Ohio's favor. "The only qualification demanded is that the commissioner be a physician skilled in sanitary science," whether he has practiced medicine for five years in Ohio or for one in Montana is of small importance in comparison to the fact of adequate training.

The new law provides also for a deputy commissioner of health, who need not be a medical man. To this position, James E. Bauman, for sometime acting secretary of the board, will, it is said, be appointed.

MINIMUM WAGE ESTABLISHED IN ARIZONA

BOTH houses of the Arizona legislature came to a deadlock over appropriation bills for the state institutions with an almost sterile session, so far as social legislation is concerned.

Greatest interest centered in the bill, introduced by one of the three women members of the House, providing a minimum wage for women of \$12 a week. It was passed, after a long debate, with the \$12 reduced to \$10. A child-welfare act provides for the establishment of a child welfare board in each city in the state. Other acts prohibit re-marriage of divorced persons for one year after the decree is granted; prohibit unnatural sexual relations; provide for the destruction, under certain conditions, of juvenile court records; provide for cooperation between the state and the federal Department of Labor in establishing and maintaining free employment offices.

GAINS AND LOSSES IN MICHIGAN SESSION

THE Michigan legislature, which adjourned April 20, enacted bills to give effect to the constitutional amendment adopted by the people at the November, 1916, election prohibiting the manufacture or sale of intoxicating liquors within the state. This enabling legislation, indeed, went further than the amendment and under it importation of liquor will be expressly prohibited. The effect will be to make Michigan bone dry after May 1, 1918.

Michigan's lack of any reformatory for women has been at last met by a law providing for the establishment of a reformatory and carrying an appropriation of \$117,250 for the purchase of a site and construction of initial buildings. This law provides that the superintendent of the reformatory shall be a woman and that women shall be included among the members of the governing board.

Women gained the presidential vote from this legislature, which further provided for the submission of a suffrage amendment at the November, 1918, election.

The legislature also enacted a state-wide housing code for all cities of the state, based upon a draft prepared with the assistance and advice of the National Housing Association.

Several measures of considerable importance were defeated. Among them was a bill providing for divisional courts of domestic relations in the several county courts, the purpose of which was to provide a tribunal of comprehensive jurisdiction and adequate administrative equipment for the effective and intelligent handling of domestic relations cases, both civil and criminal. Another measure which failed was the bill providing for hitherto unknown state supervision over the local administration of public outdoor relief. A bill providing for this purpose a public relief department of the State Board of Corrections and Charities, and giving that board power to prescribe a uniform system of case records and reports for use by local poor officials, drafted in harmony with one of the recommendations of the State Commission to Investigate Public Outdoor Relief, was defeated in the House after passing the Senate.

Practically all measures introduced in the interest of wage-earners were defeated. Workmen were a law amending the workmen's compensation act, by increasing slightly the benefits payable thereunder; a bill pro-

Specials in White and Colored Dress Cottons

During May and until lots are sold, several thousand yards of desirable summer materials both in White and colors will be offered at the following reduced prices:

At 15c yard Irish Dimities, White grounds with floral printings in various colors.

At 18c yard Printed Cotton Voiles in Dots, Stripes, Figures and all-over designs.

At 25c yard Woven and printed Voiles, Batiste, fancy Skirtings, Japanese Crepes and Madras and Percalé Shirtings.

At 50c yard Imported woven Batiste, printed Crepe de Chine, Silk Stripe Voiles, woven and printed effects on fine Voiles and novelty fabrics for sport Skirts, etc.

At 75c yard Printed and woven Imported Voiles showing a fine range of Dots, Stripes, Checks and Floral Designs; also a fine range of woven fabrics for sport Skirts in Striped and checked effects.

At 95c and \$1.35 yard, Smart Fabrics for Sport Skirts, Checks, Stripes, Plaids, in light or dark effects, 36 to 40 inches wide.

White Fabrics

At 35c yard Novelty weaves in Voiles and Crepes, Stripes, Checks, and plain effects.

At 50c yard Fabrics suitable for separate Skirts, such as Gabardines, fancy corded Piques, Repps. Basket Weaves and Imported Piques, also fine Voiles and Crepes in several desirable patterns.

Samples of any of these lines except bordered materials, mailed upon request

CENTRALIZED CONTROL FOR NEW HAMPSHIRE

THE New Hampshire legislature has for the third time in succession reorganized the control of the public institutions. Instead of the large board of ten trustees provided for two years ago, there will hereafter be a more centralized board of five, of whom the governor will be ex-officio one. The most important legislation with reference to any single state institution touches the School for Feeble-minded, which will hereafter care for adults as well as children, thus making it possible to retain the grown-up children whom it would be unsafe to turn back into the world. Money was provided for a new building for adults.

After a number of sessions of fruitless debate, the legislature has finally passed a weights and measures act. Another new piece of legislation is a factory inspection law, but the legislature was unable to cope successfully with the workmen's compensation law, which will consequently remain in its present unsatisfactory condition.

An attempt to get the placing-out of dependent children entirely in the hands of the state was only partially successful. An act was passed which enables the State Board of Charities to employ placing-out agents, throwing the expense of maintaining the placed-out children upon the county or town in which the children have their settlement. As the act requires that no bill for such maintenance shall be paid without the approval of the county commissioner or the overseer of the poor, the law cannot be fully successful, but it is a start in the right direction. Similarly legislation was provided by which juvenile court justices may order children on probation placed out in suitable homes at the expense of the county or town. Here again, however, there is the same sort of a check provided by the necessary approval of the county commissioners or the overseer of the poor.

In consequence of the repeal of the local option law, the state will return to prohibition on May 1, 1918.

ELWIN L. PAGE.

SOME PROGRESS REPORTED IN IOWA

IOWA enacted a substantial amount of social legislation in spite of long partisan quarrels and the scrapping of Governor Harding's entire program. A million dollars was appropriated for raising and equipping Iowa's share of an army and soldiers and sailors were exempted from paying debts during the war. But an appropriation of \$100,000 for encouraging an increased food supply was killed.

State-wide prohibition under a constitutional amendment was ordered submitted to the voters October 15, liquor advertising and importing liquor were prohibited and the discovery of liquor on hotel and restaurant

premises was made evidence of intent to sell. Woman suffrage is to be submitted again to the voters.

The State University at Iowa City has extensive plans for the use of the \$25,000 a year appropriated to it for a child-welfare station. Des Moines was authorized to levy a tax to establish teachers' pensions. The office of registrar of vital statistics was created, with an annual appropriation of \$2,000.

Cities were authorized to establish community center houses with recreation grounds. Cities of the first class may set off restricted residence districts and levy a special tax for bathing beaches, pools, ice rinks and dance pavilions, and they are required to establish comfort stations.

An appropriation of \$150,000 was made for a children's hospital at Iowa City. The state industrial schools were renamed training schools. Control of the School for the Deaf was transferred from the Board of Control to the Board of Education. Permission to use schoolhouses for public meetings was granted. Sixteen was substituted for fourteen as the age up to which mothers' pensions may apply.

REORGANIZATION OF THE MAINE PRISONS

ALTHOUGH the Maine legislature failed to pass several bills proposed by interested social workers, a number of important measures were enacted. One is the removal of the state prison from politics by the creation of a nonpartisan prison board of three members and the transfer of the duties of the Board of Prison Inspectors to it. The commission is to be appointed by the governor with the advice and consent of his council for a six-year term. By making the commission an advisory board of pardons, the former advisory board of paroles was done away with. This is an advance over the old system in that every prisoner will be used fairly. An interesting feature of the bill is the authorization of employment of all able-bodied prisoners, not serving a life term, on the construction and improvement of highways.

A bill providing special aid to mothers with dependent children under fourteen years of age grants a maximum sum of \$10 a month for the first child and a sum not exceeding \$4 a month for each additional child. Administration is in the hands of a state board, created for that purpose and consisting of the members of the State Board of Charities and Corrections. In each town, there is to be a municipal board subordinate and subject to the state board. Both are given discretionary powers.

A State Department of Health, having all the powers and duties for which the State Board of Health has previously been responsible, was created. As health commissioner a trained and experienced physician may be appointed by the governor, whose term of office is to be six years and whose entire time must be devoted strictly to his official duties. The bill provides for the division of the state into three districts, each to be presided over by a district health officer, a trained physician appointed by the commissioner, receiving a salary of \$2,500.

The woman suffrage amendment was passed and goes to the voters on referendum next fall.

Among the bills that failed was one that proposed doing away with town almshouses and farms and having in their places either a district or county almshouse, a proposal based on the fact that in several existing almshouses there is but one inmate. A bill providing a matron for county jails and police stations also failed.

Meeting the Universal Need

In the high passes of the mountains, accessible only to the daring pioneer and the sure-footed burro, there are telephone linemen stringing wires.

Vast telephone extensions are progressing simultaneously in the waste places as well as in the thickly populated communities.

Across bays or rivers a flat-bottomed boat is used to unreel the message-bearing cables and lay them beneath the water.

These betterments are ceaseless and they are voluntary, requiring the expenditure of almost superhuman imagination, energy and large capital.

Over the sand-blown, treeless desert a truck train plows its way with telephone material and supplies.

In the Bell organization, besides the army of manual toilers, there is an army of experts, including almost the entire gamut of human labors. These men, scientific and practical, are constantly inventing means for supplying the numberless new demands of the telephone using public.

Through dense forests linemen are felling trees and cutting a swath for lines of wire-laden poles.

A Watch That the People Want
—the New

Ingersoll

Waterbury

In the first place it's the size that is so much wanted today—especially in the cities—the smaller "12-size." Then the whole "get-up" of the watch is smart, stylish, up-to-the-minute in all the little features found in the high-priced watches.

But a watch is to keep time and meet practical requirements. Here is three dollars' worth of watch by the best Ingersoll standards. It's jeweled with four jewels at points of greatest friction. It is accurate; and it is sturdy, too. It isn't put out of business by a little rough handling that most watches won't stand.

As an added attraction you have the Waterbury "Radiolite" at \$4.00. The hands and figures are made of a new self-luminous substance containing genuine radium. This causes them to glow with a brilliance that lasts for ten years—probably much longer.

You can always tell an Ingersoll store by the display of Ingersolls in the window. There's one not far from you.

The Minimum Cost of Living

WINIFRED S. GIBBS

Lecturer on Household Economics, Teachers College,
Columbia University

Miss Gibbs' book is a study of 100 family budgets, selected from the records of her ten years' work in New York city with the Association for Improving the Condition of the Poor. It shows how items in the family income were made the basis of instruction in foods, diet, sewing, etc., and estimates the minimum on which a family may live. Charts are included, showing the "budget book" used by the Association. "No corrective is more effective than a record of an unwise expenditure," says Director Burritt in his Introduction.

Under terms of contract with the publishers, the A. I. C. P. has a number of copies for sale to social workers at the special price of fifty cents. Address orders to

How Does Your State Stand?

HAS it ever struck you that your state's activity for the common welfare might be judged by the number of SURVEY subscribers it has? People don't read the SURVEY just for amusement; but because they want to know what's being done in the fields of social and civic advance.

Where does your state stand on the following table of SURVEY subscribers by states?

Column 1, population January 1, 1917 (World Almanac).

Column 2, Survey subscribers, April 1, 1917.

Column 3, ratio of population to paid-up Survey subscribers.

	1	2	3		1	2	3
1 Dist. of Columbia	366,631	251	1466	25 Arizona	259,666	28	8832
2 Massachusetts	3,747,664	1610	2327	26 Indiana	2,826,154	314	9000
3 New York	10,368,778	3187	3252	27 Utah	438,974	47	9339
4 New Hampshire	443,467	131	3385	28 Nebraska	1,277,750	129	9905
5 California	2,983,843	826	3612	29 Kansas	1,840,707	181	10160

If your state is ahead in this evidence of social interest, don't you want it to keep on leading? If it lags behind, don't you want it to better its position?

You can help your state climb in this barometer—can add to your patriotic service in these times when understanding of the social phases of wartime problems and of the wartime phases of social problems is of the utmost importance to everyone.

—by getting busy as a SURVEY Circulator.

That is a new kind of membership in Survey Associates which is attained not through financial contributions, but through securing new readers of the Survey. Just send us four new three-dollar subscriptions to the weekly Survey, or eight new two-dollar subscriptions to the first-of-the-month issues, or the equivalent in combination of the two kinds.

To help you get these new readers, we'll send you appropriate printed matter just as soon as we receive from you the coupon below.

If every SURVEY subscriber in your state would become a Circulator, just see where that would put your state! That isn't impossible, if each would do his bit. Will you do yours?

CIRCULATOR COUPON—Fill this out and return it to us.

Please enroll me as a Circulator in the SURVEY's campaign for wider use of social information.

Texts for Volunteers

CLASSES in civilian war relief work have been established in a score of cities with the articles on The Task of Civilian War Relief, now running in the SURVEY, and the pamphlet, A Canadian City in Wartime, reprinted from the SURVEY, as required reading. Special rates are made for classes taking the SURVEY, and the Canadian booklet is given free with each new subscription. The SURVEY will be glad to hear of other classes, formed or forming, and to have the names of any individuals who might find its pages useful.

WOMEN have rallied to the colors in such numbers that the Council of National Defense has had to classify and coordinate their wartime service. The Committee on Women in Industry, in particular, has a tremendous task in upholding tottering industrial standards in the trades where women are flocking into men's jobs and in watching the sub-contracting by which government work is given out to states where there is little protection for wage-earners. Page 153.

"DADDY" GEORGE long ago suggested that census-taking was an educational task for children. Now his contention has been proved by the elaborate agricultural census taken by school boys and girls in the rural counties of New York in five days. Page 155.

WORKSHOP councils are being established all over England and they are working. Employes are given a greatly increased control over the conditions under which they work and trade union practices do not seem to be interfered with. Page 156.

MARYLAND'S agricultural militia is being recruited with the practical advice of farmers and canners. Page 159.

RED CROSS relief plans for families of soldiers have been given out in detail. Great sums of money are to be raised by the man who has organized the successful Y. M. C. A. campaigns. Page 162. Congress has before it several proposals for separation allowances for men with dependents, while the War Department is confident that, under selective conscription, married men can be kept out of the ranks. Page 167. And sailors on food ships, who reckon they have one chance in two of coming home again, are to be protected by insurance. Page 166. California social workers insist that allowances to soldiers must be sharply differentiated from charity. Page 170.

STATE and federal public health officers have agreed on a joint working program. Page 172.

EVERETT'S "bloody Sunday," when deputy sheriffs and I. W. W.'s fought until men had been killed on both sides, ended finally last week in a verdict of not guilty. The man who was tried for murder and his companions have all been set free. Something of the testimony and of the methods of these wandering husbandmen on whose labor the western crops depend. Page 160.

MEN who have built and operated railroads are given preference in the engineer regiments for France. What American trainmen say when they see the fussy little French locomotives should be made a matter of special dispensation by the censor. Page 166.

FIRST to return of the special agents from this country who administered civilian relief in Russia, Mr. Pettit has an interesting story of the interned Germans and of the social progress of a Russian city. Page 168.

PLANS of the official committee for settling discharged English soldiers and sailors on the land have proved something of a disappointment, but private agencies are supplementing the government report. Page 171.

DR. PATTEN'S retirement for age from the University of Pennsylvania is being reconsidered by the trustees. Page 172.

WHAT we may expect in France after the war as set forth in three recent hooks—a timely review with the French commission swinging round the circle with almost the speed of a presidential candidate. Page 173.

Women and War Work

By Mary Chamberlain

OF THE SURVEY STAFF

NATIONAL plans are on foot to protect women workers in the United States during war time from over-strain and over-fatigue, despite efforts of state legislatures to break down labor laws and the ignorance of people who confuse patriotism with lengthened hours of factory work which exhaust vitality and hamper efficiency.

At first glance, the official committees appointed to deal with women's share in war service appear to be wheels within wheels. Functions seem to overlap, plans to be duplicated and directorates to be interlocking. Explanations are needed to point out the lines of distinction between the activities of these committees and to show how, with definite purpose, representatives of one body sit at the councils of another.

First of all, there is the Women's Committee of the Council of National Defense, whose chairman is Anna Howard Shaw. This committee is a sort of central clearing-house which will give advice and information regarding every form of women's service—from weeding gardens to rolling bandages. The five tentative divisions of work are: Registration of women; food production and consumption; storage and distribution of foods; work along industrial lines to prevent legislation injurious to women and children in industry; training for special service, and preservation of the inner resources of national life, by safeguarding the education of children, moral standards and a normal home life. Each state is called a division of the committee and a state chairman has been appointed to take charge of affairs in her territory. Thus Mrs. William Grant Brown, who has been appointed chairman of New York state, has planned already an Exchange for Women War Relief Workers, where the activities of more than 300 women's organizations engaged in patriotic service will be classified and records be kept on file to prevent duplication of effort.

The members of the Women's Committee represent women in all walks of life, women of varied interests and different points of view. The General Federation of Women's Clubs is represented, the National Civic Federation, the International Council of Women, suffragists, anti-suffragists and trade union women.

Through Mrs. Carrie Chapman Catt, a member of the committee, the work of this central national council is brought

in touch with the work of 2,000,000 women in the National American Woman Suffrage Association, who have offered their services to the government in the war emergency. In a letter to the chambers of commerce of 500 cities, Mrs. Catt, president of the national association, has asked for the cooperation of the trade bodies to secure reasonable working hours and equal pay for equal work for the women who take men's places in business offices, factories and other occupations. Vigilance committees of suffragists are to be appointed in every industrial locality to cooperate with the chambers of commerce and to inform themselves as to the working conditions in local plants. A widespread propaganda will be conducted through every available agency to induce women workers themselves, as well as employers, to maintain proper standards in the interests of public health and efficiency. That the National Suffrage Association is determined to carry out this industrial side of their program is indicated by the pressure brought to bear by the suffragists recently on the director of the Bureau of Engraving and the public printer for the reduction of the hours of work of some 500 girls who were employed four to five hours overtime.

Agnes Nestor, of the glove-makers' union, was recently added to the Women's Committee of the Council of National Defense as a representative of the working women of the country. Miss Nestor is the connecting link between the central women's committee and a Committee on Women in Industry organized under the general supervision of the committee on labor whose chairman is Samuel Gompers, a member of the Advisory Commission of the Council of National Defense. Mrs. Borden Harriman is chairman of this committee. Besides Miss Nestor, half the membership of the committee is composed of women trade unionists. The executive committee consists of Mrs. Harriman; Sara A. Conboy, of the textile workers' union; Melinda Scott, of the New York Women's Trade Union League; Marie Obernauer; Grace Abbott, newly appointed director for enforcing the federal child labor law; Mrs. V. Everitt Macy; Mrs. George Vanderbilt, treasurer; and Pauline Goldmark, of the National Consumers' League, secretary.

Upon this Committee on Women in Industry will devolve the actual task of formulating labor standards to be observed in war time and of investigating the readjustments in women's work that are bound to take place. So far, four sub-

committees have been outlined: A committee on location of industry and condition of labor; a committee on general housing conditions for transient workers; a committee on standards; a committee on women doing men's work.

The last named, according to Miss Goldmark, must be alive especially to the danger of lowering men's wages by introducing female labor. A case of this kind has already come to the notice of the committee. An automobile supply company in Chicago replaced men earning \$21 a week with women at wages of \$12 a week. The women are now out on strike.

Equal Pay in England and France

WITH seven of the foremost railroads training women to become car-cleaners, ticket-agents, etc., and factories and business-houses enlarging the scope of women's work, similar disturbances are expected to arise. To deal with the situation, Miss Goldmark advocates studying the experience of England and France. In England an act has provided that women employed at the same processes as men should be paid the same wages. But employers "get around" the law by making some slight change in machinery or operation. In France another system is enforced which also has its flaws, but which apparently prevents lowering standards of pay better than the English guarantees. There the labor cost of each item of production must be maintained whether men or women are engaged in the manufacture.

The following set of resolutions passed at the last meeting of the Committee on Women in Industry summarizes briefly its aims and principles.

RESOLVED, That all organizations and committees willing to give service in upholding standards for women in industry be invited to co-operate with this committee in order to avoid duplication of effort and to make the best possible utilization of the available woman power of the nation.

RESOLVED, That we reiterate the statement of the Labor Committee of the Council of National Defense, that in the interest of health, output and peace in industry there should be no movement to relax existing labor standards, especially in regard to hours of labor and weekly day of rest.

RESOLVED, That we view with alarm the increase of employment of married women with young children, and believe that efforts should be made to stem this movement as far as practicable, especially as regards night work, and that these women should be the last to enter into industry.

Since women in their generous impulse to render service are offering to enter industry, therefore be it,

RESOLVED, That their attention be called to the danger of undercutting existing wage standards and of displacing workers dependent on their own earnings.

The presence of Marie Obernauer on the executive committee of the Committee on Women in Industry connects this body with still another agency established to assist women in war industries. Miss Obernauer is secretary of a Bureau of Registration and Information of the National League for Women's Service, which is working in conjunction with the Department of Labor. Through cooperation with public and private employment offices this bureau expects to distribute the woman labor supply throughout the country wherever it is needed.

But the making of plans to safeguard women in war work is one thing and the carrying out of plans is another. The Committee on Women in Industry may recommend standards of hours and conditions for women workers *ad infinitum*; unless machinery is provided to enforce these standards through the Department of Labor or the Council of National Defense, plans will be scraps of paper.

Not only must federal inspection be applied to factories engaged on government contracts, but the inspection must be extended to include sub-contracting shops. One of the gravest

evils in England at the beginning of the war was the sweating that went on in the homes where army clothing, military brushes, haversacks, etc., were made, sublet by government contractors to sub-contractors and then to home workers. Workers on khaki clothing were receiving only \$3.36 to \$3.60 a week, toiling twelve hours a day and paying for their own thread and silk, although the government issued a notice to contractors, forbidding the letting out of goods to home workers. No inspection accompanied the order, the contracts were far larger than the capacity of most factories and the contractors were greedy for gain.

In New York state, according to the New York City Consumers' League, there has never been so much home work. Flags and khaki uniforms particularly are being finished in the homes. In Philadelphia recently, where a ruling permits pensioners' wives and relatives to take home work from the arsenal, the rule has been so relaxed that several hundred women were allowed to make bed sacks in their homes. Moreover, in addition to increased home work applications, some factories accepting government contracts are sub-letting to other factories in states where there are no child labor laws or laws regulating the work of women. Only rigid federal regulations over sub-contracting can change such practices.

Another reason for urging federal inspection of munitions and war-supplying industries is the ruthless destruction of labor standards in state legislatures. Vermont has abrogated her labor laws for women and children during the war; four bills of a similar nature are pending in the Pennsylvania legislature; Governor Whitman in New York state is ready to sign the Brown-Slater bills passed last week by both houses of the legislature. One of these bills suspends at the discretion of the commissioner of education the compulsory education law for children, between the first day of April and the first day of November of each year, to permit the performance of labor in the cultivation, production and care of food products upon farms and gardens within the state. It is looked upon as a wedge for the reintroduction of child labor in canneries.

The Ineffective Opposition

THE second Brown bill suspends, after due investigation by the State Industrial Commission, any provisions of the labor laws which will "obstruct, hamper or interfere with the successful prosecution of the present war." The Industrial Commission is empowered to make rules and regulations under which employment will be permitted, after approval by the governor. The action of the commission may be suspended or modified by the governor or on the request of the Council of National Defense. The bills were passed over the strenuous opposition of trade unionists, and practically all social and civic organizations in the state. The New York City Consumers' League strove unavailingly to have amendments included providing for public hearings before exemptions were granted, raising the age for exempted workers to 16 and over, limiting the application of the law to particular establishments rather than to whole industries, and fixing a time limit of six months.

Massachusetts, where a fifty-hour bill for women and children is likely to pass, is a shining exception to legislative hysteria in the present crisis.

The tendency in most states seems to be to disregard all foreign experience, and all domestic evidence of the wisdom of the short working day. The conflict between the aims of the national committees dealing with women's work and the action of state authorities can only be solved by the interference of federal regulation and supervision.

A Farm Census in Five Days

Educational Values of a War Time Service for School Children

By *Winthrop D. Lane*

OF THE SURVEY STAFF

SEVERAL years ago William R. George, founder of the George Junior Republic, made what seemed to many persons a very impracticable suggestion. He proposed that the children of the public schools, whose numbers are legion and who extend over nearly every square inch of the United States, be allowed to act as official census takers. Mr. George had in mind the use of such children in rural areas especially. He did not propose that their work should supersede the national census taken every ten years. He thought, however, that they might perform a task of considerable value between such censuses, and that with the aid of teachers they might enumerate not only the population but the quantity and character of crops, the acres under cultivation, live stock, amount of pasturage, and many other facts that the Department of Agriculture and the farmers of the country would be greatly interested to know.

Last month this plan was tried out in New York state. It had previously been tried several times on a smaller scale, with fairly satisfactory results, but this was the first big use made of it. Under impulse of the war situation, the State Food Supply Commission, appointed by Governor Whitman in April, ordered a survey not only of the agricultural resources of the state but also of the farmers' requirements for the immediate future.

The commission used the teachers and school children of the state for this task. The census was ordered on April 17. By April 21, 250,000 census blanks had been printed and delivered to the counties and preliminary arrangements had been completed for taking the enumeration. In forty-one counties having county farm bureaus, the county agent was made official census taker and in fifteen counties not having such bureaus extension specialists of the State College of Agriculture were made census takers.

The use of the school machinery in taking this census is thus described by the commission:

District superintendents instructed the teachers and older pupils under their jurisdiction to suspend school work temporarily and get the census data needed at once. The teacher or the pupils in each district secured the original facts from farmers, and the teachers summarized their districts on the summary sheets furnished by the commission. Superintendents collected the district summaries, delivered them to the official enumerator, and assisted him in tabulating all the school districts of the county. The work of taking the census was actually begun in most of the counties on Monday, April 23, the records being practically all secured by the 25th, tabulations made in the counties on the 26th and 27th, and by the 28th complete tabulations from thirty-four counties had been sent to the central state census office at the College of Agriculture.

Banks, business firms, chambers of commerce, and individuals have greatly assisted in and facilitated the tabulations by loaning clerks and other expert employes, adding machines, etc. The staff of the State College of Agriculture aided by advice in preparing the blanks and in organizing the field work. The state schools of agriculture at Canton, Alfred, Morrisville, Cobleskill, Delhi and Farmingdale, and the Joseph Slocum College of Agriculture at Syracuse University have given much assistance. High school principals and teachers of agriculture throughout the state have furnished equipment and men.

It will thus be seen that the actual filling in of the information blanks, the going to the farmers and gathering the

data wanted, was done by the teachers and pupils. On two specified days tens of thousands of children were scurrying, one or two to each farm house in the state, collecting the desired facts.

As a result, the commission says, "in just ten days after the copy for the census blanks was delivered to the printer, the . . . commission is able to announce . . . summary conclusions from the survey. In addition to the taking of this census in record time, it has probably been secured at less expense to the state than any other ever taken."

Among the information gathered was the fact that New York farmers are greatly increasing the acreage of food crops this year. Labor, says the commission, is the limiting factor. "Many men have left the farm since the world war began. There are only 84 per cent as many hired men as there were last year when there was also a shortage." There appear to be only two hired men for each five farms. Nearly 50,000 additional employes are asked for by farmers in order to carry out the work they have planned. Approximately 8,000 persons will be needed to work in the farm home.

It was learned also that New York farmers have about 10,000 horses for sale. If this number is needed for military purposes, says the commission, the federal government now knows where it can get them. Increases in the price of feeds are so great that fewer heifers are being raised and fewer eggs incubated. If the country is to maintain its supply of milk and eggs, says the commission, the prices of these commodities will have to be raised.

It was learned also that there is a shortage of some seeds, particularly buckwheat and potato, and a bad distribution of others, some districts having more than enough and others not enough. Better distribution can now be effected. There is a proposed increase of 56 per cent in the acreage devoted to corn. Other grain crops show proposed increases of 10 to 20 per cent. In wheat the increase is 11 per cent over last year. Preliminary results show an increase of 40 per cent in the proposed acreage of beans, 40 per cent in vegetable crops and 80 per cent in cabbage. These increases are made possible largely by plowing up hay land, since there is a surplus of hay on hand.

The first experiment with Mr. George's idea was made several years ago at West Dryden, N. Y., where a single school district was covered. The next was in Burlington county, one of the largest counties in New Jersey, where enumerations were taken in both 1915 and 1916. One farmer declared afterwards: "Gosh! The kid got more out of me than the regular census taker ever did!"

Impressed by these experiments, State Commissioner of Agriculture Charles S. Wilson, of New York, conducted a state-wide survey with school children in the fall of 1916, and the success of this trial, it was declared, attracted the attention of other states. The federal Department of Agriculture is said to be considering a use of the plan at the present time.

The Committee on Industrial Relations, of which Frank P.

Walsh is chairman, has undertaken to secure publicity for the New York census of last month and to urge the use of similar methods by other states. While the children were gathering information, says the committee, "they themselves were learning about their state. . . . If other states would follow this plan, the whole nation could know in a fortnight just what its every resource and need were and just where its every need should be filled and its every answering resource drawn on."

It is the educative effect of the census upon the children

themselves, as well as its efficiency in getting information, that has appealed to Mr. George. In his work with boys and girls of all kinds and many ages at the George Junior Republic he has come to regard responsibility as an important element in the training of children. Here is a task, he believes, that imposes for a short time an ideal sort of responsibility upon children. In addition, it brings them in touch with facts from a new point of view and gives them a new interest in the common surroundings of their daily lives.

The Discovery¹

An Account of a New Way to Industrial Peace in Great Britain

By *Arthur Gleason*

THE reconstruction of British industry is being made in many ways. The most important single way is by giving the workers an increased measure of control over the conditions of their working life. Workshop councils of the employes have already been formed in the one hundred national munition factories. They are rapidly being formed in the 4,700 controlled establishments. Martin Hall, of the Ministry of Munitions, who has been instrumental in forming these councils, tells me they are working with a minimum of friction. Before they are set up, the employer dreads them as an interference with his management, and the worker regards them as a "welfare device" to extract higher production without increase of wages. But the council, once established, operates to lessen suspicion and to better conditions. A new constitution is thus being written for labor, a constitution that gives representation in the control of working conditions.

In a Cocoa Factory

WHAT is the workshop council? The head of one of the largest cocoa manufactories in the world has sent me the details of his council, as now in operation in the almond paste department. The cocoa business is not the best field for studying workers' control, because the labor is largely female, because the industry is not nationally organized like the building and engineering trades, and because the experiment is only in its beginning. But with a new application of a principle, we have to take it where we find it and push on with the experiment.

The departments of the factory have well defined sections, so each section has a sub- or sectional council. The number of delegates for each sectional council is fixed on the basis of one delegate for every twelve workers (of whatever age) or part of twelve exceeding six, employed in the section. Sitting with these at the meetings of each sectional council and having equal powers with them, are the manager of the department with the head and sub-overlookers, monitors or chargemen of the particular section. Should these, however (including the manager), exceed in number the workers' delegates, the members of the council representing the administration consist of the manager and head overlookers, together with as many of the sub-overlookers, chargemen and monitors (elected by ballot amongst themselves) as are required to

make up a number equal to that of the workers' delegates. The manager of the department is ex-officio chairman of the sectional councils. He does not have a casting vote. In case of a drawn vote the matter is submitted to the director controlling the department.

In addition, there will be one delegate appointed by each union concerned (for the men's sectional councils from the men's union, and for the women's sectional councils from the women's union), who shall be allowed to speak but shall have no vote. Such delegates shall be deemed to hold a watching brief for the union, but shall be in the employment of the firm and working in the department, and preferably, though not necessarily, in the section.

The departmental council is a distinct body from the sectional councils and consists of one member for every fifty workers (or part of fifty exceeding twenty-five,) with an equal number of the administrative staff, namely, manager, head overlookers, sub-overlookers, monitors and chargemen. Where these exceed the workers, the members representing the administration will consist of the manager and head overlookers, together with as many of the sub-overlookers, chargemen and monitors (elected by ballot amongst themselves), as are required to make up a number equal to that of the workers' delegates.

At the meetings of the departmental councils there will also be one delegate appointed by the union representing the men and one by the union representing the women, who shall be allowed to speak, but shall have no votes. Such delegates shall be deemed to hold a watching brief for the union, but shall be in the employment of the firm and working in the department.

Further, the workers are entitled to have the attendance of a permanent official of their union, not necessarily in the employment of the firm, during the discussion of any matter on which they consider that they should have skilled assistance and advice. Any such official attending a departmental council meeting shall withdraw as soon as the matter is disposed of upon which his or her advice has been required.

Nothing that takes place at a sectional or departmental council shall prejudice the trade union in raising any question in the ordinary way. Questions of general principle such as the working week, wage standards and general wage rules, shall not be within the jurisdiction of the councils.

All male employes over twenty-one years of age and all female employes over sixteen, who have been employed by the firms for six months (whether on the regular staff or not), will be eligible to vote for delegates to both the sectional or

¹ This article, by a former member of the staff of the SURVEY, and later of *Collier's*, comes to us from London, where the author has spent considerable time the past two years in the breathing spells between his periods of service as a Red Cross ambulance man. It will form a chapter in his book, *Inside the British Isles*, to be published on May 25, by the Century Company (\$2.00; by mail of the SURVEY, \$2.15).

departmental councils and to become members of such councils. Delegates will be elected to serve for one year. They will be eligible for re-election so long as they remain in the employment of the company. No deduction will be made from the wages of day-workers for the time occupied as delegates in attending the council meetings, and piece-workers will receive an average wage for the time so occupied.

Based on this constitution, the sectional and departmental councils in the almond paste department work out as follows:

SECTIONAL

There are six sectional councils as under:

- Women (1) Bottoms and centers.
- (2) Pipers and coverers.
- (3) Makers.
- (4) Packers and labellers.
- Men (5) Slab, machine and boiling (4th floor).
- (6) Crystallizing and piping (5th floor), cage and carting (3rd floor).

The number of delegates for each of these councils work out thus:

	No. of delegates
(1) Bottoms and Centers	
Bottoms—Room 1.....	2
Bottoms—Room 2.....	2
Centers—Room 1.....	3
Centers—Room 2.....	1
Total.....	8
(2) Pipers and coverers	
Room 1.....	11
Room 2.....	5
Total.....	16
(3) Makers.....	6
(4) Packers and labellers	
Packers.....	9
Labellers.....	2
Total.....	11
(5) Slab, machine and boiling (4th floor).....	5
(6) Crystallizing and Piping (5th floor).....	6
Cage and carting (3rd floor).....	1
Total.....	7

The number of delegates to the departmental council is shown below:

	No. of delegates
Bottoms and centers	
Bottoms—Rooms 1 and 2.....	1
Centers—Rooms 1 and 2.....	1
Pipers and coverers	
Room 1.....	3
Room 2.....	1
Makers.....	2
Packers and labellers.....	2
Slab, machine and boiling (4th floor).....	1
Crystallizing and piping (5th floor) and cage and carting (3rd floor).....	1
Total.....	12

What are the matters dealt with by these works' councils?

- (1) The criticism of any piece wages not thought to be fair or adequate, and the consideration of suggestions for adjustment.
- (2) The consideration of conditions and hours of work in the department.
- (3) The consideration of departmental organization and production.
- (4) Rules and discipline.

In the Engineering Trades

The engineering trades are perfecting a similar system of workers' control. F. S. Button, of the executive council of the Amalgamated Society of Engineers, has sent me the outline.

SHOP COMMITTEES

The committee comprises representatives from the management and the workpeople in equal numbers. The management choose their own representatives. The workpeople elect by ballot their representatives. Care should be taken that the trade unions shall

be represented. Each side appoints its own chairman and secretary. Each side submits its agenda to the other for discussion at joint meetings which should be held weekly during workshop hours to deal with:

1. Improved methods of manufacture, tools, jigs, gauges, and to make suggestions thereon; also new methods of production;
2. Class of labor to be used on new types or reconstructed machines;
3. Criticism and adjustment in existing piece-work prices;
4. Cooperation with the management in supervision;
5. Shop troubles and grievances;
6. Suspensions and dismissals consequent upon slackness in trade;
7. Shop rules—timekeeping, meal hours, cleaning time, clock allowances, changes in starting time;
8. Suggestions to change the method of remuneration from day work to piece work or a bonus system, or vice versa;
9. The problem of the disabled soldier;
10. Matters relating to welfare;
11. Demarcation between trades with the free sanction of the unions concerned;
12. Advise generally on labor and workshop conditions.

The committee must not interfere with recognized trade union practices nor deal with matters covered by agreements, except with approval of the parties concerned.

Where it is necessary owing to the complex organization of the works to set up more than one shop committee, a

CENTRAL WORKS COUNCIL

shall be formed from the shop committee.

The basis of representation shall in each case be the same. The board of directors shall appoint the chairman for its side, the trade union shall choose a representative workman as chairman for the side of the workpeople. The council shall sit during factory hours to deal with:

1. Reports from shop committees;
2. Refer back unadopted portions of report to shop committee concerned;
3. Decide matters from such reports which affect the factory as a whole as distinct from the shop;
4. Generally to assist the management in matters relating to production and organization;
5. To initiate reforms arising out of new legislation affecting factories and workshops;
6. Assist after the war period in the resumption of existing laws;
7. Consider matters referred to them by the board of directors or the workpeople's side of the workshop committees;
8. To appoint a representative from each side of the council to sit with the board of directors when reports from the council are being considered.

No workshop committee or works council shall have any power to impose any restriction on the employers or workpeople either with regard to lock-outs or strikes, or to institute any system of profit-sharing or co-partnership.

The council must not interfere with recognized trade union practices nor deal with matters covered by agreements except with approval of the parties concerned.

LOCAL JOINT COMMITTEES

The members shall consist of an equal number of employers and workpeople appointed by the employers' associations and by the trade union organizations in the district.

Each side shall appoint a chairman and secretary. At local conferences each chairman shall preside over his own side. Each side shall be entitled to hold a preliminary meeting separately to consider and prepare its agenda and to discuss its policy on questions to be submitted to the local conferences.

The committee shall meet at least fortnightly, and the following matters should be within its competence:

1. References from each side of works council within its area;
2. Codification, unification and amendment of working rules:
 - (a) Holidays.
 - (b) Sunday labor.
 - (c) Overtime.
 - (d) Shift systems.
 - (e) Demarcation between classes of labor.
3. Coordination of local workshop practice;
4. General district matters relating to welfare work;
5. Discuss, by mutual consent and reference, matters covered by existing agreements.
6. Discuss relations between both sides not covered by existing agreements.

In the period succeeding the war the committee should also be encouraged to settle by agreement:

1. Questions arising out of the restoration of trade union conditions including questions of priority, of employment and the restoration of trade union rules and customs;
2. Problems of the employment of disabled soldiers and sailors;
3. Questions relating to demobilization and the discharge and re-employment of emergency workers.

The committee shall take no action that contravenes any agreement between employers and the trade unions, whether such agreement be local or national in character.

CENTRAL CONCILIATION BOARD

Such boards shall be set up in each industry and shall be representative of the central executive of employers and the trade union or unions concerned;

The representation shall be equal in numbers, each side having the right to appoint a chairman and secretary.

Each side shall be entitled to hold a preliminary meeting to consider and discuss its policy on the agenda.

The matters competent for discussion shall be confined to:

1. Appeals from the local joint committees; appeals may be made by each side of the local joint committees. Representatives from the local joint committees shall attend in a consultative capacity, but shall not sit in session or take official part in the proceedings;
2. Discuss relations between employers and workpeople not covered by existing agreements; no new agreements to be arranged without the full concurrence of all parties concerned;
3. Act as a permanent advisory board to the government on all questions affecting the industry, and to be empowered to suggest alterations, modifications and additions to existing laws, or fresh enactments required;
4. Such proposed new legislation or amendments to existing laws to be submitted to the department of state concerned;
5. In the event of such department of state refusing to accept in whole or part such proposals, the central conciliation board should have the right to appeal to the Cabinet and to state its reasons for tabling its proposals;
6. The Cabinet shall not have the absolute right to veto without an appeal and vote in the House of Commons, on the question raised.

BENEFITS RESULTING TO INDUSTRY

1. Harmony in the factory, workshop or mine.
2. Assurance of industrial peace.
3. Would give the worker a real chance to achieve responsibility.
4. Guarantee of continuity of labor.
5. Tend to abolish the spirit of antagonism and distrust.
6. Greater productivity in the workshop.
7. Would provide the missing link in industry—cooperation.
8. Bring about a real community of interest between employers and workpeople, and secure coordination of the whole factory system so far as the workshop is concerned.

The executive committee of the National Union of Railwaymen have drawn up their demand. "At each large shop center there shall be formed a local shops committee. There shall be a central committee for each railway. There shall be established on each railway a conciliation board." The following is an example of the method of constituting the board:

Groups of grades	No. of men	No. of representatives
(a) Engine drivers, firemen, cleaners, electric motormen	7,500	4
(b) Shed men, electric light men, hydraulic men etc.....	1,900	1
(c) Carriage and wagon examiners, washers, etc.	1,200	1
(d) Signalmen, etc.....	3,100	2
(e) Guards, shunters, etc.....	4,300	2
(f) General porters, parcels, staff, etc.....	3,500	2
(g) Goods shed and yard staff.....	4,500	2
(h) Cartage staff	3,700	2
(i) Platelayers	4,600	2
(j) Ballast men, etc.....	2,000	1
(k) Signal and telegraph men, etc.....	500	1

A builders' national industrial parliament has been advocated by the National Associated Building Trades Council, representing the national executives of the principal trade unions in the industry. The constitution calls for works committees, representing management and labor in particular shops, for joint district boards, and for a national parliament, where sit twenty members appointed by the National Federation of Building Trades Employers of Great Britain and Ireland, and twenty members appointed by the National Associated Building Trades Council.

Self-government in Industry

SO ENTER the principle of self-government in industry. This is totally different from compulsory arbitration, though often confused with it. Arbitration deals with matters that have reached the boiling point. A joint board deals with process

and relationship before friction has developed, and thus keeps clear of that region in men's minds where emotion is kindled and where matters of fact are heated into matters of principle. Once a question of fact has become a "matter of principle," it is always difficult and often impossible for arbitration boards to deal with it. This sharp distinction must be realized, because on its recognition hinges the change in the status of the worker. By government and private action he is now being admitted to a place in deciding on the next step, before the next step is taken. Many employers wish a scheme of compulsory arbitration, with penal clauses against striking. The trade unions will not consent, because they do not care for industrial harmony by compulsion. A number of employers will offer co-partnerships and profit-sharing. The trade unions will not consent. Talk of national efficiency and world markets alone will not win the trade unions. To meet their opposition, a measure of control must be granted to them. So joint standing councils of employers and employed have already been formed and will continue to be formed, to secure increased productivity in industry and a better status for labor.

As It Works In Coal Mining

SINCE October of 1915, the Lancashire and Cheshire Coal Association (of employers) and the Lancashire and Cheshire Miners' Federation (of workers) have had an agreement. The coal owners undertake that no general notice to terminate contracts shall be given at any colliery. The miners undertake that no general strike or cessation of work shall take place. Any general dispute is referred to the conciliation board. They have always come to agreement without calling in the independent chairman. Any local dispute is referred to the joint district board, made up of owners' and workers' representatives.

The government accepted the principle of self-government in industry when in the crisis of 1915, Mr. Tennant, representing the government, summoned the labor leaders to organize the forces of labor. The employers and the government were helpless, unless aided by the workers themselves. On that day, February 8, 1915, the principle of democratic control in industry was, to my mind, established in the modern state, never to be receded from. This system of joint committees had indeed long existed in the leading trades, where employers and union leaders met to settle disputes. But the white flag of truce was over the conference, while, outside, the battle raged. But Mr. Tennant by his bold measure raised the joint committee to the level of continuous mediation and consultation. These joint boards will be the method by which the government, the employer and the worker will discuss the break-down during war time of the trade union rules, and the substitute to be given in place of an impossible restoration.

The joint board is part of the machinery for reconstruction. The acceptance of it is an acceptance of the principle of democratic control.

What labor can manage and possesses the right to manage but has not received the permission to manage, are the conditions of its own life—its working life and its leisure life. The installation of new processes, the introduction of new machinery, the injection of new workers—all these alterations of working conditions have been imposed upon the workers as one puts a new harness on a horse, or shifts him from the plow to the tread-mill. The workers have built up their own system of protective devices to meet these impositions of the oligarchy in control of them. They have limited the output by "going gently" with the work. They have limited the number of apprentices. They have practiced sabotage and

called strikes. They had no other weapons. The result of these protective devices has been to lessen the volume of production, to give capital a smaller return on its investment and to cut down wages. The policy has been bad for employer and employe. But the policy has received its death blow in this new constitution of labor which I have outlined. Self-government will not offer grave difficulties in the twelve or fifteen highly organized trades, where organized cooperation is understood. It will come much more slowly in the unskilled occupations.

A partial application of this principle of workers' control has long been made. Thus coal-miners possess the right to have the employers' calculations checked by the men's official. The men, by a decision of the majority of those employed in any pit, have, at the expense of the whole pit, a check-weigher with full power to keep an accurate and independent record of each man's work. He is the representative of the men

at the pit bank to check the weight to be paid for. Another instance is the "chapel" of the compositors, where the "clicker" who hands out copy to compositors, is appointed and frequently paid by the "chapel," the ancient organization of the workmen.

But almost at one stroke, this principle of self-government has been greatly extended. It is all part of the general movement toward the organized state. The employers will form great combines. The workers will continue to develop the strength of trade unions and will exercise that strength in the control of their working conditions. In the next five years, workers' control will be the most discussed item in England's reconstruction. Because it is in line with democratic tendency, the movement will soon spread to our country. It is time that our statesmen, our social experts, our writers and our industrial leaders begin to study it. They will be forced to accept it.

Farm or Fight

By Arthur P. Herring, M. D.

SECRETARY STATE LUNACY COMMISSION OF MARYLAND

THE serious shortage of trained farm labor which the American farmer is facing today has stimulated the members of Governor Harrington's Preparedness and Survey Commission to suggest a practical plan whereby this difficulty may be successfully met. The Farm Labor Committee of the Preparedness Commission of Maryland, of which W. H. Manss is chairman, is organizing a state agricultural army for the purpose of training raw recruits into helpful and efficient farm laborers.

Before deciding to adopt this plan, it was discussed in every detail with practical farmers, cannery men and many others who are familiar with every phase of such an organization. The unanimous opinion was that it is the only practical solution of the problem which has yet been presented. It seems quite essential to have the state take the initiative in this movement in order to demonstrate to the government that it is practical, efficient and economical. The plan is presented at this time through the SURVEY with the idea of giving it wide publicity and with the hope that it may stimulate other states to work along this or similar lines.

I think everyone realizes the importance of this country increasing very materially its food products. Carl Vrooman, assistant secretary of agriculture, has recently stated that it is "the boy in the furrow and not the boy in the trenches who will win this war." The success of the allies depends largely upon the amount of food products which this country can send to Europe, and it is with the idea of increasing to the maximum the agricultural productivity of the soil that this plan is presented:

1. Establish on the various state farms an agricultural training base camp.
2. From this base camp men would go out either singly or in groups to work on adjoining farms.
3. The entire system (Maryland Agricultural Militia) to be under state control and strict military discipline.
4. Each camp to be under the control of an officer and a teacher or senior student from the Maryland Agricultural College, or a

farmer of experience, who will train the inexperienced recruits.

5. The initial cost of organization and equipment to be borne by the state as a war measure. The men to be paid the same salary as though they were serving in the regular army. The farmer to reimburse the state for the service of the men at a fixed wage.

6. The members of these agricultural camps to be recruited from four sources: (a) Men who have been rejected for active military service because of some minor physical disability. This class will be under close medical supervision with the idea of fitting them for active service later. In the meantime they are receiving military training. (b) Men who are beyond the age limit for active service, retired farmers, etc., but who are willing to do their patriotic duty in helping till the soil. (c) Men who will form congenial groups and spend their vacation working on the farms and living for several weeks in camp under military discipline. (d) Boys from 12 to 16 years of age who will work in the trucking sections of the state and in the canneries and doing the lighter work on the farm, spending their vacation or the summer season in tents and receiving military discipline.

7. The members of the agricultural camp to be uniformed (when not working) and wear a special insignia.

8. Place the first agricultural training camp on state farms, because there is: (a) Good water; (b) Medical supervision; (c) Vacant building or tents on hand; (d) Cots, sheets, blankets, etc., on hand; (e) Laundry facilities; (f) Food supplies accessible; (g) Transportation facilities, *i. e.*, motor trucks; (h) Opportunities for recreation, *i. e.*, moving pictures, baseball, dances.

9. Establish at each state hospital a well equipped cannery to can all vegetables required by them and, when that is completed, for the government.

10. This plan has been presented to groups of farmers who say it is practical and will solve their labor problem, if properly managed.

11. The Maryland Agricultural Militia would be established by an act of the General Assembly as a separate unit of the Maryland State Militia.

12. The enlistment would be voluntary, based upon the same regulations as enlistment in the State Militia, that is, they would volunteer to serve for a definite period.

The opinion of those in close touch with the federal government is that it will be a comparatively short time until this or a similar movement is taken over by the government and made national in its scope. In fact, it may become necessary later on to apply the selective draft to obtain farm labor as well as to get men for the fighting forces.

The Verdict at Everett

Acquittal for the Man Tried, Release for the Other I. W. W.'s

By *Anna Louise Strong*

“NOT guilty!” With these words the great labor trial growing out of the battle on the Everett dock last November drew to a close, on May 5. “We are making history,” said the judge in his opening remarks to the jury. They were, indeed. Although driven from public notice by the opening of war, the trial of the seventy-four I. W. W.'s, represented technically in the person of one of their number, Thomas Tracy, is in many respects the greatest labor trial in our history. Tracy has been adjudged not guilty, after nine weeks of trial, and the others have been released without trial.

The main events leading up to the trial were covered in the *SURVEY* of January 27, and the evidence coming in at the trial has shown that statement to have been correct, except for one or two irrelevant details. A boatload of I. W. W.'s went to Everett on November 5, having previously announced a meeting on the streets of that city, and invited by circular the citizens of Everett to “come and help defend your and our constitutional rights.” They were met at the dock by the sheriff and 150 deputies. In the fight that ensued two deputies and five I. W. W.'s are known to have been killed, and there is a strong probability that three or four more I. W. W.'s were lost in the waters of the sound. On the return of the steamer *Verona* to Seattle, the entire load of passengers was arrested, and subsequently seventy-four were held on a charge of murder in the first degree.

The trial moved forward like a great drama, unfolding a background of life little known to the comfortable dwellers in city homes. “They that follow the harvest,” they whom modern conditions of industry have turned into wanderers upon the face of the earth, with no home, no settled abode, no property—yet they upon whose labors rest all the homes and the settled cities and the civilization of western United States—this was the group that came forth into the light of publicity through the trial. The old-time peasant, the “man with the hoe,” bound to one spot of earth, exists no longer; the machines have overthrown him. His place is taken by thousands of men, no longer stationary but passing from state to state, beginning in Kansas and Oklahoma in the spring, traveling north to the Dakotas, then on into Montana, and over into Washington and Oregon for the autumn fruit-picking, dropping finally into the big cities for the winter, to live on the proceeds of their summer work while they search for odd jobs. For a few brief weeks in each community they are the most desired of men; farmers pull them off freight trains as they are on their way, even under contract, to other jobs. But, in a day, with the last hours of harvest, they cease to be desirable. Vagrants now, not needed, they are driven relentlessly from one community to the next. Our civilization has as yet found no way to deal with them; each little town knows only that it no longer wants them.

And among these migratory workers the Industrial Workers of the World has begun its work. A man belonging to the organization has already a sort of standing; freight-train crews through the West usually recognize their union cards as passports. At the end of the season, into whatever town they drift, the workers know that they can find the I. W. W. hall, paid for by their own dues, a meeting-place for fellow-workers,

with a gymnasium perhaps and shower-baths, and at least with a reading-room, an office, a bulletin board with notice of jobs. If they have no money, they can put their blankets on the floor of the hall and sleep there, or leave their few possessions with the secretary while they look for work. No charity, either, but paid for with their own money, the membership dues collected during the season of plenty.

Here is companionship—men who have worked in the open as they have; here is a place to get mail; here is the only element of continuity, the only home, in lives that are otherwise like the waves of the sea. And the I. W. W. preaches to them the gospel which they, of all men, most crave—that they are not wasters, not useless wanderers, but that upon them and their work all modern civilization rests. There is roughness in the doctrine they are taught, there is bitterness, there is revolution, there is hope.

Perhaps the most surprising thing to the general public in the course of the entire trial was the type of witness put on the stand by the I. W. W. defense. Men of intelligence, men with experience in many states and with many varieties of human being. Roughly dressed often, but keen. Varying from the slow-moving logger, whose mind held doggedly through a driving cross-examination to the solid definite facts that he knew, to the impassioned son of a Jewish rabbi, who told how he came from Portland in order to defend free speech, prepared to go to jail if necessary, in order to bring conditions to the attention of the American world.

The “conditions” in Everett were not strikingly different from those in other parts of our country. Its working conditions, its public officials, its methods of passing on to the next town the men without work, may be duplicated in many other places. And a similar chain of circumstances may lead, at any time, to another Everett tragedy, unless the towns and cities of the United States awaken to the situation, and learn to deal with the migratory workers and their desire for organization and self-expression in some less stupid manner than just shoving them along and making them shut up.

Everett was in the midst of labor troubles of its own when the organizer for the industrial workers appeared in its streets on a speaking tour of the state. There was a strike on among the shingle-weavers, and there had been some disorder. There can be no doubt that scores of Everett citizens honestly believed that they owed it to the fair name of their town to drive out the invaders. The first few speakers were arrested and told to keep out. They replied what in fact was the truth, that they were breaking no law, and that they had a right to speak where they had spoken and discuss the subjects they had discussed. They were deported from town without trial, and the fight was on.

New speakers and foot-loose rebels came to Everett to speak; they were thrown into jail and deported. They spoke at a place where, under the city ordinances, they had a right to speak. They never resisted arrest; this is one fact on which the testimony of every witness, for defense and state, is clear. They even provoked the police by their non-resistance and by saying to the crowd of listening citizens: “Stand back, don’t get excited. We’ll show you what brutes you have for officers.” As the prosecuting attorney said in his

plea: "The I. W. W. have learned a very dangerous truth, that when a large number of people dislike a law they can make it ineffective by violating it in such numbers that only a small proportion can be punished. The jails won't hold them; the machinery of justice breaks down."

A meeting of citizens was called at the Commercial Club in Everett. The mayor stated on the stand, "The Commercial Club took my authority and gave it to Sheriff McRae." Hundreds of deputy sheriffs were enrolled; they signed up at the Commercial Club and were given such oath of office as they took by a man at the club. The minutes of the Commercial Club show that meetings of the deputies were called at which the doctrines of the open shop were guardedly presented and were found to be favorably received. Clubs were also bought by the Commercial Club, and guns were kept there.

Obviously the Commercial Club assumed the right to run the city of Everett. And obviously many men thought that this was necessary in order to protect their town. And yet, up to this time, no I. W. W. had violated any ordinance or law, or had resisted arrest or used violence toward any citizen or officer in Everett.

In breaking up the crowds gathered to hear the speakers, the deputies tied white handkerchiefs around their necks "so we wouldn't hammer our own men," as one of them explained on the stand. An emergency ordinance was passed making speaking unlawful at the street corner where the I. W. W.'s had been speaking. After that time no meeting was held at this corner, no speakers were ever allowed to reach it.

Long before speaking on Hewitt and Wetmore became unlawful, the sheriff and his deputies, taking the law into their own hands, had broken up meetings, beaten citizens and I. W. W.'s and even made raids into surrounding towns for the purpose of driving away all incoming migratory workers. Placards were mailed by the I. W. W. organization to harvest fields and lumber camps warning their members to keep out of Everett in order to avoid mistreatment.

The Fight at the Dock

MANY individual claims of severe beatings were denied by the sheriff and his deputies on the stand. They did not, however, deny the fact that they had met the launch Wanderer, coming into Everett with some twenty I. W. W.'s, and had fired at the boatload of men. The captain claims that five or six shots were fired, one striking his iron bunk; the sheriff admits but one shot. That the sheriff struck three men over the head with a club and kicked the captain, inflicting serious injuries, and then threw all the men into jail for nine days, not even allowing the captain to get bail, is not denied except as to the extent of the injuries.

On another occasion, during the breaking up of a street meeting, an Everett citizen was beaten over the head by mistake and taken to jail sobbing and bleeding. The two I. W. W. speakers were taken on the same night. The citizen was released through the side door, and told "not to go out in front or he'd get killed"; the two I. W. W.'s were sent out through the front door to be beaten by a group of armed deputies. All this is admitted except as to the extent of the beating; Roberts claims that he was hit over the head and twice knocked unconscious; the sheriff claims that there was merely some beating around the legs and body. All this took place before the street speaking-ordinance was passed, and was done to men who had violated no law whatever.

On the night of October 30, some forty-one I. W. W.'s coming to Everett to hold a meeting, were met at the dock, taken to Beverly Park, a small interurban station outside

town, and made to run the gauntlet between rows of men who beat them over the head with clubs. The sheriff claimed that the beating was unauthorized and that he was not present, but his two chief deputies swore on the stand that the sheriff was in charge of the whole proceeding and did not leave until it was over. Citizens living near who came over were warned to get away or they would be beaten themselves. A gun was fired at one man who tried to escape into the woods.

"We're All Leaders"

A GROUP of Everett ministers held an indignation meeting and one minister went to the I. W. W. hall in Seattle and advised them to hold a big meeting to inform the citizens of Everett of the facts. The Verona was chartered, a call was sent out to other towns for volunteers, and over 200 members went to Everett on Sunday afternoon. They were met at the dock by the sheriff and his deputies. The conversation that followed is repeated by all in substantially the same words.

"Who's your leader?"

"We're all leaders."

"You can't land here."

"The hell we can't."

A shot rang out, then two, then a fusillade. Each side claims that the other side fired first. Witnesses on both sides admit, however, that the sheriff's hand went to his gun before the shooting began. Dozens of witnesses, Everett citizens who, forbidden to go out on the dock, watched the tragedy from the beach and the hills, state that with the very first shot the men on the boat rushed away from the dock in such numbers that the boat nearly turned over, and several men fell into the water. The inference is that the men on the boat did not expect shooting and that, wherever the first three shots came from, the fusillade did not come from a group of men who were piling up on each other in an effort to get away.

The evidence also tends to show that the boat was raked by fire from several directions, and that men swimming in the water were shot from the dock. High-power rifles and shotguns as well as revolvers, were shown to have been used from the dock. One deputy confessed to shooting at a man who was trying to dodge out of the pilot-house, not because the man was armed, but because "I thought he might untie the boat and we wanted to get them all."

Two trials were going on in the crowded courtroom in Seattle. This was clear to me as I watched. The trial of Thomas Tracy, the first of the I. W. W. prisoners before the court of King county, and the trial of our whole system of dealing with workers, including our arrangement of courts and laws, before the bar of the working-people of America. Over and over again I heard: "If they convict these men, there is no justice in America," by men and women not members of the I. W. W. or of any revolutionary group, but ordinary working people of Seattle. The prisoners were judged not guilty by the jury; but until the conspiracy laws are changed on our statute books, our system of law and justice will remain under suspicion in the minds of all organized workers. For they know clearly that it was not the law which saved Tom Tracy, but the common human sense of the jury, which refused to convict of murder a man who, as far as clear evidence went, may not have fired a shot or even desired the killing of any person. According to our conspiracy laws as they now stand, such a man may still be guilty of murder in the first degree.

So the I. W. W.'s come out of jail, many of them, perhaps all. And these boys, some very attractive, very intelligent

and capable, presumed to be innocent until proved guilty, and now indeed proved innocent, have lost six months of their lives with no redress. One of them was telling me about it.

"There's no exercise, and not much air, and you can't expect very good food, of course, and there's nothing to do but read. There's not enough daylight for that, and lots of us have hurt our eyesight trying to read. There's one boy, 'Happy' we all call him, he wouldn't hurt a flea; he's had a bad cough for some time, we think it's consumption. You see, it can't be called exactly a healthy place for anyone."

This is what we do with human beings. And while doing it, we stir up a situation which breeds discord and hate. Ever-

ett is divided into two hostile camps. I received an anonymous letter which was evidently, by handwriting, paper and style, from a lady of culture and gentle breeding. In her treatment of me she was most courteous. Yet in speaking of the I. W. W.'s she said: "If the militia had only reached the docks in time, we should have been spared the heavy expense of this trial. There would have been no I. W. W.'s left to prosecute." She told me of little boys in school who were called I. W. W.'s and "nearly thrashed to death" by older boys, "a good lesson to the parents who teach them to sympathize with that God-forsaken organization."

And the fruit of war is war and yet more war.

The Red Cross Civilian Relief Plan

Organization of the Chapters and a Great Campaign for Money

COINCIDENT with the creation last week by President Wilson of a Red Cross War Council to carry on the extraordinary relief work made necessary by the entrance of the United States into the European war, the Department of Civilian Relief of the American Red Cross announced the policies and methods that will govern its giving of relief to dependent families of soldiers and sailors. These policies assume an added interest to SURVEY readers because of the opportunity afforded by Mr. Kellogg's recent articles to compare Canadian policies with those now announced for this country.

Henry P. Davison, of J. P. Morgan & Co., is chairman of the Red Cross War Council. This is taken to mean that the financial and business machinery of the Morgan firm will be placed at the disposal of the council to assist in the collection and disbursement of money. Mr. Davison has announced that he will establish headquarters in Washington and give practically all of his time to his new task.

The War Council is the outgrowth of the meeting of prominent business men from all over the country called by President Wilson on April 21 last to lay plans for a Red Cross fund-raising campaign. At that meeting a War Finance Committee of a score or so of members was created, with Cleveland H. Dodge as chairman. This and the War Council now exist side by side, the function of the committee being, as one official put it, to raise money and that of the council to spend it or to assume the responsibility for its expenditure to the country at large. Mr. Davison is also vice-president of the finance committee.

Meanwhile, Charles S. Ward, for years secretary of the International Committee of the Y. M. C. A., has been engaged as secretary of the War Finance Committee. It was he who organized the campaign by which \$4,000,000 was raised for the New York city Y. M. C. A. three years ago, and altogether he has conducted some 200 campaigns that have raised \$60,000,000. The precise money-raising methods to be pursued by the Red Cross will be announced shortly.

The finance committee will undertake to raise money both for relieving the dependent families of our own soldiers and sailors and probably for extending relief to residents of parts of France from which the Germans have recently been driven. It was the second of these purposes that Mr. Davison emphasized in discussing the work of the council. The situation in evacuated French territory is described as terrible. Houses, agricultural implements, fruit trees, and even the

tillable earth are said to have been destroyed by explosives and fire; the people lack even knives, forks and plates. It is understood to be the intention of the Red Cross to aid in rebuilding houses, supplying agricultural implements and seeds, and generally to bear a share in rehabilitating the destitute.

In discussing the aims of the council Mr. Davison is quoted by the *New York Times*:

All our efforts, of course, will be predicated upon the help we receive from the people of the United States. If we can get the story to them we will get all the money we need, and we will require not thousands, but millions, of dollars to do what we have set out to do. I am a great believer in the American people, and am confident they will respond liberally when they appreciate the full gravity of the situation.

Concentration of effort will be our goal, and, while it is not intended to discourage the work of other bodies, we believe that better results will be obtained if all charitable organizations will coordinate their work with that of the Red Cross.

What is most desired by members of the War Council is constructive relief. This will not only alleviate suffering, but it will be an important step toward winning the war, because every one will appreciate that every person restored to normal activity is just so much gained in the struggle in which we are all now engaged.

Since coming to Washington I have been impressed by the fact that the officials here are thoroughly awake to the needs of the hour. I doubt if 2 per cent of the people of the country, however, fully realize the gigantic task before us. This realization will ultimately be brought home to them, however, and when it is America will rise as one man, eager and willing to do its part.

A commission will be sent to France, said Mr. Davison, to bring back word as to what this country can do.

With Mr. Davison on the War Council are William H. Taft, Edward N. Hurley, of Chicago, former Chairman of the Federal Trade Commission; Cornelius N. Bliss, Jr., Charles D. Norton, Grayson M. P. Murphy, of New York; and Eliot Wadsworth, of Boston. Mr. Taft and Mr. Wadsworth are respectively chairman and vice-chairman of the executive committee of the American Red Cross, thus making direct correlation between the war council and the executive committee.

The policies and methods governing relief to the dependent families of soldiers and sailors are announced by the Department of Civilian Relief of the Red Cross, of which Ernest P. Bicknell is director, in two pamphlets sent to chapters throughout the country. As the SURVEY has already told, the immediate direction of this work will be in the hands of the director of family relief, a new position to which Eugene T. Lies, of Chicago, has been called. The country is to be divided into geographical districts with a supervising director in charge of each. This director is responsible to the director of family

relief and is to supervise the work of Red Cross chapters in his district. In places having no chapters, single Red Cross civilian relief committees are being formed to do the work.

These chapters and committees are to be the units of activity. They will be able to spend, in addition to money raised locally, portions of the national fund to be raised by the Red Cross. This fund will aid in equalizing the work throughout the country.

It is expected that many families will receive a part of the pay of their enlisted members, which will be assigned to them, and also direct grants from the government, if such grants are authorized. The Red Cross is proceeding on the assumption that they will be, though it points out that this had not been officially determined when its statement of policies went to press.¹ Army and navy officers, it declares, are expected to encourage men to assign portions of their pay to their dependents.

The two great objectives in the relief work, says the statement issued to chapters,

are the satisfaction of creature needs, such as sustenance, shelter, clothing, etc., and the maintenance of social well-being. With the breadwinner gone, regular income must come from outside sources, unless the family has independent resources. The Red Cross aims to do its part to provide such support wherever necessary, and to do it with due regard for the family's sensibilities. Properly also due regard should be given to conservation of the resources of the organization.

On the other hand, it should ever be kept in mind that the family well-being is affected by other things than food, shelter and raiment. Health, housing and moral conditions need consideration. To allow these to be adversely affected and the family's standard of living to be pulled down would be most unfortunate. . . .

Naturally material aid should be rendered only to those families who are in need—whose income, from all sources whatever, is insufficient to maintain them in a proper standard of living, and whose main or sole support has enlisted as a soldier or sailor of the United States.

The immediate work of relief for such families will be in charge of the chapter's committee of civilian relief. Within this committee should be created, says the statement, a consultation or case committee, composed of a small group of persons experienced in social work, who "shall consider the information collected in regard to each applicant and will pass upon and decide the character and amount of relief to be granted in each case." Under the committee on distribution also may be organized, if needed, subcommittees on employment, friendly visiting, legal aid, and medical care.

A strong subcommittee on rehabilitation is also suggested, to which may be referred the needs of the families of men killed, and of discharged men who are unable to resume the support of their families. The statement assumes that the government will in due time pension such families, but meanwhile it declares that the Red Cross will probably find it necessary to provide interim help. Such help may take the form of convalescent care, providing special surgical appliances or artificial limbs or teaching trades suitable to the man's disabilities. So much for the organization. The procedure to be followed in determining whether a given family shall receive relief, and if so to what amount, is substantially this: A blank form is provided to contain the man's statement of his possible dependents. This is to be distributed at recruiting stations, camps and armories, and is to be signed by an officer of the army at the time of the man's enlistment. Another blank will be filled out by the dependent applying for relief, giving the relationship to the soldier, the present income from the man's pay, from federal aid and from other sources, and other facts. This is to be signed by a judge, minister, priest, public official or other well-known citizen. A more elaborate sheet is then provided to be filled in by a visitor to the applicant's home. This contains queries designed to bring forth information necessary for a proper decision.

¹ See Separation Allowances Under Conscription, page 167.

The fourth blank in this process is to be used by chapters in reporting periodically to national headquarters a list of applicants for relief. This list will be submitted to the appropriate government department, which will enter against the name of each dependent family the amount of federal aid granted that family and the amount of the soldier's or sailor's pay assigned to it. Thus the Red Cross chapter can check up the applicant's own statements on these matters and can use this information in dealing intelligently with families. Incidentally, these lists will enable the national office to keep a complete record of all applicants.

Under the heading "necessary information," to be gained largely by the visitor to the home, the statement thus summarizes the facts to be learned about each family:

Before allotment of funds, the validity of the applicant's claim must be ascertained. Positive proof of a soldier's enlistment must be given. In the case of a wife, her marriage should be established by satisfactory proof. The ages of children should be verified.

Inquiry into the circumstances of the family should be made with a view of ascertaining whether there are any actual sources of income other than the pay and allowances received from the federal government, whether there exist any resources from which additional legitimate income can be derived, and whether the family requires supplementary assistance from the Red Cross. In the case of a mother or other relative, proof of dependence should be required.

When it is decided that the applicant has legitimate claim upon the relief funds of the Red Cross, an allotment should be made of an amount equal to the difference between the income from all sources and the amount which the chapter's committee feels necessary for proper maintenance.

The following schedule of amounts is suggested as indicating the probable total monthly needs of families of different sizes and of individuals:

Wife	\$30
Wife and one child	40
Wife and two children	45
Wife and three children	48
Wife and four children	51
Wife and five children	54
Wife and six children	57
Wife and seven children	60
Widowed mother, if entirely dependent	30
Both parents, if old and entirely dependent	40

From these amounts should be deducted, says the statement, the sums received from the government, from the pay of the enlisted man and from all other sources. The Red Cross should provide the balance. The above amounts are not to be regarded as fixed. They will vary in different parts of the country as both the standard and cost of living vary, and the revision upward or downward should be left to the judgment of the local committee.

Allowances from the Red Cross fund are to be payable from the date of application. Should a soldier's dependent neglect to apply, however, for a considerable period after enlistment, the allowance may be made retroactive for one month.

Other principles affecting the distribution of relief are these: If a family or individual is not wholly dependent upon a soldier, the allotment should be calculated upon his proportionate share in the support. If, again, the federal aid or assigned pay, or both, equal or exceed the amount previously contributed by a soldier or sailor to the support of his dependents, the latter should have no claim on the Red Cross funds, except possibly for emergency needs, such as illness, accidents, funerals, etc. Widowers' children should be considered only when actually dependent. Allowances should be delivered to the beneficiary at regular intervals—say, monthly—and when practicable delivery should be made by a visitor who will maintain neighborly and helpful relations with the family.

Chapters are urged to "discourage demoralizing idleness" on the part of members of the family who ought to be at work, and it is suggested that "it may be the wisest thing to encourage even a young childless wife, if she is physically sound, to seek suitable employment." The obtaining of

positions is suggested as a desirable function of chapters.

Declaring that it is the duty of chapters to assume the task of family relief "cheerfully and diligently, not as a burden but as a privilege," the statement continues:

If, however, there exists an efficient local organization which wishes to assume this responsibility, the chapter should avoid any competitive action, but on the contrary should establish a definite cooperative relationship with that organization, whereby the latter may carry on the work in close connection with the chapter and, if practicable, as a part of the chapter itself.

The Task of Civilian War Relief¹

V

THE fact that a family is the family of a soldier or a sailor must not be permitted to prevent that family, if it should be in need, from securing the best care that the nation can provide. Yet there is a danger that these families may suffer from just this handicap. The very desire to give liberally to the support of all who are made dependent by the calling of men to military service may result in superficial and inadequate assistance for those who should have the most effective and thorough help that the country can supply.

Because the family in need is the family of a soldier, the civilian relief worker will be tempted to give aid without trying to reach an understanding of the situation in the home. The problem will appear to be a simple one. Obviously—the civilian relief worker may think—the trouble is that the man of the household is at the front. A casual and off-hand acquaintance with the family will, therefore, appear to be all that is necessary, particularly if the family seems to be self-respecting and hard-working.

This, for instance, is precisely the temptation that has come to social workers in dealing with families in whose distress tuberculosis has been a factor. Superficially the inability of the man to work is so plainly the reason why the household needs assistance that too frequently an allowance is the only kind of help supplied; yet experience has shown that again and again families thus inadequately cared for have become hopelessly disorganized and totally unfit for self-support.

This danger is even more likely to occur in households which fall into distress during such a period of widespread unemployment as the country underwent in 1907 to 1909 or more recently in the winter of 1914. Indeed, a period of widespread unemployment resembles a period of widespread enlistment in so many ways that the civilian relief worker can profit greatly by the lessons learned in the helping of families of the unemployed.

The family of an unemployed man, like the family of a soldier, is brought to distress by something largely beyond its control. In a time of unemployment, as in a time of enlistment, households which ordinarily would not have been obliged to seek help outside their home circles are compelled to accept assistance from strangers. In both instances there are so many families in need of care that at times the facilities for giving aid other than financial assistance may be strained. In both instances the public desires to help these people as

The statement hazards no guess as to the number of dependent families that may need relief. This will, of course, hang largely on the number of married men that are allowed to enter service. As is pointed out elsewhere in this issue [see page 167] the government seems to be planning to prevent both the voluntary enlistment and the drafting of men with dependents. If this be carried out, not only will Red Cross relief be reduced to a minimum but the payment of separation allowances will be almost entirely avoided.

liberally and as sympathetically as possible, and in both instances there is the possibility that in trying to do so it will really act without consideration and without practicing the genuine sympathy which it feels.

A few days before the close of the year 1907, when men were being thrown out of work every day, there applied for assistance to a certain bureau a woman, the mother of six children, whose husband was convalescing from an attack of lead poisoning. The man was strong enough to do light work—he was filling odd jobs at the time—and both he and his doctors thought that he was now able to undertake regular employment.

The woman had been helping to support the family by sewing and by keeping lodgers, but a hernia, together with the care of the youngest child, a baby, made it difficult for her to continue adding to the income of the household.

The family had at one time lived in South America and the man had letters of recommendation which told of his good record as an employe of a street railway there. His other work references were satisfactory.

Three of the children were in school. They stood well in their classes. Indeed, everything that the visitor learned seemed to testify to the capacity of the members of the family and their eagerness to become independent as soon as possible.

There was, to be sure, a complaint by a broker that the woman had not dealt fairly with him in a real estate transaction, but her explanation seemed to place the burden of proof decidedly upon the real estate dealer. A priest mentioned that he had heard a rumor that the man had had a wife living and the woman a husband at the time they were married to each other. The visitor, however, did not attempt to pursue this rumor further.

Because it was extremely difficult to obtain employment and because the situation in the household seemed to justify it, the bureau decided to pay an allowance to the family. This was done for six months, after which the man obtained work. In addition, an operation for hernia was performed upon the woman.

Superficially this home was one which with help of the kind given might have been expected to become self-supporting. Two years later, however, the family was completely disorganized. The mother was broken in spirit. From the resourceful woman who for two years before the bureau had known her had struggled to support and manage the household, she had become an indifferent, careless person, uninterested in keeping a clean or an attractive home and without any regard for the welfare of her children. A serious weakness which might have been corrected by an operation was impairing her health, but she refused to place herself under the

¹The fifth of a series of articles based upon a course of lectures upon civilian relief now being delivered in New York with the sanction of the American Red Cross, by Porter R. Lee, of the staff of the New York School of Philanthropy. The articles are being written by Karl de Schweinitz, of the New York Charity Organization Society.

care of a surgeon. Likewise she would not permit her oldest daughter to be operated upon for a complication which was undermining the girl's vitality.

The man was without employment. In the last eight months he had had six different jobs. He had either been discharged for doing unsatisfactory work or for no good reason he had left of his own accord. He had been arrested once for stealing, but he had been acquitted through a technicality, although his brother, when tried for the same offense, had been convicted.

The oldest boy had entered the messenger service, a dead-end job, which in that city had none of the safeguards enforced by progressive states.

Both parents had been brought into court for failing to send their children to school, and although work was plentiful now, the family had twice been evicted for not paying its rent.

Because all these things happened, it does not necessarily follow that if the bureau had been better acquainted with the family and had acted accordingly nothing of this sort would have occurred. In the lives of human beings with their infinite variety of character and circumstance, cause and effect do not follow each other so plainly.

It must be remembered, moreover, that when the family applied for assistance the bureau was receiving scores of calls for help from households in which able-bodied men were out of work. It was not easy to find employment for these men. The bureau was able, perhaps, to secure six or seven jobs a week.

Nevertheless, it might have taken certain precautions for the welfare of the family. It might have cleared up beyond all doubt the rumors about the unfortunate early marriages of the man and his wife. A knowledge of the facts might have shown whether or not the man had enough moral fiber to withstand the undermining influences of a long time of unemployment. Furthermore, he had been unable to work for two years, and any man who is forced by sickness to go through a period of idleness is likely to be less fit morally and psychologically for steady industrial routine than a man who is in the habit of working. Those in particular who have had to do with tuberculosis patients have found this to be true.

If the bureau had had reason to believe that the family would be demoralized by being without work it might have

given employment to this man rather than to some other person who might not so quickly have shown the effect of idleness. Moreover, it is possible, as illustrated in the unemployment period of 1914, to manufacture work for men in such a way that it seems to them to be real employment.

The bureau knew that the mother, largely by her own efforts, had been supporting the home for two years and that in this time the family had undergone privations. Would it not have been reasonable to suppose that the health of the mother needed special attention? Again, if the family had upon investigation been found to be lacking in stability, would it not have been a justifiable precaution to have introduced to it a friendly visitor, that is, someone who would have used the power of personal influence through friendship to prevent demoralization? Vocational guidance might have directed the oldest boy into some occupation other than that of messenger service.

Had these various things been done, the family would have had a better chance of becoming self-supporting. If it had been impossible to accomplish anything for this household, the bureau would have been right in not trying to become better acquainted with it. But there were definite things that could have been done.

The civilian relief worker will doubtless not have to deal with a situation of precisely this kind. She will, however, find that her problem is similar in two respects to the problem of the social worker who deals with families during a period of unemployment. Both problems are complicated by abnormal living conditions. With unemployment, it is lack of work; with war, it is high prices. If during unemployment there is a general feeling of depression, there exists during war a state of extreme tension. Then, also, as indicated at the beginning of this article, the family that is in need because of the enlistment of the man, just as the family in which there is unemployment, appears to involve no difficulty other than the one by which obviously it is handicapped.

The civilian relief worker may indeed with profit study the experience of social workers in helping families during unemployment. The lesson that she will learn is that the way to insure to needy families of soldiers and sailors the kind of care they should have is not to deal with them superficially, but to treat them upon the basis of as complete a knowledge and understanding of their problems, their strengths, and their weaknesses, as it is possible to obtain.

GIFTS

By Hortense Flexner

SHE tilts her face and smiles and asks
Some quaint gift for her play,
The friendly little girl next door,
Who thinks I have a magic store
Of lovely things—balloons and more—
Wonder for every day.

And I am just a bit amused
At her calm, trusting air;
I, who have somehow grown to be
Older so many years than three,
Still asking all expectantly
For beauty—everywhere!

COMMON WELFARE

THE FIRST MEN TO GO TO FRANCE

"THE best recommendation a man can have is a pair of dirty hands. We know he's been at work," said Captain Hogan, in charge of the New York headquarters for enlisting men in the engineer regiments which are to sail for France in sixty days.

They have turned down a lot of college professors, brokers' assistants and even the man who came the other day in his own limousine driven by his own chauffeur, and wearing white spats, who wanted to enlist as a private at twenty-five dollars a month. But the ironworker who showed his last week's pay check of \$57.60 and who wanted to go on Uncle Sam's payroll, was gladly accepted.

The men are wanted to build, maintain and operate railroad lines behind the battle lines. Engineers and trainmen are needed, but the men most sought after are for construction work, particularly those who have been engaged in railroad construction camps and in subway building.

These engineer regiments, which at the moment are having perhaps the liveliest recruiting that is going on in the country, are each to consist of 1,060 enlisted men, 160 non-commissioned officers and 37 commissioned officers. In four days of recruiting for the New York regiment, 1,500 men have offered themselves and 361 have been accepted. Pittsburgh has a better record with 600 men in the first four days. With the exception of the colonels, the regimental officers will be volunteer civilian engineers drawn from the engineers' reserve corps.

An exceptionally fine-looking lot of young men were drawn up for physical examination at the New York headquarters last Monday. Not many of them were railroad men, but they were machinists, automobile repair-men and engineers' assistants. Some of them were regularly employed at \$20 to \$25 a week, but the drop to \$25 a month did not seem to worry them a bit. It was the spirit of adventure that called one young

machinist in the line, who may have spoken for many of his fellows.

"I go to work on Monday, work all the week, get my pay, spend it Saturday and Sunday and start another week on Monday," he said. "It's the same old thing all the time. Now this business of crossing the ocean and going to France is about the biggest thing that ever happened to me. I reckon I'm going to see a lot I never saw before."

Nearly all the men were within the army conscription ages of 21 and 30, which the men obviously took into account. "Better go now of your own accord than have to go later," and "Got to go sometime—they'll take us anyway when they want us," seemed to represent the feeling of the majority. One fine, upstanding fellow, however, turned out to be there from quite another motive. He was a regular, who had come over from Governor's Island to offer himself for this new service. "I understand this crowd is going to get to France first," he explained, "and I'm going to get into it if I can."

INSURANCE FOR SAILORS ON FOOD SHIPS

WHEN an American sailor or fireman departs from port, in this springtime of 1917, aboard an American merchant vessel bound for Great Britain or France, he estimates his chance of a safe return at about one in two. Submarine attacks have become so frequent and so successful, and the difficulties of escape from a torpedoed vessel are found to be so extreme, that the ordinary member of the crew feels himself enlisting for service as dangerous as that in the trenches when he signs for a voyage aboard a food-carrying ship.

Under these circumstances the Senate Committee on Finance has reported the Simmons bill (S. 2133) amending the war risk insurance act, which, among other amendments, proposes a plan of accident and death compensation for officers and crews, to be carried as insurance at the expense of the owners of the vessels. Insurance may be taken out either in private companies or in the Bureau of War Risk Insurance. But it must provide as follows:

(a) In case of death, permanent disability which prevents the person injured from performing any and every kind of duty pertaining to his occupation, or the loss of both hands, both arms, both feet, both legs, or both eyes, for the payment of an amount equivalent to one year's earnings, or to twelve times the monthly earnings of the insured, as fixed in the articles for the voyage (hereinafter referred to as the principal sum), but in no case shall such amount be more than \$5,000 or less than \$1,500;

(b) In case of any of the following losses, for the payment of the percentage of the principal sum indicated in the following tables: One hand, fifty per centum; one arm, sixty-five per centum; one foot, fifty per centum; one leg, sixty-five per centum; one eye, forty-five per centum; total destruction of hearing fifty per centum; and

(c) In case of detention by an enemy of the United States, following capture, for the payment during the continuance of such detention of compensation at the same rate as the earnings of the insured immediately preceding such detention, to be determined in substantially the same manner as provided in subdivision (a) of this section.

Great anxiety is expressed as to the effectiveness, quite aside from the justice, of this valuation of \$1,500 upon the life

Cesare in New York Evening Post

"THE MINE"

of a common seaman or fireman in computing the insurance. It is pointed out that \$1,500 represents about one and one-half years' pay and allowances for a sailor, under present conditions, and that under the compensation laws of several states the life of any workman would be estimated to be worth to his family at least four years' earnings.

Andrew Furuseth, president of the International Seamen's Union, states that he has grave doubts of the ability of the government to attract men to the sea, at this critical time, when it offers so slight a guaranty for the future of the families of those who die.

SEPARATION ALLOWANCES UNDER CONSCRIPTION

PAYMENT of separation allowances to wives, children or other dependents of soldiers is to be avoided, according to the plans now made for the American army, by the expedient of exemption. Under the law, no man having dependents will be taken. The President is authorized to reject volunteers who have dependents, and the men drafted will be those free of obligation to support any person. Such is the policy adopted after three bills providing separation allowances had been introduced in Congress, and after one such measure had been favorably reported as part of an omnibus military bill, by the Senate Committee on Military Affairs.

That this plan of exemption is feasible is vouched for by the War Department. It estimates that about 50 per cent of the 7,000,000 men in the United States between the ages of 19 and 25 years are without exemption, including dependents of any kind. Since the ages for draft have been changed to 21 and 30 years, by the agreement of the House and Senate conference committee, Census Bureau experts estimate that the number of men within the conscription ages has been increased to 10,027,000, but that the percentage of this number free of dependents is much reduced. Assuming that it is 30 per cent, the United States has 3,000,000 men of the age for conscription who will bring no claim of separation allowance for their families to the treasury.

Before this policy was adopted, the Senate committee agreed upon this plan for possible separation allowance (Sec. 11, S. 1786, reported April 17):

In time of war the wife, or, if there be no wife, the children, or, if there be no children, a dependent relative of an enlisted man, designated by him as his beneficiary under this section, shall be paid a monthly separation allowance of \$15, which shall be the total amount, other than pensions or death gratuities, payable under this section to the dependents of any one enlisted man. This monthly separation allowance shall commence with the date of declaration or recognition of a state of war in case of all enlisted men in the service of the United States on that date, and for all other enlisted men on the date that they assume a

PATRIOTISM!

"TO many an organization the war comes at a critical time, for it is in the spring of the year that annual budgets aggregating millions of dollars are raised that the work to realize American ideals of right living may go on. . . . There is no conscription of resources in wealth and labor for social service, except the conscription which conscience imposes and the compulsion of the desire to assure those who are sent afield that all is well at home. . . . 'Business as usual' would be a sordid slogan indeed for a nation taking up arms in the spirit of America if the phrase were not broadened to include the business of holding to the forward look in the body politic. After long and patient consideration the United States has shouldered the cost of war that heretofore there shall be no under dog among the peoples of Europe; it will be for this reason all the more jealous of its institutions which make for democracy at home."

Poster heading and extract from an appeal of the Howard Orphanage and Industrial School for Colored Children on Long Island, of which L. Hollingsworth Wood, New York city, is president

status in the active military service of the United States which entitles them to federal pay, and shall cease on the date of issuance of a proclamation of the President declaring the state of war terminated. The separation allowance herein provided for shall not accrue after the date of receipt of a report of the discharge, desertion, or death of the enlisted man on whose account the allowance is authorized.

The payments authorized by this section shall be paid from funds appropriated for the pay of the army, under such regulations as may be prescribed by the secretary of war, and the action of the secretary of war in all cases provided for in this section shall be final, and no right to prosecute a claim or suit in the Court of Claims, or in any other court of the United States, or before the accounting officers of the treasury, against the government of the United States shall accrue to such enlisted men, or any member of the family of such enlisted men, or heirs thereof, by virtue of this section.

This clause follows one providing for the voluntary allotment of pay by a soldier to his family, and another repealing the existing law granting a death gratuity of six months' pay for the beneficiaries of officers and enlisted men in the army, and of one year's pay in the case of officers and men who die as the result of aviation accidents.

Although this bill is on the Senate calendar, its early passage is not anticipated by the committee.

Senator Freylinghuysen, of New Jersey, has introduced a bill proposing a wholly different plan of allowance. It calls for the payment by the federal government to the governor of each state,

monthly, of a sum equal to one-twelfth of the aggregate monthly pay proper of all officers and men of the National Guard called or drafted into the service, from such state and payable under federal law. The governors are to disburse this fund, under uniform regulations to be prescribed by the secretary of war, for the maintenance of the dependents of officers and soldiers. No one dependent person is to receive more than \$25 a month, and the aggregate payment to dependents of any one officer or soldier is not to exceed \$50 a month. Fixed income of such dependents, presently available, shall be deducted from the amount so allowed. Dependents are to include only wife, children, father, mother and minors under the age of 16 years, members of the family of the officer or soldier.

A bill offered in the House by Representative Thomas F. Smith of New York proposes a flat rate of \$15 a month as allowance to the wife, and \$7.50 a month for each child, not exceeding two, under the age of 14 years. He proposes that this monthly allowance shall commence at the date of passage of the act, or at the date of beginning of active service by men enlisted after that date, and shall terminate with the war. It carries, however, this limitation: "The allowance herein provided for shall not accrue after the date of receipt of a report of the discharge, desertion or death of the enlisted man on whose account the

allowance is authorized." Such allowances are to be paid from funds appropriated for the pay of the military and naval forces, under regulations to be prescribed by the secretaries of war and the navy.

The first army to be raised by draft will total 500,000 men. The second will be of equal size. If the war should last long enough and shipping be available to transport the first million abroad, another million men may be enlisted. Yet the War Department is persuaded that even so it will not have come near the necessity of drafting men for whose families a separation allowance scheme will have to be considered. Until it shall be persuaded otherwise, Congress will not be asked to take up the whole problem of family maintenance as has been done in Europe.

On the other hand, the Labor Advisory Committee of the Council of National Defense, meeting this week in Washington, may seriously consider the problem from the standpoint of the men of the industrial army which the exigencies of war may separate from their homes. England has had to deal with this variety of separation allowance. It may prove the beginning of the question here.

INDUSTRIAL PEACE IN GREAT BRITAIN

FOLLOWING a number of informal conferences and the private circulation, last summer, of a report by the Garton Foundation which was widely commented upon, the British prime minister, Lloyd George, has appointed a Central Reconstruction Committee to plan for the reconstruction of social and industrial life after the war. One of the principal functions of this committee will be that of translating into action the evident desire throughout the country that when the war is ended the unity of the nation in its present patriotic endeavor shall not be disturbed by preventable industrial strife.

Already there are signs that new forms of organization will spring into life which will go far to uproot suspicion between employers and employed and substitute for it frank and good-willed discussion of differences on matters in which the interests of capital and labor do not coincide. Neville Chamberlain, the director-general of national service, a member of the family which has done so much to improve industrial and social conditions in Birmingham, has taken the lead in the formation of a National Alliance of Employers and Employed. The aim of this association is to secure cooperation between employers and workers in the task of reinstating in civil employment at the conclusion of the war those who at present are serving with the forces or work-

ing in munition factories. Its plans include the following items:

That the cordial and wholehearted cooperation of employers and employed be promoted as the most important element in the success of any scheme for dealing with the reinstatement of the men of the forces and munitions in civil employment and the general redistribution of labor after the war and for handling any subsequent problem of unemployment or labor dislocation.

That powers be obtained from Parliament to set up without delay a central statutory board to regulate and supervise this demobilization and redistribution; and that at least two-thirds of the members of this board be employers and employed in equal numbers, to be appointed from employers' associations and trade unions.

That where a trade union by arrangement with an employers' association is capable of placing its members in employment, the central board have power, if it deems it in the national interest, to delegate to it the responsibility of dealing with the reinstatement of its own members.

That local boards, similarly constituted, be established to assist the central board, and that all expenses incurred by the boards be paid for out of monies provided by Parliament.

The Bristol Trades Council, a local federation of trade unions, in a counter-proposal eliminates the official representatives on the central and local boards which it desires to see confined entirely

to the representatives of industry, except for the chairman who would be appointed by the Ministry of Labor. Its chief aim is that of democratizing the national labor exchange system, which is not sufficiently influenced in its operations by the wishes of the individual trades and industries in any given locality. Also, it desires that all labor representatives be not appointed but elected annually rather than appointed, those for the central board by the trade union congress, those for district boards by district conferences of trade unions, and those for local boards by the local trades councils.

Another trades council has formed a "war problems committee" which is visiting trade union branches to discuss the future relations of capital and labor. According to *Co-Partnership*, there is a lively interest in trade union circles in such proposals as those named above.

More significant than these various manifestations of the new spirit, however, are the concrete realizations of the desire to combine arrangements for increased output with an active participation of employes in management. The most important developments in that direction are told by Arthur Gleason in the article on page 156.

RUSSIA'S ALIEN ENEMIES AND REFUGEES

THE treatment of civilian enemies in Russia is not as uniformly bad as has sometimes been asserted, according to Walter Pettit, of the staff of the New York School of Philanthropy, who has just returned from that country where he was one of the special agents of the American embassy charged with the administration of funds for aiding war prisoners.

In the southern government of Saratof, where Mr. Pettit was stationed, the German and Austrian civilians were prisoners only in the sense of having their liberty of movement curtailed. They were not, like the soldiers, maintained by the Russian government, but were given every opportunity to earn their living and were helped by funds transmitted for them by their home governments and distributed by committees which knew their job—and on which the prisoners themselves were often represented, a practice which was stopped later.

They were decently housed, provided with good hospitals, and allowed great freedom in the choice of occupations, men of military age as well as others. Hardships, where they arose, were due not to malevolence but to the inefficiency of the imperial authorities, Mr. Pettit says. The allowance received from the home government was very meager and, with the rise in prices, often insufficient. The Austrian pay was raised from eight to ten rubles in the course of last year, the German from ten first to fifteen and

later to twenty rubles (\$5.40), with thirty rubles in exceptional cases. These civil prisoners, most of them business men and farmers speaking the Russian language, did not find an altogether congenial social environment.

Quite different is the case of two other classes which were brought to the wealthy Volga region during the war, the hostages taken in the occupied parts of East Prussia—an unknown number, variously estimated as between 10,000 and 60,000 altogether—and the refugees from the Russian Baltic and Polish provinces occupied by the German army, probably several hundred thousand, distributed over various parts of the empire.

Among the hostages, the suffering was the most acute. Since the regions taken in the fall of 1914 were depleted of their men of military age, most of these hostages are old men, women and children. The death-rate among them, owing to the severity of the climate and the blunders made in transportation of such large numbers for which the government was entirely unprepared and unequipped, was appallingly high. The physical and mental effects of that long journey, on which they were unprotected and unprovided with the necessaries of life, have presented one of the most urgent and most difficult tasks of relief. In the city of Saratof, crowds of these unfortunates arrived on the day before Christmas, unexpected and in a deplorable condition.

More recently their number has been added to by Austrian hostages from Bukowina, people of an intelligent and educated peasantry. Curiously enough, these last named were in receipt of a meager allowance from the Russian imperial government, when Mr. Pettit left, just before

the outbreak of the revolution; and since most of them are able to find suitable jobs, they are as well off as many Russian citizens in the district. German and Austrian civil prisoners of Polish descent also were given a slightly preferential treatment as regards freedom of movement.

The refugees from the Russian provinces now occupied by the enemy were, perhaps, the most wretched of those who came down to the Volga metropolis. There was no uniform regulation concerning their aid; in some towns they were paid by the authorities, in others not. Probably the government did the best it could, but it was unable to grant these hundreds of thousands an adequate pension and, of course, no foreign government was interested in them. Com-

mittees, under the patronage of the Princess Titania, were organized all over the country for their relief. In Saratof, public funds first used for this purpose gave out, and the refugees were thrown entirely upon private charity.

Many false statements and implications have been circulated in this country because the situation of the three classes mentioned has been confused. The worst conditions of insanitation and of poverty bordering starvation are found among the refugees who are Russian subjects, not among war prisoners. The funds collected in this country for the relief of German and Austrian war prisoners do not go to these people, even though many of them may be of German ancestry and speak the German language. They are cared for largely by Russian-Polish and Russian-Lithuanian as well as purely Russian committees.

Reports coming from German war prisoners to the effect that their regular allowances, made by the home government, no longer come to them, may perhaps be traced, at least so far as Mr. Pettit's own experience is concerned, to a very necessary systematization and improvement of the method of relief. During the first year of the war, practically all applicants were relieved alike. But since then, an effort has been made to render the war prisoners as far as possible self-supporting. A branch of the municipal public employment bureau was established to direct them into profitable openings, free of charge. Several hundred persons were thus placed in a few months. Naturally, some of the able-bodied men who previously were given a regular pension without any investigation as to their power of self-support, did not like the innovation. Hence the dissatisfaction.

PRINCE DE L'ART

Mention of the municipal public employment bureau in Saratof, a city with a population of about 300,000, brought Mr. Pettit to explain that in administrative efficiency and social concern this city compares favorably with many an American city of the same size. More particularly is this true of the maintenance of the streets, sewerage system and schools. There are supervised playgrounds and moving picture shows on Sunday afternoons especially selected for children. The educational system includes day nurseries, a "people's university" and Sunday "people's schools" where persons of both sexes and between twenty and sixty years of age may secure free elementary instruction. An unusually large proportion of the population is of German ancestry and, in spite of the state of war, German may be heard spoken here and there. No persecution of German citizens, either popularly or by the police, took place.

Mr. Pettit was particularly struck with the progressive character of Saratof's Jewish citizens, who maintain excellent schools, making use of the most modern text-books. Among other special educational provisions, they have developed apprenticeship shops where young men and women can acquire a skilled trade, and, since the school takes orders from wealthy patrons, at the same time earn their living.

PREMATURE OLD AGE FROM THE TRENCHES

A SECTION in the second report of the British Association Committee for the study of fatigue from the economic standpoint is written by Dr. T. G. Maitland on accumulated fatigue in warfare. This is based on experience with the soldiers at the front, where there was no motive that would lead the officers or medical men to exaggerate the effects of overstrain on the men; what they found was forced on them by observation of men who had passed the breaking point.

The most important group of these is composed of men who do not collapse in the field but who, when relieved, are found to have a degree of fatigue that has gone slightly beyond the point of normal physiologic recuperation. They are like rubber that has been stretched too far and cannot recover its former elasticity. The quality of the soldier's work is distinctly impaired, his aim is less sure, his decision less prompt, he shows a *faiblesse irritable* in the restless movements of hands and feet.

To reduce the number of such cases, which are only an encumbrance to the fighting force, the hours in the fighting line have had to be shortened. The final result of such overstrain when long continued has been observed by Dr. Maitland in Serbian soldiers who have lived through six years of nearly con-

tinuous war in the Balkans. They show marked hardening of the arteries, which means premature old age.

Steel foundry-men who work under great strain for twelve hours out of the twenty-four and seven days in the week do not have physicians anxiously watching the effect upon them of this excessive work, but there is good reason to believe that here, too, the limits of normal fatigue are overpassed and that premature ageing results.

ORGANIZED SOCIAL WORK AND THE WAR

THAT war does not change social problems and social work but rather increases the one and intensifies the other came out clearly enough in two recent conferences of social workers. At the ninth annual meeting of the California State Conference of Social Agencies there was great interest, to be sure, in the sessions on international relations, food supply and military and industrial mobilization. But these did not overshadow the sessions which discussed minimum standards in industry, health insurance, some failures in our public school system and how to organize a county to carry on constructive social work.

The discussion of many of these topics was broadened by the simultaneous meet-

ings of the Society for the Study and Prevention of Tuberculosis, the California Probation Association, the Society for Mental Hygiene and the Travelers' Aid Society, reenforced for the first time this year by the State Council of Defense and the Red Cross.

New undertakings of both peace time and war time resulted from this pooling of experience and debate. A joint committee of the probation officers and of the State Board of Charities and Corrections is to make a survey of the juvenile courts and probation offices with a view to standardization and possible changes in the law. A committee of the conference itself will study with the same board the possibilities of correlating and making uniform the work commonly known as charities endorsement—a matter that has had widespread and even bitter discussion as a result of divergent views of the methods of endorsement undertaken by California cities. Another committee is to study the question of legal residence, which has of late come up in new and puzzling aspects as a result of the proposal in the Kent bill to pay federal subsidies to tuberculosis sanatoria for the care of non-resident dependent patients.

As to war measures, resolutions were adopted urging that existing standards of labor be maintained and that educational and protective agencies be continued. The conference went on record in favor of a universal selective draft, limited at first to unmarried men and adding that when, or if, married men must be taken, the federal government should grant an allowance of \$30 a month to the wife and \$10 a month for each dependent child. Emphasis was laid on distinguishing between such an allowance and charity (see the SURVEY for April 28, page 95).

Similarly, at the New Jersey State Conference of Charities and Correction there was discussion of the need of radical increases in payment for the care of children in institutions and those placed out in private homes if standards are to be maintained, of infantile paralysis, from which parts of the state suffered sorely last summer, together with the familiar questions of principle and practice in both charities and correction.

But with them ran a strong current of opinion which, as put by the president of the conference, Mrs. Lewis S. Thompson of Red Bank, is that "we must plan to meet the new responsibility put upon social service by the war." Practical points were brought out. E. R. Johnstone, of the Vineland Training School, for instance, would have none of the plan for sending feeble-minded boys to the trenches in place of "better" men. They should not be allowed even to work in munitions plants or in any factories making war supplies, he said. The feeble-minded are susceptible to plots and they are careless; it is possible

OUTPUT AND HOURS

The following is a statement made in March by John M. Williams, secretary of Fayette R. Plumb, Inc., of Philadelphia, a firm manufacturing tools:

During the period when men were so hard to get we tried to analyze the cause for men either not hiring with us or not staying with us and the employment department made the following report as to one of the contributing causes, viz:—

"Our work from its very nature is hard and laborious, tiring men out compared with work in the average factory.

"We figure that in order to hold our men, and make our plant attractive to new men, it is necessary to reduce our week from 57½ hours to 52½ hours, with no reduction in pay.

"We figure that it will not decrease our production, but will raise it."

After some discussion their report was adopted and on December 4, 1916, all day rates were raised so that the pay equalled or slightly bettered on a 52½ hour basis the old pay on a 57½ hour basis.

All piece rates were carefully analyzed, and adjusted in every case where the shorter hours affected the pay of the producers.

The results speak for themselves. The men felt better and appreciated our action. It is much easier to hire men than before.

The weekly production in one of our worst departments in spite of the shorter hours has increased 18.4 per cent and in the entire plant 10 per cent.

that the great munitions explosion at Eddystone was due to a feeble-minded worker.

C. L. Stonaker insisted that when crippled and disabled soldiers come home from the front they shall not be housed in the antiquated barracks of our civil war soldiers' homes, run with an eye to the G. A. R. vote; nor should the care of these young men be entrusted to the elderly physicians who have become practically specialists in the peculiar requirements of the octogenarians who are their present inhabitants.

And A. W. MacDougall, of the Newark Bureau of Charities, predicted a great democratization of social work as a result of the universal desire to serve and the coming in of a great number of untrained but eager volunteers. "A broader conception of 'charity' and a deeper social conscience will result," he said. "This is, indeed, the day of those who have been doing fundamental social work."

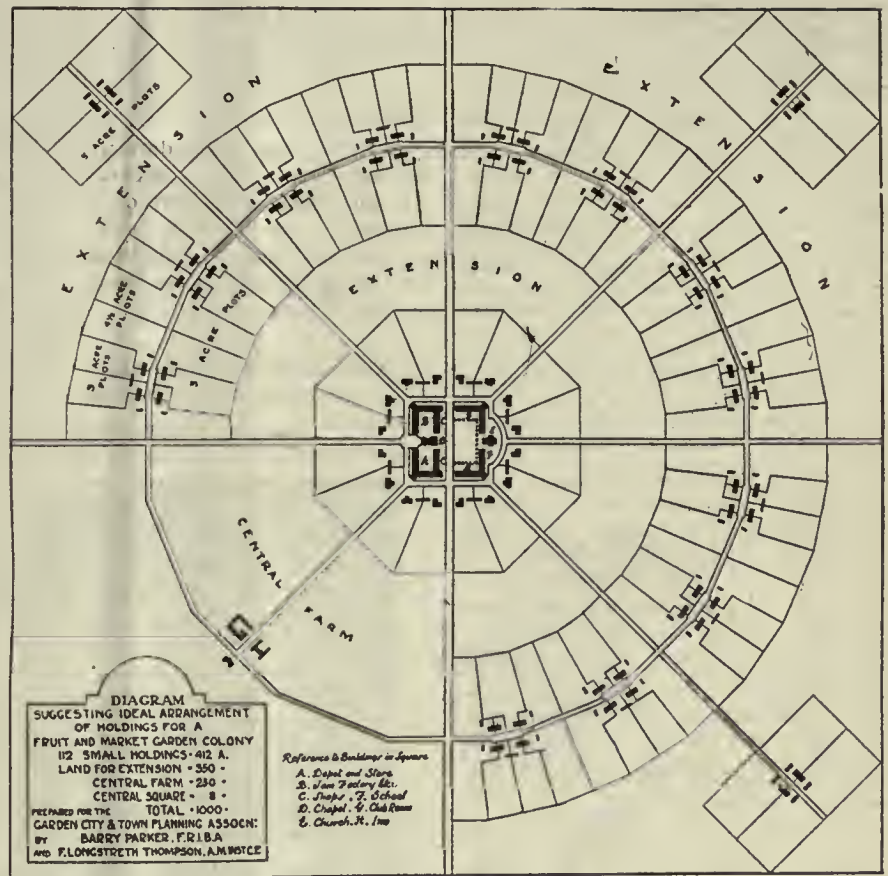

SETTLEMENTS FOR BRITISH SOLDIERS

ACTING upon the report of the departmental committee appointed by the president of the Board of Agriculture to consider the settlement and employment on the land of discharged sailors and soldiers [the SURVEY, June 24, 1916], an act was passed providing for settlement of 4,000 acres in England, 2,000 in Wales and 2,000 in Scotland. Many social reformers in Great Britain have been disappointed with the meagerness of the result and believe that a fine opportunity for the social reconstruction of rural England by state action has been missed.

The English Garden Cities Association, while on the whole highly appreciative of the government report, especially with the declaration of the departmental committee in opposition to the segregation of the disabled men by the establishment of colonies for cripples only, has embodied a number of minor proposals in a special report, to which another by the society's architectural committee is appended.

More importance, in its opinion, attaches to the establishment of village or home industries and small workshops which will not only provide alternative and additional means of livelihood, but will serve to retain in the community those who are not inclined for agriculture itself. Indeed, the association looks upon it as essential if colonization is to be permanent and of maximum social benefit. For this reason, it urges a closer grouping of the homesteads than planned by the departmental committee, so as to create a strong community life.

The association is doubtful also of the practicability of the proposed use of former military hutments for housing these settlements. Apart from the fact that in the British climate wooden structures

MODEL plan for a rural settlement of discharged British soldiers. The objects aimed at are accessibility of all holdings with a minimum of road-making and economy in drainage and water supply; provision for extension of holdings and a large, educational central farm; attractive grouping of houses in groups of eight with a village center for churches, school, club, stores, jam-factory and cooperative warehouses and collecting depot

are unlikely to offer a sound investment, it is insisted that no dwellings will be satisfactory which are not designed for the purpose. "The unskillful adaptation of hutments for housing purposes would . . . probably produce many ill effects both from the sanitary and structural as well as from the architectural point of view."

Doubt is expressed whether it would be wise in such settlements to dispense with all building regulations and by-laws as is the case with buildings erected on small holdings provided by county councils. While harsh restrictions must be avoided to make possible the erection of low-priced one-family houses, so long as a minimum distance of such buildings from each other is made obligatory, the entire abrogation of building regulations may set a precedent exceedingly irksome to get over when building in the rural districts generally is again taken up with vigor.

The chief ground for dissatisfaction, however, is the smallness of the experiment now sanctioned by legislation. To supplement it immediately by a similar development on a larger scale, a number of national organizations interested in the improvement of the conditions of rural life have cooperatively launched the Rural Organization Council which will advance the creation of small hold-

ing colonies by every means at its disposal.

WAR AS A "TIME FOR THINKING"

IN Montreal, in the early days of the European war, when, as with us, everybody wanted to "do something," and when both tolerance and cool-headedness were at a premium, a group of university professors, ministers and social thinkers "put themselves at the service of any societies or groups of people" who wished to "study the deeper issues of the war." They made their offer in a little pamphlet called Thinking in Wartime which may be suggestive to similar groups in the United States.

The response from the churches and societies among well-to-do people was meager, but settlement groups, trade unionists, forums and other organizations in which, in ordinary times, social and industrial problems are of immediate personal interest, responded. And in the last two years and a half there has been an increasing amount of intelligent discussion going forward.

The pamphlet stated the situation in this way:

THE DEEPER ISSUES OF THE WAR

As a nation we are putting all our strength into this war because we believe that Our cause is just—

What is it that makes it so?
 it is a defence of democracy and liberty.
 What is democracy in the warring nations?
 it is defence of oppressed nationality.
 What is nationality, its value and limitations?
 in spite of its waste, permanent good may come of it.

What good can we expect?

These and similar questions call for study and answer. How did the nations come to the point of war? What was their previous history? What place has war in the development of civilization? What place have religion and education?

The war calls for hard fighting; but for hard thinking too. Those who cannot go to the front can help in other ways; one is to clear their own minds and assist in creating a body of opinion and knowledge on the problems raised by the war.

The list of available lectures as drafted by this Canadian group two years ago and over was as follows:

The Duty of Those who are not at the Front, The Scope of Patriotism, Patriotism and Christianity, Nationalism and Internationalism, The Ground of International Morality, National Freedom and National Character, The Moral Equivalent of War, War and the Survival of the Fit, War and the Golden Age, War and the Brotherhood of Man, War and Labour, War and Democracy, The Future of Democracy, The Economic Aspect of the War, The War and Educational Ideals, The Tragedy of German Education, Democracy and Education, German Ideals of the State, The Making of the German Empire, The Making of Italy, Social Experiments of Modern Germany, France Since 1871, Belgium and her Social Experiments, Russia, What Is Civilization, The Sovereignty of Thought, Panaceas and Pessimism, Taking Stock, How to Prevent a Reaction.

TRAVELERS' AID ON A NEW BASIS

UNITING on the principle of "protection from danger and prevention of crime for travelers, especially women, boys and girls traveling alone," representatives from every state in the union and from Canada recently met in New York to form the first national Travelers' Aid Conference. The New York society's building was designated as headquarters for the permanent organization which resulted, with Gilbert Colgate as president and Orin C. Baker as secretary.

Travelers' aid work, originally a church activity, was given new scope and impetus by the first meeting of a non-sectarian committee in New York in 1905, further emphasized by the International Conference of Station Workers in Berne, Switzerland, in 1910 and the incorporation and enlargement of the non-sectarian New York Travelers' Aid Society in 1907 and 1910. The present national organization brings into co-operative relations such widely divergent bodies as the Y. W. C. A., the National Council of Jewish Women, the National Conference of Catholic Charities, the National Grange, the Gideons (an organization of commercial traveling sales-

men), the Girls' Friendly Society of America and the International Order of the King's Daughters and Sons.

NATIONALIZING THE PUBLIC HEALTH

TO determine the relation of health authorities in this country to war conditions, the fifteenth annual Conference of State and Territorial Health Officers with the United States Public Health Service, was held in Washington on April 30 and May 1, a month earlier than the dates originally chosen. The following program, whereby state health

officers may assist the federal authorities in sanitary activities during the war, was adopted:

Sanitation of military and naval camps and camp sites.

Exercise of police power relating to the sanitary environment of military and naval camps.

Provision of public health laboratory facilities.

Diagnosis and surveillance of infectious diseases among the troops.

Provision, as far as possible, of hospital accommodations for care of cases of communicable diseases among the troops.

Protection of military and naval camps from the introduction of communicable diseases, including tuberculosis and venereal diseases, from civilian population.

Sanitation of intrastate transportation facilities.

Investigation and exclusion from military and naval camps of disease-carriers.

Immediate reporting to the Public Health Service of any epidemic foci in any of the states or territories of various infectious diseases (poliomyelitis, cerebro-spinal meningitis, smallpox, typhus, etc.).

Sanitary supervision of refugees and interned aliens.

Sanitary supervision of sources of water, milk and food supplies of the troops.

Sanitary supervision of soldiers suffering from tuberculosis, or those rejected from the army and naval forces because of this disease.

Sanitary supervision of migratory laborers and industrial camps.

The conference asked that the Public Health Service standardize all biological products, vaccines and sera. It resolved that during the present war reciprocal notification should be made on stated forms—that is, that the health authorities in any state immediately notify authorities in another state of the entrance into that state of carriers or exposed persons from the first locality.

The Public Health Service was requested to advise the state health officers of lines upon which the service would be able to extend aid in case of necessity during the war. Special emphasis was placed upon the collection of morbidity statistics from industries, hospitals, sanatoria and penal institutions.

DR. PATTEN'S RETIREMENT TO BE RECONSIDERED

ALUMNI of the University of Pennsylvania have been given to understand that the university trustees may reconsider their retirement of Prof. Simon N. Patten, of the Department of Political Economy, on June 30 when he reaches the age of 65 years. There has been widespread interest in the matter and men in all parts of the country have felt that Dr. Patten, of all men, was unsuitable for retirement for age; that others in their mid-sixties may appropriately retire and even welcome the action of the trustees in applying an arbitrary age rule, but that his freshness and vigor give him constant and sustained value to the university. As one

From the New York Times

JOSEPH H. CHOATE
1832-1917

MR. CHOATE, who died on May 14, will be remembered both here and abroad as a leader of the American bar, as ambassador to England, as an orator and wit. But to these distinctions must be added the service he rendered in the civic and social life of New York city. He was a member—perhaps the most energetic member—of the Committee of Seventy whose activity smashed Boss Tweed. He led in the fight against Boss Croker and was, for many years, among the most active of the anti-Tammany forces. He was a trustee of the American Natural History Museum, the Metropolitan Museum of Art and the New York Hospital. Last February, shortly after his eighty-fifth birthday, he was elected president of the New York State Charities Aid Association for the seventeenth successive year. In that society, and in the New York Association for the Blind, of which he was also president, he gave unstintedly of his time and thought. The last meeting of the board of managers of the State Charities Aid Association at which he presided was the recent one at which the association, pledging its services to the nation, recalled that it owed its existence to the social service which grew out of the Sanitary Commission formed during the Civil War.

of Dr. Patten's pupils—himself a full professor in another university—put it:

When a man of Professor Patten's ability and distinction, one with his record of devoted and loyal service to the university, and with his secure hold on the affection of his students, reaches the age of sixty-five years with his powers unimpaired and his interest in teaching unabated, the university should certainly not exercise the summary power of retirement but should consult the wishes of the faculty and the interests of the students. . . .

By the highest standards which one could choose for comparison, Professor Patten is a great teacher. He is a vigorous, original, daring but entirely modest seeker after the truth in the field in which he works. He has made contributions to knowledge and to clear thinking. He has inspired his asso-

ciates and his students by his faith in their capacity often long before they themselves had any adequate conception of what they could do. The circle of those whom he has thus stimulated is far wider than those who sat in his classroom. From the very beginning of his teaching it is the stronger men, often those who differed from him most vehemently in particular matters, who have acknowledged most freely their indebtedness to him.

Dr. Patten's associates, it is understood, have made formal application to the trustees to retain his services for another year, with the presumption of a further extension of two years, or three years in all, in accordance with the practice followed in the case of other men who have reached the retirement age.

even convincing history are spoiled by an overflow of enthusiasm which now and then comes near to false pride and jingoism. He insists, for instance, on the French character of the Rhine and considers this river a necessary part of the frame for the normal economic and political life of France. On the other hand, he is no wild exponent of the doctrine of unlimited expansion, but points out how, in modern times, France has been content to enrich the world with ideas of liberty and tolerance rather than add to her own territorial possessions.

He desires France to be credited by the world for carrying the heaviest burden in the present war on behalf of humanity, and for a purity of aim which makes her the only belligerent country for which foreign legions are glad to die without too close a scrutiny of her immediate purposes, but confident that she stands for the highest ideals of mankind. Altogether, a charming panegyric, beautifully written and frequently illumined by flashes of true insight, but not a reliable guide for the student in search of incontestable verities, or even of a typical present-day French attitude to the problems of Europe.

Very different is the book of addresses and articles which Edouard Herriot, mayor of Lyons, senator of the Rhone, and minister of subsistence in one of the recent administrations, has found time to give to the world of thought in spite of his many-sided activities. The dedication of this collection to the memory of the great Comptroller-General Colbert emphasizes the author's outlook. Colbert, in the days of French world supremacy, managed the country's material resources with an astuteness and success which has probably never been rivaled. Incidentally, he shared with Herriot, his modern prototype, a special interest for the lace industry.

Herriot is deeply concerned that the vitality of the nation, its wonderful unanimity in acting for a great common purpose, should not "fizzle out," to use a telling slang, when the war is over, in petty political quarrels and intrigues. He does not desire a suppression of parties whose existence, indeed, is essential to a healthy and vigorous national life; but "tomorrow, as today, France will find herself in so difficult a position that a lack of understanding for the need of a policy directed towards purely national ends would be to betray the sacrifices of so many victims, to lose the benefit of so much effort, to outrage both the interest of the living and the silent prayer of the dead."

Foremost in his thought is the fear of general poverty, or rather of its psychological effect. "When the war is over, the French people will need the spirit of devotion which will make it possible to live together as brothers in an empty house." A purely negative policy of depriving German industry of its raw materials and of its markets will not suffice to re-establish French prosperity. Above all, the unused resources of the nation must be brought into play.

In this connection, the conservation of human life has the first claim to the nation's effort. In Germany, too, the birth-rate has decreased in the last decade while the mortality has remained more or less stationary. But in France the relative decrease in the size of the population is much more serious. Her birth-rate is the lowest in the world. The immediate need, according to Herriot, is an energetic campaign for the protection of infancy. He would like to see, the moment the war is over, the patriotic devotion of French women diverted from the care of wounded soldiers to that of future citizens.

But infant welfare activity, he well realizes, implies progress in the improvement of material conditions of life all along the line. The betterment of housing conditions and a determined fight against alcohol here take the first rank. France today is the most

Book Reviews

PREMIÈRES CONSÉQUENCES DE LA GUERRE

LES TRADITIONS POLITIQUES DE LA FRANCE ET LES CONDITIONS DE LA PAIX

By Edouard Driault. Felix Alcan, Paris. 254 pp. Price 75 cents; by mail of the SURVEY, 90 cents.

AGIR

By Edouard Herriot. Payot & Cie., Paris. 471 pp. Price 90 cents; by mail of the SURVEY, \$1.06.

As a corrective of excessive and unwarranted optimism—already displayed in many writings on the probable social and political results of the war—Gustave Le Bon's First Results of the War forms a valuable contribution. And that in spite of the fact that this renowned psychologist is not

himself entirely free from some of the popular delusions which he is in the habit of chasing in the world of modern ideas.

Le Bon is a voracious newspaper reader, it appears. He follows the changes of mental attitude toward problems of world import not only in France but the world over and, after completing his survey, comes to certain conclusions which are interesting as having some bearing to facts, which most present day speculations on events after the war have not. None the less, they may be largely inaccurate because the material selected for analysis itself is no "true sample." He overlooks the fact that the press of a country, even where it is not excessively sensational, concerns itself with outstanding rather than with typical phenomena and sentiments so that it does not accurately reflect the attitude even of its own clientèle. If, for instance, we take Le Bon's analysis of the part played by America during the war, and especially the part played by German-Americans, it is clear that his newspaper reading has given him the "wrong slant," and, as it happens, supports conveniently his preconceived notions on such questions as the permanence of patriotic affiliations.

A thesis which has gone through much of

Le Bon's previous teaching, that reason plays but a small part in the activity of man, and that nations are drifting from one relationship into another more or less as immediate economic interests and inherited illusions of racial destiny demand of them, gives a background of pessimism to this, his latest study also. He traces the mental effects of the war on the people, and more particularly the people of France, not in any positive gain, but merely in a negative, though wholesome, bursting of certain illusions: "The pacifist dream with its hope of establishing a little brotherly feeling among the peoples," the "error that science, education, civilization can soften morals, prevent conflicts and render them, when they do occur, less sanguinary," "that an international court of arbitration without penal power can ever exercise the slightest influence on the struggle between nations or even establish rules of humanity which will be respected by the belligerents," "that any law, whatever it may be, can be maintained without sufficient force to uphold it."

One curious thing is that, while France is held capable by the author of shaking off many ideas which he brands as illusions, the German people, apparently, have an ingrained desire of world domination, dating back over hundreds of years, which not even defeat in the present war can eradicate. Hence, "adaptation" of the national policy to the perpetual menace of German aggression, in peace as in war, naturally must appear not only desirable but necessary. In short, an analysis of world currents such as this, though under the cloak of science, is really too incomplete to make it of practical value and too prejudiced to make it a safe guide of policy.

Unfortunately such self-deception by men not without influence and authority is rampant in all the belligerent countries and encourages loose talk of "war after the war." Let it be hoped that saner counsel will prevail when economic and political readjustments come under the consideration of practical statesmen who are now too much occupied in the conduct of the war to give earnest thought to the after-war problems.

Edouard Driault has tried to render the essence of French political tradition and draw from it conclusions for the future. His outlook is patriotic rather than critical, and many pages of otherwise interesting and

tuberculous nation, and this in spite of the fact that her population is less dense than that of almost every other industrial nation. He cites Professor Courmont as an authority for the statement that during the nineteenth century France lost 500,000 through cholera, two millions through war, and ten millions through tuberculosis. The work on behalf of the tuberculous soldier, already under way, forms the beginning of an educational campaign which, as soon as the mental energy of the nation is available for such a task, will have to be greatly widened.

To bring about continuous progress along these different lines and others, Herriot urges that the whole administrative machinery of the country be turned inside out. The department of the interior, too largely preoccupied with questions of elections and appointments, must become the center of a genuine national health service. Even more important in their permanent influence are the changes which the author advocates in the system of education. The public school must be given national unity. He would make attendance at the public school compulsory for six years upon the children of all classes. On this basis he would erect a system of secondary education open to all, whether poor or rich, so long as they show promise. This, he believes, would correspond more closely to the practical needs of the country than the present higher education. In the same connection, he also urges the need for a greatly extended provision of vocational schools.

Pointing to the fertilizing effect of past wars and of the great revolution in French science and letters, Herriot emphasizes the need in the immediate future for unfettered and vigorous thought. It is through disciplined mental activity alone that the nation can retain its high position in the world. And more, "France cannot completely fulfil her program of action so long as she thinks only of herself. . . . She must never close her ears to the suffering of all the world, to the struggle and hope for liberty everywhere." The renaissance of Poland, especially, is a cause to which the patriot is exhorted to devote himself.

Taking France for the center of a world organization for civilization, the author proposes the construction of a physical artery of communication analogous to the Paris circular underground railway, the *Métropolitain*. On either side of such a ring of rapid and efficient transit there will be countries which especially require the sustaining strength of French idealism, there will be problems which an enlightened Europe must meet and solve. More immediately, Herriot hears the call for the freedom of Syria, of ancient Bohemia, of *Italia irredenta*.

One chapter discusses the American Friendship. In the moral support of the allies by America, the author sees the greatest defeat of Germany. For the organization of American philanthropies in France in war time, he has nothing but praise. A more lasting bond than gratitude, however, is to be found in the similarity of French and American aims in the alleviation of suffering, in carrying on high through the most trying times the banners of humanity and justice, in looking ahead to the great tasks of civilization which beckon from the future.

BRUNO LASKER.

THE JUDGMENT OF THE ORIENT

By K'ung Yuan Ku'suh. Translated by Ambrose Pratt. E. P. Dutton Company. 72 pp. Price \$.60; by mail of the SURVEY, \$.64.

Ève ate the apple, and woman has been to blame for everything wrong since; but it remained for Mr. K'ung Yuan Ku'suh to discover that the war is due to Germany's having a female soul. How determine the

soul sex of a nation? Perfectly simple—see how the nation acts; if badly, it has a female soul. "Where the female soul collectively predominates, the nation is potentially dishonest." Germany is the most conspicuously woman-dominated state in Europe, and Turkey, whose most conspicuous national institution is the seraglio, is, of course, her natural ally. As for England—"he" is "the most virile state in Europe, with a predominantly masculine soul, simply because the women of England, during the past few decades, have relaxed much of the fury of their primeval sex warfare against their male enemies, in order to chase the rainbows of commercial and political enfranchisement." If, in the flood of foolish writing about the war, more nonsense has anywhere else been packed within the narrow limits of seventy-two small pages, it has not been the reviewer's ill fortune to see the work.

H. R. M.

SHORT RATIONS

By Madeleine Z. Doty. Century Company. 274 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

The present volume belongs to that category of books whose chief *raison d'être* is the reluctance of many educated persons to throw away notes made during travel and copies of letters written home. For the purpose of making a book, these notes are, of course, furbished up, much in the same way as a painter will

tone up a sketch before he sends it out for exhibition. Miss Doty went to The Hague as a member of the Ford peace party, and subsequently traveled about Europe partly as a worker for peace and partly as a sight-seer. Not knowing the German language well, she had a number of adventures while in Germany which provided her with a good deal of excitement and amusement. For the same reason, she also got a good many false impressions, and hands on some hearsay of doubtful authenticity.

The title of her book covers not only the shortage of food in Germany, but the shortage of a great many other things which make life worth living, such as lack of interest in everything not directly connected with war or with the abnormal conditions created by war; lack of cheerfulness, sometimes lack of hope. To her hosts Miss Doty must have appeared an unsympathetic and inquisitive person. She seems to have gone about her mission of peace much in the way in which a Lady Bountiful goes on a slumming tour, and the stories brought back by her are just as diverting as those told by that lady at the dinner table in their mixture of humor and sentiment, caricature and genuine compassion.

It is probably not the author's fault that she missed real opportunities of gauging the mental processes of a great nation at war; of understanding what lies behind the passion of every German patriot to convert to his point of view the luckless foreigner who is thrown into his company. The present volume, however, does not offer a promising approach to such a study.

B. L.

THE DRAMA OF THE SPIRITUAL LIFE

By Annie Lyman Sears. Macmillan Company. 495 pp. \$3.00; by mail of the SURVEY \$3.25.

The title suggests a mode of presentation and implies a method of treatment of the types and states of religious life as expressed in religious experiences and ideals. Inde-

pendence and originality are shown in the selection and presentation of the material.

Throughout the entire volume the author regards the process of the religious life as an empirical fact, whose importance is to be tested by experience. The apparent conflicts and the paradoxical phrases of experience of the individual and the group furnish the topics which she discusses, and give the basis for much of the dialectical procedure employed to throw light upon the great problem of the religious life: Does God exist and is salvation possible?

The late Prof. Josiah Royce's fine appreciation of the volume in his introduction to it best interprets its practical value: "Anybody who reads this book and makes it his companion, will, in my opinion, make better use of his own faith, understand better its meaning, appreciate more deeply its problems, be less perplexed by its paradoxes, and better prepared both to give reasons for the faith that is in him if he has any faith, and to be more intelligently adapted for the tolerant, the critically reverent and the positively constructive examination of the Drama of the Spiritual Life."

L. E. A. S.

THE TEACHING OF HISTORY IN THE HIGH SCHOOL

By Ernest C. Hartwell. Houghton Mifflin Company. 71 pp. Price \$.40; by mail of the SURVEY, \$.44.

"The ultimate test of any mode of human association is the contribution which it makes to the quality of experience," says John Dewey in his book, *Democracy and Education*. That is a stiff standard, but it is the standard of Ernest C. Hartwell in his little volume of sixty pages packed with suggestion for the teaching of those associations that we call history, and for the realization of historical fact by study.

Ernest Hartwell's teacher, who has so marvellously at hand the material with which to vitalize the lives of citizens to come, must be heroically prepared. "It is presupposed that he [the teacher] understands the wisdom of correlating in his instruction the geography, social progress, and economic development of the people which his class is studying. He is aware that the pupil should experience something more than a kaleidoscopic view of isolated facts." In characterizing a period of history, the facts chosen are to reflect "ideals, institutions, and conditions" of the period described. The search is not confined to the text. Source-books, fiction, literature of all kinds, are to yield the "spirit of the laws, public education, social progress."

The underlying ideal of the whole course of instruction is a social ideal. The concrete suggestions reveal methods for enriching human experience, and any teacher, most of all the teacher of history, may be glad of this hand book and its new vitality.

V. C. L.

THE FLOGGING CRAZE

By Henry S. Salt. University of Chicago Press. 159 pp. Price \$.60; by mail of the SURVEY \$.75.

"I want to see the marks of good British muscle on their backs!" cried a gallant colonel in the House of Commons in 1912 when the criminal law amendment bill was under debate, says Sir George Greenwood, M. P., author of the foreword to this book. "It's a good thing they have got a skin to be tanned!" shouted another member. Some of the arguments then employed, and successfully employed, to keep flogging on the English statute books as a punishment for crime, sound strange in the country that has given so many pioneers to prison reform.

They would sound no less strange, how-

ever, in the house of delegates of our own Delaware, where whipping is still a legal and practiced discipline for several offenses.

Mr. Salt has set about calmly to reason flogging out of existence. In a chapter entitled the Fallacies of Flagellants he attempts to show the hollowness of certain stock arguments in favor of the lash.

Sir George Greenwood thinks the book is very opportune. "There is, I fear," he says, "a real danger lest, when the war is done, the counsels of force, so inevitable in the time of war, should hold sway among us in time of peace also." W. D. L.

THE PROMISE OF COUNTRY LIFE

Edited by James Cloyd Bowman. D. C. Heath & Co. 303 pp. Price \$1; by mail of the SURVEY \$1.09.

This book contains a number of well edited selections gleaned from writers of many countries, dealing with all the great out-of-doors, with mountain and plain and lowland prairie, and the life that dwells therein.

For those who seek enlightenment on the wonders, riches, and pleasures of country life and the things that make it tolerable and worth living the book is intended. Included in the list of contributors, we find Tolstoi, Björnson, Stephenson, and Maupassant among European writers; Parkman, Thoreau, and Irving among our older group, as also living writers, Stewart Edward White, Corra Harris, and Hamlin Garland.

In schools and on the country book shelf it is worthy of permanent place. H. W. F.

COMMUNITY CENTER ACTIVITIES

By Clarence Arthur Perry. Russell Sage Foundation. 127 pp. Price, \$35; by mail of the SURVEY, \$40.

Probably the greatest obstacle to the rapid development of social centers is a lack of leaders who know how to make them go. The Department of Recreation of the Russell Sage Foundation has offered one big means of equipping workers in public-school social centers in this little service-manual and reference book of something over 100 pages. It deals with a surprising variety of activities adapted to public-school property out of school hours. The activities are classified by those suitable for assembly rooms, gymnasiums, kindergartens, classrooms, playrooms, corridors, domestic-science rooms, lunchrooms, manual-training rooms, principal's office, teachers' room, swimming-pool, dispensary and the building as a whole. The activities are set forth in detail with full references under civic occasions, educational occasions, entertainments, handicrafts, mental contests, neighborhood service, club and society meetings, classes and social and physical activities. Sample programs of various events are included.

The book is a handy reference manual for the use of all workers in developing public-school social centers in neighborhood buildings. It will also be found helpful for settlements and institutional churches.

ROGER N. BALDWIN.

THE SECOND FOLK DANCE BOOK

Compiled by C. Ward Crampton. A. S. Barnes Company. 79 pp. Price \$1.60; by mail of the SURVEY, \$1.73.

The editor of The Second Folk Dance Book correctly says: "Folk dances have ceased to be a fad. They are now used in connection with primal physical training as a delightful means of obtaining hygienic, educational and recreative results of normal exercise."

The Folk Dance Book, published seven years ago, has been adopted generally throughout the United States. It presented a clear, concise description of the most useful and attractive folk dances, appropriate

for schools and playgrounds. In response to a widespread demand for more dances, this Second Folk Dance Book is published.

Like all collections, the compilation leaves out many lovely things. But its thirty-two dances, with music and very adequate directions for performance, will bring enrichment to the repertory of playgrounds and children's societies all over the country.

J. C.

WORLD PEACE—A SPECTACLE DRAMA IN THREE ACTS

By Frank P. and Kate Richards O'Hare. National Rip Saw Publishing Co., St. Louis. 64 pp.

This drama is Shavian in one respect—that it is nearly all talk; there is neither action nor a struggle of wills with uncertainty as to the outcome. Yet it is not like Bernard Shaw because it contains no surprises; in neither thought nor phrase is there anything new. The lowest common denominator of such views of war as those of David Starr Jordan; of the ante-bellum socialist, and of the Woman's Peace Party, is given in dialogue spoken by kaisers, armament manufacturers, peasants, women and representatives of America, history, democracy, etc.

One act shows the beginning of war; one act shows America at war with herself between ideals and war profits, and the last act shows World Federation, a beautiful young woman. This drama is well intended but mediocre in result.

J. C.

THE EDUCATION OF WOMEN

By Marion Talbot. University of Chicago Press. 255 pp. Price, \$1.25; by mail of the SURVEY, \$1.35.

of thinking, active men and women is breaking away from thralldom" to tradition and is recognizing the right of girls not only to enjoy the world's progress but "to share in making that progress as speedy and as rich as it lies within human power to make it;" one can see fathers and mothers hurriedly packing their daughters off to college in order that they themselves may be counted among the world of "thinking, active men and women."

Education, Dean Talbot thinks, ought to prepare girls for what they are going to do. So far as social and economic arrangements allot to men and women different tasks, so far must the educational machinery be developed differently for the two sexes. She has no quarrel, however, with the census of the United States, which lists 303 separate employments and shows that in 295 of these women are found. Her desire is not to restrict the entry of women into gainful occupations, but to make education fit women's modern needs.

What these needs are she enumerates. They comprise nearly every aspect of bodily, mental and spiritual growth. A girl must be able, among other things, to appreciate beauty, to exercise her social instinct as friend and as citizen, to understand the value of domestic relations as wife, mother, household manager and director of consumption, and she must be fitted to be of economic value.

The public school system, Dean Talbot thinks, is rapidly adjusting itself to meet these requirements. The woman's college is not adjusting itself so rapidly. Vassar College is an example and has a chapter all to itself. Dean Talbot thinks the change between Vassar's course of study in the sixties and its course now is not so great as the times demand. "The intellectual life of women continues to be patterned after the same mold," she says, and leaders "are timorous about making a change."

Several things are necessary if college life is to perform any real function in the education of women. Among these are a juster recognition of women in academic and intellectual fields, and the development of the professional or expert attitude of mind on the part of women students themselves. Indeed, it is one of Dean Talbot's complaints that "there is no dominating purpose in the life of most young college women of today." She sees truly, however, that one of the chief reasons for this is society's expectation that women shall be "casual" in their interests and work. The need for removing this and other "barriers" is the primary contention of her book.

WINTHROP D. LANE.

THE SINS OF THE CHILDREN

By Cosmo Hamilton. Little, Brown & Co. 1916. 352 pp. Price \$1.40; by mail of the SURVEY, \$1.52.

In this novel the author again makes his "plea for the younger generation" and again attacks important sex problems as he has in many previous articles and in his familiar play *The Blindness of Virtue*.

An American—or we may say New York—family with newly acquired wealth, a type which might come under the eye of a visiting foreigner, gives the setting for the story. Dr. Guthrie does unfortunately represent a large class of American fathers. He loves his family devotedly, willingly sacrificing his life for what he, with his limited vision, considers to be for their best good. He labors untiringly that he may give abundantly of his wealth, yet forever keeps himself outside his children's lives.

Each of Dr. Guthrie's children typifies some extreme point which the author wishes to impress upon the reader. There is, however, little character development in the book. The actors are either good or bad and move as the "purpose" demands, dragging in "preachments" so obviously that they are often obtrusive. Interest is lessened by the unnatural and often impossible chance occurrences in the turning-points of the story.

Many readers will feel that the author has overstressed his one point of giving to young people the facts of sex. Some will feel, too, that the "silence" has recently become audible enough; that now our youth do hold within their hands their own fate, and the fate of the children of tomorrow. Yet many more who are seriously thinking on this subject will agree that in spite of all emphasis there are many parents today who will do well to read carefully and heed the lesson in Mr. Hamilton's *The Sins of the Children*.

B. C. C.

PERSONAL HEALTH

By William Brady, M. D. W. B. Saunders Company. 407 pp. Price \$1.50; by mail of the SURVEY, \$1.60.

From a literary standpoint, the style adopted by Dr. Brady is too popular to be dignified, while the use of the vernacular is too much in evidence for really "discriminating people." It is unfortunate that the Queen's or President's English is not recognized as the most useful medium for interpreting the facts of hygiene. Errors in spelling may be attributed, of course, to poor proofreading.

Criticisms of this character do not invali-

date the information Dr. Brady imparts, even though occasional dogmatism does not serve as satisfying information; as, for example, his denial of the existence of rabies.

The statement that young boys and girls "who lug home an armful of books every night have frail bodies and 'big heads' in more than one sense" is hardly a strong argument for decreasing night studying. Experience is not always the basis of knowledge, wherefore it is not illumining to read that teachers, "being rarely mothers themselves, do not realize how unphysiologic and utterly wrong it is to force a child to sit prim and straight for long periods day after day."

Various items such as actinomycosis glands are briefly discussed without relation to personal health.

In view of the popular interest now taken in personal hygiene and the scarcity of reliable information on the vast number of subjects, captious criticism is indefensible. The volume is characterized, as a whole, by readability, common-sense, sane judgment and simplicity in treatment. The author is at his best in opposing quackery, shams and untenable traditions. If the readers are not "discriminating" in the matter of literary form, a perusal of the book will yield them much enjoyment and instruction, both of which will tend to promote their personal health.

DR. FRIEDLAENDER'S ARTICLE

TO THE EDITOR: Americanizing the Jewish Immigrant in the May 5 SURVEY is a very important paper for all true Christian patriots to read and ponder and practice. My heart goes out to these strangers in our enlightened land. Always have I appreciated this wonderful race of people from my boyhood in New York to my world-wide travels and experience, the race that gave us the newer and high ideals of the Hebrew prophets and of the great "Jewish Reformer," our dear Lord and Master, Jesus Christ.

HENRY M. HALL.

[89 years old.]
Pittsburgh.

DAYLIGHT SAVING

TO THE EDITOR: From the article on Daylight Saving in your issue of May 5, it

seems that the writer thereof is in error when he states that the movement is one for setting back the clock. The Daylight Saving plan proposes to set the clocks forward one hour, this being the arrangement wherever it has been tried, including the twelve countries of Europe which have adopted it. Your writer also states that the plan does not, for the great majority of the workers, transfer a work hour from the hottest part of the day to a cooler one. This is exactly what the plan does when the clocks are moved forward. A cool morning hour of work is substituted for an hour of work in the afternoon. In other words, workers begin an hour earlier and leave an hour earlier.

Your writer is also in error when he states that in the summer months the plan does not appreciably diminish the amount of industrial work carried on under artificial light and so diminish the number of industrial ac-

cidents. This is exactly what the plan has done as, from the testimony of many, the English parliamentary commission and the French commission have recently observed. The great value of the plan to us in the present crisis lies in the fact that it will enable at least 20,000,000 workers engaged in manufacturing, transportation and other industrial occupations to utilize an extra hour of daylight after the work-day is over for intensive gardening.

Your writer expresses a fear that new danger to health might result if the extra hour will come out of those usually given to sleep. The English Parliamentary Commission reports as a result of all the evidence received that while in a certain number of districts a tendency to shorten sleeping hours was noticed, the fears which were entertained in the matter have not in the main been justified. The opinion of a very large majority and the enthusiastic opinion of a great number of authorities in Great Britain is that the children benefited by the operation of the daylight saving act both by receiving the extra time which they were able to spend in the open air and also because of the cool air gained in the morning in place of a trying hour in the heat of the afternoon. Many authorities reported that the children have been brighter and fresher in consequence. This view was confirmed by medical testimony received by the commission.

DANIEL BLOOMFIELD.

Boston.

[The phrase "setting back the clock" was, of course, a slip (as the context, indeed, revealed), and the plan will, as the writer points out, secure an afternoon hour for gardening and other social advantages. Yet we do not yet see how, for the industrial worker, starting an hour earlier will transfer an hour of work from the hottest part of the day. A cool morning hour is substituted for a warmer hour in the late afternoon. Nor do we see how stopping at four instead of five o'clock can, in summer, reduce industrial work under artificial light. The paragraphs did not oppose the daylight saving movement, but exposed exaggerated claims for it, which, by leading to disappointment, might stand in the way of its success. Despite the fact that the United States is so much further south that we should not gain as much as the British Isles by the plan, it is one which has our hearty interest and approval.—EDITOR.]

NEW NAME?

TO THE EDITOR: If your columns are open for the discussion of the change of name for our National Conference of Charities and Correction, as proposed by President Almy, I submit my reasons for opposing a change. First, the present name is appropriate, definite, and sufficiently inclusive to cover the widest range of activities for social betterment. Second, if charity is love, it is a personal virtue to be exemplified by service and sacrifice to prevent human suffering in all its manifestations, and its call to duty is the most urgent and inviting call which can be used to spur effort. Third, correction is the relief of ills which charity has not prevented because of our imperfect obedience to its calls to duty. It is the second greatest duty set before humanity for its protection and advancement. Our hospitals, prisons and shelters are conveniences of relief and correction, which must continue until the works of charity have been perfected. Fourth, to abandon these blessed invitations to service and sacrifice which challenge the cooperation of all which is wise, skilful, enduring and patient in our social life, and to substitute less definite objectives of service, is to invite the danger

of becoming what St. Paul would call a national conference of sounding brass and tinkling cymbals.

It is unfortunate that the word charity is used in our statute books to describe the works performed under the compulsion of law and the support of the tax-gatherer. This fact, however, need not obscure the beauty of duty exemplified by voluntary service and sacrifice, which is true charity, or frighten away those who place too much stress upon an apparent misconception of the real values of the word. Charity is the science of prevention. Correction is the science of relief and cure. Joined together to compass all which words can express of the meaning of such service, their abandonment for the proposed platitudes of nothingness would be criminal folly.

C. E. FAULKNER.

Minneapolis.

TO THE EDITOR: Will you submit my suggestion for a new title for the National Conference of Charities and Correction to your readers? Of recent years the discussions of the conference have outgrown the bounds of what is ordinarily known as social work. Its members are tested not by their creeds, but by their achievements.

There are in this country today Socialists who do not believe the charity workers are acting in good faith, and social workers to whom it does not occur to take the Socialists seriously. We have labor unionists who cannot put their faith in uplift movements officered by men who employ strike-breakers, and single-taxers who laugh at any movement for social betterment promoted by the rich landlord. We have converted the terms "radical" and "conservative" into epithets of mutual denunciation.

Part of this friction and distrust is inevitable and wholesome; but even more of it is wasteful of energy and based on misunderstanding. Why should the conference not gather in and amalgamate these warring forces; why should its title not serve as a countersign which would put the acid test to the honesty of purpose of those who confer?

Why not call it the National Conference on the Abolition of Poverty and Crime? Alexander Johnson has written his hearty endorsement of this title and says he will be glad to lead the fight for it at the conference. The last two words were his suggested concession to those who do not believe that crime will disappear automatically with the abolition of poverty.

Two generations ago the term "abolitionist" needed no explanation to the people of this country. Why can we not resurrect the term to serve our generation?

MOTHERCRAFT MANUAL

TO THE EDITOR: My attention has been called to the review, in your issue of March 10, of the Mothercraft Manual. I beg to express my appreciation of your interest in the manual and to acknowledge indebtedness to the reviewer. The following inaccuracies in quotation or inference are evidently oversights of the reviewer:

1. "Indiscriminate advice to increase carbohydrates in the diet." On pp. 66-7 special attention is called to the need of slight increase, and the advantages of a small baby at birth.

2. The "toxin-free" diet is discussed at length on page 67. The term is one commonly used at Battle Creek Sanitarium, and Dr. J. H. Kellogg would doubtless furnish further discussion of it.

3. In the tabulation of causes of infant mortality, neither prematurity, prenatal and natal injury have been ignored. See page 378, figures quoted from U. S. census.

4. "Miscarriage and kidney complications, the two great dangers of pregnancy, are not mentioned." Referring to the index, these are dealt with on pages 64, 68, 69, 359, 378, 379.

The reviewer's objections on the following points are not in accord with the most recent experiments, studies and conclusions of leading authorities:

1. The possibility of an hereditary taint in tuberculosis, and the disqualification of a tuberculous condition for parenthood. Of those who would disagree with the reviewer's standpoint are Davenport and H. E. Jordan among biologists, and Knopf, Kober, Edgar, Cragin, Osler among physicians.

2. The effects of alcohol, when taken by the parent, upon the germ-plasm, embryo or nursing. The studies of Kraepelin, Hodge, Laitinen, Berthelot, Brandthwaite, Stockard, Gordon have added much to our knowledge on this matter in the last few years.

3. Nitrous oxide oxygen as a thoroughly satisfactory anesthetic in labor cases. This is of value only in short cases. Because of certain dangers and difficulties in its use, it is even now being discarded by many obstetricians and dentists. . . .

Mothercraft includes vastly more than simply infant care. The distinct purpose, as set forth in the manual, was to discuss comprehensively in one volume the range of problems which every young woman who marries must face practically. If systematic discussion is considered ambitious, what shall we say of our present custom of neglecting through education for their practice?

MARY L. READ.

New York

ARKANSAS "SLOTH"

TO THE EDITOR: I beg to thank you for the copies of the SURVEY of March 24 containing the article on Pictures for the Cure of Legislative Sloth. We regret very much that such an expression as "legislative sloth" should have been used in connection with the Arkansas legislature in this matter.

The legislature, in 1915, immediately passed, by unanimous vote in each house, a resolution appointing the above commission to "ascertain the conditions and needs of the feeble-minded in Arkansas and to report their findings and recommendations to the next General Assembly. This was the very first time the matter had ever been presented to the legislature.

At the next biennial session, recently closed, the legislature passed the bill creating and appropriating for a school for the feeble-minded—the very first time the proposition had ever been made to a legislature in this state. So apologies are in order when you speak of sloth in their connection.

As to the State Board of Charities "conducting largely" "an aggressive fight" for the proposition—that body, while friendly to the matter had nothing whatever to do with getting the institution created and took no part in the preliminary work.

DURAND WHIPPLE.

[Secretary Arkansas Commission
for the Feeble-minded]
Little Rock

MARTIN KALLIKAK'S FAMILY

TO THE EDITOR: I am an enthusiast of eugenics, consequently was greatly pleased to see your article about the Kallikaks, though I was as greatly shocked by the lack of thoroughness of the educational campaign of the Public Charities Association of Pennsylvania.

That they should want a state village

for feeble-minded women, is very well, but what about the feeble-minded men? The short history of the "wild oats family" of Martin Kallikak tells us that the Revolutionary soldier had one son by the feeble-minded girl he met; that this son also was feeble-minded and that he, in turn, had many feeble-minded children. This would imply to every reasoning person, that the feeble-minded man is just as much of a menace to the race as the feeble-minded woman and more so. A woman can have only one child in nine months, or two at the worst. The number of children a man may have is almost illimited, especially if one consider the morals of a feeble-minded person.

This the Suisse authorities have not failed to recognize, when they ordered the segregation of the cretins that scourged their country. They also separated the sexes absolutely so that in a generation there were no more cretins left.

I hope sincerely that the members of the legislature have seen the importance of this side of the question too; they will understand that if they fail to segregate the men as well as the women they shall never obtain the result which the forward-looking people of Pennsylvania have set their hearts on.

MAGDA TELKES, M. D.

Schenectady, N. Y.

[The attempt to secure rural, custodial care for feeble-minded women, reported in the SURVEY for April 7, is not to be taken as evidence that the feeble-minded man was left entirely out of consideration. It only means that the woman was chosen as the first step in the stamping out of mental deficiency, because she represents the greater danger to the race. With the present organization and moral code of society it is far more probable that feeble-minded girls will bear children than that normal women will choose feeble-minded men as the fathers of their offspring. Feeble-mindedness in a woman puts a premium on her sex function; feeble-mindedness in a man puts a discount on his earning capacity and therefore, except with feeble-minded women, makes him ineligible as the head of a family.—EDITOR.]

CONNECTICUT HOURS OF LABOR

TO THE EDITOR: The Consumers' League of Connecticut is glad of an opportunity to reply to various criticisms of its hours of employment bill printed in the SURVEY of March 10. The first criticism is that the phrase, "no minor under sixteen years of age and no woman" does not necessarily include girls between sixteen and twenty-one." The labor committee had already been asked to add to the phrase the words "and no girl over sixteen," so that the criticism was not to the point.

The second criticism is that "the two age groups 'no female under sixteen years of age' and 'no female over sixteen years of age' certainly omit girls of sixteen." Connecticut statutes recognize children of fourteen and fifteen as over fourteen and under sixteen. No class is recognized as remaining sixteen for a year. Since a child is "going on seventeen" after his sixteenth birthday and soon becomes "sixteen years and three months," it is difficult to regard any group of children as definitely sixteen. It is no easier to regard a child as remaining sixteen for a whole year than it would be to think of him as remaining sixteen years and three months for a whole year.

The article goes on to say that "none of the four labor bills restricts labor to six days in the week." Section 1369 of the general statutes of Connecticut forbids under penalty of a fine "exposing any property for sale or keeping open any shop, warehouse or any manufacturing or mechanical estab-

lishment between twelve o'clock Saturday night and twelve o'clock Sunday night." It is because of this law that the munition factories are employing women only five nights in the week. This law is a general statute and is therefore enforced by the local police. To incorporate such a provision into the hours of employment statute would put its enforcement upon the factory inspector and would establish a dual system which would probably result in lax enforcement.

Moreover, the local police with their hundreds of officers always within call are far better equipped to enforce such a law than the factory inspector with only eight deputies for the whole state.

The article further criticizes two of the bills for not asking for a ten-hour day for mercantile establishments on the ground that "a weekly limit without a daily limit in stores is unenforceable." Such a provision existed in the Connecticut law until 1913, when it was taken out for the following reason: It became necessary for stores that were open from 8 A.M. until 10 P.M. one or two or three nights in the week and all of Christmas week, to employ a double shift of women workers in order to cover the period and obey the law. This double shift arrangement opens the door to constant violations of the law, since it is impossible for an inspector to know from the employment notice what the hours of work of any individual girl are. Those who are interested in the enforcement of the law are therefore working now for a nine o'clock closing hour which is easily enforceable and accomplishes far more for the girls.

The last criticism related to the failure of the Connecticut organizations to ask for "an opening hour in mercantile establishments," as well as a closing hour. There has been a remarkable trend in the Connecticut stores the last few years toward later opening. Six or seven years ago all of the stores opened at eight o'clock in the morning. Then a general eight-thirty opening was adopted. A year ago the New Haven stores began to open at nine on Saturday morning, and last January the Hartford department, grocery and most of the specialty stores adopted a nine o'clock opening throughout the week. The spirit toward shorter hours in the stores is spreading in Connecticut without legislation, and to legislate that they shall not be open before six or seven o'clock in the morning when the tendency is toward opening at nine would seem purposeless.

Attention may be called to a statement made in another article in the same issue of the SURVEY that "because some people [in Connecticut] believe the state 'is not ready' for an eight-hour law [for children] a nine-hour law has been introduced." This statement is not correct. Connecticut may be ready for an eight-hour law, and believing it may be the Consumers' League has been working to secure the passage of the National Child Labor Committee's bill for an eight-hour day for the children.

MARY C. WELLES.

[Gen. Sec'y Consumers' League
of Connecticut]
Hartford.

THE NEWGATE LETTER

TO THE EDITOR: May I beg the privilege of saying a word in answer to the criticism in the SURVEY for April 21 of my Life of Elizabeth Fry? The critic says: "The utter inability of the reader to tell how much of this book is fact and how much is Mrs. Richards . . . is its chief defect," and calls to witness the letter from the women of Newgate, which I print "with no question as to its having actually been written by them."

It would be strange indeed if I should confound romance with biography, as your critic

suggests, and interpolate my own fancies in a record, which, though slight, aims to be faithful. The letter in question is given as "from the prisoners of Newgate," it is taken verbatim from the Memoir of Elizabeth Fry by her daughters (1845). I never supposed, nor did it occur to me that others would suppose, that the prisoners actually wrote the letter; it was probably written for them by some kindly official or visitor with a taste for the sententious; that it was, as I have said, "from the women of Newgate," that is, composed at their request and sent by them, there seems no reason to doubt.

The material for my little book was drawn entirely from the above-mentioned memoir, and from The Gurneys of Earlham, by A. J. C. Hare. May I add that it is not intended for children, but for young people of high school and college age.

LAURA E. RICHARDS.

Gardiner, Me.

BREAD OR BEER

TO THE EDITOR: Just to get the record clear, let me say that the brewing business has changed so greatly since 1896 that the figures Mrs. Tilton uses [the SURVEY for April 21] as to materials employed at that time are thoroughly misleading. Our estimate is that the actual amount of raw materials (in grains) used in brewing last year consisted of 48,000,000 bushels of barley, 17,000,000 bushels of corn and 2,000,000 bushels of rice, or less than 1 per cent of the grain production of the country. Of this, from one-third to one-half goes back to the farm in the form of by-products, such as barley screenings, malt sprouts and dried brewers' grains, which are exceedingly valuable for dairy purposes.

We exported last year 5,000,000 bushels of malt for brewing purposes in England, Ireland and other countries. It is not generally known that only the best barley is suitable for malting purposes, and this commands a high premium. The balance of the crop is sold for cattle feed purposes, in competition with oats.

The brewers have done a vast amount of work to encourage the barley farmers in the production and development of barley. The crop is already sown, and it is practically unused in this country for purposes of human food except in the form of beer.

Dr. Sorensen, the great Danish physiological chemist who is in charge of the research laboratories at Copenhagen, shows that 100 kilograms of barley have an energy value of 371,000 calories. This quantity of barley will produce 4.5 kilograms of malt sprouts, 26.0 kilograms of dried brewers' grains, 2.0 kilograms of yeast, 3.6 barrels of beer (figuring the alcohol at 3½ per cent).

The total energy value of these sprout-dried grains, yeast and beer is 325,000 calories, so that in converting grain into beer there is a loss of only 46,000 calories, or 12.5 per cent; and this small loss always takes place, according to Dr. Sorensen, when raw materials are transformed into digestible food products.

I have just learned that the Belgium authorities in 1915 arranged through the Relief Commission to supply the Belgium brewers with a portion of the indigenous grain for the purpose of keeping the breweries going.

The reports of the British Liquor Control Commission show that it was necessary to let the munition workers, miners and dock laborers, and, in fact, the industrial workers generally, have their beer. Will not the American wage-earner have something to say about the matter?

HUGH F. FOX.

[Sec'y U. S. Brewers' Ass'n.]
New York.

TO THE EDITOR: Mr. Fox says that my figures about the food values going yearly into beer are misleading. When we both wrote, the government had not given recent figures and I based my computation for 1915 upon the increased production of 66 per cent as compared with 1896. We now have the official report for 1916, so there need be no further estimates.

The Department of Agriculture now reports that the food material going in 1916 into fermented liquor amounted to 3,004,754,590 pounds (see table 204-1). Professor Carver finds that the figures for distilled liquor from the Internal Revenue Office for the year 1916 amount to 3,603,911,916 pounds. Adding these together, we find a total for 1916 (fermented and distilled spirits) of 6,608,566,006 pounds. This does not include about 80,000 bushels of extra materials.

Dr. Percy Stiles and Dr. Walter Cannon (food experts at the Harvard Medical School) state over their signatures that 5,833,000,000 pounds of this material have caloric values enough to feed 7,000,000 men for an entire year, so that my statement comes out, now that the real figures are in, well inside the facts.

Now about the offals from beer. In a splendid hearing on war prohibition last Tuesday at our governor's office, Professor Carver (economics at Harvard) said that while the refuse from beer had food value left in it that could be fed to live stock, the offals from flour had a little more food value, so the question was simply this: Is it better to turn grain into flour which builds up, or into beer which breaks down? Thrift would say flour and flour offals, not beer with its offals of less value.

As for the fact that the barley is already sown, Professor Carver says that poultry men are killing their hens because grain is so high and the barley used on farms would divert grain to hens and so help to ward off an egg famine.

Mr. Fox notes that the Belgian Relief Commission allowed a portion of the barley available to be used for beer. My answer is that because England and Belgium have been weak about beer is no reason why we should be weak.

If Mr. Hoover has had to carry barley on his relief ships or divert indigenous grain to breweries in Belgium, my belief is that this experience will make him all the stronger in believing that his own country should commit no such criminal waste.

I do believe we should appoint committees to help the bartender and brewery worker out of the saloon and breweries into the million gaps now left in industry. It is hard to see one's business upset, but war demands sacrifice, and just now the transition will be easier than at any other time, for the question now is not where can we find a job for a man, but where can we find a man for the job.

As for Mr. Fox saying that there may be riots if we take away the wage-earners' beer, I think there is more likelihood of there being riots if we take away the wage-earners' bread.

ELIZABETH TILTON.

Cambridge, Mass.

THE COST OF LIQUOR

TO THE EDITOR: War figuring has now taken hold of the question of prohibition. In your issue of April 21, on pages 65 and 66, Elizabeth Tilton states: "Adding together beer and distilled liquors, I find that we have used in 1915, in brewing and distilling, approximately enough calories or food values to support an army of over one million hardy men for seven years; that is to say, there are calories in that material equal to doing his. They would, of course, have to be given in variety."

The *Annalist* for April 23 states on page

556 that "Secretary Houston's rough estimate of 145 million dollars, the figure which he gave to Congress in asking for control of the food situation. . . ." This has reference to the value of farm products that enter into the manufacture of distilled and malt liquors.

And, finally, the public press has quoted President Waters, of the Kansas Agricultural College, as stating that with all the breweries and distilleries closed, there would be a saving of 600,000,000 bushels of grain to add to our limited food supply.

Evidently these authorities do not agree, for if Mrs. Tilton can feed 7,000,000 hardy men for one year on a value of \$145,000,000, there should be no criticism of the high cost of living. Similarly, if President Waters' estimate of 600,000,000 bushels of grain were saved at a cost of \$145,000,000, there would be a very serious shortage of grain in the near future because the farmers could not afford to produce grain at such prices.

[New York State College of Agriculture]
Ithaca.

TO THE EDITOR: Secretary Houston says the food materials that go into liquor cost yearly about \$145,000,000 and I (or later, Prof. Irving Fisher, Dr. Walter Cannon and Dr. Percy Stiles) say that these foodstuffs have caloric value sufficient to support 7,000,000 men for an entire year, only I add that they must be given with variety. Mr. Lauman says that means that a man can live on about six cents a day, so why all this cry about the high cost of living?

But Mr. Lauman did not quite take in that Secretary Houston's figures probably apply to the raw grain and that we are not horses eating raw oats or calories in the open field. We are human beings, eating the calories in grain at a dinner table; that is, eating them after they have gone through many expensive processes. The cost of the calories in the raw may be \$145,000,000, but the cost of those calories in my corncake this morning is a different and a dearer story.

ELIZABETH TILTON.

Cambridge, Mass.

INSURANCE FACTS

TO THE EDITOR: In your issue of March 3 appears a very comprehensive propagandist review of compulsory health insurance by Dr. I. M. Rubinow. In that review he virtually admits that as the result of four years of effort without opposition until the last six months, the bill drafted by the American Association for Labor Legislation has been introduced in a few states, and bills for the appointment of commissions to study the subject, in a few other states. He does not expect the health bill to pass anywhere this year, but is hopeful of the future.

The whole theory of compulsory health insurance is one of unsound social reform, emanating from departments of sociology and economics of various institutions of learning. It found converts and supporters chiefly among sociologists and welfare and charity workers—because it is charity. Dr. Rubinow is insistently trying to promote the view that compulsory health insurance is but an extension of workmen's compensation, but he knows better. Compensation—compensates. Industry damages labor, and the law regulates the compensation. That principle is sound. Compulsory health insurance seeks to create a tremendous burden of involuntary charity contribution, under an unwieldy and expensive system. It does not contemplate the discharge of incurred debt or liability. It argues insufficient wage to be supplemented by enforced charity. If this is a wage question, why not deal with it as such? If it is charity, why not deal with it as such?

It isn't insurance. There are only two principles of insurance: 1. Between individual and corporation, where the individual pays the agreed upon premium, the corporation assumes all the risk and takes the chance of profit. 2. Where individuals combine to mutually indemnify one another.

But this scheme is not insurance, and it is not founded upon a correct principle of insurance. For the state to include some and exclude others—to charge one class double—to create liability for the employer who is not responsible—to act as a collection bureau for doctors—and to lay a discriminating tax burden upon the taxpayer, does not in any way represent insurance. It is a propaganda of false economy to promote a system of indemnification for recognized waste.

The ever-growing sentiment against the measure is due to the awakening of capital, industry and labor to the unwholesomeness of the plan. It is significant, that every large organization of business or labor goes on record against the measure just as soon as it has had time to study the subject.

The true course would be a nation-wide campaign of prevention. If we can inaugurate reforms that will save any part of the present waste, and at the same time ameliorate human misery and suffering, let us do so. But this proposition of allowing a waste of \$600,000,000 to continue and to propose spending \$800,000,000 annually to cover the damage, and with full knowledge that the new system will create another waste of more than \$500,000,000, is simply preposterous.

Let us give the public the true facts of conditions and correctives; of loss and cost—of cause and effect—then the public can and will properly judge the matter.

WILLIAM GALE CURTIS.

[Chairman Educational Committee,
Insurance Economics Society of
America]

Detroit.

TO THE EDITOR: It is impossible in a brief rejoinder even to enumerate all the misstatements crowded into Mr. Curtis' letter.

1. It is not true that the organized health insurance propaganda has been going on for four years. The first tentative draft of the bill which opened the campaign was not published until November, 1915.

2. In stating the results of the propaganda up to date, Mr. Curtis disregards the most important achievements—two favorable reports of state commissions and endorsement by two governors.

3. It is not true that "every large organization of labor goes on record against the measure just as soon as it has had time to study the subject." My own information is just the opposite. For instance, in October, 1916, the California State Federation of Labor refused to endorse health insurance, on the plea that it did not know enough about it. At present it is working for the constitutional amendment in favor of health insurance.

4. To Mr. Curtis' undisguised contempt for "departments of sociology and economics of various institutions of learning, and welfare and charity workers" the readers of the SURVEY need no reply.

5. As to the argument that health insurance isn't insurance at all—my advice would be to study, at least superficially, the enormous European literature on social insurance. For instance, the German "society for all branches of insurance science" has two distinct sections—for private insurance and for social insurance. Of course, Mr. Curtis would simply reply—that one can prove nothing by German experience—don't they have a Kaiser?

6. Mr. Curtis' figures as to cost are purely imaginary, of course. But an insurance

Your Wartime Responsibility

YOU, as a SURVEY reader, have information on the social aspects of war problems and the wartime aspects of social problems which are possessed by only one person in 8,000 in our country. You have the unique service of news and opinion on every phase of social and civic advance which is the peculiar property of SURVEY subscribers.

Yet, 26 cities of over 100,000 population have but one SURVEY subscriber each;

5 cities of 50,000 to 100,000 population;

13 cities of 25,000 to 50,000;

82 cities of 10,000 to 25,000;

458 towns of 2,500 to 10,000;

1,124 places under 2,500.

How isolated are you as a center of social understanding?

Just what do you figure is your wartime responsibility to those who are working in Red Cross chapters, in church groups, as volunteers in a great variety of agencies—folks who need the material which the SURVEY can bring?

Why not extend your influence by becoming a Survey Circulator? That's a new kind of membership in Survey Associates which is attained through contributions, not of money, but of service. You'll be elected to membership when you have sent us four three-dollar weekly subscribers, eight two-dollar monthly subscribers, or the equivalent in combination of the two.

Just fill out and mail the coupon below. We'll promptly send you material to use in your campaign for greater social understanding in your community.

man's objection that insurance costs more than the loss it covers, is at least interesting. I would have presumed him to know that it takes \$450,000,000 of fire insurance to cover \$250,000,000 of fire loss. I find, for instance, that in 1915 the National Casualty Company, of which Mr. Curtis is president, has collected \$749,256 in premiums for accident and health insurance; paid to its policyholders for losses sustained, \$310,475 or 41 per cent, to its agents in commissions \$296,864 or 40 per cent and in other expenses \$154,313 or 19 per cent. Would Mr. Curtis also assert that these results are "simply preposterous"? As a matter of fact, all social health insurance systems spend for their administrative expenses from 10 per cent to 15 per cent of the net cost, against 100 per cent to 150 per cent by private health insurance companies.

6. "It is," says Mr. Curtis, "propaganda of false economy to promote a system of indemnification for recognized waste." Why then write health insurance at all?

7. The suggestion for a reform that "will save any part of the present waste and at the same time ameliorate human misery and suffering" is a very commendable one. Health insurance endeavors to do just that. I think the readers of the SURVEY will agree that the elimination of misery and suffering is even more important than the saving of the waste. There is waste in an average of six or nine days of sickness. Perhaps there is also waste in the average loss of 52 days of Sunday rest. I don't know, but I am not worried. There is waste in smoking, in ice cream sodas, in going to vaudeville shows. Perhaps we can afford all this waste, but we cannot afford to let misery and suffering go unaided. That is the real social purpose of insurance.

"Let us give the public the true facts," exclaims Mr. Curtis. Massachusetts did that in appointing a commission. California did that in appointing a commission. As a result the constitutional amendment is in, and has the support of organized labor. Ohio just passed a bill for a commission; other states will follow suit. Very soon the public will know, and the public will act.

I. M. RUBINOW.

[Executive secretary, Committee on Social Insurance, Am. Medical Ass'n.]
New York.

JOTTINGS

WITH the publication of a Teacher's Handbook for use in connection with physical training in schools, a new organization of and for boys announces its establishment on a national scale. This is the Pioneers of America, for boys from 8 to 12 years or the "pre-scout" age. Judge Ben B. Lindsey is honorary president and Frederick M. Davenport, Oscar S. Straus, and M. Woolsey Stryker are honorary vice-presidents.

THE People's Forum of Oshkosh, Wis., has found as a result of its first year's work that people will not only attend forum meetings—there were twelve of them with an average attendance of 900—but that they will pay for it. The guarantors were not called upon for any money as the free will offerings paid the expenses, running about \$75 an evening, and left a small balance at the end of the season.

LIFE'S CLINIC, the "series of sketches written from between the lines of some medical case histories," for the SURVEY by Edith

Houghton Hooker, has been brought out as a trim and attractive pamphlet by the Association Press. Single copies are 25 cents with special prices for orders in quantity for use among boys' and girls' clubs and classes—a use to which individual chapters have already been put in large numbers by social hygiene organizations in the West. (124 East 28 street, New York.)

ESTIMATING A FAMILY BUDGET, by Florence Nesbitt, field supervisor in the Aid to Mothers Department of the Juvenile Court of Cook County (Chicago), has been added as a new and timely chapter to the revised edition of *The Charity Visitor*, a Handbook for Beginners, by Amelia Sears, just published by the Chicago School of Civics and Philanthropy. (50 cents, 2559 Michigan avenue.)

SOME sixty people have signed a call to the First American Conference for Democracy and Terms of Peace, to be held at the Holland House, New York city, May 30-31, "to clarify public opinion on the issues arising out of America's participation in the war; to devise means for safeguarding American liberty and democracy; and to formulate the demands of forward-looking Americans as to the terms of the coming peace." Among the signers are Simon N. Patten, Harry A. Overstreet, Joseph D. Cannon, Emily Greene Balch, Morris Hillquit, Judah L. Magnes, Sidney Strong, David R. Jordan and Scott Nearing. Labor and Socialist elements are active in the project.

NEW publications are *Inter-America*, to be published monthly in alternate English and Spanish editions by the Carnegie Endowment for International Peace as a means of distributing articles from the best magazines in the United States in Spanish-American and translations from the Spanish and Portuguese in this country, (\$1.50 yearly, Doubleday, Page & Co., Garden City, N. Y.); the *Red Cross Bulletin*, published weekly by the American Red Cross at Washington for the use of its rapidly growing chapters; and the *Charities Bulletin*, published by the New York city Department of Public Charities as a means of acquainting the public with the work of the department. (Municipal Building, New York city, John A. Kingsbury, managing editor.)

AFTER refusing once by a vote of five to four to accept the resignation of Prof. Scott Nearing, the trustees of Toledo University, the municipal university of Toledo, O., voted a week later to dispense with his services. The second vote stood four to three and was taken in the absence of two of the trustees who had voted favorably to Professor Nearing at the first meeting. Professor Nearing is dean of the College of Arts and Sciences, and professor of social science. He tendered his resignation some weeks ago, after criticism of his pacifistic utterances. In doing so he offered to leave whenever in the judgment of the trustees his presence became harmful to the university. Professor Nearing's dismissal by the trustees of the University of Pennsylvania, in 1915 precipitated a nation-wide discussion of "academic freedom." The present vote of the Toledo trustees calls for his withdrawal June 30.

EMERGENCY hospital use, to which it is expected buildings of every sort and description may be put in the near future, has led H. F. J. Porter to offer, without charge, his services in safeguarding these buildings from fire risks through means of his horizontal fire escape [the SURVEY for November 13 and December 25, 1915]. Mr. Porter's plan is to supply new divisional [Continued on page 182]

walls or develop the old walls, running across the building from the basement upward. Through doorways in these walls patients may be taken from one side of the building to another, and a barrier provided against the spread of fire merely by closing the fireproof door. Besides the walls, Mr. Porter's only special equipment calls for roller casters on the bedposts, and an iron lifting strap by which the bed may be lifted slightly and rolled into the next section of the hospital. A fire signal warns nurses and attendants without attracting the special attention of the patients. The essential principle of Mr. Porter's plan is to provide ab-

solute safety at slight cost, and by simplicity of device.

FOR some time the exchange of ideas with Great Britain has been rendered exceedingly difficult by the restrictions imposed by that country on both the import and export of printed material. The regulations are not only severe but, apparently, very complicated so that it is always uncertain whether a book, pamphlet, press-clipping or document of any kind sent from either side will be allowed to pass. In reply to a complaint on this matter addressed to him as foreign secretary, Arthur J. Balfour writes from Washington to the SURVEY: "I am conscious of the difficulty which people in this country are experiencing in communication with England. The restrictions on the importation of printed matter into the United Kingdom, rendered necessary by the acute shortage of tonnage, and the regulations governing the export of printed matter rendered necessary in the past in order to check the passage of illicit communications, press hardly in many particulars on those who are engaged in the exchange of valuable information. . . . We are taking all possible steps to improve our system, and to make our regulations widely known. . . . I need hardly add that the exchange of information on all labor and social welfare questions between our two countries is one which we especially wish to encourage in every possible way."

SOCIAL LEGISLATION

EDUCATION was the chief beneficiary of this year's legislature in Wyoming. By codifying the school laws and especially by creating a state board of education, the state has taken a long step toward removing the administration of the school system from politics, in the view of many local educators. Heretofore there has existed only a state superintendent of public instruction, a constitutional officer, who is also secretary of the State Board of Charities and Reform. The new board of education is composed of seven members and must appoint a commissioner of education, who becomes the executive school officer of the state. It is expected that the new law will make possible definite advances in the standardization of Wyoming's scattered schools. Another law created the office of supervising matron, who is empowered to investigate the management and control of institutions under the State Board of Charities and Reform containing women or girls or men under twenty-five, and to recommend changes in their management.

"IN the last state legislature of Washington the influence of women was felt more than ever before. Suffrage seems to give a certain commanding tone to woman's voice," writes the Rev. Sydney Strong, of Seattle. "Of the thirty-three measures that the women's organizations of the state favored, nine became laws. The women sustained a kind of weather bureau at the capitol, called an 'information bureau' where the legislators could read the signs in the political sky. A law was passed establishing a single standard of morals. Hereafter what is adultery for women is likewise for men. Legislation was also provided for free kindergartens throughout the state. Hereafter, also, when the law refers to an unlawful death it applies to a mother as well as to a father. A bone-dry prohibition law was passed, without reference to the people. The legislature refused to restore capital punishment or to provide for military training in high schools,

although each of these measures passed one branch. There was no reaction in labor legislation, but a slight advancement. A measure similar to the recent law in Minnesota curbing freedom of speech passed the legislature, but was vetoed by Gov. Ernest Lister."

GOVERNOR CAPPER'S proposal to take the Kansas state service out of the loaves and fishes class by applying the city manager idea to the state was accomplished by the legislature recently adjourned. The new Board of Administration, which will have charge of all the state educational, charitable and correctional institutions, is composed of the governor ex-officio and three other members to be appointed by him at a yearly salary of \$3,500. The board will appoint a business manager and fix his salary. The supplementary proposal of an executive budget system was not adopted. Among important measures passed were those providing for city managers, marriage registration, a state detention home for women, mothers' pensions, highway work for convicts and changes in the workmen's compensation and child labor laws. Bills which failed included those providing for a nine-hour work-day for women, home rule for cities, four-year terms for state and county officers and compulsory eighth-grade education.

PERHAPS the most far-reaching piece of social legislation enacted by the recent Tennessee legislature was a general child-welfare law, drafted by W. H. Slingerland, of the Russell Sage Foundation, to regulate all aspects of the care of dependent and delinquent children, and all agencies and institutions which deal with them. The state Industrial School was made a placing-out agency, probably the first step toward making of it a school for dependent children, and a state child-placing department. The Boys' Training School will be removed to the Herbert Domain, a state tract of 11,000 acres, rich in timber, stone and coal, which will eventually become the site of a group of institutions. An appropriation to complete the Girls' Vocational School means the early end of state subsidies to private institutions doing this form of work. Capital punishment was re-enacted, but the contract labor system was abolished to take effect January 1, 1918. County prisoners must hereafter be fed three meals a day instead of two. The fee system for payment of county officials was displaced by salary payments. The state itself was put on a budget basis. The State Tuberculosis Association succeeded in getting a law enabling any county or group of counties to erect and maintain a tuberculosis hospital, and a special hospital for tuberculous insane is to be built by the state. The per capita allowance of all state institutions was increased to meet the high cost of food.

PERSONAL AND PROFESSIONAL

HORNELL HART has resigned as secretary of the City Club of Milwaukee to become assistant to Wilbur Phillips of the National Social Unit Organization in connection with its experiment at Cincinnati. He is succeeded in the Milwaukee City Club by Leo Tiefenthaler.

THIRTY-THREE women have registered in a ten-weeks summer course on civilian relief work given by the Texas School of Civics and Philanthropy, at Houston, in cooperation with the Red Cross. Nine students

who have just finished the first year's work of the school have volunteered their services in civilian relief for the summer.

PROF. C. M. BRUNSON has been elected president of Toledo's new welfare commission, by the members, who represent all classes in the city.

OFFICERS elected for the New Jersey State Conference of Charities and Corrections are: President, Robert L. Flemming, Jersey City; treasurer, Walter Kidd, Montclair; secretary, Earnest D. Easton, Newark.

PEARL CHASE, of Santa Barbara, is president, and Stuart A. Queen, of San Francisco, secretary, of the California State Conference of Social Agencies which meets a year hence at Santa Barbara.

EVELYN G. GARDINER has resigned as executive secretary of the Social Welfare Association of Grand Rapids, Mich., to take an extended holiday and rest. She is succeeded by Edward D. B. Lynde, who for several years has been secretary of the Associated Charities of New London, Ct.

SECRETARY of the Interior Lane has appointed Stephen T. Mather, of Chicago, director of the national park service recently provided for by Congress. Mr. Mather is not new to the work but has, in the past, given only part of his time to the supervision of the national parks. The new service was endorsed by most of the agencies interested in recreation.

NEW officers for the National Community Center Conference are, president, John Collier, New York; vice-president, Mary Follett, Boston; secretary, Edward L. Burchard, 123 West Madison street, Chicago. Of the Open Forum Council, which met at Chicago the same time (the SURVEY, May 5), president, George W. Coleman, Boston; vice-presidents, the Rev. Percy S. Grant, New York; Morris H. Turk, Kansas City; secretary, Harold Marshall, Melrose, Mass.; treasurer, E. F. Sanderson, New York.

ONE has still to go to Europe to find a man who has been at his job for forty years. If such a man has not only grown in accumulated experience but has been able through these long years to absorb new ideas, to adapt his professional skill to new conditions, to redirect his aim to meet new issues, then the society which commands his services is to be congratulated indeed. J. T. Strang, secretary of the Glasgow Charity Organization Society, we are informed, is retiring after just such a career. He has seen as complete a change from the older notions of charitable relief to the newer aims of preventive and remedial philanthropy as any man. It is significant for this change of spirit during a life time of social service that the current issue of *Organised Help*, the organ of the Glasgow society, is filled with discussion of political, industrial, educational and moral problems which have arisen from the war.

ZILPHA D. SMITH has retired as associate of the Boston School for Social Workers because of need of rest. Her twelve years in the school followed her much longer service as secretary of the Boston Associated Charities. Announcement of her retirement was made the week of the publication of Mary E. Richmond's volume, *Social Diagnosis*, dedicated "To Zilpha Drew Smith, whose steady faith in the possibilities of social case work has been the inspiration of this book and of its author." She is succeeded by Lucy Wright, formerly a district secretary in the Boston Associated Charities and for the past

ten years superintendent of the Massachusetts Commission for the Blind. Grace T. Willis of Lincoln House and Jane R. McCrady of Ellis Memorial Club, two leading Boston social settlements, have also joined the school staff for part-time work.

EMIL E. FUCHS has been appointed by Mayor Mitchel a judge of the magistrate's courts in New York city—the courts more and more recognized as neighborhood or people's courts, which are frequently the first point of contact between the bewildered alien and American institutions and call for a generous fund of human understanding on the part of the judge. Magistrate Fuchs' boyhood was spent in the University Settlement, and in early manhood he was associated with such men as Charles B. Stover, J. K. Paulding, J. B. Reynolds, Henry Moskowitz, Samuel Rosensohn and many other civic and social leaders.

GRACE ABBOTT, of Chicago, has been appointed head of a division in the Children's Bureau, Department of Labor, to enforce the federal child labor law. She began her duties May 1. For the last seven years Miss Abbott has been director of the Immigrants Protective League of Chicago, a resident of Hull-House and an active participant in the civic life of Chicago. Her sympathetic study of the immigrant and the Community, just published, reveals her clear understanding of industrial matters. The federal child labor law goes into actual effect September 1. Before that date a tentative draft of the rules and regulations for its enforcement will be issued. All the positions required for the administration of the law are under the civil service, and it is understood that special examinations will be announced shortly. "Certainly this," writes a Washington correspondent, "is no easy moment for launching the new law, yet at no time could it be more important to show that the government has entered upon a policy for securing an equal measure of protection to every child. Indeed the prospect of war reminds us of the grim fact that the wise protection and training of the children now alive may come to be our chief assurance of continuing our present level of national life."

CALENDAR OF CONFERENCES

Items for the next calendar should reach the SURVEY before June 13.

MAY AND JUNE.

BOYS' WORK CONFERENCE, Buffalo, N. Y., May 22-24. Sec'y, C. J. Atkinson, 1 Madison avenue, New York city.

CHARITIES AND CORRECTION, National Conference of, Pittsburgh, Pa., June 6-13. Sec'y, W. T. Cross, 315 Plymouth court, Chicago.

Aid for Travelers

AID FOR TRAVELERS—The Travelers' Aid Society provides advice, guidance and protection to travelers, especially women and girls, who need assistance. It is non-sectarian and its services are free irrespective of race, creed, class or sex. For literature, address Orin C. Baker, Gen. Sec'y, 465 Lexington Ave., New York City.

General

SOCIAL DIAGNOSIS—A new and important book, by Mary E. Richmond, for all who must make decisions affecting the welfare of individuals, whether in courts, hospitals, schools, workshops, or in public and private social agencies. Cloth, 511 pp., \$2.00 net; postpaid, \$2.10. Order of Publication Department, RUSSELL SAGE FOUNDATION, 130 E. 22d St., New York city.

AMERICAN INSTITUTE OF SOCIAL SERVICE, Bible House, Astor Place, New York City. Founded by Dr. Josiah Strong. Nathaniel M. Pratt, General Secretary. Edward W. Bemis, Robert A. Woods, department directors. Welcomes inquiries as to all matters of community organization and progress. Members of its staff glad to enter into consultation by correspondence about given conditions or particular projects. Assists in bringing to individual new undertakings the combined results and lessons of the best productive achievement. Ready to aid in securing publications, speakers, temporary or permanent leadership. Particular attention given to requests from communities in which all such effort is at an early stage. Seeks to bring about better co-operation among specialized national organizations, toward securing the more comprehensive local application of their types of service. Promotes the fullest extension of principles and methods which on a limited scale have conclusively shown their power for the upbuilding of the nation.

CHARLES FRANCIS PRESS, NEW YORK

Immigration

NATIONAL LIBERAL IMMIGRATION LEAGUE—Advocates selection, distribution and Americanization and opposes indiscriminate restriction. Summarized arguments and catalog of publications on request. Minimum membership (\$1) includes all available pamphlets desired, and current publications. Address Educational Dept., National Liberal Immigration League, Sun Bldg., N. Y.

WAR BOOKS OF VITAL AND VIGOROUS APPEAL

The Slaying of Fear

A STUDENT IN ARMS

By DONALD HANKEY Net, \$1.50

Introduction by J. St. Loe Strachey, Editor of the London Spectator.

A BOOK THAT IS GRIPPING ENGLAND

The one soul-stirring book produced by the war. We would like to feel that every *Father* and *Mother of America* had read of this wonderful experience.

The New York Tribune says: "For Americans the book will increase our conviction and resolve that our army must be a citizen army and that the natural democracy of such a mingling must be fostered by every means in our power."

Only a Dog

By BERTHA WHITRIDGE SMITH. Net, \$1.00

The Spur says:—"Of all the numerous stories inspired by the present war, it would be difficult to find one of greater human interest. It carries conviction."

The Call of the Republic

By COLONEL JENNINGS C. WISE, of the Virginia Military Institute. Net, \$1.00

With an Introductory Note by GENERAL LEONARD WOOD.

Col. Scott Shipp, for fifty years Commandant and Superintendent of the famous Virginia Military Institute, says:—"This timely volume deals with a vital question now occupying the attention of the public. It deserves to be widely read and pondered."

Germany in Defeat

A Strategic History of the War

By COUNT CHARLES DE SOUZA. Net, \$2.00

3 volumes. Each, Net, \$2.00

FIRST PHASE from the beginning of the War to the close of the Battle of the Marne.

SECOND PHASE to the close of the battle of Ypres.

THIRD PHASE to and including the attack on Verdun.

In the Claws of the German Eagle

By ALBERT RHYNS WILLIAMS. Net, \$1.50

Special war correspondent of the OUTLOOK.

The most human book of this most inhuman war.

Some winced and cried aloud, others turned white with terror, still others laughed defiant to the end. Caught in the Claws the author shared with these fellow prisoners the torments of trial as a spy before the German Military Court in Brussels.

With a B.P. Scout in Gallipoli

By E. X. PRIESTMAN. Net, \$1.75

Letters written home by a Scoutmaster serving as a subaltern. This is one of the few really humorous books the war has produced. The book is full of the cheeriest kind of fun; the irrepressible outburst of a youth who was blessed with the ability always to see the grotesque side of life. The book will teach you to respect Tommy Atkins as a man aside from his ability as a soldier.

From Dartmouth to the Dardanelles

Net, 60c.

A boy's story of ten months of the great war as he saw it.

Chicago Examiner:—"This volume is one of the few satisfying books that have come from the war, and like most others it is written by an actual combatant."

Women in War

By FRANCIS GRIBBLE. Net, \$2.75

Mr. Gribble has collected the most important instances in history and related them in his usual delightful manner. The book is one which every woman will value and which will surprise those not acquainted with this side of history.

Hallow-E'en and Poems of the War

By W. M. LETTS. Net, \$1.25

Philadelphia Press:—"One of the best pieces of verse England has reaped from the war is 'The Spires of Oxford.' If the volume contained nothing but that poem it would still be of permanent value."

Maple Leaves in Flanders Fields

By HERBERT RAE. Net, \$1.75

A book which may be compared with Boyd Cable's "Between the Lines" for vivid narrative, humor, and the spirit of the fighting men. Told in a manner worthy of the deeds of the First Canadian Contingent.

Soldier Songs

By PATRICK MacGILL. Net, \$1.00

Poems written under fire and many of them dealing with the every-day events of a soldier's life. An interesting foreword tells of the songs that most appeal to men at the front.

A Little House in War Times

Net, \$1.50

By AGNES AND EGERTON CASTLE.

New York Post says:—"The Castles have struck a new and interesting vein in their latest book which is a chronicle of life in war time in England. A delightful tale of a beautiful suburban town."

Seen and Heard Before and After 1914

By MARY and JANE FINDLATER. Net, \$1.50

Short stories showing how the war has influenced the thought and way of life even of dwellers in the remote villages of the Highlands.

Grapes of Wrath

By BOYD CABLE. Net, \$1.50

The book describes what a Big Push is like from the point of view of an average infantry private, and gives a glimpse of the spirit and endurance that have made the New Armies more than a match for the Germans.

BY THE SAME AUTHOR.

ACTION FRONT Net, \$1.35
BETWEEN THE LINES Net, \$1.50
DOING THEIR BIT Net, \$1.00

Boyd Cable is recognized as possibly the most vivid writer on trench warfare which the war has produced in England.

The Unbroken Line

By H. WARNER ALLEN. Net, \$2.00

With Illustrations and Maps. Along the French trenches from Switzerland to the North Sea. The Champagne assault affords the author great scope, his tales of Verdun are fascinating.

Impressions and Experiences of a French Trooper, 1914-1915

By CHRISTIAN MALLET. Net, \$1.00

The Wall Street Journal says:—"Takes one into the midst of Europe's nightmare. The retreat from Belgium, the battle of the Marne, the attack on Loos. It is a picture of the utter confusion, privation, and terrible suffering through which the army of France had to go to find itself."

The First Seven Divisions

By CAPTAIN ERNEST HAMILTON. Net, \$1.50

Review of Reviews says:—"His book is valuable not only as an authoritative account of the fortunes of the allied armies at the most critical time in the war, but also as a professional study in modern strategy and tactics."

Battery Flashes

By "WAGGER." Net, \$1.00

Philadelphia Press says:—"Reveals much of the inner life of the English preparation for war before those who had enlisted were called into service. And when the call came the author increases the vigor of his style, the vividness of portrait."

By a Member of the Distinguished French War Commission Now Visiting This Country

THE DEEPER CAUSES OF THE WAR

By EMILE HOVELAQUE Net, \$1.25

The Outlook says: "A suggestive and valuable psychological analysis of Germany and England."

POSTAGE EXTRA. AT ALL BOOKSTORES

E. P. DUTTON & COMPANY, 681 FIFTH AVENUE, NEW YORK

5 of

THE SURVEY

Public Health Service
MAY 25 1917
Bureau of the

OVER one thousand disabled Irish soldiers have passed through the training school and employment bureau of the Soldiers' and Sailors' Help Society in Dublin. The society also maintains a home with 150 beds. In its workshops, tailoring, bootmaking, carpentry, electric work, motor mechanism, shorthand, typewriting and bookkeeping are taught

Waterbury

\$3

A Watch That the People Want
—the New

Ingersoll

Waterbury

In the first place it's the size that is so much wanted today—especially in the cities—the smaller "12-size." Then the whole "get-up" of the watch is smart, stylish, up-to-the-minute in all the little features found in the high-priced watches.

But a watch is to keep time and meet practical requirements. Here is three dollars' worth of watch by the best Ingersoll standards. It's jeweled with four jewels at points of greatest friction. It is accurate; and it is sturdy, too. It isn't put out of business by a little rough handling that most watches won't stand.

As an added attraction you have the Waterbury "Radiolite" at \$4.00. The hands and figures are made of a new self-luminous substance containing genuine radium. This causes them to glow with a brilliance that lasts for ten years—probably much longer.

You can always tell an Ingersoll store by the display of Ingersolls in the window. There's one not far from you.

Waterbury
"Radiolite"

Single copies of this issue, 10 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

Reprints Ready

DEMAND for the issues of the SURVEY containing the articles on The Task of Civilian War Relief has been so brisk as to use up the entire stock and to make it impossible, the past week, to send the back issues to new subscribers. A reprint of the series to date, including the sixth article in this issue, is in press and will be ready by Saturday. Copies will be sent to new subscribers the terms of whose subscriptions call for them. Others, especially those wanting quantities for class use, are invited to write to the Circulation Department of the SURVEY.

IF you are not afraid of Typhoid, go to live in Toledo or Dayton or Detroit. If you are, move to Cambridge. Page 196.

NEITHER capital nor labor nor the government nor the Council of National Defense has a program to prevent controversy and strikes at this moment with its supreme need for peace at home if we are to prosecute war abroad. Conflicting state laws, the giving out of eight-hour government work alongside ten-hour private work and a score of other puzzling situations have come up already. The way out, Mr. Fitch suggests, is a governmental board, with such a man as Mr. Brandeis at its head, to establish standards and to enforce them. Page 189.

PRESIDENT WILSON has come out flatly against the rape of the labor law, and British and Canadian trade unionists have told, for the benefit of the United States, of the ill effects of lowered standards, sweating the efficiency out of the very workers on whose output success hangs. Page 194.

GENERAL SMUTS, fresh from his African campaign, is for constructive peace. The League of Nations Society, before which he spoke in London, showed the greatest enthusiasm for a permanent peace to be brought about by a union of free nations, including Germany. Page 195.

FEDERAL plans for enlisting boys of 16 and over in farming and industry have resulted in the formation of the Boys' Working Reserve under the joint auspices of the Departments of Labor and Agriculture. Page 195.

BUT please note, says the National Consumers' League, that the boy workers sent to farms may be employed in growing grain for whiskey and beer. Even from dry states, the harvest may go to the distilleries. If the need for food is so great as to make necessary a great, new, legalized force of child laborers, then it is great enough to justify prohibition. Page 195.

AMERICA is asked to help rehabilitate disabled Irish soldiers through the society whose poster is printed on the cover of this issue of the SURVEY. Page 196.

ONE hundred million dollars is to be raised by the Red Cross for relief work abroad, beginning in the sections of France which have been freed of the Germans. Page 196.

PHILADELPHIA social agencies have formed an organic committee for handling war problems in their midst. Page 197.

IOWA women have at last secured from the legislature the child welfare station for their state university, which is expected to work out problems of prime importance to every state. Page 197.

SOME social legislation of the recent sessions in Montana, Utah and New York. Page 200.

Working Women in Convention

Sixth Biennial Convention

National Women's Trade Union League, Kansas City, Missouri

June 4-9, 1917

At this critical moment in the history of the world it is essential that the working women of America meet together for fellowship, for counsel and for action.

Delegates invited from all affiliated organizations.

Individual members of the National Women's Trade Union League and fraternal delegates are entitled to a voice at the convention. Visitors welcome to attend the open sessions.

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travels, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

HELP WANTED

GRADUATE NURSE—We are seeking the services of a graduate nurse who must speak Yiddish or German, to live in a Settlement and to do visiting nurse work among Jewish people. State age, education, experience, reference and salary expected. Address 2511, SURVEY.

DIRECTOR OF BOYS' AND YOUNG MEN'S WORK—Applications are being considered now for the position, vacant September 1st, of Director of Boys' and Young Men's Work in a large Settlement in a Jewish neighborhood. State age, experience, references and salary expected. Must be mature and have had some experience in the work. Address 2512 SURVEY.

WANTED: A GRADUATE NURSE to do visiting work during the summer months. The position will probably become a permanent one. Beautiful seashore resort. Answer—Superintendent of the LONG BRANCH PUBLIC HEALTH NURSING ASSOCIATION, Long Branch, New Jersey.

AT SUMMER CAMP. Capable young woman assistant. Experienced, efficient secretary. Small salary. Address 2516 SURVEY.

A COLLEGE MAN for a general welfare program for foreign born, especially boys. Big future for initiative. Also in need of a playground man for summer work. Address 2517 SURVEY.

SITUATIONS WANTED

AN experienced social worker, Jewess, with conversational knowledge of several languages wants a position as an investigator. Best references. Address 2514 SURVEY.

YOUNG woman, college graduate with several years of experience in teaching and in social work, efficient, seeks responsible position. Address 2518 SURVEY.

YOUNG woman of literary ability, university graduate, teacher of English, desires summer position in assisting a writer in manuscript reading or in research work. Address 2519 SURVEY.

YOUNG woman, college graduate, teacher, experienced in leadership of girls, desires position in Summer Camp for girls, in welfare work, or as tutor. Address 2520 SURVEY.

PENNSYLVANIA SCHOOL FOR SOCIAL SERVICE

Eighth year begins September 1st, 1917

Courses in Social Case Work, Industrial Problems, Public Hygiene, Social Statistics, Medical Social Service, Probation, etc. Well-organized practice work under careful supervision. For 1917-1918 Bulletin, address REGISTRAR, 425 South 15th Street, Philadelphia, Pa.

How About the Folks in Your Town?

J. Blaine Gwin, secretary of the Associated Charities in El Paso, Texas, has written:

"You can always tell, I think, whether a speaker is a reader of the SURVEY. When I came to El Paso, among other speakers I heard two men talk and I said at once, because of the wide knowledge they seemed to have of events and trends of thought on social, civic and political matters, that they were readers of the SURVEY. I found out later that I was correct and also learned later that they were the only two people in the city who read the SURVEY regularly."

That isn't true of El Paso, alone.

It is true wherever the SURVEY is read. Don't you find it so in your own experience?

And, if the SURVEY's service of news and opinion in all the fields of social and civic advance does bring such a striking advantage to its readers, wouldn't it be a good thing if others could be brought to read it through your activities as a SURVEY Circulator?

You'll be elected a member of the SURVEY Associates, if you'll get either four new three-dollar subscriptions to the weekly SURVEY, or eight new two-dollar subscriptions to the first-of-the-month SURVEY, or the equivalent in both kinds.

To help you get these new readers for the SURVEY and this distinction for yourself, we'll send you appropriate printed matter just as soon as we receive from you the coupon below.

Peace at Home

The Double Danger of Strikes and Coercion

By John A. Fitch

OF THE SURVEY STAFF

WHETHER the United States is going to repeat the English experience in dealing with labor troubles—have a period of strikes and disorder and end it all with coercion—or whether it can find a better way of its own, is a question that is to be decided, either by timely action or by default, within a very short time.

The present situation is full of dynamite. There are unsettled questions of policy of such grave moment that failure to attend to them will undoubtedly mean disaster. The National Association of Manufacturers has asked Congress to authorize the President to suspend the eight-hour law applying to government contracts for the duration of the war. In several states laws have been enacted authorizing the suspension of labor laws. There are serious possibilities of trouble in plants which, not in the habit of doing government work and having a working day longer than eight hours, are now taking government contracts. They face the difficulty of running half the shop on an eight-hour basis and the other half, working on private contracts, on a ten-hour basis.

There can be no question that labor will resist any attempt to break down standards previously secured. Employers will be equally opposed to yielding to demands of their employes based on the war emergency. Neither side will be disposed to yield to the other if it believes that the existence of a state of war is being turned to account. Already such advantage is being taken in certain instances by both employers and employes. A case has recently come to light where an employer who had a government contract reduced wages and told his men that it would be treasonable for them to strike. At the same time employes have here and there used the national emergency as an occasion to demand more favorable terms of employment. As time goes on, the opportunities for strife and confusion will increase if industrial changes at all comparable to those that have taken place in England are introduced or attempts are made in that direction. The question before the country is whether we are going to have controversy and strikes or conciliation and negotiation.

Private citizens and industrial leaders in both groups have already shown the way in part. The recent conferences between managers and men in the mining industry, whereby wage contracts with many months still to run were amended

to conform to present facts which were non-existent when the contracts were signed, are examples to the whole country in patriotism, mutual tolerance and good will. Last week officers of the Metal Trades Department of the American Federation of Labor offered to sign an arbitration agreement with the Navy Department agreeing, for the duration of the war, to submit all controversies to arbitration and under no circumstances to go on strike.

In general, however, the attitude of both employers and employes is negative. That the National Association of Manufacturers at this supreme moment in history could think of nothing better than to ask that the President be given power to break down labor standards is a sad commentary on the statesmanship of that body.

But labor, in general, is without a program, too. There has come forth so far no constructive plan for meeting and adjusting the difficulties that are certain to arise, from any labor body or any authorized spokesman for labor. Mr. Gompers, with other labor men who are cooperating with him, has devoted himself to his task as a member of the Advisory Commission of the Council of National Defense, with patriotic zeal and disinterested purpose. So far, however, no plan has been devised which offers anything in the way of peaceful adjustment. It is a grave situation for labor. The absence of anything better led in England to the adoption of a policy of coercion that would be at once repugnant to American habits of thought and dangerous to labor's hard-won right of collective bargaining. Already there have been rumors of interference with strikes by the military authorities and there has been at least one case of an injunction against the carrying on of a strike, based on the theory that it was an interference with the successful conduct of the war.

In the midst of all this confusion what has the government to offer? It is satisfactory and encouraging to note that plans are going forward to conserve the food supply of the nation. Bills are now pending in Congress which have the full strength of the administration back of them looking to the encouraging of food production and the regulation of its distribution. With a man like Herbert C. Hoover at the head of a regulatory board, the country would feel assured of good sense and justice in the administration of affairs vital to our success in the war.

An equally vital matter, the production of munitions, is being handled in an admirable manner by the Munitions Standards Board that has been created by the Council of National Defense. With an efficient business man at its head and with competent engineers in its membership, contracts for munitions are being passed on by this board in order to insure the fulfilling of all technical requirements.

The Physical Basis of Output

THESE two, food and war supplies, are the chief material requirements for the prosecution of a war. The government has either taken steps or evolved plans for administrative control in both of these fields. All of these plans depend for their successful operation, however, on the efficiency, loyalty and physical well-being of the workers. It is somewhat perplexing and shocking therefore to observe that the government has taken no such steps for the conservation of the workers and for the adjustment of the complex relations between employer and employe as have been taken in these other fields.

There is a Committee on Labor of the Advisory Commission of the Council of National Defense, with Samuel Gompers as its chairman. It has a membership of several hundred persons, including labor men, labor women, capitalists, scientific men and publicists. This committee has held two all-day sessions in Washington at which speeches were made and opinions interchanged, but without taking action of any sort beyond authorizing the creation of an executive committee.

Beside the executive committee, Mr. Gompers has appointed subcommittees as follows: wages and hours, chairman, Frank Morrison, secretary of the American Federation of Labor; mediation and conciliation, chairman, V. Everit Macy, New York city; welfare work, chairman, L. A. Coolidge, Boston; women and industry, chairman, Mrs. Borden Harri-man, Washington; information and statistics, chairman, Frederick L. Hoffman, Prudential Insurance Company; press, chairman, Grant Hamilton, American Federation of Labor; publicity, chairman, Edward T. Devine, New York city; cost of living and domestic economy, chairman, S. Thurston Ballard, Louisville, Ky.

Of these committees only the first four have been completed and organized. The work of the committee on women and industry was discussed in last week's SURVEY. Apparently nothing has as yet been done by any of the other committees, beyond the appointment of a number of sub-committees of the Committee on Welfare Work. These sub-committees include industrial safety, sanitation, dust and fumes, lighting, structural safety and fire prevention, fatigue, public education in health matters and vocational education. None of the committees has made any report of progress and the executive committee is not yet ready, apparently, to outline a program or to propose any line of action to the general committee.

It thus appears that very little has been accomplished so far through the Labor Committee. There has not been time enough for much accomplishment, it is true. Even if there had been time and constructive work mapped out, it should be noted that neither the general committee nor any of its sub-committees has any power. They are advisory bodies to an advisory commission of an advisory council; for the Council of National Defense itself was created to give advice to the government.

It is not intended here to suggest that the Labor Committee and its sub-committees should be given wide powers. Emphasis should be laid, however, on the fact that at this time, when the mobilization and conservation of the labor forces of the country are of utmost importance, no agency of the gov-

ernment is in a position to devote itself competently and effectively to those tasks. Even the Department of Labor must perforce sit apart so far as adequate powers are concerned and let other departments of government, which are chiefly concerned with supplies and not with the human forces back of them, deal with those forces without its aid or directing counsel.

What are the powers that the necessities of the time demand and which we have a right to expect the government to exercise? They appear to group themselves under three heads:

First, the establishment of standards. The government is manufacturing for itself and is contracting for the manufacture of goods on a scale exceeding any previous similar activity in its history. New methods are being put into operation; plants unaccustomed to government work are undertaking it on a large scale. Work is being done in states that have made reasonable progress in the enactment of laws establishing standards of employment and in states with lower standards or with none at all. It is necessary for the protection of the workers and their maintenance in health and vigor that definite standards be laid down by the government. These should be written into the contracts.

Second, enforcement of standards. The federal government has at present no force of factory inspectors. Such work has been performed heretofore exclusively by the states. The Department of Labor should now be given power to inspect factories doing government work in order to insure the observance of the eight-hour law already existing and to enforce such other standards as may be written into contracts.

Third, conciliation and arbitration. To meet the difficulties that are already presenting themselves and to insure justice to all and uninterrupted production, it will be necessary to devise some plan for the speedy adjudication of disputes. The Department of Labor is empowered to mediate in industrial disputes and it has done so in many cases with marked success. It must be recognized, however, that the department does not have the full confidence of employers throughout the country. This is not said in criticism of the department; it is merely a fact that grows almost inevitably out of the fact that Secretary Wilson is a trade unionist and occupies his present position because he is a representative of trade unionists. We cannot afford in times like these to depend upon a mediating body that is unable, for any reason whatever, to command the heartiest support and confidence of the whole people.

For the same reason neither Mr. Gompers' Labor Committee nor its sub-committee on arbitration and conciliation could successfully discharge the necessary functions.

A Standards Board

WHAT then can be done? It has been suggested that a special board be created consisting of five or seven persons, having in its membership an equal number of representatives of employers and employes with a chairman who is neither, to act wherever a dispute arises, in the interest of justice and industrial peace.

Such a board, if created, should do more than act in a mediatory capacity. This should be the board of standards as well, to whom all contracts should be submitted in order that the proper industrial standards may be written into them. Half the work of mediation will have been accomplished if employers and workmen alike can be assured that conditions of employment are to be uniform and if adequate safeguards are set up and maintained.

If given the power to visé contracts, the board would have an opportunity to set up arbitration machinery of the greatest possible effectiveness, because its administration would be in

the hands of men possessed of the confidence of both sides, and because it would be on a voluntary basis, the only sound basis for arbitration at any time.

There is no question about the patriotism of the overwhelming majority of employers and employes of this country. Both are earnestly desirous of avoiding interruptions in production. But both must safeguard their interests. If a board such as has been suggested were created, composed of men of the right caliber, would it not be possible to draft an arbitration plan to be inserted in each contract, and to which the employes as well as the employer and the government should be parties? Under these conditions employers and employes might agree, as the metal trades unions have offered to do, in their relations with the government, to submit all differences throughout the duration of the war to this board of standards for final adjudication and award.

Of all the men in the country to head such a board there is no one so eminently fitted by experience and judicial temperament as Mr. Justice Brandeis of the United States Supreme Court. It was widely urged, not long ago, that Mr. Brandeis should be detached from the court to serve on the commission to Russia. Here is a task of more fundamental importance just now than any foreign mission. It goes to the

heart of the question of preparedness and fitness for war. It involves the mobilization and maintenance of the industrial army.

If, however, Justice Brandeis cannot be diverted from his duties as a member of the highest court of the land, there are other men of clear understanding, breadth of view and possessing the confidence of the industrial public, such as Judge Julian W. Mack, who succeeded Justice Brandeis as chairman of the arbitration board in the dress and waist industry in New York, B. H. Meyer, chairman of the Interstate Commerce Commission, Prof. Henry R. Seager, of Columbia, and Prof. John R. Commons, of Wisconsin. Men of this type would give dignity to such a board and would instantly command for it the support and confidence of the public.

Let us have some such machinery as this and let us have it soon. We do not want strikes at this crisis in our political affairs. We do not want coercion either. What we do want is an opportunity for employers and employes to get together voluntarily on a program that will inspire mutual confidence and good will; that will safeguard the interest of each; and, in so doing, safeguard the interests of the whole American people.

The Task of Civilian War Relief¹

VI

ON a rainy afternoon in August a woman passing through a certain park saw seated upon a bench, unsheltered by umbrella or coat, a young mother with a baby in her arms. Huddled up against her was a little fellow of perhaps three years. There was something so forlorn and bedraggled about the three that the stranger who had noticed them stopped to see what the trouble was. After a short conversation she took them to a bureau the purpose of which is to care for just such distressed persons.

The bureau immediately arranged to lodge the mother and children in an institution; then it set about to learn whether it could help them further. This was their story.

The mother, Lillian Newton—so at least we shall call her—had come to the United States from Ireland a little more than three years before. Her husband, George Newton, had served ten years with the British army in India, Australia, and the isthmus. While in the service he had acquired a liking for liquor that apparently had become stronger than his power to control it, for now that he was once more in civilian life he found it difficult to work steadily enough to earn more than a most meager living for his family. His last job he had lost because he had taken "only a drop too much of whiskey."

Sometimes when he felt that he was becoming intoxicated he would take his wife and children to one of his sisters, at other times to a woman with whom he once had boarded. This woman had been the only person who had ever succeeded in making him stop drinking. At one time he had kept away from the saloon for nine months. But the reform was not permanent. His wife, an admirable woman in most respects, lacked the force of character necessary to keep him

temperate. Whenever he was out of work he would go on a spree and whenever he went on a spree he was thrown out of work.

The man blamed himself for all his family's troubles. He had often tried to stop drinking. He had indeed left Ireland in the hope that the United States would offer him better chances of reform. When his wife and children were discovered in the park he had been drinking for a week. Now, however, he was recovering from his spree and he expected to go to work. As soon as he should receive his first pay he would take a room for his family. But he recognized that this would not be a permanent arrangement, for he confessed that he could not control his appetite for alcohol.

With an infinite variety of detail the problem of George Newton is presenting itself constantly to social workers. Superficially it is the problem of drunkenness. Fundamentally it is the problem of the change of habit.

Drunkenness is but one of many habits which the social worker is called upon to help individuals and families change. There are habits of diet, habits of housekeeping, moral habits. It is because of the lessons in the reorganization of habit which the treatment of drunkenness teaches that a study of the subject is important to the civilian relief worker; although it is true that in Canada an unusual amount of drunkenness has been noticed among women in families receiving relief.

To understand the part which habit plays in drunkenness it is necessary to know something of the three classes into which users of alcohol may be divided. These are the occasional drinker, the free drinker or occasional drunkard, the habitual drunkard or inebriate. The occasional drinker takes a drink for the same reason that he eats an apple, because he likes it or because it is a sociable thing to do. He rarely if ever becomes intoxicated. His insistence upon his right to drink is the chief obstacle in the way of the abolition of the liquor traffic and he is therefore a social problem to those

¹ The sixth of a series of articles based upon a course of lectures upon civilian relief now being delivered in New York with the sanction of the American Red Cross, by Porter R. Lee, of the staff of the New York School of Philanthropy. The articles are being written by Karl de Schweinitz, of the New York Charity Organization Society.

who are interested in prohibition. But he is not a social problem in the sense that as a violator of the law or as an offender in any other way because of drunkenness he comes to the attention of social workers engaged in helping individuals out of trouble.

Will-Power the Cure

THE free drinker becomes intoxicated. He may become intoxicated frequently. His characteristic is his desire to experience the more advanced sensations associated with alcoholic excess. He may drink without any idea of becoming intoxicated; he may have acquired the habit in spite of a desire to stop. But to the best of our knowledge the only thing that he needs to break his habit is sufficient will power.

The inebriate is unable to take alcohol in moderation. Despite his best efforts, if once he tastes alcohol he is sure to drink to excess. Inebriety may be described as a disease. Drunkenness in the occasional drinker or the free drinker cannot correctly be called a disease.

According to statistics issued for the year 1909 by R. W. Branthwaite, inspector under the inebriates acts of 1879-1900, it is estimated in England that of every thousand users of alcohol, 980 are occasional drinkers, 17½ to 18 are free drinkers or occasional drunkards, and 2 to 2½ are habitual drunkards or inebriates.

Dr. Irwin H. Neff, of the Norfolk State Hospital, Massachusetts, says that inebriety is an expression of nervous weakness and that upon this weakness is founded a habit which we call drunkenness. In other words, there is in the inebriate a definite pathological condition which predisposes him to an excessive use of alcohol if he drinks at all, just as a person may be predisposed to tuberculosis—a weakness which Dr. Neff says is ordinarily transmitted from father to child. Such a person born and living, for example, in prohibition territory might, for lack of opportunity, never develop the habit of drunkenness. There is no known cure for his weakness. His only hope lies in not drinking at all. It is possible that inebriety may be acquired by long continued indulgence, just as a person not predisposed to tuberculosis may with sufficient exposure to the disease acquire it. Usually, however, inebriety is inherited as a nervous condition, remaining latent or becoming evident according to circumstances of habit and environment.

Granted that one knows that a man is an inebriate, the first step in treatment is to ascertain whether the patient has a desire for intoxication, whether he drinks because he enjoys it and whether he is willing to give up the habit. Then it is necessary to learn as precisely as possible the measure of control over himself which he has or which can be developed in him. Mr. Branthwaite holds it probable that in the majority of instances a person who is an inebriate (*i. e.*, has a definite nervous weakness, a pathological condition) and who has also a strong desire for drink can acquire enough self-control to maintain sobriety if he is mentally capable of appreciating the necessity for effort, if a reasonable chance of making that effort is given to him and if he can be induced to believe that his peculiar condition renders him unable to take alcohol in any form in even the smallest quantity so long as he lives.

"The inebriate's desire for intoxication," says Mr. Branthwaite, "is acquired by experience, and, what is more, maintained by indulgence. In the very large majority of cases, when an inebriate can be induced or is made to discontinue his indulgence, the desire (craving) diminishes, or leaves him altogether, a few hours or a few days after his last drink—generally in two or three days. When an inebriate is supposed to have given up alcohol and, after a reasonable period, continues to complain of craving he is usually still in-

dulging, although possibly in a quantity that would hurt no other person."

The craving, in other words, is not the driving power of his disease but the force of his habit. It is important to understand this because the method to be used in breaking a habit is of course different from that to be pursued in curing a disease.

Simple encouragement is what Mr. Branthwaite places first among the means of treatment. Every inebriate possesses more self-control than he appears to have, more than he believes he has; but there are few inebriates indeed who can free themselves from alcohol unaided. There is no drug which will permanently eradicate the desire to drink. Simple encouragement supplied by some one in whom the patient has confidence is the most potent means of cure. It is the power of personal influence, the support given by a stronger to a weaker will.

Usually, says Mr. Branthwaite, personal influence may be supplemented by other things, among them special medical treatment, suggestive therapeutics, electrical treatment, strict religious discipline, and the alleged magic of some drug widely advertised as a cure for inebriety. The supplemental treatment required depends of course largely upon the needs of the patient. With some persons a strong religious motive may be the most powerful aid in the breaking of the habit. The cooperation of an intelligent physician is invaluable in relieving insomnia and other physical symptoms which may accompany the stoppage of the intoxicant. Mr. Branthwaite does not believe that any of the cures for alcohol have an inherent value. But if the patient believes that the drug will cure him, then by all means try it. This belief will make his will just so much the stronger.

What is true of the treatment of the inebriate is true of the treatment of the free drinker or occasional drunkard. Here, also, it is a problem of breaking a habit with this advantage, however, that there is not the predisposition to alcohol. Here again it is a question of affecting the psychology of the individual with personal influence the most potent factor.

New Environment

THERE are few things more effective in the breaking of a habit than a change of environment. Take a man from his old neighborhood and he cannot drift almost automatically into the saloons to which his feet have been turning for years. Better yet, take him where there are no saloons at all. That is the value of the farm colonies which are being developed in many of our states. They help a man to leave the habit of alcohol because they offer him an entirely different environment. They enable him to establish a new routine of life. Furthermore, they give him work to do, wholesome work chiefly in the open air. Such work occupies a man's mind and thereby clears it of its old habits and impulses. For the same reason, relaxing diversion which will give the patient new interests is valuable. All this the well conducted farm colony should supply.

The gospel mission is another kind of institution which deals with inebriates. A knowledge of the reformations they have been instrumental in accomplishing is widely spread. To one who examines their work more closely there comes the impression of a tragic disproportion between the effort expended and the result achieved. This is largely because in most missions there is no method of following up the men who are trying to reform, no personality to assist the patient, no attention such as admission to a farm colony, none of the careful individual treatment that the man who is trying to rid himself of this habit needs. Thus probably most of the

men who have professed to have given up alcohol do not hold to their resolution. The surprising success of one mission which has tried to follow up its graduates argues well for the more general introduction of this method.

Group psychology can be made a useful support to the man who is struggling to overcome the drink habit. A class or a club of men, every member of which has been down and out through drink, has been organized in each of two cities. This class meets regularly. The men report upon their progress against temptation. If one is especially hard put to it the rest all do their best to help. For the honor of the group the individual struggles to succeed and in giving aid to others achieves a victory for himself.

After-care in alcoholism is as important as it is in insanity. The home to which the man returns from the farm colony, for example, must be as comfortable as is within reason possible. It should be free from things that irritate. Responsible though he may be for all the troubles that have come to the family, his wife should, for the sake of continuing his reform, regard him as a man worthy of confidence and of her zealous care. She must not nag him. No nagger ever reformed anybody.

The work the man obtains ought not to be debilitating and it ought to be in favorable surroundings. Nothing, for example, could be worse than a job in a factory where payment is made by check and where the saloon is the only place at which the check could be cashed. Recreation and a new environment, as already indicated, are important.

There should be given to the man an objective in life, something definite and concrete, something which he can achieve. Thus to say to a man with a son of nine years, "if you don't stop drinking your little boy will have to go to work when he is fourteen," is too indefinite. It is a long time until the boy will have reached his fourteenth birthday. In urging total abstinence it is much better to induce a man to try the experiment of stopping drinking for a month. When thirty days of abstinence have been achieved he will be ready for a further struggle because he will have the aid of that greatest of all psychological strengtheners, the sense of having made good.

This applies to the change of any habit. When the social worker tries to bring an individual up to a higher standard he finds it effective to divide the road to be covered into small sections, so that it may be taken in stages, thus making possible the feeling of achievement.

Important, also, is learning whether the man ever tried to reform before. If so, find out under what circumstances the attempt was made, and why it failed. Obviously the plans of the new campaign and the conditions of it must be made to profit by an understanding of the cause of the previous defeat.

The problem of George Newton, whose story was told at the beginning of this article, should, in view of this discussion of drunkenness, be recognized as a problem in the breaking of a habit.—To help him in this, the bureau sent him to a privately conducted farm colony. There he stayed for three months, when his wife urged him to return. For four months he worked steadily, adding to the household possessions. Then he met an old acquaintance and in his company became intoxicated. After six weeks of sobriety he slipped back to the condition in which he was when the bureau first came to know him.

During all this time, however, there was being exerted upon him the personal influence of a man who, having been a drunkard, was now reformed. This man pulled George Newton to his feet and stood by him so effectively that from 1910 to 1913 Newton was intoxicated only once and then for but a short time. The last news had of him was at the opening of the war, when he enlisted.

Institutional care and personal and religious influence were all brought to bear upon him with varying effect. Each problem in the breaking of habit, whether the habit be one of diet or of alcohol, has its own solution, but in general the same principles apply to all: first, a thorough understanding of the nature of the habit and of the character, history and situation of the individual; second, a proper adjustment of environment and circumstances, and lastly and above all, the influencing of his psychology.

GULLIVER WAKES

By Eleanor Preston

LONG he has lain asleep,
Bound by the million tiny threads
Of tyranny
And little kings,
Albeit his sleep was restless,
Troubled by dreams of freedom
And the stings
Of innumerable wrongs.
Sleeping, they thought him helpless.
He lay upon the ground
Inert and bound,
And all their drunken songs
And revels could not wake him.
There was not any power
Could make him
Arise, avenge his wrongs,

But now the giant wakes
From his long nap.
His shoulders heave, his great arms stretch,
His cobweb fetters snap.
A century's thirst he slakes.
The tiny bureaucrats and little kings
Fall neck-and-heels.
(And O! the glory and the wonder of it!
Freedom sings,
And all creation!
And every free heart thrills
In every nation,
On every sea.)
After his sodden sleep of serfdom and oppression,
Russia stands upright—
A democracy!

COMMON WELFARE

LABOR STANDARDS HERE AND IN ENGLAND

DECLARING that "nothing would be more deplorable" than setting aside "even temporarily the laws which have safeguarded standards of labor and of life," President Wilson last week placed himself squarely in opposition to the movement to break down labor laws as a war time emergency measure. Speaking at the White House to the members of the Labor Committee of the Council of National Defense, the President said in part:

I have been very much alarmed at one or two things that have happened—at the apparent inclination of the legislature of one or two of our states to set aside even temporarily the laws which have safeguarded standards of labor and of life. I think nothing would be more deplorable than that. We are trying to fight in a cause which means the lifting of the standards of life, and we can fight in that cause best by voluntary cooperation. I do not doubt that any body of men representing labor in this country, speaking for their fellows, will be willing to make any sacrifice that is necessary in order to carry this contest to a successful issue, and in that confidence I feel that it would be inexcusable if we deprived men and women of such a spirit of any of the existing safeguards of law. Therefore I shall exercise my influence so far as it goes to see that that does not happen, and that the sacrifices we make shall be made voluntarily and not under the compulsion which mistakenly is interpreted to mean a lowering of the standards which we have sought through so many generations to bring to their present level.

Later in the day, at a meeting of the committee at the headquarters of the American Federation of Labor, British labor men, members of the commission recently sent to this country by their government, out of their own experience in two and a half years of war gave expression to similar views. James H. Thomas, member of Parliament and general secretary of the National Union of Railwaymen of Great Britain and Ireland, said:

One of the mistakes that we made in the war was to forget the human side. At the beginning of the war some of our people worked 100, 110 and even 120 hours a week. They worked seven days a week, too, with never a day of rest. Then they began to

get worn out and conditions became alarming. Now we have gone back to Sunday rest and Saturday half holiday and overtime has been reduced. If you're going to have a long war you can't afford to sacrifice labor power.

In answer to a question Mr. Thomas said, "With all the great resources of the United States, serious as is the condition of the allies, I cannot conceive of the winning of the war to be dependent on the breakdown of the child labor laws of this country." A war so won would be lost, he said, because it would mean the sacrifice of future generations.

The Committee on Labor of the Council of National Defense had been called together by its chairman, Mr. Gompers, for the purpose of meeting the British labor men, Mr. Thomas and Charles H. Bowerman, also a member of Parliament, and secretary of the British Trade Union Congress, and a similar delegation from Canada led by J. C. Watters, president of the Canadian Trades and Labour Congress.

The British delegates reviewed briefly the experience of labor under war conditions. They expressed themselves vigorously in opposition to overtime, seven-day labor and the employment of children. While there was a demand for the breakdown of child labor laws at the beginning of the war, there was little yielding to these demands and attendance at school has not been interfered with in the least.

Wherever women are employed—and according to Mr. Thomas there are about one and a quarter million of them at work who never were engaged in industry before—the principle of equal pay for equal work is rigidly enforced. In the printing industry no woman can be employed so long as men are available.

The "industrial truce" which was entered into at the outset of the war was a step taken, Mr. Thomas told the committee, "without regard to the fact that there are people prepared to take advantage of others." The agreement to make no changes did not extend to prices and the leap in the cost of foodstuffs caused such a decline in real wages as could not be borne. Prices, Mr.

Thomas said, are now 94 per cent higher than before the war. The practice now is to write into every government contract a "fair wages" clause, the determination of what is "fair" being based on the cost of living.

Speedy mobilization of labor where it is needed, Mr. Thomas explained, is accomplished by enrolling "munitions volunteers," men who are prepared to go wherever called upon to meet an emergency demand in munitions factories. Their wage standard is protected by paying them the prevailing rate either of the vicinity from which they come or of the place to which they are sent—the rate to be the higher one of the two. Every two weeks these men are given passes on the railroads to enable them to pay a week-end visit to their homes.

Dock laborers have been organized in the same way into flying squadrons to be used where needed. These men are enrolled as a unit of the military service and work in khaki. This was accomplished, Mr. Bowerman said, through an agreement between Lord Kitchener and the Dock Workers' Union. Only union men are permitted to enlist for this service. At present 10,000 men are unloading ships as a military service.

MR. THOMAS explained the plan of allowances to families of soldiers, which he stated relieves them altogether from dependence on charity. A wife is allowed twelve shillings and sixpence (\$4.12) a week for herself, five shillings (\$1.25) a week for the first child, four shillings (\$1.00) for the second, and so on. These sums are paid through the post-office.

Mr. Watters spoke with much feeling of the danger to labor of giving up its standards during the war. "We need to watch," he said, "lest in our hysteria we do not give up more than we should." He insisted that there should be guarantees of the strictest sort. "We mean to maintain our right to strike," he said. "We shall give nothing unless we get something in return." After the war the employers, however patriotic and friendly now, will, he declared, merely be looking for the cheapest man,

as before, and regardless of war sacrifices by the unions. He pleaded for a war to be conducted in a loftier spirit than a desire for vengeance. "Our enemies of today," he said, "will be our allies of tomorrow."

There were present at the meeting many large employers and capitalists, among them John D. Rockefeller, Jr., Colgate Hoyt, Emerson McMillan and John D. Patterson of the National Cash Register Company.

PEACE THROUGH A UNION OF FREE NATIONS

A UNION of "free nations" for the preservation of permanent peace, and the inclusion of Germany in such a union, were enthusiastically endorsed, according to a London dispatch in the *New York Times* last week, at a meeting attended by 1,200 representative men and held under the auspices of the League of Nations Society. Members of the Houses of Lords and Commons attended and Viscount Bryce presided. Other speakers were the Most Rev. Randall Thomas Davidson, archbishop of Canterbury; Lieut. Gen. Jan Christian Smuts, Baron Buckmaster, Lord Hugh Cecil and Viscount Harcourt.

A resolution offered by General Smuts and seconded by the archbishop of Canterbury read:

It is expedient in the interest of mankind that some machinery should be set up after the present war for the purpose of maintaining international right and general peace, and this meeting welcomes the suggestion put forward for this purpose by the President of the United States and other influential statesmen in America and commends to the sympathetic consideration of the British people the idea of forming a union of free nations for the preservation of permanent peace.

Thunderous applause is declared to have greeted Lord Buckmaster when he said:

This league of nations will fail unless Germany is admitted into it. If she is excluded it will be nothing but a league against Germany, in which case I see no prospect before the world but the unending darkness of night. We have got to separate the German rulers from the German people. We must destroy the one and support the other. If that is done I believe our future will be safe.

General Smuts, the famous South African, came out strongly against carving any nations "to please the great powers:"

If a hundredth part of the thought given to this war were given toward peace there never would be war again. I believe a passion for peace has been born in this war which will prove greater than any passion for gain or conquest. As far as is humanly possible such wars as this should never be tolerated. However, there is danger in believing too much in treaties until we have a radical change in the hearts of men. I think that change is coming. There must

be no patchwork peace or a peace which is simply a compromise of conflicting interests. Every nation must have a choice in its own destiny and not be cut and carved to please the great powers.

Viscount Bryce agreed with General Smuts in regard to reprisals and said that the objects of the meeting were "to advocate an agreement among civilized states which will serve as a basis for permanent peace among them by providing for a peaceful settlement and for the observance of treaties and international law."

Both William H. Taft, president of the League to Enforce Peace in this country, and William H. Short, its secretary, were quoted next day by the *Times* as declaring that the objects of the British and American associations were "alike in the main."

FEDERAL ENLISTMENT OF BOYS FOR FARMS

GOVERNORS of practically all of the states have notified the national director of the United States Boys' Working Reserve of their intention to cooperate in its plan of mobilization of boys between the ages of 16 and 21 years this summer for work on the farms.

The Boys' Working Reserve is promoted by the United States Department of Labor as part of the general scheme of increased food production agreed upon by it and the Department of Agriculture. Under this agreement the Department of Labor was to find men and boys to fill the jobs on the farms and the Department of Agriculture was to find the jobs. The United States Employment Service is advertising for men, and is securing many thousands of them in various sections of the country. The Boys' Working Reserve is directed to the enlistment of as many as possible of the boys above 16 who are now idle. The Department of Labor estimates that there are 5,000,000 boys of from 16 to 21 years within the country and that 2,000,000 of them are doing nothing.

To be enrolled the boys within these ages must pass a physical examination, must have the consent of parents or guardians and must agree to obey the leader and camp superintendent furnished for each party. Each boy is to enroll for a period specified by himself, and in case he prefers other than farm work an attempt is to be made to find such work for him. Thus fruit and vegetable picking, canning and even shipbuilding may be supplied with boys.

The distinctive feature of the organization is its system of recognition of the boys' services after the normal industrial demands as to wages, hours and conditions shall have been met. To every boy will be given a bronze badge as a testimonial that he has performed at least one week's service. To the bottom of it will be attached a bar with

the words "Honorable Service, 1917." Each successive year's work will be recognized by the addition of another bar.

The boys will be organized into squads of twenty-five, with a leader recruited from agricultural college, boys' club or other suitable source, who will direct their work and amusements and look after them in general.

In the time of harvest attempts will be made to get work for large numbers of boys, then on school vacation, under conditions permitting them to camp out.

The director of the Boys' Working Reserve states that it has been launched for four reasons:

1. So that there shall be available in time of need an adequate reserve of farm labor.
2. So that federal standards shall be stamped on local and state organizations which will assist in carrying out the scheme.
3. In order that, through the bestowal of a national badge, the boys may actually realize that they serve the national government.
4. So that all the state, county and local organizations may be coordinated in the work of classifying and distributing labor to the best advantage, both to the country and to the boy.

Thus far only a few thousands of boys have enrolled—these in the New England states and Oklahoma—but with the beginning of the school vacation period the organization hopes for a rapid development. Its industrial ideals are as yet hazy. It has no clear conception of its relation to organized labor. Except that it is under federal supervision, it takes no positive stand on the questions of maximum hours or a minimum wage. Nor does its prospectus guarantee that the boys will not be employed at dangerous machinery. Indeed, the whole structure is experimental. Through the governors an agency is being secured in each state for handling the organization.

CHILD LABOR IN MAKING ALCOHOL

CHILD labor and grain saving—a new aspect of war prohibition—is brought out in resolutions passed on May 11 by the executive committee of the National Consumers' League, urging upon Congress the need of prohibiting the use of grain for manufacturing alcoholic beverages during the war.

Among the other wastes of alcohol-making, the league points out, is the waste of child labor now being recruited in great numbers—50,000 in New York state alone—for agricultural work. Such work the league holds may be reasonable wartime service for boys who will later go to college, but for those who "must leave school at the seventh grade or below, the loss of two months in the spring and in the fall this year and next is irreparable. Especially for children not born to the English lan-

guage, every shortening of the school year is an injury and sacrifice."

The league points out that grain, sugar and hops are grown in wet and dry states alike, so that this boy labor may be employed directly, even in prohibition states, in growing materials for liquor. Moreover,

both men and boys are occupied in the manufacture of glass bottles, drinking glasses, mugs and other bar fixtures. It has increased in recent years following the invention of bottle blowing machines. The waste of the children is indeed a cruel one. No more wretched employment is open to young boys than that of the glass bottle industry. The little fellows employed are not eligible to become apprentices and subsequently skilled workers in the glass industry. Theirs is a "dead end" employment.

Among the other wastes listed are the increase of traffic congestion through the shipping of liquor, bottles, etc., the use of horses and motors in transporting them, the large space occupied by breweries, distilleries and saloons which could "be used for preparing and distributing supplies."

So long as the Congress declines to stop these multiple wastes of man power, child labor, agricultural acreage, city real estate, motors, and horse vehicles, and transportation by trains and boats, what hope is there that serious heed will be given by citizens to requests for personal economy? If the threat of international famine is such that this new, authorized, legalized increase in child labor must be accepted, and children must be called from school to help to cope with it, the duty of the Congress to stop these wastes is correspondingly urgent.

THE SHAMROCK FUND FOR DISABLED MEN

THE Countess of Kingston, vice-president of the Irish branch of the Soldiers and Sailors' Help Society, is at present in this country appealing for funds to assist disabled Irish soldiers of all religions who have been discharged from the army on account of physical disabilities. There are already 1,241 of these men being cared for by the Soldiers and Sailors' Help Society Employment Bureau, 35 Dawson street, Dublin, and through the generosity of the American people Lady Kingston has already sent over \$30,890 to this bureau.

The latest report from Dublin says that the local war pensions committees, under the statutory committee, are now established all through the country and the Soldiers and Sailors' Help Society Employment Bureau is working in cooperation with them. These war pensions committees have been established for the purpose of investigating individual cases and granting supplementary pensions from funds supplied by the National Relief Committee to men whose government pensions are inadequate. Under the regulations, however, men discharged after home service or those who are "time-expired," are in-

eligible for this assistance and would be badly off were it not for the help granted by the employment bureau committee. There are a large number of these cases, for large numbers of home service men left good employment on the outbreak of war and are now unfit to resume work, owing to breakdown in health.

"Without the funds sent from America," says Lady Kingston, "the work would practically have to stop—which would be a real tragedy as the bureau is now doing splendid work, and the average number of men for whom employment is being found is decidedly on the increase." The poster printed on the cover of this issue of the SURVEY forms a part of the society's campaign.

RANKING CITIES BY THEIR TYPHOID RATE

FOR the last five years the *Journal of the American Medical Association* has issued a yearly report of typhoid fever in the sixty-six cities that have a population of more than 100,000. This should be an index of efficiency in city administration, since typhoid is a preventable disease, but strangely enough some cities that take great pride in their progressive spirit are far down on the list, while others of which little in the way of civic reform has been heard, are near the top.

Cambridge, Mass., heads the list this year, as it did last, with what is probably the lowest typhoid rate for a city of its size in the world. Next is Paterson, N. J., raising a whole list of unanswered questions. Why should this city, associated chiefly with turbulent labor disputes, handle its health problem so much better than Dayton, with its commission government, or Detroit, or Kansas City or Washington? Why should New Haven have almost twice as high a rate as New Bedford? Why should Toledo and Indianapolis be among the worst sinners, while Cincinnati and St. Paul have reached the honor roll?

Among those that have undergone conviction of sin and seen the light are Pittsburgh, which now has its place in the second class; and just beside it is another conspicuous convert, Philadelphia, also for decades one of the worst of American cities in this respect. Even Baltimore is improving, though her place is still far down in the third class. The South stands worse than East, North or West. All but two of the eight cities in the lowest class are southern, and none of the sixteen in the first class. The difficulties in the way of improvement are decidedly greater in the South, but that they are not insuperable is shown by the great advance made by Louisville and by the strenuous efforts which have moved Nashville up from the very foot of the class where she stood formerly.

On the whole, there is progress to be recorded. In 1916, 33 cities had a lower typhoid rate than for the preceding year and only 26 a higher, and if 1916 is compared with 1910 the improvement is decided—a rate of 7.61 per 100,000 in 1916 as against 19.59 in 1910.

A GREAT CAMPAIGN FOR RED CROSS FUNDS

JUNE 18-25 has been set aside by the American Red Cross as the week of intensive campaigns to raise money for its work throughout the country. This is the first big drive for funds to result from the appointment recently by President Wilson of the American Red Cross War Finance Committee and the War Council, and also from securing the services of Charles S. Ward, who has conducted intensive campaigns for the Y. M. C. A. for many years.

During the week named New York city will be subjected to as intensive an appeal for money as can be devised. It is planned to have twenty teams of men and ten of women at work. Prominent business men will head the teams and each team will be composed of ten people. J. P. Morgan, Jacob H. Schiff and Finley J. Shepard are three men who have already agreed to head teams.

Forty other large cities will be subjected to only less intensive campaigns. For each of these a man experienced in this method of raising money will be provided, either from the ranks of Y. M. C. A. or Chamber of Commerce workers. The 500 cities containing Red Cross chapters not included in these forty will be appealed to as intensively as the chapters can do the work, and finally all other cities throughout the country will be appealed to through their mayors.

Cities not in charge of an experienced campaigner will be provided with pamphlets of instructions telling how the work may be effectively done. In preparation for the campaigns the men who are to lead the work in the forty cities met in Washington on Thursday of this week to receive suggestions and to lay plans, and on Friday representatives of the 500 cities having Red Cross chapters met for a similar purpose.

To secure a response from sections of the country not reached by any of the above methods, the Red Cross will depend on publicity. The National Association of Advertising Clubs has offered its services to carry word of Red Cross needs wherever it can reach. In addition, the president of every national bank will be appealed to individually as a prominent citizen to make a contribution. There are 27,000 national banks in the country.

No figure has yet been set as a desirable goal to be attained by this campaign week. The Red Cross does not hesitate to say, however, that it could use

\$100,000,000 to advantage promptly, and that beyond that its usefulness would be limited only by the funds at its disposal. The War Finance Committee is emphasizing now the work it hopes to do in rehabilitating the stricken sections of France, especially those recently left by the German forces. It will not emphasize the need of money to care for the dependent families of our own soldiers and sailors until it knows more definitely what provision the government will make for these families and how much dependency there will be as a result of conscription.

IOWA'S CHILD WELFARE STATION

FUNDAMENTAL service in child welfare is expected to result from the child welfare research station, established by the legislature and the state university of Iowa as an outcome of the agitation begun several years ago by leading women of the state, who formed for the purpose the State Organization to Promote the Establishment of the Iowa Child Welfare Research Station. Supported by women's organizations, physicians, some members of the legislature and by university professors, led by Prof. Carl E. Seashore, they all but succeeded in 1915 in passing the bill which has now become law by unanimous vote of both houses.

This act provides \$25,000 annually for "the investigation of the best scientific methods of conserving and developing the normal child, the dissemination of the information acquired by such investigations and the training of students for work in that field." The station is to be located at the state university in Iowa City, where it will utilize the laboratories, libraries and services of scholars in the respective fields of investigation. As these will be utilized at no additional expense, the appropriation may be used almost entirely in prosecuting field investigations. The station will be organized and governed by a board appointed from the faculty of the graduate college.

While the specific investigations will not finally be decided upon until a director has been appointed, it now seems probable that the work will proceed along the following lines. A basic survey will be made of the physical, mental and moral condition of the child's earliest life, from its prenatal period to its sixth year, when it enters the first grade of its school life. The facts thus found in various localities and under different conditions will then be traced by intensive investigation to find an explanation of each peculiarity of the child so discovered. The typical conditions operating for good or evil during the formative period of childhood will thus be disclosed and interpreted. It is also probable that an intensive investigation will be undertaken on the nutrition of the normal child

and another in the field of preventive dentistry.

POOLING A CITY'S SOCIAL FORCES

PHILADELPHIA is mobilizing its social resources under a district committee of the Department of Civic Relief of the Pennsylvania Committee of Public Safety. This committee includes the executives of some of the city's leading social agencies, as well as various prominent citizens. Robert D. Dripps, executive secretary of the Public Charities Association of Pennsylvania, is chairman. Judge Charles L. Brown, president judge of the Municipal Court; Stevens Heckscher, president of the Society for Organizing Charity; Mrs. John C. Groome, of the Emergency Aid Committee, and Dr. Wilmer Krusen, director of the Department of Health and Charities, are vice-chairmen, and John Ihlder, executive secretary of the Housing Association, is secretary.

Acting sub-committees have either been appointed or are in process of formation under the following heads: health and sanitation, morals, religious activities, dependents, child welfare, education, Americanization and protection of aliens, recreation, industrial conditions, recruiting and placement.

The committee is stressing two principles: 1. That organized effort for community health and sanitation, child welfare, the rehabilitation of families which need it, sound and safe industrial conditions, regular and wholesome employment, clean recreation, adequate educational facilities—especially for aliens—and for a robust and pervasive moral and religious spirit, is today national service and the finest kind of patriotism, and that, as a corollary, avoidable duplication of effort, overlapping, inefficiency, or retrenchment in service needed at this time, is definitely unpatriotic; 2. that the committee's work will in large part be a failure unless, not only during the war, but later when the war is over, the charitable and philanthropic institutions and agencies now at work in Philadelphia are stronger, more efficient and better coordinated than at the present time.

Philadelphia has no up-to-date directory of social work. The committee is planning as part of its work to supply this need. Headquarters have been engaged, and the chairman will devote his entire time to directing the work of the committee until the war closes. It is hoped that there may be a coordination not merely of plans, a thing relatively easy to accomplish at any time, but of the social forces themselves. By establishing a clearing house of social work, eliminating avoidable red tape, uniting in one campaign all the agencies and institutions of public and private charity, each with its definite part in a com-

prehensive plan, elastic enough, however, to admit of adaptation to changing circumstances, it is believed that this important part of Philadelphia's activities may be placed on a war footing as efficient as its military and industrial activities are reported to be.

COLLEGE SERVICE FOR THE VOTERS

AT the election in Oregon next month, when sixteen measures will come before the voters, Reed College, of Portland, will repeat its successful demonstration of last fall as to how a college may serve the state at the polls.

For six weeks prior to November 7 the college furnished speakers to sixty audiences in all parts of the city and reached probably one-fifth of all the registered voters. The story of the part played by the college has been told for the SURVEY by William F. Ogburn, professor of sociology and economics of Reed College.

"Every two years," writes Professor Ogburn, "each voter of Oregon becomes a legislator. At each biennial state election a number of bills and constitutional amendments, sometimes as many as thirty or forty, are submitted to the people. Many of these are so complicated that to form a careful judgment the voter needs to have a good deal of research work done for him. But how can Bill Jones, who sells groceries, get time to decide wisely, for instance, whether state, county and city should limit its appropriations each year to 106 per cent of the appropriations of the preceding year? This is only one of the complex questions he was called upon to determine this year.

"An election in Oregon is a wonderful educational period. The initiative and referendum is a device unsurpassed for the education of the people on political, social and economic issues. The citizenry fairly buzzes with comments and arguments. The newspapers help, but it would seem that the college is the best place for the voters to look for information. A college is a seat of learning and there is little suspicion that it has an ax to grind.

"This new type of educational work was done this year by Reed College by five members of the faculty and seventeen students from the departments of politics, sociology, economics and public speaking. They spoke before sixty audiences in six weeks. The meetings covered Portland so well that there were few individuals who did not live within three-quarters of a mile of a place where a meeting was held.

"There were usually three speakers at a meeting and the most important facts bearing on each side of each measure were presented in a non-partisan manner. Questions and discussions followed. I suspect that the legislators in

these meetings listened more attentively than do the elected representatives in the state legislative assembly. The meetings were held at clubhouses, schools, churches, libraries, private homes, fraternal halls and hotel luncheons. The speakers were both men and women and women voters were eager listeners in nearly every audience."

THE NEW FELLOWSHIP OF RECONCILIATION

"**T**HAT the love revealed in Christ profoundly reverences personality; strives to create an order of society which suffers no individual to be exploited for the profit or pleasure of another, but assures to each the means of development for his highest usefulness; seeks reconciliation between man and man, class and class, nation and nation, race and race; deepens and enriches devotion to home, to church, and to country, and harmonizes all these loyalties in dedication of life to humanity and to the universal kingdom of Christ"—this is the central belief shared by the men and women who, since the entry of the United States into the world war, have formed a Fellowship of Reconciliation.

Applying this principle to the duty of the Christian during the present war, they have further agreed "that since war, as we believe, inevitably involves violation of these principles and disregard of the supreme value of personality, we find ourselves unable to engage in it and are convinced that loyalty to humanity and to Christ calls us instead to a life service for the enthronement of love in personal, social, industrial, national and international life, with all that this implies."

The fellowship does not primarily seek a large membership to carry out some specific task but desires the cooperation of all who are in substantial agreement with its position and endeavor to maintain it in their everyday life and relationships. As ways of furthering the purposes of the group, it suggests the distribution of "fellowship papers," a series of pamphlets by Rufus M. Jones, W. Fearon Halliday, Willard L. Sperry and others, and a volume of essays on *The Conquest of War*; the formation of small circles for the study of international and industrial relations; work with foreign students such as that described by Charles D. Hurrey in the *SURVEY* for May 5; establishment of social forums for free discussion; literary expression of the fellowship's ideals; social surveys; and humane services for the oppressed and needy wherever opportunities present themselves. Fellowship in personal life and group membership for mutual encouragement, however, are singled out as the most important and immediate means of applying constructively the redemptive purposes of the declaration. Edward W. Evans,

511 Otis building, Philadelphia, is the secretary.

INDENTURED LABOR FROM INDIA

THE first deputation of native women ever received by the British government of India appeared before the viceroy in Delhi on March 22 to present an address on the subject of indentured labor. They had "thrown aside their customary abstention from matters outside their domestic circles and taken the unprecedented step of appearing in this public manner . . . to plead the cause of the poor, helpless and ignorant women who are taken from our villages and made the victims of the indenture system in the colonies."

The evils of this system, though conditions, in the West Indies, for instance, have been much improved in recent years, are well known and have been condemned by the Indian government itself. But, said the deputation, the separation from lifelong associations, the sense of degradation for those who have been beguiled into leaving their families and homes, the loss of self-respect and hopelessness of the men and women subject to it, have made indentured labor an institution which no reform will ever justify in the eyes of decent Indians.

We feel that the evils which have taken place under the indenture system have become so ingrained in the crown colonies affected during the past few years that no more Indians can go there in the future as unskilled laborers without the gravest moral risks. We are convinced that to preserve the self-respect and to uphold the honor of the Indian nation it is absolutely necessary that not a single Indian man or woman should ever go out under indenture again.

The viceroy in his reply mentioned that owing to circumstances well understood indentured immigration had been virtually stopped during the war. He did not believe that a traffic of this sort once ended could be revived. "It may be that in the future Indian laborers may desire to leave their native land in order to seek more remunerative employment in distant colonies. But if that contingency arises, we shall take care that the conditions are wholly different from those obtaining under the indenture system." He hoped, further, that through the development of her industries India would in future offer such tempting conditions of employment that neither men nor women would wish to emigrate.

His address included also an eloquent plea to the women of India to aid the government in the solution of the country's diverse social problems by taking a more prominent part in public life. He especially desired the deputation to use its influence in working for the higher education of women so that the growing inequality between men and women should be stopped. The aid of educated

women was needed also in hygiene and sanitation and, especially, the combat of tuberculosis. "On all these, it would be of inestimable value if women of position and education would institute a campaign of instruction amongst their fellow countrywomen."

TUBERCULOSIS AMONG THE ROOKIES

A PLAN for the control of tuberculosis in war time, drawn up by Dr. Herman M. Biggs, of New York, was presented to the National Association for the Study and Prevention of Tuberculosis at its annual meeting just held in Cincinnati, by Dr. George H. Palmer, of Springfield, Ill., chairman of the committee on tuberculosis in the Council of National Defense, the other members being Dr. George M. Kober of Washington and Dr. C. J. Hatfield, secretary of the national association.

Dr. Biggs' plan is, in part, to provide for the War Department a list of qualified experts who would volunteer to assist the Medical Corps of the army in examining recruits who show signs of pulmonary disease, or in whom the history indicates its possible presence. It would greatly expedite the work of the Medical Corps, already a much overworked body, said Dr. Biggs, if all cases of the following types were referred to a volunteer expert:

Every man whose history shows that at any previous time he has had any illness resembling pulmonary tuberculosis;

Every man who gives a history at any previous time of pneumonia or pleurisy;

Every man whose history shows that one or more members of his immediate family has had pulmonary tuberculosis or died of this disease;

Every man with a flat chest whose weight compared with his height is 15 per cent below normal;

Every man who gives a history of chronic catarrh or any symptoms of any disease in the chest;

Every man in whom any abnormal physical signs of any kind are found in the chest.

"We are of the opinion," said Dr. Biggs, "from our own experiences and interpretation of expert opinion in this matter as well as from the experiences of the armies in Europe, that any man with even a very limited amount of pulmonary tuberculosis, which is latent or arrested, is almost certain to break down under the physical strain of military training and army life, and a focus of disease previously latent or arrested will almost certainly become active."

Other recommendations of this committee were the periodic examination of all troops within three months after enrollment and every three months thereafter; the prompt isolation and reexamination of every soldier who has a cough for more than two weeks or whose general physical condition undergoes deterioration. When a positive diagnosis of tuberculosis is made, the soldier should be given hospital or sanatorium treatment, preferably in his home state, lest homesickness counteract the benefits of climate in remote localities.

COMMUNICATIONS

SAID OF THE SURVEY

TO THE EDITOR: Please find enclosed check for \$3 for one year's subscription to the SURVEY. It has been so much to me in our work in this small town.

MRS. G. B. BARROW.

[President, Civic Improvement League.]
Clarksville, Va.

WAR RELIEF

TO THE EDITOR: It seems to me there is confusion of thought in identifying the Red Cross with humanity. Relief to war suffering is, I think, essentially military in its effect, not humane.

In the first days of the factory system, ruthless industrial methods produced ravages comparable with those of war—torn bodies, bent limbs, blindness and starvation. Organized poor relief, as a subsidy to wages, prolonged these methods by making them a little more tolerable. It was only when industry was made to pay its own costs, when limitation of hours, prohibition of child labor, sickness and accident insurance, took the place of poor relief that industrial suffering was reduced.

It is war, not failure to join the Red Cross, that produces the misery we are asked to relieve. Whatever makes war more bearable tends to make wars possible. Upon the present war, moreover, contributions of any sort have a military effect. In modern war money and men must be devoted to hospitals; if someone else provides my hospitals, my money and my men can go to the trenches. If I get all the hospitals and my foe none, I have so much more chance of winning; if they are given to both of us, we can both fight longer. If in America we gave dances to raise money for field supplies and artillery corps, France could provide more hospitals; by giving hospitals, we enable France to provide more munitions.

If humanity can be served only by a victory for the one side or the other, it is doubtless humane to help pay the wages of war by contributing military stores: guns or hospitals or men. But if it is the first interest of humanity that wars come as seldom and consume as little as possible, then it is humane to leave war to stand on its own feet. If every warring country paid its own wages and were responsible for its own wreckage, we should soon find some substitute for carnage.

ALICE EDGERTON.

SAN FRANCISCO EXPOSITION

TO THE EDITOR: I write from a large state college in a western state. I feel moved to send you a concrete example of the effects of the notorious conditions in San Francisco and the exposition upon the country at large—such as were used in the form of argument to the exposition and San Francisco authorities by those working for a clean exposition city in 1914-15.

I am informed by a student here whom I consider thoroughly reliable, that the group of cadets who were sent by the college to drill at the exposition were given great freedom while there, and that during the week all but one of the entire body visited the Barbary Coast. Most of them went there the first night, having that in mind as the first thing to see because of its reputation.

Further, the Streets of Cairo was advertised about among the cadets by those of their number who first saw the show, and it was generally known among them as the

place where it took 10 cents to get in and 65 cents to get out, but that it was worth the money. Some of your readers know what a vile show that was: enough permanently to slime a boy's attitude toward womanhood. I personally saw a group from one of the many national college fraternity conventions at this show.

San Francisco has the distinction, apparently, of having introduced into the limbo of suggestive ideas in the minds of American youths, the whole Hawaiian and South Sea cult—much as the Chicago exposition is responsible for the complex of ideas connected with oriental immorality. It is not two nights since a body of students serenaded a sorority house with a song, entitled The Honolulu Hula Girl, the words of which were extremely vulgar and which are directly associated with such shows and songs as were introduced in San Francisco during the exposition year. I regret to say that the song was applauded by the members of the sorority.

Here, then, are two instances in as remote a region as could well be imagined, tracing directly to the effects of the policy back of the San Francisco and exposition administration.

The present life and death struggle between the reform forces and the business-tenderloin combine in San Francisco, though less clear cut than the crisis of the graft prosecutions, is of national importance and, therefore, worthy of treatment in the SURVEY, because it represents the last stand of segregated commercialized vice in this country in unprecedented brazenness and with a cynicism which can only be described as San Franciscan.

Pullman, Wash.

FRANK BALDWIN.

CHILDREN'S MOVIES

TO THE EDITOR: "How did you like the picture today?" we ask the child of twelve or fourteen, who has just viewed a film which bears the name of one of his favorite stories. "Pretty good," and then—"It was not right." "Why was it not right?" "Well, they rammed the bow of the boat instead of the rudder. There wasn't any girl in the story. The chest drifted ashore, they didn't pull it. Lots of it wasn't true."

These statements reveal the attitude of the child. "Do not tamper with our stories. If the rudder of the boat was rammed in the original story, the rudder of the boat must always be rammed in every subsequent telling of the story."

This is one of the psychological principles to which the National Juvenile Motion Picture Board calls the attention of the motion picture producer who is becoming interested in juvenile films. The harsh details may be softened, usually should be softened, but the story must be accurately told.

The National Juvenile Motion Picture Board was formed about three years ago. The lack of wholesome juvenile films sent the New York committee to the producers who unanimously said, "Show us a paying demand for juvenile films and we will produce them." The committee looked about for this demand. It did not exist. Finally from various parts of the country came the news of other committees attempting the same thing in practically the same way. It was as if the great mother-heart of our country yearned for the right thing for her offspring, and selected the same plan for all. By the urgent request of each committee in response to the invitation of the New York committee, a federation was formed and the movement became national. And behold, the nucleus of a "demand"!

All members are altruistic, their only desire being to turn the tide of juvenile attendance upon the movies to Robinson Crusoe, Alice in Wonderland, Twenty Thousand Leagues Under the Sea, Snow-White,

Dickens' Christmas Carol, Silas Marner, etc.

And they come! Bless their hearts, they come, and they come again the next time—1,800, 3,000, 6,000 in attendance at one performance!

This is what they wish—the very thing they ought to wish; they crave it, they must have it, and we shall see that it is theirs. We, therefore, insist upon the finest and best there is for our children—fine photography, clever and subtle acting, wholesome stories in plot and detail, stories which touch their lives and make them great.

ADELE F. WOODARD.

[National Juvenile Motion Picture Board.]
New York.

SOCIAL WORK-ISH-NESS

TO THE EDITOR: One thought I should like to give you for what it may be worth: Do not allow the SURVEY to foster the idea, however unconsciously, that professional social workers and thinkers as a class have a monopoly in the world's supply of good will toward men. The layman who spends much of his time—too much perhaps—in gainful occupations is not always an oppressor of the downtrodden, and his motives are not always selfish. His viewpoint is often different from the viewpoint of the social worker because his training and experience have been different.

For example, he is apt to take into account self-interest as a factor in human nature, which factor is too often confused by social workers as the equivalent of selfishness. Selfishness is unchristian and anti-social, whereas self-interest is neither. I sometimes think that there is as much social welfare in an honestly conducted business enterprise which is financially successful as there is in many of the social activities, laying stress, as such a business does, upon the importance of the individual being self-supporting and self-respecting, whereas the danger in some purely socialized activities is to foster an enervating paternalism.

Also it is not unusual to find among business men a conception as to the true causes of the social ills and sensible remedies for their cure or alleviation which, for reliability, compares favorably with the diagnosis and remedies of the professional reformer.

It would not be altogether surprising if out of the turmoil of modern thinking there should spring up before long a new society which would be known as The Society for Reforming Reformers, made up of common-sense individuals, some of whom might well possess a saving sense of humor. Such a society should include among its members many of the present social workers and thinkers, for I recognize a clear distinction between the professional social worker and the professional reformer.

But there would be no space reserved, nor any standing room provided for that type of reformer, whether he be a social worker or not, who advocates changes for the sake of changes, who impugns the honesty of the motives of those who oppose him, who stirs up class feeling and who discredits existing institutions, as, for example, the courts, because of some decision which in his opinion is not in accordance with social justice, however unassailable it may be legally.

These thoughts are the results of certain impressions I get from reading some of the articles in the SURVEY, and particularly by occasional phrases which appear in its columns when some question of nation-wide or world-wide interest is under consideration, and the query is asked "What should be the attitude of the social worker in relation to this great question?" This direct appeal to the social worker, as such and under such circumstances, is, to my mind, a great mistake. His class consciousness should not be emphasized when facing a problem of general interest any more than it would be

right to appeal to the class consciousness of the lawyers, or the ministers, or the barbers, or the bricklayers. Questions affecting methods, practices and ethics—in other words, the technique of a profession or class, are proper subjects for professional or class concern, but not so with questions of general importance. Such questions should be regarded from the standpoint of citizenship, and preferably from the standpoint of American citizenship.

Therefore, I repeat that any tendency to encourage class consciousness among social workers, or for that matter, among labor or capital, or to make any class feel that there has been imposed on it a burden of responsibility for human welfare different in kind or degree from that imposed upon all well-intentioned and sound-thinking people, is an erroneous tendency which has manifested itself at times in the pages of your publication—although probably wholly without any conscious intention on your part, or on the part of those who write for your paper.

All of this is said with the most sincere appreciation of the stimulating effect of the ideas for social betterment which are largely created and carried into effect by the professional social worker. My point is that any work that is worth while is of greater consequence than the individual or group of individuals that is engaged in it, and that an exaggerated ego in the individual or the group is not only unbecoming, but militates against the value of the work itself.

M.

New York.

A TYPICAL TOWN

TO THE EDITOR: A few months ago some of the citizens of Lake Linden, a small community of 6,000 people, and Hubbell, towns in the copper region of Michigan, began investigating the pool room and cigarette situation, with the result that several organizations, as well as individuals, have cooperated to bring about an improvement.

The laws of the state were reviewed with the result that the superintendent of schools drafted a circular poster, at the request of a committee, which was later submitted to the local civic improvement society for approval. This society went before the two village councils and the board of education to secure their cooperation and met with success. When the poster was printed it was distributed to all the local business houses. The daily and weekly press have given space and furthered the publicity of the movement. At least one saloon and one pool room placed the cards on the glass of the main entrance, and a proprietor of one of the saloons has volunteered to have a petition circulated to the effect that in the future persons carrying a line of tobacco will no longer handle cigarettes (soon there will be no saloons as Michigan voted dry last November). A recent survey of high school students revealed the fact that only one boy smoked cigarettes to any degree.

Clubrooms are maintained by business men of the town, the Calumet and Hecla Mining Company has for years maintained an excellent public library, a large room in the city hall is being used for social center purposes by old and young. A hundred and fifty thousand dollar (\$150,000) high school building is now under construction, which, besides providing laboratories for all the vocational branches, will contain a gymnasium of regular size fully equipped, an auditorium that will seat twelve hundred people, this room will be provided with a stage for amateur dramatics and a fireproof motion-picture booth.

At the present time art and industrial clubs are being planned for the boys and girls. Evening classes are now in operation. No one person or group of persons is responsible for this community movement, but it is the result of all forces working together for

greater community uplift and improvement.

Having often been interested in reading the articles in the SURVEY on the community work that is being done in the large centers, I have taken the liberty of enclosing a statement of what is being done in a small community. I am not reporting it as being unusual, but rather as typical of the general spirit and attitude in this part of the country, and as an example of what can be accomplished when there is a genuine spirit of cooperation.

Lake Linden, Mich.

R.

BIRTH CONTROL

TO THE EDITOR: There are two kinds of law-breakers: the ones who break the laws for selfish purposes, such as to gain wealth or power for themselves, and the ones who break laws for unselfish purposes, to further some great social principle burning in their hearts.

Unselfish law-breakers seem usually to be punished far more severely than selfish ones; the higher the motive that makes a man break the law, the more vindictively is he punished by those who cannot appreciate the nobility of the sacrifice.

There is at present on trial in Cleveland a case of the unselfish sort of law-breaking. Mrs. R. D. Mitchell has been arrested on the charge of having in her possession birth-control literature, technically called "obscene." The articles, drugs or information that she had are openly sold in every drug store, or may be obtained from any family physician, but such men are not prosecuted. This woman is picked out for a victim because she was not hypocritical nor mercenary, but boldly believed that the law is unjust, and proceeded to ignore it.

Birth-control is no more contrary to nature's laws than is brushing one's teeth. It is advocated by the highest authorities, and is practiced almost universally by all intelligent married couples. But the poor, who cannot support children, are not informed on such subjects, and the result is that our country is being swamped with unwelcome children, forced on the parents by the state, born in want and doomed from birth to lives of hunger and despair. The United States is the only civilized country in the world where laws exist against the spread of birth-control information. In Holland, since the establishment of free birth-control clinics, the infantile death-rate has fallen greatly, and the national health and stature has been increased. It is an unavoidable conclusion that every person should have the right to say when and how they shall have children. By the present laws, this right is denied to thousands of poor people in practice, and to all of us in theory.

Realizing these facts, and many more, a prominent clubwoman and the mother of four children has violated the laws on this subject in the firm belief that they are cruel and unjust and that it is only a matter of time when they will be repealed. By that act she takes her stand in a group of heroes who have dared to risk their liberty for their faith. The cases of Mrs. Byrne and Margaret Sanger in New York city have already resulted in an investigation of the law and will bear more fruit later. It is certain that the names of these women will be hailed as pioneers when the names of their judges are hidden in oblivion.

The outcome of the Cleveland case is still uncertain, but it looks serious. The same judge recently sentenced Dr. Ben Reitman with the full severity of the law. The duty of the readers of this letter is plain. They should help to further publicity in all ways. The cause of truth never needs censorship or inhibitions. Mrs. Mitchell may be spared, but if not, her sacrifice will not have been in vain. She points the way to richer lives and fuller freedom.

Cleveland.

S. H. PHINNEY.

SOCIAL LEGISLATION

MONTANA'S legislature has created a division of child welfare to be under the supervision of the State Board of Health. This is the fifth such division in the country, the others being in New York, New Jersey, Pennsylvania and Kansas. Important powers were added to the state health board, and valuable regulations affecting the work of public health and school nurses were passed.

UTAH'S legislature two years ago was described in the SURVEY by James H. Wolfe, of Salt Lake City, as a useless session so far as results were concerned. This very failure, however, aroused the people of the state and paved the way for a fruitful session just adjourned. It is, Mr. Wolfe points out, practically the beginning of social and industrial legislation in Utah, but it is a broad beginning. The legislature passed what is hoped will prove the most effective prohibition bill in the United States; it established an industrial commission with large powers, including the administration of the workmen's compensation act and control over contracts between employers and employes; it passed a broad initiative and referendum bill; it established a public utilities commission; it appropriated \$2,000,000 for roads and accepted the proffered federal aid in road-building and vocational education; it enacted an important irrigation law and established a water rights commission; it rewrote the militia code. While the income tax bill failed in one house, an occupation and privilege tax imposed on mining operations, which goes into operation in 1918, will, it is said, draw the attention of tax experts throughout the United States.

PERHAPS it is the students of educational matters who are most jubilant over the results of the session of the New York legislature just closed, for measures which they hardly dared to hope for have gone through. For instance, the "cities bill," reducing the New York board of education from 46 members to 7, "gives hope of getting things done," as someone said. The similar townships bill means that the educational system of the entire state, city and rural, can now be organized upon a definitely efficient basis.

The restaurant bill, supported by the Consumers' League, gives to women employed in restaurants a 54-hour week, rest for one day in seven and no night work.

The advertising of quack remedies for venereal diseases is prohibited. Health certificates for marriage licenses will be required hereafter. Provision is made for the consolidation of certain health districts of the state in the interests of economy and efficient administration. A better regulation of registration districts for vital statistics has been secured. The bill regulating more strictly the sale and use of drugs, introduced by Senator Whitney, has passed, though in a somewhat modified form.

The proposed constitutional amendment granting full equity jurisdiction to children's courts and courts of domestic relations, drafted by the State Probation Commission and introduced into the proposed constitution of 1915, was introduced separately this year and passed. It gives to the courts of this state the power possessed by the Chicago Juvenile Court and many others to deal with children's cases and cases of non-support in a broadly social and non-criminal manner.

The passage of the Hill-Wheeler city local option bill extends to people of all cities in the state, except New York city, where the law would have to be accepted by special referendum, the right to vote on licensing for the sale of alcoholic beverages within their limits—a right hitherto possessed only by the towns.

In the field of prison reform, an important law discontinues the fee system in county jails and substitutes per capita weekly payments for the maintenance of prisoners. Another act provides that any prisoner under life sentence shall be eligible for parole except only those who are serving a life term because the death sentence was commuted. The provisions that superintendents of state prisons may lease lands, paying for them out of the capital fund; and that all farms of state institutions, including prisons, shall be under the control of the Department of Agriculture, are considered advantageous, both because of the economy of thus further developing industrial resources of the institutions, giving opportunity for outdoor work for prisoners, and ensuring skilled supervision of such work.

At the discretion of directors of reformatories of the state, the use of tobacco will be permitted. Since many disciplinary troubles have arisen over this point, the new ruling is expected to make for harmony.

The bill providing for three-family use of old dwellings in Brooklyn, over which housing reformers sharply divided, was passed. The Strong reorganization bills for the State Board of Charities all failed. The passage of the Brown ripper bills, permitting the abrogation of certain features of the labor law during the war, and the success of the bills establishing the State Hospital Commission to work out a ten-year program, have been previously reported.

JOTTINGS

VOLUNTEER courses in typewriting, book-keeping and indexing have been offered by Columbia University, New York city, to train students for government service.

NEW officers of the National Association for the Study and Prevention of Tuberculosis are: President, Dr. Charles L. Minor, Asheville, N. C.; secretary, Dr. Henry B. Jacobs, Baltimore; treasurer, William H. Baldwin, Washington.

MINIMUM wage boards for the embroidery industry have been established by the Swiss Bundesrath. The state department has power to determine both piece and hourly rates of wages which may be varied from time to time, but before making such determination is obliged to obtain a report from a representative wage board commission.

THROUGH an error the statement was made in the SURVEY of May 12 that the legislature of Iowa had passed a bill giving the governor authority to suspend the child labor laws, despite the fact that in the issue of May 5 this bill was reported as defeated. The earlier statement was the correct one, the bill having passed only one house.

OVER 2,000 students of Teachers' College, New York city, have registered for special two weeks' emergency classes in war cooking, the making of Red Cross garments, knitting, field photography and fifty other war topics. Regular classes are discontinued and examinations waived for all who take

this work. The college estimates that 20,000,000 inhabitants of the country will profit by this work, since the teachers will in turn give similar courses in their own home towns this summer.

SENATOR ROBINSON, who led the fight for the federal child labor law in the upper branch of Congress, is authority for the statement that there is not the least possibility that the Senate will seriously consider the suspension of the law, despite the movement among southern cotton operators to postpone the date on which it will go into effect from September 1 next to the end of the war.

MANY friends made by Henry Bournes Higgins, president of the Australian Federal Arbitration Court, while he was in this country three years ago [the SURVEY, August 1, 1914], will learn with regret of the loss of his son and only child, who was with the British troops in Egypt.—Judge Higgins has been for long the president of the Melbourne Peace Society, and has never ceased to speak and write on behalf of freedom of speech, even in war time.

MCGILL UNIVERSITY, Montreal, has recommended the founding of a Department of Social Service to the university governors. One argument was that the war had turned people's minds more than ever to the urgency of social and industrial problems. It was also pointed out that while the number of trained social workers in Montreal has greatly increased in the last few years, most, if not all, of these have received their training in the United States.

TWO HUNDRED newspaper men—publishers, editors of dailies, Washington correspondents, correspondents of foreign journals, magazine editors and writers—have been invited by the Academy of Political Science in the City of New York, to join in a conference on foreign relations. What America should stand for in the day of settlement—in world organization, in the principles underlying that organization—with respect to the Caribbean and Latin America, with respect to the East, with respect to colonies and weaker nationalities, are some of the things to be discussed at the meeting which will be held May 28 to June 1, at Long Beach, Long Island. The American Society of International Law is coöperating with the academy.

CLUB girls from twenty-eight New York settlements met together May 12-13 at Mt. Ivy, the summer house of the College Settlement, in the first inter-settlement conference of senior club girls. Such topics were discussed as finance and business management, form of organization, membership and club standards, neighborhood social work, house social activities, club programs and club spirit. The conference was a first step in forming a permanent association of inter-settlement girls' clubs, similar to the boys' inter-settlement athletic association.

PRELIMINARY announcements of the health surveys now in course by the Metropolitan Life Insurance Company in different parts of the country indicate a large incidence of rheumatism as well as diseases of the heart and stomach. In West Virginia, where the company was investigating during March, influenza was unduly prevalent. In Kansas City, scarlet fever and measles showed so high a rate as to point to possibly epidemic conditions. In the western city more sickness was found among Negroes than among the white people. In West Virginia, the greatest amount was among coal-miners.

MASSACHUSETTS, which a fortnight ago had two dry votes in Congress, has now six

and in addition a "spotted dry," as the prohibitionists call Senator Lodge, who is willing to prohibit distilled liquor, but not beer and wine. A mass meeting in Boston last Sunday, including representatives of practically every prominent woman's organization, urged Governor McCall to come out for war prohibition and protested against the stand of Senator Lodge and the Boston *American* in the partial measure which they advocate. Men's organizations in all parts of the state have already taken a position in the matter.

"THIS town, with a population of 5,000," writes S. P. Chown, of Renfrew, Ontario, in connection with the SURVEY series on the Canadian Patriotic Fund, "has raised and given, or will have given by the end of this year, since the war started over \$150,000 for the Patriotic Fund, Red Cross fund, Belgian relief and other patriotic and war funds. Early each year we have a patriotic campaign lasting three or four days in which we get pledges from all classes, from the richest to the poorest, to pay a fixed amount each year spread over ten monthly payments. If the war continues for another year the town is good for another \$50,000 for these funds."

THE new base hospitals which the American Red Cross has been organizing for a year and a half are being ordered out for active duty and one has reached France. Each consists of 23 doctors, 2 dentists, 65 nurses and 150 enlisted men of the medical department, and is equipped to care for 500 wounded men. Besides its surgical equipment, each unit has its own laundry, kitchen and X-ray outfit. The six ordered out are those organized from the Presbyterian Hospital, New York city; Lakeside Hospital, Cleveland; Medical School of Harvard University; Pennsylvania Hospital, Philadelphia; Northwestern University, Evanston, Ill.; and Washington University Hospital, St. Louis.

ILLINOIS cooperation with the Woman's Division of the Committee of National Defense has been organized under the chairmanship of Mrs. Joseph T. Bowen. Serving on the advisory council of the state division are the presidents of the Federation of Women's Clubs, the state Women's Christian Temperance Union, the Catholic Woman's League, the Young Women's Christian Association and the Woman's Church Federation. Through the last, the united Protestant churches of the state have for the first time sought and secured recognition in public service. A complete registration of all the women of the state for service during the period of war is the immediate purpose of the Woman's Division.

THE preparedness claim has captured, for the time being at least, the new department of prevention and cooperation which V. Everit Macy, commissioner of charities and correction of Westchester county, New York, created several months ago to study charitable and correctional problems in that county. The department has practically been merged with the Committee on Cooperation with Red Cross, War Relief and Health Agencies, which is a sub-committee of the Westchester County Commission of General Safety, created recently to prepare Westchester county internally for any emergency due to war. John R. Shillady, director of the department, is acting as executive secretary of the committee.

"NAIL a flag to your hoe, your spade, your rake, and enter heart and soul into the food-growing movement." This slogan of the Woman's Christian Temperance Union is being followed by the 20,000 local unions in every part of the country. The Oregon W. C. T. U. is out to make "two chickens grow

Some of REBMAN'S New Books

DIABETES—

Fasting and Undernutrition in the Treatment of Diabetes.—By HEINRICH STERN, M.D., LL.D., New York.

This little book is based entirely upon personal observations and experiences. It will be found that it differs, in certain essentials and in a number of details, from the rules and regulations laid down by others in articles dealing with the same theme.

It is intended for direct perusal by the diabetic patient.

Cloth—Price \$2.00

FEEDING BABIES—

The Science of Feeding Babies and Normal Care of the Growing Child.—By H. ELIZABETH GOULD.

The author offers so many valuable hints and practical suggestions for almost every phase of a baby's career that her work is bound to meet with great approval.

It is written for young mothers and nurses having charge of babies.

Cloth—Price \$1.50

TEETH—

Care of the Mouth and Teeth. A Primer of Oral Hygiene.—By JOSEPH HERBERT KAUFFMANN, D.D.S., New York.

This brief volume aims at nothing else than the grasping of the fundamental idea of the value of oral hygiene.

To parents, teachers, social workers, and all those who have charge of children, this book should prove invaluable.

Cloth—Price 60 cents

OBSTETRICAL QUIZ FOR NURSES—

A Monograph on Obstetrics for the Graduate and the Undergraduate Nurse in the Lying-in-room.—By HILDA ELIZABETH CARLSON.

The essential feature of this work consists in a description for improvising everything required on an emergency case. It is eminently practical.

Cloth—Price \$1.75

WHAT SHALL I EAT—

A Manual of Rational Feeding.—By F. X. GOURAUD, M.D., formerly Chief of the Laboratory of the Medical Faculty of Paris, France. (Translation by F. J. REBMAN.) With a Glossary containing definitions of the Principal Technical Terms, and an Index of Diseases referred to in the text.

An Analysis of each Article of Food and its Calories are given. Also the actions on the digestive functions, in assimilation, secretion and elimination. Likewise the reasons are given why a food should be employed or rejected, according to the normal or pathological conditions of each individual case. Indications and contra-indications are given in every instance. This makes the choice of food adapted to each case easy.

Cloth—Price \$2.00

HOSPITALS AND THE LAW—

By EDWIN VALENTINE MITCHELL, LL.B. This is a short analysis of the general propositions of law relating to health institutions, and to make it readily comprehensible to those who are professionally or otherwise interested in such establishments.

Cloth—Price \$1.75

Rebman

Company

New

York

where only one grew last year"; the Michigan branch is cooperating with the State Agricultural School; other states are establishing canning clubs. The W. C. T. U. is prepared also to give information in regard to the making and filling of comfort bags; the establishment of rest-rooms at training stations and mobilization camps; the knitting of vests, mufflers and wristlets; general relief for families of enlisted men; and many other forms of assistance.

THE United States government has appropriated twelve and a half million dollars monthly for relief in Belgium and northern France to share with the allies the burden of this pressing obligation. In view of this fact, the Commission for Relief in Belgium has discontinued its appeals for voluntary contributions and suggests that pledges for future gifts be diverted to other urgent needs of foreign war relief. Millions of people in Poland, Armenia, Syria, Palestine, Serbia and other Balkan countries depend on voluntary gifts from America for life itself. The Federal Council of the Churches of Christ in America has sent out a new appeal on behalf of these stricken countries which do not participate in the official appropriation and where, according to recent reports, want and sickness are on the increase.

THE first task of the mayor's Committee of Women on National Defense, appointed by Mayor Mitchel as the official body for the coordination of defense and relief committees in New York city, is to make a uniform registration of all women's organizations or groups devoting themselves to emergency work. The committee will then be in a position to act as a clearing house for war service information of any kind. It will be able to suggest new fields of activity, to call attention to obvious overlapping of the work of existing agencies and to point out to organizations and individuals useful channels for their patriotic energies as well as opportunities for specialized education or training. Ruth Morgan is chairman of the committee and Mrs. Harrison Thomas is the executive secretary at the headquarters, 4 east 39 street, New York city.

THAT the break with Germany does not interfere with the possibility of bringing aid to the Jews in Palestine was pointed out in the SURVEY for March 31. That this also holds true of the relief of Armenians and Syrians is stated by Fred P. Haggard, chairman of the committee for the relief of these peoples. Contrary to the erroneous belief that in the event of a break in our relations with Turkey all work in the aid of sufferers in the near East would have to be discontinued, the committee has made arrangements for cabling credits to the stricken zones and for the administration of such funds by neutral agents. After a period of dissension and comparative inactivity, different factions representing the 200,000 Syrians in this country have recently come together for a renewed joint effort to raise a large fund for the relief of their suffering friends abroad.

FOLLOWING its time-honored policy of generosity towards its men who serve in the army or navy, Massachusetts was quick to make provision for such men and their dependent families. Supplementing their federal pay, the legislature voted each enlisted man \$10 state pay per month, and in addition an amount not to exceed \$40 per month for dependent families. The administration of these appropriations is in the hands of the commissioner of state aid and pensions. Last summer when troops were called to the Mexican border, Governor McCall appointed a voluntary committee, the Massachusetts Volunteer Aid Association, to make

provision for dependent families. When troops were called out in the present crisis, this association found itself with over \$20,000 left from the fund raised last summer, and accordingly was again called into activity by Governor McCall. The Red Cross, through its Civilian Relief Committees, has been of material assistance. In Boston, the committee of the Metropolitan Chapter is the agent of the Volunteer Aid Association in reporting upon the needs of families of soldiers. Since the Red Cross is a national organization, local chapters are also assisting families of men who do not belong to the Massachusetts quota and consequently are not eligible either for state aid or for assistance from the Volunteer Aid Association.

BESIDES the classes in civilian war relief noted in earlier issues of the SURVEY, a number of other classes have been announced. In Denver, 36 persons have registered in the class conducted by the Social Service Bureau of the Federation for Charity and Philanthropy, of which Anna G. Williams is general secretary. The field work is given by the bureau, the City Charities Department and the Jewish Aid Society. In Atlanta, the class is conducted by Joseph C. Logan, general secretary of the Associated Charities, in cooperation with the Juvenile Court, the Anti-Tuberculosis Association, the Jewish Educational Alliance, the Fulton county probation officers, the Vocational Bureau, the Central Presbyterian Church and the Atlanta Child's Home. In St. Louis the Missouri School of Social Economy, George B. Mangold, director, is conducting a class for the St. Louis chapter of the Red Cross, with the cooperation of many social agencies, and in the hope that those completing the course will form a stable group of volunteers.

PRESIDENT WILSON has made available for the United States civil service the lists of eligible candidates for clerical work from 250 states and municipalities. The Civil Service Commission in New York city offers 150 stenographers and typists for appointment in the wartime service of the federal government. That these candidates will receive early appointment, however, is by no means certain, as the number of additional clerks to be employed in Washington this year is reported as well under 5,000, while there are 100,000 names on the eligible lists of the federal Civil Service Commission alone. Press reports to the effect that the national capital would require the help of 100,000 additional clerks this summer and that problems of housing and social living would be proportionately complicated, are said in Washington to be unfounded. The War Department is employing some 700 additional men and women in its clerical staff. The Treasury has added 300 clerks, the Council of National Defense something less than 100 and other departments about 400 in all. When the Bureau of Internal Revenue, in the Treasury Department, is engaged in collection of the income taxes it will have an additional force of 1,500 to 2,000 people in Washington and 1,000 in the field. Civil service officials see in this war the beginning of a process of distribution of the executive forces of the national government throughout the country. For example, the liberty loan work is being handled by clerical forces in the twelve cities where the federal reserve banks are located. Efforts are constantly made to have field work summarized before it is reported to the national capital. In this way clerical staffs will be built up in the federal branch offices throughout the country and the tendency to assemble in the capital city a vast army of professional public servants out of touch with the normal political and industrial spirit of the United States will be overcome.

EARLY in April representatives of a score of the leading national social service organizations met with the SURVEY staff to exchange views as to the wartime urgencies in their fields, and to acquaint us with their plans.

THERE was general recognition of the need for spreading intelligence as to practical activities paralleling military operations—such as the relief of soldiers' families, the medical and vocational work for invalided men, the recreational problems of garrison cities, the preservation of labor, health and compulsory education standards, and a great number of other forms of emergent public service.

IT was felt all around that by serving as a chronicle, by pooling experience and suggestion, by affording a channel for the criticism of false starts and disorganized endeavor, and for the informed discussion of the social bearings of situations and issues as they develop, the SURVEY could perform a very real and vigorous function in what might be called the civil strategy of the national crisis.

WE are already well along in certain constructive plans. To illustrate, as early as March we "struck twelve" in articles on the work of the Canadian Patriotic Fund, which the Red Cross is reprinting and distributing to its chapters throughout the country. At the present time, Porter R. Lee's lectures to volunteers on "The Task of Civilian War Relief," at the New York School of Philanthropy, is, through the SURVEY, being used by training classes in

OTHER equally definite steps, cashing in social craftsmanship and drawing on the resources of cooperating national and local movements, will be announced within a fortnight.

ANY one of a hundred government and volunteer agencies are engaged in tasks of prime importance which can well enlist the time and means of every reader of the SURVEY as never before—peace-time activities which should not be allowed to sag, with resulting loss in social health and efficiency;—war-time activities which will help bear the stress ahead, make for fitness and prevent human waste,—war relief and medical work abroad, for which the need is greater this summer than ever before,—international movements paving the way for an enduring peace, and the generous processes of reconstruction.

THE SURVEY is not a counter-claimant to any of these. Rather, it is a medium which should bring reinforcement, cooperation, perspective; clarifying sequence and a broad outlook which will reveal the "forest" as well as the

"trees." You can help these essential undertakings in your own community and in the country at large, by helping us maintain this medium—even-handedly, efficiently, now and in the months ahead. We need that help to measure up to the opportunity. We need it *now*, so that the service we can render two months from now, four months from now, can be part of a long-headed plan. We need it in the form of 100 cooperating subscriptions at \$100 each. We need *yours*.

We Believe—

THAT home-making should be regarded as a profession.

THAT right living should be the fourth "R" in education.

THAT health is the business of the individual, illness of the physician.

THAT the spending of money is as important as the earning of the money.

THAT the upbringing of children demands more study than the raising of chickens.

THAT the home-maker should be as alert to make progress in her life work as the business or professional man.

—American School of Home Economics.

If you agree, send for the 100-page illustrated handbook, "The Profession of Home-Making," giving details of home-study, domestic science courses, etc. It's FREE. Address postal or note.—A. S. H. E., 519 West 69th Street, Chicago, Ill.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

"None genuine without
Trade Mark"

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

Excelsior Quilted Mattress Co.

SURVEY ASSOCIATES, INC., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

WHEN business and patriotism flow smoothly in one channel, a man's duty is clear. Canning, for example. Senator Brown finds that the proposal to arrogate the labor law in wartime opens up profitable possibilities of restoring the discarded practice of working women and children unlimited hours in the canning season. Hence his bill, now before Governor Whitman, against which labor, social and civic organizations have united in stiff protest. Page 225.

DR. FARRAND is to be in charge of a great American campaign in France—against tuberculosis. Page 223.

PERSONAL interest and service, slow as it is and trying to the patience, is the only solid basis for successful civilian relief work, as in all work with distressed, misguided, weak-willed men and women. We'd all like to make men strong and well and wise by wholesale, but human nature does not work that way. Page 221.

HIGH cost of living and other factors have combined to give new impetus to the co-operative movement in Great Britain. Page 230.

LABORATORY men have gotten to the point, in the study of polio, of calling names. "Glohold body," as they term the organism which produces it, is a mean little animal that not only wrecks children, but divides scientists. There's no proof it is transmitted by other means than personal contact. There is hope, however, that it may not return to its old haunts this summer, like the migratory birds. And in the treatment of polio victims there have been great advances. Page 205.

COMMUNITY service, the new name for an old ideal of the settlements, has been incorporated in the title of the Intercollegiate Settlements' Association. Page 219.

THE high cost of training men for new jobs has at last been recognized by business, and a new executive, the employment manager, hired to overcome it. His task is to find the right men, to put them in the right jobs and to keep them there. An industrial development of high promise that grew out of the vocational guidance of school boys. Page 211.

WAR relief agencies which do not make proper accounting of their funds are letting down the bars for those which would find audited statements embarrassing. The Council of National Defense asked to issue an investigated list of approved agencies. Page 215.

COUNCILS of social agencies represent a form of moral federation, as against the financial federations. The latter center their efforts on raising money while the former seek to improve standards of work. The St. Louis self-survey and its meaning. Page 216.

"SPOTTED" prohibition—with the beer left out—is the latest phase of the fight before Congress for national war prohibition. In state campaigns, this has generally marked the last stand of the losing wets. Page 223.

FEDERAL appropriations for vocational education have been taken advantage of by one state after another, until it seems clear that the congressional appropriation, which was ten years in committee pigeon-holes, is to be the beginning of a country-wide movement. Page 229.

Publicity

Excerpt from the Executive Office Report of the National Association for the Study and Prevention of Tuberculosis, read at Cincinnati, May 9, 1917

"EARLY in the year 1917, the National Association tried the experiment of contracting for its publicity . . . with the Press Service Company, thereby relieving the Executive Office of a large amount of work and responsibility. It is gratifying to announce that this experiment has proven its worth and it is hoped that it will be continued. There is need for greater expansion of the publicity work of the National Association, and for expert advice to the state and local associations on perfecting their publicity. This special service can best be done by an agency such as that mentioned, particularly since the personnel of the staff of this company is made up of men and women who have had special experience in the anti-tuberculosis and public health campaigns."

PRESS SERVICE COMPANY

30 East 42d Street . New York, N. Y.

SOCIAL WORKERS' EMPLOYMENT EXCHANGE: The Department for Social Workers of the Intercollegiate Bureau of Occupations registers men and women for positions in social and civic work, the qualifications for registration being a degree from an accredited college, a year's course in a professional school training for social or civic work, or experience which has given at least equivalent preparation. Needs of organizations seeking workers are given careful and prompt attention. EMELYN PECK, MANAGER, 130 East 22d St., New York city.

SITUATIONS WANTED

UNIVERSITY Professor of Sociology and lecturer on Social Problems desires to spend summer lecturing or in practical social or institutional work. Middle aged, married man. Go anywhere. Address, 2521 SURVEY.

SENIOR, Posse Normal School Gymnastics, wants summer work organizing and supervising recreation. Experience. References. Address 2522 SURVEY.

PROFESSOR of Social Science, practical worker, investigator and lecturer, desires position in charitable or correctionary institution or agency for summer, beginning June 25, closing September 25. Address 2523 SURVEY.

REAL ESTATE

FOR SALE

A Shaker village in the Berkshires, known as Fernside, situated in the beautiful Tyringham Valley. Comprises over 500 acres farm, pasture and woodland. Fourteen buildings of which eight are dwellings of various sizes and the rest barns. Would make ideal location for an institution or for private estate. Will be sold for fraction of value of buildings alone. Folder containing full information will be mailed upon request.

E. F. ROGERS, Agent

Lee, Berkshire County, Massachusetts

FOR RENT OR SALE

Staten Island

Small farm, near New Dorp. Situated on high land in centre of island. 14 acres, 3-story stone house, completely furnished, 12 rooms, 2 baths, 3 toilets, veranda enclosed with glass. Annex adjoining containing 1 large room. Telephone.

Good barn, with cement cellar and gardener's living quarters above. City water in house and barn. Good kitchen garden. Fine orchard, yielding plentifully. 10 minutes from trolley. Has been occupied for the past 2 years as a Home for Girls. For further information, apply to

MRS. P. MALI, 8 Fifth Avenue.

FOR THE HOME

BULLETINS: "Five-Cent Meals," 10c; "Food Values," 10c; "Free-Hand Cooking," 10c; "The Up-To-Date-Home, Labor Saving Appliances," 15c; "The Profession of Home-Making. Home Study, Domestic Science Courses," 100 pp. free. American School of Home Economics, 519 West 69th St., Chicago

Poliomyelitis

A Winter's Work and Study

By Gertrude Seymour

OF THE SURVEY STAFF

RETURNING warm days have stimulated many anxious queries concerning the investigations of poliomyelitis this past winter. What has been learned? What is the cause of the disease? How is the disease transmitted—by flies? or animals? or human beings? Can immunity be secured? Is there any cure? Will an epidemic occur again this summer? Can one guard against infection?

To answer these imperative questionings the best resources and skill of the entire country are being devoted. Students have not yet shown conclusively the cause of infantile paralysis; they have learned something about diagnosis, treatment, and after-care. And here is a brief story of some of the investigation that lies back of rulings, both thou shalt and thou shalt not. Such results as thus far have been obtained come from three sources: laboratory experiment, evidence from epidemiology, and clinical study.

First, as to the cause of poliomyelitis. In the laboratories an interesting situation has arisen—a distinct cleavage of opinion as to the causative organism of the disease. It will be recalled [the SURVEY, July 15, 1916] that Flexner and Noguchi were the first to isolate a specific organism which they believed to be the cause of poliomyelitis, describing this organism as a "globoid body" in 1913. These globoid forms are obtainable with great difficulty—growing only in certain media, but producing without exception the results of poliomyelitis in experiments. In contrast to these conclusions of the workers at Rockefeller Institute are the findings announced last December by another group, especially Rosenow and his associates in Rochester, Minn., and Mathers in Chicago. They, too, have isolated the globoid bodies, but under conditions that lead them to consider these not a distinct species of micro-organism, but a peculiar form assumed by a larger organism in the course of its breaking down or fission. This larger organism, as they saw it, not only tended to become smaller, but also to assume different forms according to the medium on which it was cultivated. Here is, apparently, an-

other instance of "pleomorphism" or the tendency of certain bacteria to assume new characteristics under different conditions of growth—a discovery for which Rosenow was awarded the gold medal for scientific investigation in 1916, and which has hitherto been most widely known through the study of mouth and throat infection as causing systemic disease.

The New York scientists took up the matter again, followed the methods of the Chicago experiments, and reported failure. They did not discover microscopically the "globoid forms"; they did not secure poliomyelitis upon inoculation; they did secure results common to ordinary streptococcus infection. So that the most definite statement possible at this time is that an apparently new coccus has been found, which possesses some interesting characteristics, and which has seemed to bear a certain relation to poliomyelitis, though what this relation is has not yet been determined. The number of cases studied is too small to allow the conclusion that it always occurs in the disease or in any form of it. In cases where its use in experiment has produced typical poliomyelitis it is possible, as Hektoen, of Chicago, suggests, that another more important microbe was present (*Boston Medical and Surgical Journal*, May 19, 1917).

As to transmission of this germ, the prevailing opinion is thus expressed by the American Public Health Association:

Many facts, such as the seasonal incidence and rural prevalence of the disease, have seemed to indicate that some insect or animal host, as yet unrecognized, may be a necessary factor in the spread of poliomyelitis, but specific evidence to this effect is lacking, and the weight of present opinion inclines to the view that poliomyelitis is exclusively a human disease and is spread by personal contact, whatever causes may be found to contribute to its spread. In personal contact we mean to include all the usual opportunities, direct or indirect, immediate or intermediate, for the transference of body discharges from person to person, having in mind as a possibility that the infection may occur through contaminated food.

For a time local facts seemed to point to flies, especially the biting stable fly, as the transmitting agent; but this contention has not been sustained. "No promising facts," says Commissioner Emerson, "or even coincidences between insects

and the development of the disease in New York city." Animals—dogs? cats? chickens? To quote Dr. Emerson again:

For some years past, the keeping of animals on premises occupied by tenements has been forbidden by the sanitary code. There have, therefore, been no chickens in these places. As regards dead animals, there have been about eight times as many dead animals removed from Brooklyn in the past six weeks as in the same period a year ago. This may point to an epidemic among the animals or to a change in the social habits of the people!

So then, whatever future study may reveal about insect or animal transmission, the human being has been proved worthy of suspicion.

Concerning the human transmission of poliomyelitis infection, an important communication comes from the Research Laboratory of the Vermont State Board of Health. That the port of entry for poliomyelitis infection is the upper respiratory tract is accepted as proved. The virus has been found in membranes of the nasopharynx, not only during acute illness, but several months after convalescence; also, it has been detected in the nasopharynx of healthy persons who had been in contact with those acutely ill. All these facts have been amply demonstrated and reported in the past five years. So in the Burlington laboratory Amoss and Taylor focused attention upon the healthy carrier; for he is important, first as a possible means of transmitting the virus to those less resistant who presently develop poliomyelitis; second, as a possible case himself, since he may later develop the disease. If then, during an epidemic many persons are contaminated by the virus, are they by so much a menace to their associates and to society? Not necessarily.

The investigation showed, first, that in some instances secre-

Photo from New Rochelle Department of Health through Mrs. Lathrop

ON THE VISITORS' PORCH

Through plate-glass windows mothers may see how their children are being cared for, and watch their progress. This brings comfort to the mother, pleasure to the convalescing child, and removes from the community any lingering dread of "the hospital"

tions of the membranes of the nasopharynx possessed a power of neutralizing the virus. Therefore not every person exposed to poliomyelitis becomes thereby a "carrier." Second, this power fluctuates, being diminished or lost by inflamed conditions in the upper air passages. Therefore, healthy air passages are from a new point of view desirable.

Too few tests have been made, the experimenters say, to ascertain yet how children and adults differ in respect to this neutralizing property of nasal secretions. But since poliomyelitis virus has remained active for over six years, even though kept in certain chemical antiseptics, that it should be unable to survive in normal secretions is a striking tribute to the healthy membrane's power of self-defense.

Another urgent problem for which laboratory workers and medical practitioners have sought solution is that of diagnosis. An early determination of the case is important both for isolating the patient, for prompt treatment, and for any adequate quarantine measures in the community.

Said Dr. George Draper, of Rockefeller Institute, to the special conference of health officers held with the Public Health Service to consider poliomyelitis:

Any quarantine measures which are based solely upon those cases of infantile paralysis which show paralysis are without value because the cases of infantile paralysis which develop paralysis are much in the minority; and unless the disease is recognized in the non-paralyzed forms, no quarantine measures which apply only to paralyzed individuals are adequate.

Urging that instances of sickness among children this summer be observed with special keenness, Dr. Draper told how to recognize the disease in the non-paralytic form—no longer an impossible thing to do, thanks to the work done in various parts of the country, especially Vermont. One of his associates said to Dr. Draper last fall, "I do not believe we need pay any attention to paralysis any more." It is one rather vivid way of saying that there is a perfectly definite "clinical picture" of poliomyelitis apart from paralysis but quite recognizable. Guiding details in that picture Dr. Draper gave as:

First, the manner of onset. Perhaps the most common method is when a child, previously physically well, suddenly complains of headache, *malaise*, or has a temperature. The child has been noticed as lying around, crouched up on the sofa. There is a lack of the usual activity, though he does not complain of being sick. A dose of castor oil may be followed by vomiting, the child feels better, and frequently the case goes no farther, and the episode is passed over as a "summer upset." The same onset may be followed in twelve or twenty-four hours by a paralysis.

Another form of onset is a long-drawn-out development. The child is sick and out of sorts; has no appetite; there has been some indiscretion in eating and a slight diarrhea. Things go vaguely along for five or six days; then either paralysis occurs or the case clears up.

A double onset is found sometimes. The onset begins in the way first described; but after twenty-four or thirty-six hours everything seems to clear up, the child is apparently well for two or three days, then suddenly headache returns, fever, and pain in the neck. This form seems to be increasingly frequent.

One form is called the "fulminating form" because of its suddenness and acuteness. At first sight it seems indistinguishable from spinal meningitis.

The instant resistance of a child to any attempt to bend the neck or spine is, Dr. Draper said, an amazingly constant sign that is of aid in diagnosis. Also the tenderness of muscles; and the disturbance of temperament. A usually calm, phlegmatic child becomes highly irritable, objecting to everything, with a whining resentfulness. Or the very antithesis may occur—drowsiness, or a rapid change from irritability to drowsiness, and if disturbed in sleep the child jerks away the shoulder with a veritable snarl.

Dr. Draper urged the value of lumbar puncture, often repeated at intervals of sixteen or twenty-four hours, if the spinal fluid does not at first indicate the trouble. He illus-

Photo from the New Rochelle Department of Health

THE PLAY TREATMENT OF POLIO

Under strictest supervision, for carefully assigned periods, children in the New Rochelle hospital play in the sunshine at various simple games adapted to their stage of recovery. The carpenter who is seen yet at work in the lower left corner, finished the playground just in time

trates the value of repeated punctures from a case which had just come to his attention:

One child was down with the disease and another became ill. A puncture was made within two or three hours of the onset which indicated no change in the spinal fluid. After twelve hours another puncture was made and there was a marked increase of cells. . . . At the end of a second twelve hours another puncture was made and the fluid was found to have returned to normal. . . . The following day the temperature was normal and the child was up and about as usual. If those punctures had not been done, the case would not have been known as positive, and the boy would have gone about spreading the disease.

With Dr. Draper's report the Harvard Infantile Paralysis Commission agrees in the main (*Boston Medical and Surgical Journal*, April 14). The commission found that with the aid of the family physician to furnish the earlier history, early diagnosis is possible in a large percentage of cases. They, too, believe the final test in uncertainty to be examination of the spinal fluid. The commission resorted to lumbar puncture in 31 cases which proved not poliomyelitis. In these examinations of spinal fluid the cell count was below 10, in all cases but two, and these showed 12 and 15; whereas in true poliomyelitis the cell count ranged from 34 to 1,980 in severe cases.

The repeated caution is, "be suspicious." A child who seems restless, tired, drowsy, with symptoms of influenza or digestive disturbances, should be promptly isolated and a doctor summoned. Too great care is better than being misled by symptoms apparently trivial. To the unusually prompt attention which ailing children received last summer Dr. Emerson attributes the astonishing fact that the death-rate was lower than usual:

The benefit of following such advice is seen at once in the earlier home recognition of the common infections of childhood, a quicker

appeal to the family physician, and in the more prompt and general reporting of communicable diseases of children to the health authorities. To the adoption of such advice we may attribute the decided reduction of the infectious diseases (pertussis, measles, diphtheria, scarlet fever, and infantile diarrhea) during the past summer.

In the matter of treatment, the year's experience has largely confirmed the value of "immune serum," that is, prepared from recently recovered cases of poliomyelitis, who, because of their attack are immune to the disease, at least for the present. The action of this serum is reported as arresting rather than curing paralysis—another argument for early diagnosis. Human serum rather than animal is said to give the best results. Last week a preliminary report appeared from the Research Laboratory of the New York city Department of Health, of experiments with a horse serum which seems to promise protective and curative properties. The treatment is, with proper care, given without danger. Like certain drugs, it is applicable only to the acute stage of the disease.

Traveling Clinics for Convalescents

FOR THE treatment of convalescent stages, a different procedure is needed, according to Dr. Robert W. Lovett, of Boston, whose name is especially associated with the treatment of poliomyelitis not only because of his work in Boston, but for the "traveling clinics" he has held in Vermont, and this year in New York state. In a recent issue of the *Journal of the American Medical Association*, Dr. Lovett urges that special attention be paid to the "middle stage" of the disease, after acute illness has passed and before it is time for orthopedic surgery:

This is the more important because during this period is determined

Photo from Dr. L. W. Hubbard, N. Y. State Department of Health

RE-EDUCATING WEAKENED MUSCLES

Physicians and nurses trained by the clinics which Dr. Lovett conducted, gently exercise limbs touched by paralysis, helping a child to use them again of his own accord. Preliminary testing is made with a spring balance

in many cases the degree of recovery of the affected muscles. In no department of surgery does precise, long-continued, common-sense treatment have a more determining effect upon ultimate function than here.

In his recapitulation of the after-care due to this convalescent period—a period which may last several years—Dr. Lovett emphasized first of all, rest; no massage while tenderness lasts; no fatigue—these are among his chief dicta. The three therapeutic measures most often depended upon for muscle improvement are massage, electricity, muscle-training. The first Dr. Lovett believes of use if properly controlled; the second “depends for its vogue largely upon tradition.” It has done harm, Dr. Lovett believes, because often used carelessly, and parents have been lulled into a false security supposing the treatment adequate while valuable time was lost and disabling deformities were acquired. It is from definite, steady, prolonged re-education of the muscle that is weakened, not injured, that the main hope of recovery rests:

The predominance of partial rather than total paralysis shows that partial rather than total destruction of nerve cells occurs in nine out of ten instances. The method advocated attempts to send an impulse from brain to muscle by establishing through such partially destroyed centers a new route which it tends to find for itself by constant repetition of attempted muscular effort.

A fuller account of this method was given in the SURVEY for October 21, 1916. The difficulty in applying it is, of course, the necessity of an exact and special knowledge of anatomy and muscle function, which is not common; and the long demand on faith and patience of those on whom the care finally depends—the mothers [the SURVEY, February 3].

But poliomyelitis is also a public health problem. It must be considered from the angle of the community as well as from that of the patient; from the angles of control and prevention as well as those of diagnosis and cure. According to Flexner, since the first epidemic in the United States in 1907, the country has not been free from the disease. Hence, local measures are but part of a needed “national guard,” a carefully worked-out program for uniform operation throughout the country.

It is the health officer's task in an epidemic to know where all cases are in his bailiwick; to isolate them from the community; provide for hospitalization; to assist in checking the disease in homes by sanitary rulings affecting milk routes and delivery, the use of library books, the disposal of refuse, etc.;

to trace infection to its source—across the continent if need be; to find “missed cases” and human carriers and other possible means of transmission; to see that only those travel who, as far as may be ascertained, have not been exposed to infection; to notify his fellow officers when people from the infected area in his domain go into their domains; to watch carefully those who are reported to him as coming from theirs. Meantime he keeps the fullest possible records for future study.

His five-year records will tell whether the eight cases in his state during April are more than usual for that time. His spot-maps will show the behavior of the disease in various districts, and help, perhaps, to answer the question, Why should this epidemic come quickly to a head in one place, and develop but slowly in another? What factors existed in the one locality that were not in the other? Waves of sickness in adjoining districts after the due incubation period of the disease, are understandable; but how did that case occur off there on a clean and sunny farm? Is the much-used term, “sporadic,” the only answer? Why do so many cases occur in farmers' families? Is milk going to be found the guilty transmitter, after all?

In an effort to find the answer to all these vital problems and yet not cause too great discomfort to people in the community, certain “minimum requirements” were adopted at the latest conference of health authorities with the Public Health Service, in May:

Briefer quarantine, not less than two weeks nor more than three, unless fever continues.

Adults of an infected household are advised to keep from contact with all children.

Disinfection of discharges, attendants, patient and premises.

Hospitalization unless moving the patient would be detrimental to the patient in the early stages when rest is imperative.

Travel and contact with children should be discouraged. Expert supervision is urged. Cooperation of public health nurses to teach sickroom precautions is effective. Food must be carefully protected; screens used; animals excluded from the sickroom.

The lumbar puncture is urged. Schools need not be closed; medical supervision should instead be instituted.

And, finally, prompt reporting of recognized or suspected cases is imperative.

The value of this extensive scheme of work to the whole country can easily be seen. It has also a service to the intensive medical work in individual homes. Clearly, a doctor's diagnosis must precede his report of a case to the health authorities. This diagnosis is frequently helped by the discovery through epidemiological work of the health department, which has traced contact infections from one part of the country to the other. A striking instance of this comes

Photo from Dr. L. W. Hubbard, N. Y. State Department of Health

IN THE REST AND SUNSHINE STAGE

Rolling chairs and level porches help to pass the time in the sitting-up stage of recovery

from California, told in a recent issue of the Public Health Service *Bulletin*:

An officer of the service was sent to investigate an alleged case of typhoid fever which had occurred about September 1, 1916, at the Point San Luis Obispo lighthouse, on Point San Luis, California. The case had been in a girl aged fifteen years, and from the statements of the family and of the physician who had been in attendance it was concluded that the case was probably one of poliomyelitis and not of typhoid fever. If it was poliomyelitis, the question was, What was the source of infection?

As the girl had been in the habit of spending two or three days in a week with relatives in the neighboring village of Avila, a brief investigation was made at that place. Inquiry as to whether there had been infantile paralysis in the village or vicinity was met with the statement that there had been none. When the question was asked, however, if there had been any children ill recently, some one stated that a baby had been ill with some sort of fever and that after the fever left, the baby was unable to walk or to use its legs. On visiting the home of this child information was obtained of a similar case in a neighboring family. The mother of the second child knew of a third one similarly affected. While in the village accounts of three other cases were obtained.

It was also learned that a family with several small children had come to the village in the month of July, and that one of the children had died while *en route* from somewhere in the East. This family was found, and it was ascertained that on July 5 they had left New York city, where they had lived in a neighborhood in which there had been cases of poliomyelitis. Two or three days after leaving New York, one of the children, aged four years, became suddenly ill with high fever and paralysis. The child did not recover. After its death the rest of the family proceeded to Avila. It was after the arrival of this family that the cases developed in Avila.

Similarly, contacts have been traced from Illinois to New York; from Maine to New York and Montreal; from Minnesota to Montana and Saskatchewan; from Washington to Montana; from North and South Carolina to New York, not to mention the more easily accounted for relation between cases in nearer states—Connecticut, Delaware, District of Columbia.

But the procedure which found the connection between this "fever of some sort" among the children of a California village and the epidemic in an Atlantic state, is precisely the same on a larger scale as that followed everywhere by local health officers. Take the story just reported from Montana:

The people of Happy Hollow, like those everywhere else, kept their children closely at home for fear of picking up the disease. The head of one family clerked in a store in Billings and made frequent visits to his family. His child developed all the symptoms of the disease without exhibiting paralysis. The case was isolated from the beginning of the symptoms, but a playmate from a neighboring farm developed the worst case of paralysis that survived the epidemic. Another neighboring child was a trifle ill, but nothing suspicious developed; however, a cousin of this child who had visited there one day, developed the characteristic lesions of the disease.

EMERGENCY HOSPITAL IN WESTCHESTER COUNTY

One of the wards in which quiet, light and skilled care saved many children from permanent deformity last summer

Photo from Dr. L. W. Hubbard, N. Y. State Department of Health

"SEE WHAT I CAN DO!"

Though her fingers are twisted yet, this little patient has gained some control of her arms

But the story of poliomyelitis is a story of a remarkable cooperation. Perhaps never in medical history have emergency measures been undertaken on so enormous a scale as in connection with these recent outbreaks. Physicians, health officers and public have worked together with zeal to a common end; and but little panic has occurred in the unselfish effort to understand what should be done to care for so many children sick and threatened with permanent affliction.

Of course, there were occasional exceptions. Physicians did not unvaryingly agree with the health department's diagnosis. Yet 97 per cent of the cases sent last summer to New York hospitals were correctly diagnosed—among the 4,378 admitted as poliomyelitis patients, only 49 were found to have some other disease. You may read in actual print a protest against all this preparation; rather leave things to the good old general practitioner who "deals with situations as they arise." Also, it is undeniably true that many people developed a most perverse ingenuity in discovering automobile détours to avoid places where the health officer was uncomfortably alert. But the argument here is obviously not against all quarantine, but for uniform measures. If some tenement families in terror shut their poor little youngsters up tight in the house lest they "catch something" from street playmates, the argument is not against an honest educational publicity, but for more playgrounds where under proper supervision the children shall have fresh air and recreation [the SURVEY, August 12, 1916].

Among the special efforts to meet these crises and to protect child-life must be mentioned several outstanding not only because of their extent, but because, too, of their significant results for science and for practice everywhere. A private gift to the Vermont State Board of Health at the time of the epidemic in that state in 1914 made possible not only the laboratory research already noted in this paper, but also the first series of "polio-clinics" in the country, conducted by Dr. Robert W. Lovett, of Boston. During the epidemic, Dr.

Lovett saw 304 patients. Last year in Massachusetts the State Department of Health cooperated with the Harvard Infantile Paralysis Commission directed by Drs. Pierce, Peabody, Lovett and Rosenau. Clinics were established in and near Boston and surgeons and nurses were on call for consultation or treatment at all hours of day and night. In 1916, the New York State Department of Health itself assumed the expense of the clinics to which Dr. Lovett was summoned as director, and in which local health boards, local health associations like that in Dutchess county, the State Charities Aid Association and nursing societies of all kinds, cooperated with good-will and to splendid effect.

Nurses went first into the field. Calling at the homes where children had been ill with poliomyelitis they told of the coming clinics and the hope of restoring weakened muscles through the new treatment. They arranged for transportation when families could not meet this expense themselves. And the children came, hundreds of them. In the three trips of the traveling clinic through the state, up to the end of April, 138 clinics were held, and more than 2,500 different patients examined. Dr. Leroy W. Hubbard, of the New York State Department of Health, said, "It is interesting to note how many more old cases appeared after our first visit—that is, cases that had occurred years before the present epidemic. The opportunity for such treatment did not exist when they were sick; they took it as soon as they could get it."

The state's work included providing hospital care for the children when this was advised, and sharing the cost with the parents and the special committee of the State Charities Aid when necessary. Similarly, braces and other apparatus were provided.

Within the limits of New York city this task of after-care has been fulfilled by the Committee on After-Care, which, as told in the SURVEY for October 21, 1916, represents the splendid team-work of health department, charities, physicians, nursing associations and relief agencies. This committee believes that fully 6,000 of the more than 7,000 children in the city needing care have been cared for. At the end of April it had secured over 13,000 clinic treatments, 2,800 home treatments, and successfully disposed of 5,000 cases.

Finally, a brief description of the civic cooperation that gave to New Rochelle, N. Y., the banner emergency hospital of the state must not be omitted. Of this hospital Mrs. John Lathrop writes:

Early in July, New Rochelle realized the magnitude of this problem. "Stop, look, listen," was the warning of social danger.

The citizens and health commissioners did not stop to ask, What shall we do? They said, How big a job have we to do? How vital is this to the city's future?

On the third day of July, the Board of Health decided to take immediate action. The mayor and a well organized citizens' committee stood ready to lend support. And so well has the work been done

that, this community movement swept New Rochelle into the front rank of civic preparedness.

Approximately \$15,000 has been used in constructing the plant. This does not include maintenance.

In getting ready to save the babies the Board of Health had the hearty cooperation of an unselfish community, with only a few exceptions. Some selfish folks thought only of their own interests; in one case a property owner said the only place for the institution was on the property which the city used as a dumping ground. Can you imagine a home for little children in the midst of the filth and debris of a city dump? Another whose vision was somewhat blinded at first, later came to aid in the work and made with his own hands little chairs for the unfortunate kiddies.

The number of people who desired to use their money to do good were in the majority, and with zeal and energy, with thought and earnestness, they built what has proven a model quarantine hospital on land owned by the city.

As soon as authority was given to proceed, a septic tank with pipe line was laid and city water and gas installed, two portable houses were purchased and all equipment necessary, including food, was ordered to be delivered when the call should come that a little citizen had been stricken.

Work began on July 7. No publicity was given the matter, but on July 19, when the first case was reported, everything was ready and the doctors and nurses on hand. Several other cases followed immediately—then they came so fast that they often caught up with the carpenters who built unit after unit, until in one month from the time the first case came in, eight portable units and four army tents were in use, with two larger units under construction.

Every device necessary for sanitation and the comfort of the patients and working staff was installed. Plumbing connections, laundry tubs, sinks, steam clothes dryer, steam radiators, telephones, electric fans, phonographs and adequate fire protection.

There is a sterilizing plant where all milk bottles used at the hospital and also those from the quarantined houses in the city are cleaned and sterilized before returning to the dealer. An incinerator takes care of all garbage—and as the virus of the disease is thrown off in body excrement, all dressings used are burned at once. Also all hospital refuse.

A branch laboratory was established in the town where specimens were examined and early diagnosis secured by expert diagnosticians. The exterior reminds one more of a summer camp in the Adirondacks than an isolation camp for contagious disease. The stars and stripes float in the summer breeze—flowers are blooming on every side; bay trees add dignity to the surroundings. Inside the atmosphere is one of simplicity and contentment, while much fresh air and sunlight permeates every nook and corner. Along the entire series of units is an enclosed porch which has proven a blessing to the patients as well as a labor-saving device to the staff. This porch is provided with awnings and connects with each ward.

The visitors' porch adjoins. Here the anxious parents can sit and, through a window protected with plate glass know the exact condition of their children as they are brought from the wards or lie in the cribs on the sunny screened porch. The "sun playground" is also connected with the main porch. Here the children are provided with facilities for wholesome recreation and given the exercise so necessary to a convalescent poliomyelitis patient.

The outlook for the coming year?

Those who have studied say that where an epidemic has been severe in one season it is less likely to recur soon. The likelihood of an outbreak in places not stricken last year is yet on the lap of the gods. But this chronicle, a warning of what to look for, what to guard against, how to serve, is dedicated to those who would bring to the service of children the best that science has to offer.

THE NEW ROCHELLE EMERGENCY HOSPITAL

This hospital, with its eight units, connecting pavilions, and splendid equipment, is considered one of the most efficient centers for treatment in the state. It is also a remarkable instance of cooperation between civic, health and philanthropic organizations

Making the Boss Efficient

The Beginnings of a New Industrial Regime

By *John A. Fitch*

OF THE SURVEY STAFF

SEVERAL hundred men from all over the country met a few weeks ago in Philadelphia to consider the problems involved in the relationship between employers and employes. They spent two days in frank discussion of industrial methods, they pointed out where managers and foremen were at fault and they talked about justice to the worker. There was earnest consideration of the question of legitimate grievances.

It was not a convention of an international trade union. Quite the contrary. The men present were the employment managers of some of the largest corporations in America. But they were meeting to exchange experiences and get new ideas in order that they might handle their jobs better, lessen the strain on industrial relations, and create more general satisfaction among employes.

These men were representatives of a new idea—an idea so hopeful and full of promise that there is just a possibility of its being the forerunner of policies and methods that will revolutionize industry. Whether it is as big an idea as that remains to be seen, but unquestionably it means new things.

When Saint Peter on the Day of Judgment begins to balance his books and tabulate his statistics he will find that until about midway of the second decade of the twentieth century employers of labor in general and critics of labor policies in general had one sin in common. They both believed that it didn't cost anything to replace one man in a factory with another.

There were exceptions, but in general the critics have expressed the idea almost exultantly. It makes a fine climax to a ringing denunciation of the employers' disregard of human welfare. "Aha," they have said, "he takes good care of his machines, new ones cost money. But his men? If he squeezes them dry and throws them on the scrap heap, what's the difference? A new man doesn't cost anything."

With certain honorable exceptions, the employers have believed the same thing. They have hired and fired with careless abandon. As a competent critic observes, "they have wasted human efficiency like water." The only thing many of them have cared to know has been whether men were standing at the gate, seeking employment. So long as men were in reserve they have been indifferent to discharges and resignations.

With the employers holding to a theory like that, and their most active critics—even the unions—silent or acquiescent in the fallacy that a new man costs nothing, what could you expect? The Ford Motor Company in 1913 hired 54,000 new men to keep 13,000 jobs filled—more than four times as many men as there were jobs. To put it in terms of modern business problems, the "labor turnover" of the Ford company was over 400 per cent.

That was four years ago. Things have changed since the men began to get five dollars for an eight-hour day. But even now in other industries the Ford experience of 1913 can be duplicated. At the Philadelphia meeting a representative of the Goodrich Rubber Company said that in recent years it

had been necessary to hire in a twelve-month nearly twice as many men as were on the payroll at one time in order to keep the plant fully manned. And he declared that, at the time of speaking, the labor turnover of that company was higher still.

Magnus W. Alexander, of the General Electric Company, made a study some time ago of employment problems in twelve factories manufacturing machines and metal products. The factories were offering employment opportunities at the beginning of the year to 37,274 men and at the end of the year to 43,971. He found that in order to maintain their regular force through the year and increase it by about 7,000, these factories had to hire 42,571 new men. W. A. Grieves, of the Jeffrey Manufacturing Company of Columbus, wrote to twenty manufacturing plants in 1914 and got their records of hiring and firing. The twenty factories took on 69,000 new employes that year in order to keep intact a total force of 44,000.

These figures are not extraordinary. The fact that such examples are hard to find is no indication that they are in any way exceptional, or that the other corporations have better records. It simply means that other records are not available. Last week an executive of an important employing corporation told me that, taking the country over, the average labor turnover is probably 200 per cent. Can you visualize that? If you were starting a factory this year to employ 1,000 men in the manufacture of army tents you would naturally expect to hire 1,000 men. But if this estimate is correct, and yours should turn out to be an "average" factory, you would have to superintend a procession of about 3,000 men through your employment office this year and 2,000 more every year hereafter. Last year Boyd Fisher, secretary of the Detroit Executives' Club, examined the employment records of fifty-seven Detroit factories and found their labor turnover during the year averaged something over 252 per cent.

Hiring and Firing

THAT there is a shocking social waste about such a condition has of course long been evident to everyone. That it is exceedingly discreditable to a society that permits it has been pointed out again and again. Even though we haven't known and do not know now just how fast the work of hiring and firing has gone on, we have seen it and been appalled by it in the seasonal industries.

We have blamed society for it, and rightly, where it has been due to the lack of training and guidance of the men and women who must engaged in industry. We have deplored the blind alley jobs where a boy learned no trade and is turned out at maturity, too old for the job that spoiled his best learning years and incompetent for a better job, to drift from one unskilled task to another, never satisfactory and never satisfied. We have scored the employer for ruthlessly turning off his "help" whenever it suited his purpose.

We have seen that the whole proceeding is tremendously

costly for society. The carrying of a dead weight of incompetents who might have been trained to skilful service and the maintenance of an industrial reserve to await the pleasure of the employer has been a heavy burden on the public. We have seen, too, how, above all, it has been costly for the employe. Every member of this shifting army of labor feels in his own body the effects of unemployment and stamped on his mind is the discomfort and misery of constant economic uncertainty.

The High Cost of New Men

BUT WE have continued to believe that it costs the employer nothing. How wrong we have been, the employer himself is now beginning to point out. There have been employers here and there who knew it all the time, but there was no talk about it. There was no general understanding. Most of the employers were wholly in the dark, and many of them continue in it.

The study made in 1913 by Magnus W. Alexander was the first attempt to grapple with costs. There were few guide posts pointing the way, but Mr. Alexander found no fewer than five distinct elements of cost in hiring and training new employes. These were:

1. Clerical work in connection with the hiring process.
2. Instruction of new employes by foremen and assistants.
3. Increased wear and tear of machinery and tools by new employes.
4. Reduced rate of production during early period of employment.
5. Increased amount of spoiled work by new employes.

He admitted that these were not the only costs and named two others: "Reduced profits due to reduced production," and "investment cost of increased equipment on account of the decreased productivity of the machines on which new employes are being broken in." He made no attempt, however, to estimate these costs.

He found next that these elements of cost varied with different classes of employes. After making due allowance for each of the five items of cost, and for each of five classes of employes, Mr. Alexander estimated that the cost of hiring a new man was between \$35 and \$40.

It was stated above that over 42,500 new employes were hired by twelve factories in a year that began with over 37,000 employes on the payroll and ended with about 44,000. After making deductions for changes due to unavoidable causes, Mr. Alexander came to the conclusion that 22,000 employes were unnecessarily hired, at an expense to the twelve factories involved of \$831,000.

Mr. Grieves, who made a study of twenty factories in 1914, where 69,000 new employes were hired to maintain a force of 44,000, found the same elements of cost as those considered by Mr. Alexander. He estimated the average cost of hiring to be \$40 per man and figured the extra cost of hiring unnecessary employes for the twenty factories was \$1,760,000. John M. Williams, secretary of Fayette R. Plumb, Inc., of Philadelphia, in an address delivered in April, declared that \$40 is an extremely low estimate of the cost of hiring a new man. His investigations led him to place the figure nearer \$100.

The awakening of employers to the cost of unnecessary hiring was given a great stimulus by the publication of the results of Mr. Alexander's study. The great scarcity of labor that has marked the last two years, however, has probably done more than any estimate of costs could have done to impress employers with the necessity of doing everything possible to maintain a stable working force. President Hopkins of Dartmouth says that only two years ago a large employer of labor

in Philadelphia said to him: "We are not interested in problems of personnel. We have a lot of work; but there are always more people to do it than there is work; and if those we have do not wish to work under our conditions, they can go, and we will go out and get others."

Now that men are not so easy to get, employers are in a frame of mind to consider the new idea in employment, which has spread so rapidly within the last two years. That idea is simply this: That the employment problem should be studied as carefully and as scientifically as any other business problem. To make this possible the function of hiring and discharging is taken away from the foremen and placed in the hands of a centralized employment department. Foremen are hired, not for their ability to select good workmen, but for their technical knowledge and their ability to get out the work. It is a loss of energy and a detriment to the plant for the foremen to do the work of hiring new men—and in addition they are, as likely as not, incompetent for that particular task.

An executive of a manufacturing company that adopted the new method of employment last year said recently:

One of the first benefits we derived was in freeing the foremen from the daily necessity of looking over men they needed at the factory door. Under the old system the first hour of each morning and the most critical hour from a departmental standpoint, was signalized by the absence of the foremen from their departments. The new system automatically changed this, and foremen were free to supervise work in their own departments, rather than lose hours daily in interviewing applicants for work.

By placing the function of hiring in a specialized department with a responsible executive in charge, it is possible to acquire a knowledge of the sources of labor supply that never could be had under the old system. At the same time a capacity for judging men and making wise selections is developed.

The first great function of an employment department, as I get it from the prophets and leaders of this movement, is the selection of the employe from an organized labor market—not at the gate. The fact that the old methods did not result in wise selections is one of the strongest reasons for the development of the new methods. Any analysis of labor turnover under the unregulated, hit-or-miss methods of a few years ago will show a constant shifting because the men hired were not fit for the jobs. A very large part of the work of eliminating this waste consists in hiring the right men the first time—in getting men who are fitted to the jobs. Trained, intelligent, experienced employment men can do that far better than men whose training is exclusively in another field and whose experience is in operation rather than in hiring.

Round Pins for Round Holes

NOT EVEN men of experience and training can select men with 100 per cent success, however. They may be mistaken altogether, or they may have sent men to the wrong departments or placed them in the wrong jobs. The second chief function of an employment department, therefore, the leaders and wise men in this field tell me, is the training of men and the constant endeavor to place them in positions for which they are fitted or to which they are adapted.

When the hiring and firing is done by the foremen a man seldom gets a second chance to make good. He may be eminently fitted for some other job in the plant, but the foreman hasn't time to inquire into that. He simply discharges the man and tries another. Under the newer system the foreman has no power of discharge. He merely refers an unsatisfactory employe back to the employment department with a statement of his reasons for considering him unsuited to the work of his department. The employment manager does

not then discharge the man except for the gravest of reasons. He studies his case, tries him out somewhere else and continues to try him until it becomes perfectly clear that he is hopelessly incompetent.

Most important of all from many points of view is the third function of an employment department conducted according to the new idea. Here is where new ground is being broken. The importance of hiring men who are fitted for the jobs has long been recognized. It is a new thing, however, for an employment department to consider whether the jobs are fit for the men. But that is what employment managers are now doing, seriously and in dead earnest. This is where, most of all, there enters what Meyer Bloomfield, of the Boston Vocation Bureau, calls "the new profession of handling men."

Loss from Trained Men Who Quit

STUDIES of employment problems have revealed that a high labor turnover is not due exclusively to hiring the wrong men. There are two elements in turnover—the discharge of undesirable workers and the voluntary leaving of desirable ones. The first element can be attacked effectively by careful selection. Discharges for incompetency may be reduced to a reasonable minimum. When this is done, however, the terrible drain due to the second element in the situation, the voluntary quitting of good men, is only emphasized.

Accordingly, the new employment department makes a careful study of the reasons for quitting. Many of them have a rule that a man cannot leave without passing through the office of the employment manager. A requirement that the signature of the employment manager must be secured before the last pay can be drawn enables the manager to have a face-to-face interview with every man as he leaves the company's employ. Of course it is not always possible to induce men to give their real reasons for leaving, but a tactful official can get pretty close to the facts in a majority of cases.

What this procedure means is that the management is getting the most accurate and valuable check it could possibly have on its own competency from the standpoint of dealing with labor. It is thus enabled to test the capability of foremen and gang bosses, and it receives illuminating reports on the physical condition of the plant and the acceptability of working conditions and of the scale of wages.

Nothing would illustrate the point better than the experience of a Philadelphia company that reorganized its employment methods only a little over a year ago. Speaking before a conference of employment managers in Philadelphia recently, John M. Williams, secretary of Fayette R. Plumb, Inc., explained that their employment manager has a chance to interview every man who is leaving the company's employ. He said:

Some of the results are illuminating. When men quit or are discharged they have no reason for withholding information. Complaints are heard of nagging foremen, lost time in waiting for work and other complaints bearing on shop efficiency. These are investigated, and if the fault is with us it is remedied.

These complaints brought to light the weakness of one of our best foremen. He always had a "chip on his shoulder," approached his men with that attitude and caused a great deal of friction before this fault was discovered. A talk by our superintendent convinced him that while that sort of attitude may have been all right ten years ago, it can't be done—not now.

Another case: a man quit, and on being asked for reasons stated that he had to lose too much time waiting for one indispensable tool, and for material for his work. Likewise was advised that his work was O. K. by one inspector, only to finish it up and have a half day's work thrown back by another inspector. An investigation proved that the man was justified; the case was settled and the man is still with us. As this man was an experienced hand in the department in which I stated it cost us \$100 to break in a new man, it looks as though this was a fair day's work.

Other accomplishments of the new employment department in this plant, as related by Mr. Williams, are most impressive. A section from the address has appeared in the SURVEY for May 19, telling of the reduction in working hours from 57½ per week to 52½ hours with an increase in production in the "worst department" of 18.4 per cent per week, and a general increase throughout the plant of 10 per cent. Further details are worth quoting:

One of our departments demanded personal investigation, as we found it impossible to keep men or to maintain production. An analysis by the employment department showed poor shop conditions in many phases.

(A) Inadequate artificial lighting at dusk, so bad that no one but the individual workman bent over his work could tell what he was doing. This part of room dark and cheerless.

(B) Bad drainage in the rear of the machines, which were fed with water. The water collected in spots. This section of the department had a dark unwholesome smell.

(C) The foreman was inefficient, had no control over his men, and therefore none over his department. He wasted most of his time doing clerical work that he dragged out almost over the entire day. The men who worked under him were as a class heavy drinkers and independent, worked when they wanted to and quit when they wanted to. The following remedies were suggested and adopted:

(a) Improved lighting. One hundred watt Mazda lamps were installed every twenty feet.

(b) Drain was put in which took care of all excess water, relieving both the discomfort and odor.

(c) The foreman was discharged and a capable man from another department put in his place. This move stiffened up discipline and improved personnel of department.

(d) The entire layout was inspected, safety guards put on all machines where there was any chance of a workman getting injured. Everything possible was done to make the operation of the machine safe and convenient for the men.

(e) Two instructors were installed to teach new men.

(f) All piece rates were carefully analyzed and prices adjusted so that there were no "good jobs" and "bad jobs." They were all made "fair and square jobs." Rates were equalized and set so that men could make an average sum per hour on any kind of work done in the department. Since then there have been several adjustments and still a few to make, but we keep in close touch with the work, and "raise before we are compelled to." This is the department that increased production 18.4 per cent. with five hours per week less running time, and last month had the largest production in the last three years. . . .

Transfers in the factory had never been attempted. If a man did not suit his foreman, he was fired and no questions asked. Now we look into unsatisfactory cases, try to find the cause, remedy it if we can, and if we can't, try to locate the unsatisfactory man in another department.

Just a few cases of what we have done:

We have one young man, of undoubted ability, good personality, pleasant and obliging. He became a regular Monday absentee, took all that was told to him as a reprimand with a lackadaisical air, and had evidently lost his "pep." We found upon investigation that he was fast becoming disgusted with his outlook, and felt that he was up against a blank wall. We transferred him to a semi-executive position in another department, gave him larger responsibilities, and a larger salary, and he has more than made good.

Another man was a boss trucker, who made a flat failure of the job. He was then made head inspector of one of our hardest departments, and has done wonders in bringing up the general efficiency of the department. He was temporarily unfitted for one job, and fitted for the other. . . .

To show you how far we have gone I will cite the way disputes were handled before and have been since the creation of this department. Formerly men would stop work in a bunch, demanding something, and refuse to return to work until it was granted. In one case they gave us one hour to consider a question involving fifty men in one department, and before we had time to even digest the demand the hour was up and they walked out. Since April 1, 1915, we have had no strikes nor no threats. We have had two requests, and the men have stayed at work until a decision was reached. I wish to say that if our employment department had done nothing but produce this feeling of personal responsibility to each other on the part of the men and on the part of the firm, it would have justified its existence and its cost.

In conclusion I feel that in the study of employment problems we are trying to solve issues ages old, and while the reward is great from the standpoint of efficient factory management, the reward is still greater if we can but help to solve the principle of humanity involved, and so insure that cooperation without which we can make no progress, and with which the watch-word will be "prosperity for all" and not "prosperity for one."

Four years ago the Vocation Bureau of Boston awoke to

a realization that something was wrong with employment methods. Their best efforts in placing young people in the right positions were nullified by a lack of effective cooperation toward the same ends on the part of most employers. There seemed to be little effort to fit the man to the job or the job to the man. A boy would be placed in a position only to lose it or leave it in a short time. In order to get a chance at least to talk things over the Vocation Bureau invited into conference a group of men connected with the various industries in Boston who dealt with the problem of hiring. From that initial conference grew a desire for regular and frequent conferences for the interchange of opinion and experience, and the first association of employing executives in the country.

Managers Organizing in Many Cities

ACCORDINGLY the Boston Employment Managers' Association was organized. Not all of the members were "managers" at the outset. The employment problems that were given an airing at these meetings, soon led to the conviction, however, on the part of most of the members, that the man in charge of employment should be a manager in a real sense—an executive with recognized responsibility and authority.

Almost simultaneously, in other parts of the country, notably in Detroit, similar organizations with similar convictions and aims have come into being. From these pioneer organizations the idea has grown until there are now in a dozen cities, from Boston to San Francisco, organizations known as executives' clubs, employment managers' associations and the like which meet regularly to discuss employment problems. Three national conferences have now been held, the first in Minneapolis and the second in Boston—both of these were held last year, the third in Philadelphia in April.

It is difficult to say what this movement may mean to industry. The fact that it is a "movement" is what gives it significance. The individual conceptions in this new idea of employment are not themselves new. Some of them have been practiced for many years by individual employers. The important thing is their rediscovery and their restatement in a form that has taken hold of the imagination of employers the country over and so is gathering adherents like a new crusade.

The movement must give a great impetus to education and to the conservation of human skill. So much it must accomplish merely from the standpoint of getting the right kind of workers into industry. When industrial managers analyze industry itself to see whether it offers a fit career to the kind of men whom they would like to employ, the possibilities in the way of social betterment are very great.

The aims, the full intent of the new type of employment manager, cannot be described except in his own language. Robert C. Clothier, of the Curtis Publishing Company, has said, "The raising of the standard of efficiency of the working force, individually and as a whole, in order that the purchasing power of the wage-dollar may be increased—this as we interpret it is the broad function of the employment department." And he names among the essential principles to be observed, intelligent selection, instruction work, the creation of a "satisfied spirit," the stimulation of hope of advancement by filling positions from within the organization, and the avoidance of arbitrary or unjust dismissals.

Philip J. Reilly, of the Dennison Manufacturing Company, in describing their employment methods which cut labor turnover down from 68 per cent in 1911 to 28 per cent in 1915, says that it has been "worth a lot" to discover how "vital to the contentment and efficiency of a working force" it is to have foremen who are friendly and patient. "It is worth while also," he says, "for the industry to have maintained

through its employment department a point of contact with the employes that has resulted in their feeling free to express themselves."

President Hopkins, of Dartmouth, who reached his present position through the unique route of employment manager in several large corporations, speaks of the efficiency of a high wage and reasonable hours. "The truth is," he says, "that seemingly there is not yet any general understanding among employers that a high gross payroll does not necessarily result from a high individual wage, or expressed in slightly different terms, that the cost per unit of production may be larger the lower the rate of pay to the individual worker."

The same idea is expressed by Boyd Fisher, secretary of the Detroit Executives Club when he says: "One of the most basic remedies for turnover is the payment of an adequate wage. . . . By adequate wage I don't mean merely a minimum wage. I mean a good fat wage. . . . Start your men right, promote physical efficiency, foster good habits, make your work an unfolding career and a sufficient future, and all the time encourage self-expression, not only of complaints but of suggestions and of cooperative interest and activity."

Mr. Fisher, who is one of the most irrepressible optimists in this movement, even goes so far as to recommend that when men must be fired—for he believes that "there is a legitimate place yet for the tin can"—"every discharge should be certified by a committee on which workmen are represented." This sounds like a radical proposition, yet at the Filene store in Boston no employe has been discharged for years without right of appeal to a board on which not only are employes "represented," but which is composed exclusively of employes. This board has reinstated some employes who have been discharged by the store, and others they have refused to reinstate. No one can come in contact with its work without being deeply impressed by the uncompromising standard of justice that has been set up toward the store management as well as toward the employes.

The Promise for Both Masters and Men

IT WOULD be too much to expect that industry in general will soon be conducted in accordance with these ideas. The labor policies of some of the largest corporations in the country are based on theories that are vastly different. But the fact that these new ideas in employment are finding such wide acceptance among employers and industrial managers does justify the hope that great changes are on their way—changes that will mean vastly improved conditions of living and of work, more amicable industrial relations and better industrial practice in every way, affording benefits to the employe and to the employer as well.

The new idea in employment methods must have the effect of changing altogether the attitude of mind of the employer as he approaches any question involving the satisfaction of his employes. The old, narrow-minded attitude that refuses to meet a committee must give way to a more tolerant, a more scientific spirit. An employer doesn't refuse to give any consideration to a machine that has broken down, he tries to get at the cause; he doesn't curse a piece of material that fails to meet the required test, he sends it to the chemist for analysis.

It doesn't pay to have a different formula for treating human reactions. Dissatisfied men are expensive men to employ. The new attitude towards these matters is going to lead the employer sooner or later to consider coolly and on its merits every conceivable need and desire of the workers in his plant. It will lead him out into the community to discover whether there exists an opportunity for comfortable

living at the wage he pays. And finally it must lead him to consider the question of the participation of the employes in problems of management. One of the biggest shoe companies in the country has 20 per cent of its employes in training all the time for executive positions. That number of men alternate between work on their machines and on executive work. Another has found it worth while to spend time explaining to the men its production problems. It turns over to the men all the knowledge in its possession, leads them to see the job not as a mechanical process but as a problem to be solved and

thus it enlists their cooperation and at the same time gives them something worth working for.

It isn't industrial democracy—whatever that is—not yet. But the men in this new movement have said goodby to tradition. They have turned their backs on prejudice and the closed mind. They are ready to give a hearing to new methods in dealing with employes and even to give them a trial. When a big idea gets into the minds of men like that they are worth watching and the whole world is before them.

A Danger in War Relief

By Barry C. Smith

FINANCIAL SECRETARY; SECRETARY BUREAU OF ADVICE AND INFORMATION, NEW YORK CHARITY ORGANIZATION SOCIETY

THERE exists today, due to the urgent need of war relief and to the policy of some of our war-relief organizations, a condition which is inimical to the progress of social work, and which may easily become a distinctly demoralizing force, capable of undoing the educational results of two decades. It is a danger which has not yet assumed large proportions and which may easily be checked. It should be checked very promptly.

There are at this time and have been during the past two and a half years a large number of war-relief organizations raising money in the United States. Somewhat over eighty have been sufficiently investigated by the Bureau of Advice and Information of the New York Charity Organization Society to enable that bureau to certify that they are worthy of support. Tremendous sums of money have been secured by them, wide publicity has been obtained.

From the very outbreak of the war, demands of the sufferers abroad have been both fundamental and immediate. Food and clothing in ever-increasing quantities—these first of all have been necessities. Second in demand, perhaps, and almost as pressing has been the need of medical supplies. Organization after organization, committee after committee, has sprung into existence, appealing for millions upon millions to feed the starving, to shelter the homeless, to relieve every imaginable suffering. The appeal has been direct, elemental. Rehabilitation is mostly for the future; primal needs must be filled now. Quite naturally our American committees have emphasized that direct and forceful appeal. Little has been said about the considerable service which even in this emergency period is needed; little has been said of the expense of providing either service or relief. Demands have been pressing; to meet them quickly and adequately, large sums had to be secured without delay. The surest and most effective way of reaching the sympathetic and not over thoughtful giver has been to stress the suffering and the need of relief.

In this anxiety to prevent unnecessary misery by prompt measures, two factors have been, quite unintentionally, perhaps unconsciously, brought into action. The first of these has to do with financial policy. The war-relief organizations are largely collecting agencies so far as their work in the United States is concerned. Funds contributed are either sent abroad for disbursement, or are expended in the purchase of supplies which are themselves shipped abroad, where the actual work among the sufferers is done. Therefore no expense for service necessarily appears in the accounts of the American organization beyond the expense of collection, shipping, etc. The pub-

lication of a separate financial account of the American work (which is quite common) shows in consequence a very low overhead charge. In most cases the complete account of an organization, including the work abroad, would give a very different impression. Furthermore, there has been a natural and entirely justifiable desire to keep the administrative expenses properly chargeable to the American end of the work as low as possible. In accomplishing this some very curious policies have come to light.

One man, connected in a volunteer capacity with one of the very best of our organizations, stated not long since that all expenses of administration, including postage and other office charges, packing, shipping and certain costs of manufacture, amounted to less than 1 per cent. "Every dollar goes straight where it is needed." But when closely questioned, this gentleman admitted that the actual expenses were nearer 15 per cent, but that they were "donated," *i. e.*, paid by a number of wealthy contributors who "understood their value and necessity," so that they did not appear on the books. In other words, the amounts given for this purpose did not appear either as receipts or disbursements in the accounts of the organization.

As to the ethical value of such procedure I have no comment to make. But it is certainly a way of "beating the devil around the stump." It creates a wrong impression in the public mind, and it is distinctly a non-educating influence. It discounts and depreciates the value of a perfectly proper and justifiable expense, and tends to create an impression that a 99 per cent relief, 1 per cent administration, charitable organization is possible and desirable—which is hardly the case.

The second of the factors above referred to relates to the question of administrative responsibility. Many of our war relief agencies do not publish audited financial statements. More than once the writer has been curtly informed that financial statements were not shown to anyone—that the mere fact that Mr. or Mrs. So-and-So was behind the movement was a sufficient evidence of integrity. The really regrettable fact is not so much any danger of dishonesty; it is rather that such a policy educates the giver to contribute without demanding evidence of responsible management. This is directly the reverse of what social agencies have been striving for. And in the long run this failure to insist on such responsibility is bound not only to lower the standards of many good organizations, but also to encourage dishonest people to undertake bogus activities, for which somehow or other they seem to be able to secure the use of well-known names.

Not many really good organizations have descended to the use of solicitors on commission, an indefensible and expensive system which puts a premium on dishonesty. But not so of entertainments. These have occurred without number and in most cases the arrangement is something like this. If total receipts are \$5,000, expenses of, say, \$1,500 are first deducted and the balance split, half going to the "manager" and half to the war-relief fund, which, therefore, receives about one-third the total amount for its actual work. One man, perfectly frank about the matter, recently collected a considerable sum as "American representative" of a foreign war-relief agency, and sent the entire amount abroad with no deduction whatever. He said, with no hesitation, that he was glad to do so because it gave him a standing which he thought would assure him a large sum from the management of a "50-50" entertainment.

The situation above outlined need not be regarded at this time as cause for alarm. It is by no means universal. But it does indicate a general trend; and when one considers the wide influence of the war-relief organizations, the important work they are doing, it cannot fail to appear that they are bound in the long run to wield a tremendous educational power. It is of vast importance that that power be properly applied. Otherwise it may do great harm. It may so far lower administrative and financial standards, it may so depreciate the popular valuation of skilled social work, as contrasted with relief, as to undo twenty years of painstaking education of the people of this country.

The remedy has lain with the organizations themselves. They could have taken the broader view, and their funds would not have been decreased had they adopted the most scrupulous care in making their work and methods conform to the very highest accepted standards. But they have not done

so. Already the failure to insist on these standards has somewhat lowered the demands of the giver, bringing about a kind of unquestioning enthusiasm; and it has encouraged the dishonest to undertake certain money-raising schemes, which would be impossible but for that very lack of questioning. In order that the great good accomplished by war relief may not be offset by the creation of careless methods and the encouragement of a careless attitude in the appraisal of charitable agencies, some form of supervision seems now imperative. There is, however, no existing force which can either establish regulations or induce the various organizations to abide by any regulations which might be laid down.

The suggestion is therefore made that a federal bureau of endorsement be established by executive action to undertake this work. Such a bureau might be operated under the supervision of the Council of National Defense, as a department of its work, and the council has before it this week a suggestion to that effect. No legislative action would be required to establish it, its work would be simple and could be conducted quite along the lines of an ordinary charities endorsement committee. Reasonable minimum requirements should be laid down, opportunity given to meet these requirements, and all organizations soliciting funds for war relief should be invited to submit satisfactory evidence that such requirements are being fulfilled. A list of approved organizations should then be issued and widely distributed. Not a word need be said about agencies not approved; the mere omission from the list would be sufficient.

Such a bureau would receive the hearty cooperation of the better organizations and would standardize a great and necessary work of charity. Above all, it would help maintain those standards of social work which have been won at such pains.

Central Councils and Community Planning

By Francis H. McLean

YEARS enough have passed since the first central council of social agencies was created to make possible a review of the actual results of the movement: where they have been weakest, where strongest. It will also be well to consider the gradually developing philosophy which is behind this form of community organization for social planning.

For the sake of clearness, and in order to distinguish this from other forms of federation, no matter what titles may be used, we shall here define central councils as delegate bodies representing the social agencies of the city, these agencies still maintaining independence of action in all fields and being bound together by cooperative rather than contractual relationships. In so defining central councils, we are in no way taking a stand against financial federations on the one hand, or city conferences of charities on the other. We are simply trying to limit our group to those federations whose ideals and form of organization are practically the same and whose underlying philosophy is the same.

At once we part regretfully from several well-known friends. The oldest council of all, that of Pittsburgh, has

become virtually a city conference, though it is by no means inactive in the development of coördination. The Central Council of Seattle may be listed in the same category. On the other hand, the council in Cincinnati has fostered contractual relationships by arranging for joint money-raising for a number of its larger organizations.

Strictly limiting ourselves, therefore, to non-contractual councils, we find that active ones exist in Milwaukee, Wis.; Rochester, N. Y.; Columbus, Ohio; St. Louis, Mo.; Chicago, Ill.; Minneapolis, Minn.; Springfield, Ill.; Columbia, S. C.

These are given in the general chronological order of their establishment, though the writer does not affirm absolute accuracy in this regard.

The Rochester council occupies the peculiar position of being the general board of the United Charities, electing the executive committee which manages this society's work. By reason of this double relationship, it can scarcely be compared in the scope of its work with the other councils. Let it be said now, therefore, that it has been very active in the educational field, its monthly meetings being carefully planned. It has undoubtedly exerted a very great influence in social develop-

ment, but it has attempted none of the functionings of the other councils. It may, however, do this in the future.

The pages which follow will dwell mostly on developments in Columbus, Milwaukee and St. Louis, because the councils in these cities have existed years enough to show in what directions they have exerted influence. Minneapolis, Chicago and Springfield indicate certain later as opposed to earlier tendencies. Columbia, the infant, is just in the formative stage, but it is a sturdy and determined infant. It is the first council of any strength in a community of less than 50,000 population.

The principal purposes of central councils may be briefly stated (not in terms of their constitutions):

1. To develop better understanding and cooperation among existing agencies.
2. To further new activities whenever required by inciting the proper organization or group to undertake the work.
3. To provide means for united action in the carrying on of any educational or agitational campaigns for governmental action in the administrative or legislative field.
4. To develop constantly improving standards of work among existing organizations.
5. To work out and carry out, through its influence on the proper groups, a systematic program for social development.

Turning to the first of these purposes, we can have no doubt of the large results which have been achieved. Sometimes the efforts have been most systematic. Milwaukee gave all of its meetings, for the first year of its existence, to a presentation of the work of every one of the agencies in the city, the agencies being divided into groups, of course. The secretary of the council recently expressed the opinion that in no city of its size has there been developed such a genuine working together as in Milwaukee, by reason of the council's existence and this first year's program. In Chicago there have been informal case conferences for case work societies which have been exceedingly valuable. In practically all of the cities there have been definite committees at work in this field, but we cannot pause to describe exactly what they have accomplished.

As to the second object, "to further new activities," the Central Council in Milwaukee is at least responsible among other advances for the re-organization of the Associated Charities upon a modern basis, the organization of a confidential exchange, the organization of a Juvenile Protective Association, the organization of a Legal Aid Society, the inauguration of social service work in hospitals, the undertaking to investigate vacation homes for girls with small wages by one agency, the publication of a Charities Directory, the organization in different years of three Special Institutes.

The St. Louis council has to its credit, among other matters, the creation of a permanent Committee on Public Morals, the assumption of work for the prevention of infant mortality by one agency at the committee's request, the establishment of a confidential exchange.

The St. Louis council, however, has been reluctant to go very far in the direction of initiating new activities, because of its desire to complete its first general self-survey of the work of the existing organizations, which will be discussed later.

The Columbus council has been in general more active in securing action by public agencies than in the development of new private agencies, and has, I believe, little to report on this latter side except the establishment of a confidential exchange.

The Chicago and Minneapolis councils are still too young to have any record in this direction. They are inclined to follow the lead of St. Louis in making intensive studies first.

Of the third purpose—securing public action through united effort—it may be said that the central councils have been more uniformly active than in any other field. It is probable, for example, that since its organization in 1909 the Central Council of Milwaukee has been the most influential private agency in the state of Wisconsin, as well as in the city of Milwaukee, in securing legislative and administrative development in the purely social field.

The council in Columbus has also been extremely active in both city and state fields. Its efforts, often based upon extended investigations, have achieved definite advances in fields as far apart as the reforming of desperately bad conditions in the State Penitentiary, thoroughly reforming the Columbus Juvenile Court, and preventing the emasculation of the statute providing for the Board of Moving Picture Censors (the chairman of the council affirms positively that the efforts of the council were the chief preventative of any change).

The St. Louis Self-Survey

THE ST. LOUIS council, organized in January, 1912, determined early in its existence that it would devote its attention to a self-survey. It found that if it gave too much attention to legislative and public administrative matters, it would not have time for the survey. So it asked an organization, which was really a city conference on social work, to undertake this other functioning. Nevertheless, no less than 28 city and state matters were taken up in the first three years of its existence, in many of which it played the major, sometimes the only, rôle.

In regard to the fourth purpose, there is an interesting divergence between the policies of the earlier councils, those in Milwaukee and Columbus, and those which were organized later. St. Louis, Chicago, Minneapolis and Springfield have emphasized, at the start, the importance of systematic attempts to develop better standards and methods of work, though Milwaukee and Columbus would be the first to resent any imputation that they have neglected this most important field. The first secretary of the Milwaukee council, who was giving only half time to the council and was serving also as general secretary of the Associated Charities, and who recently resigned so that a secretary on full time might be employed, wrote recently:

"After the first year (which, it will be remembered, was given to a presentation of the work of all of the agencies) the educational work of the council was begun with a distinct aim of creating and improving standards. This work has constantly gone on and the standards throughout the city have been steadily rising not only in individual societies but for the general public work. . . . At the beginning of the council year, last September, it was felt that the cooperation, co-ordination and general activities of the agencies of the city were in such good shape that the committees could begin more intensive work."

It is evident from this quotation that the Milwaukee council has probably ironed out more difficulties in the way of coordination than most of its fellow councils, and that while there has been the inevitable reaction upon standards, there has not yet been any extended study of standards irrespective of cooperating relationships, the Columbus council would point to some of its special reports as indicating its work in this field. For instance, there is the celebrated report of the

Committee on Children, which had most positive and far-reaching effects on the work of at least two public departments.

But neither of the older councils so clearly concentrated on developing standards as its first task as did the councils in St. Louis, Chicago, Minneapolis and Springfield. Indeed, the Springfield Conference (as it is called there) was the direct result of a recommendation embodied in the Charities Department of the Springfield Survey. Therefore, it was to be expected that standards of work were and have been its chief concern.

The St. Louis council held its first meeting in November, 1911. Its first winter was chiefly devoted to legislative matters, but in October, 1912, it began to formulate plans for a self-survey of all private and a few public agencies. Along with much other work requiring immediate attention, this first self-survey was practically completed last October. Inasmuch as the Minneapolis council has undertaken practically the same task, and believing strongly that a self-survey of standards is one of the most important functions of a council, I shall very briefly describe the methods followed by the St. Louis council.

Twelve Methods in St. Louis

1. Group committees, with from five to twenty members each, were formed of representatives of the societies whose work came within the field of the particular group. Each committee, therefore, was thoroughly democratic in make-up.

2. Each group committee, consulting outside authorities either through the study of printed material or by correspondence, prepared a questionnaire for each kind of society in its field.

3. The questionnaires were passed upon by the executive committee, which includes representatives from all of the larger fields.

4. The approved questionnaires were then sent to the societies and replies requested. Where the replies were not obtained in due time, personal visits were made.

5. From the questionnaires, the group committees attempted to formulate standards, again using outside authorities whenever necessary. Sometimes, when the divergence between proposed standards and current practice required too big a jump a lower standard was adopted but the higher one was embodied in a recommendation.

6. These standards were then reviewed by the executive committee and were the subject of some most interesting discussions. The executive committee was ever insistent that minimum standards were desired; practical, not ideal standards, because there were years ahead for further development.

7. Both questionnaires and standards were subject to amendment by the whole council, but that body is a large one and seldom made alterations.

8. In order to apply these standards, not only was a study made by help of the questionnaires which revealed many understandard conditions, but also visits were paid to practically all of the agencies of any importance. The only exception to this visiting was the group of hospitals and dispensaries, not because of any opposition, but in the hope of a more extended medical survey later on. These visits were made partly by members of the council and others representing the committees, partly by the writer and an assistant, who for several months gave full time to the service of the council.¹

9. A report was made of the work of each society, with statements of specific needs and conditions and a final summing-up report.

10. In certain fields the organization of special conferences, meeting regularly, has been suggested, as a preliminary to the submission of the individual reports to some of the societies and in order to consider properly some of the recommendations which require joint action.

11. A great many of the individual reports, however, have gone and will go directly to the societies, and it is proposed that there be a yearly accounting of progress in each organization.

12. It has been proposed that the Business Men's League Endorsement Committee, which has been provided with copies of all the reports, should not refuse endorsement, excepting in the case of societies which consistently refuse to make any improvements, no matter how fundamental, even after the interval of a few years. Such societies may present the reasons for the refusal and the endorsement committee shall consider them, after calling upon the council to present its position. This plan has the advantage of not making the standard makers the final judges when, if ever, coercive measures have to be used.

As to this whole plan of a council self-survey, the writer, from his experience in St. Louis, is sure of one thing, namely, that though there may be serious disappointments in some directions, there are in such democratic surveys possibilities for long strides ahead. There is a splendid and genuine interest in standards in St. Louis, which nothing short of these three or four years of work and study could have made so widespread. I look to that city to show a steadily growing development in the next few years.

As to the fifth purpose of central councils, the carrying out of systematic programs for social development, all of the councils have inevitably taken part in this by reason of their other activities. Columbus has prepared a social chart and is endeavoring to fill in the gaps. The Milwaukee council has strengthened the whole field of work in that city and state. The Chicago council is working out very large problems of coordination. It is probably true, however, that in order to justify the use of the word "systematic," extensive self-surveys, like the one in St. Louis and the one now being undertaken in Minneapolis, are required, at least in the larger cities. It is because of the absence of these, that no central council has yet attained the desirable condition of being not only the predominant moral factor in the social growth of its community from year to year, but of being able also to indicate with systematic accuracy in what direction and to what extent growth should be encouraged each year.

Central councils, as we have said before, represent a form of moral federation. They have no administrative functions,

¹ Merely to illustrate the whole method; let us examine the standards adopted for societies engaged in "relief and service." Under Investigation there were listed eleven sources of information which were to be used generally. While all of them were not necessarily to be used in each instance, as many were to be consulted as were required to formulate a plan for permanent betterment. It was agreed that this was only a temporary standard to be improved later.

Under Procuring the Services of Other Helpful Agencies were listed sixteen kinds of agencies.

Under Securing Cooperation of Relatives, Employers and Other Individuals, three sub-headings appeared: 1. Personal calls upon those whose interest and cooperation is sought; 2. letters to the same when calls are impracticable; 3. group conferences with relatives and others whose interest is sought.

A minimum case record was described as one having information on at least twenty-one points such as names, previous addresses, employers (departments and foremen), names and addresses of relatives, etc.

The other headings were Formulation of Plan of Treatment, Promotion of Preventive Measures, Conservation of Health, Instruction and Encouragement in Industry, Instruction and Encouragement in Thrift. This questionnaire served in itself to bring out weaknesses in some of the smaller agencies. All agencies with anything resembling decent records were surveyed by straight case-record reading, covering from fifty to five records for each organization according to its importance and volume of work. On each record there were made individual comments as to the investigation, the cooperation and the plan. On the basis of this case reading, specific suggestions were made as to the division of work among all the agencies in this field. A special conference of executives was also proposed to travel along experimentally for a year or so in an endeavor to reduce any needless double covering of the ground in investigation or treatment. Different agencies will, of course, need to obtain supplementary specialized information.

no power; though the expression, "no power," needs qualification. In more than one city the central council has gained such an influential standing that its recommendations are not to be lightly reckoned with, even though it has no sort of weapon to enforce them.

The effect of such a position is to induce a council to give second, even third, thought before taking a definite stand. Largeness of vision in all, a very sympathetic understanding, more and more searching of values, a greater humility, and finally a larger unselfishness are developed. Surely the illustration the writer has frequently used of how a Y. M. C. A. secretary delayed his new building scheme so that a badly needed associated charities might be established in his town is now no isolated phenomenon. Any plan which compels a group of eager people interested in some social purpose dear to their hearts to give way, because they are convinced that by pressing it at a given time they will get in the way of something which is more urgently necessary, has achieved the highest possible success. There is no group of people in this country in this most difficult social field so all-wise as to be infallible and the use of coercion always involves an implication of infallibility. Of course, there are some things, such as indiscriminate relief-giving, which all are agreed have no social value at all. But the real problems of coordination in the social field are far more complicated than this, they are the problems connected with the varying values of different kinds of social effort.

So far as community planning in the social field is concerned, the central councils show positive achievement. They

have not always been able to check what they considered unwise new ventures. With developing self-surveys, however, and systematic programs, they will become more powerful deterrents.

When they become such, because of their lack of coercive power aside from their influence upon public opinion, they will never be tempted to give too scant attention to the project of any group. Their eyes must always be opened to the slightest social values. Because their own power may be flouted tomorrow, they can never become self-assured and self-contented. The motives and purposes of those really inspired to undertake something or enlarge something already started are too precious to be simply oppressed by the sheer force of any group of social workers. It is far better that people sometimes persist in wrong courses.

Central-councils have already shown that they can exert this kind of guidance, and they are just beginning to realize their larger possibilities and opportunities.

One other fact to be considered is that with the exception of Milwaukee, which had a secretary on half time, the councils mentioned have had no paid service. What they have achieved has been by voluntary service alone. Chicago now proposes to have a paid secretary. Milwaukee has just engaged one on full time. There will be further developments in this direction in the next few years. Weighing this fact, we cannot question that the councils have justified themselves many-fold and have indicated large possibilities in the development of a systematic community program.

An Old Friend with a New Name

By Vida D. Scudder

PROFESSOR OF ENGLISH LITERATURE, WELLESLEY COLLEGE

NEW occasions teach new manners, and if time does not make ancient good uncouth, it has a trick of making it dull. To many middle-aged people, the days seem close at hand when the University Settlement was the last word in social romance, a shining mark for invigorating hostility, a lure to adventure, a summons to sanctity—a center where St. Francis might gladly have sojourned and Tolstoy found some surcease from his conscience pangs. Those were good days, but they are past. Settlements have succeeded; they have proved their value beyond the fondest dreams of their founders; their contribution to the sanest and most significant phases of social advance is by common consent more than can be measured; and they were never so necessary as they are today. But the modern college graduate seeking her place in the world five times out of six rejects the suggestion that she enter settlement work. Why? Oh, because settlements are jog-trot affairs; they are "sentimental," they are "superseded." Entirely accredited, thoroughly established, they present no appeal to the chivalry of youth, partly because they are mistakenly expected to go of themselves. Ardent radicalism, on the rise in our colleges, demands something "more constructive"; ardent Christianity still wishes to wear its religious badge in the world of social need.

Despite a constant widening of achievement, made possible by a host of devoted workers from the ranks of college women, the College Settlements Association, with the four

houses which it controls, has suffered from this sort of thing. Its hold on the colleges has relaxed.

Well, then! Would the young graduate feel drawn to community service? At once the eyes brighten, the girl is alert, response is swift. Community service! She responds to the word of the hour—and it is a good word, more definite yet broader than the old word "settlement," originally chosen precisely on account of its lack of color, a word distinctive, suggestive, alluring. "The beloved community!" What can college women and men do better than to help to create or evolve it in the wretched old world?

And so, and because the original impulse which expressed itself in settlements is seeking varied channels, the old College Settlements Association, still full of faith and fire, decided to rebaptize itself and to widen its appeal and its ambitions. This feat it lately accomplished at Mt. Ivy, the beautiful summer camp of the Rivington street New York College Settlement. There the electoral board of the association had gathered in full force; it met around roaring fires, while the great hills stood sentinel outside. Grey-haired, but to their own minds at least still full of energy, several of the founders sat in a row; around them clustered college women from all succeeding generations, the alumnae electors including the retiring president, Ellen Emerson, largely drawn from the early years of the present century, the undergraduate representatives of eleven women's colleges eager to receive the torch alit with sacred fire and to hand it on and on.

Friends of old standing, leaders in allied movements like the Consumers' League and the Association for Labor Legislation, the Public Health Association and the Charity Organization Society lent their helpful presence; and the C. S. A. was reborn. Circumstances seemed symbolic. Outside it felt, and it looked, like winter; but we knew that it was really spring. Just so, in this year of grace, or disgrace, ancient fraternal hopes, shivering under death-cold winds are yet conscious of the sap of the new order rising in their veins.

The C. S. A. will keep its old initials; but these connote a new title, Intercollegiate Community Service Association. Its aim, perfectly realizable and in one sense only a reaffirmation of its early intention, is the constant organized direction of the youth which passes through the women's colleges toward the wisest forms of helpfulness to the common life.

The first care of the new association, as of the old, must always be the centers which it has so long maintained—the college settlements in New York, Philadelphia, Boston and Baltimore. These settlements are the one distinctive piece of social work which the college women of this country have undertaken and sustained. They have not become very large nor have they developed mainly on the institutional side. They have never blown their own trumpets. But as they have worked on steadily and silently during the last twenty-five years, those who have known them best have valued them most. They have had their full share in pioneer enterprises, in medical social service, in folk-handicraft, in drama, in civic education, in forums for immigrant peoples, in the movement countryward. Their neighborhoods know their worth. They are stronger today than ever, more resourceful, more interesting to live in. It is believed that this new move on the part of the parent association will rally the rising generation and the young alumnae more earnestly to their support.

But beyond the settlements stretches a field in which truly the harvest is plentiful and the laborers are few: it is the home-field, whither our graduates usually return, rich in untried powers, eager possessors of an aroused civic conscience but too often baffled as to the wisest method of approach. The new C. S. A. hopes to cooperate with all other associations which are working for social justice and civic health in

the smaller centers, industrial and rural; it will attempt to carry on more vigorously than heretofore the work of social education in the colleges; and it will try to guide its members toward the work which most needs to be done, and the special fellowship in which they can best serve. Pictures rise before it of large student-rallies with the social emphasis, where men and women of light and leading can be brought in touch with the young life of the schools and colleges. It desires to add to its staff an executive secretary, a woman of mature experience, who can place her wisdom whenever so desired at the service of local need. Assisted by a younger secretary, she will focus her attention on strengthening the organization within the colleges themselves. The function of these secretaries will be to go to any community desiring assistance and to aid the citizens to organize the forces of city, town, village or rural section for social and civic development and improvement. Fellowships, which the C. S. A. has long offered, will be continued; and we shall hope, through our contact with the student and alumnae world, to stimulate and strengthen the whole social apparatus of friendliness and democracy, accredited by experience, and so much needed not only or chiefly in great cities, but through all the smaller towns, and the countryside at large.

If the plan sounds vague, settlements a quarter century ago were much more vague, and a project which has no experimental features lacks that pioneer imagination which has always characterized the C. S. A.

The best is the last to be told: the association has secured for its leaders Susan M. Kingsbury, director of the Carola Woerishoffer graduate school for social studies at Bryn Mawr, and Helen Greene, long intimate with civic and settlement work. Dr. Kingsbury brings to this new enterprise executive ability, wide experience, and devoted faith in the contribution to be made by educated women to the ideals of the new fraternal world toward which in these dark days our faces are resolutely set. Her department at Bryn Mawr represents the first attempt connected with any woman's college to train graduates for social service, and Bryn Mawr and the C. S. A. should both profit by her assumption of leadership in the intercollegiate movement.

THE FIREPLACE AT MT. IVY, WHERE THE CHRISTENING TOOK PLACE

The Task of Civilian War Relief¹

VII

ASTRONOMERS always allow for the personal equation in their calculations. If personality influences so mathematical a science as astronomy what must not its importance be to so human a work as civilian relief.

A score of trifles of conduct and common sense will largely decide whether or not needy families of soldiers and sailors shall receive the kind of care which the nation wants them to have. For the successful performance of some of these details it will be possible for the Red Cross volunteer to prepare herself, and here the experience of social workers in dealing with families and individuals will be of help; but frequently innate tact and ability to understand people will be her only aid.

It seems, for example, of no great importance that a civilian relief worker should know whether to make her first acquaintance with a family at the Red Cross office or in the home of the family. Yet social workers have learned that usually, almost universally, the introduction most satisfactory to both family and visitor is an introduction at home.

At home the family is more at ease, more confident of itself. Even a business man prefers to conduct an important interview in his own office. Furthermore, to begin an acquaintance in the home is, in a measure at least, to orientate the family. The home gives the visitor some idea of the standards of the family. Besides, she is likely to find there an indication of the interests of the person with whom she is speaking, which in turn enables her to start a friendly relationship with the household.

A social worker's incomplete knowledge of German made it difficult for him to gain the confidence of a woman of that nationality whom he desired to assist. Had the interview occurred in his office he might not have been successful. But he was talking to her in her own home. While he was struggling to show the woman how much he wanted to be of service, her little daughter came home from school, and by making friends with the child he broke down the mother's reserve and opened the way to a helpful acquaintance.

It is difficult to remember all the important things a family tells one about its situation. Should one use a pencil and pad? Only where it is absolutely necessary. The most successful interview is not that in which the visitor asks a series of questions which she expects to have answered in the logical order in which they have been put so that she can write them down census fashion. In the best interview one thing leads to another and the facts of the situation in which the family finds itself and the other necessary information come forth naturally as they would in any friendly conversation. But it is difficult to remember everything, especially difficult for the volunteer civilian relief worker without great experience.

She will, however, find some things which the family will feel that it is proper for her to jot down. If it should happen that a child is not getting on well in school and the mother accepts the offer of the Red Cross worker to go and find out what is wrong, obviously she will not object to having the worker write the name of the child, the teacher, and the

address of the school. Similarly, a girl who is ill and worried for fear that her position will not be held for her will be relieved to see the Red Cross worker make a note of the address of the employer after she has promised to see what can be done to save the job.

Sometimes the writing down of items seriatim is what will impress and reassure a man or a woman most of all. It is for the common sense of the worker to determine this. Generally, however, the fewer notes taken the better. An interview must not be made to appear to be a cross-examination. The purpose of an interview is not statistics for the census, but to find out just what is wrong and what means there are for helping the family to get out of trouble. Nothing should, therefore, be done which might hinder the development in the family of confidence in the visitor.

It is desirable to avoid making tentative promises during a first interview with a family. A promise that may seem to the visitor to be only conditional may to the person with whom she is speaking appear to be final. If such an interpretation has been placed upon what has been said it will later be difficult to make a necessary change of action.

Social workers no longer think of people who need assistance as being worthy or unworthy. The families which formerly were called unworthy, that is, families which have unpleasant characteristics, are frequently those which require the greatest care and thought that the visitor can give. It is important that the visitor should not allow herself to be prejudiced against a person because that person has made a false statement to her. While it is not possible to ignore the ethical implication which misstatement of fact may carry, it is essential to consider the point of view and the circumstances which have influenced the speaker.

Whose Fact Is the Fact?

"BEFORE deciding whether a statement conforms or not to fact, we must ask, What fact?" writes Helen Bosanquet in *An Apology for False Statements*.

Whose fact is the fact? Or is there such a thing as a fact at all? Does not the interest of the individual always determine what is or is not fact for him? And if so, should not our zeal for truth lead us rather to reflect upon men's minds than to condemn their statements?

Suppose we are questioning a man who has asked for help at a bureau for relief. We know how inevitably we elicit in the process what we are pleased to call false statements. And it is impossible that it should be otherwise, from the very nature of the case. Putting aside mere personal deficiencies of want of sympathy on the one side, and inadequacy of expression on the other, there remains the insuperable obstacle that we are talking about wholly different matters. The fact which guides his statements, round which they all gather, and to which they all conform, is the very engrossing one that he wants help, wants it with an intensity which dominates all minor interests to a degree inconceivable to an outsider; and his one endeavor is to bring this fact as clearly before the mind of the hearer as it is before his own. We, meanwhile, have accepted that aspect of the fact (though probably inadequately) and are trying to get at another which is absolutely uninteresting to our patient, which probably does not exist for him.

Take such a question as this, which I imagine must be a fairly common one: "Have you ever been so badly off before?" We want to get at the cause; is it periodical or accidental? He has not even a glimpse of our drift, and sees only another opportunity of emphasizing his fact, the uniqueness and intensity of his situation; while very likely the only difference between his present position and that of twelve months ago is the difference between present suffering and the mere recollection of past suffering, and everyone knows what a difference that is.

Generally speaking, it is inevitable that where personal interests

¹ The seventh of a series of articles based upon a course of lectures upon civilian relief now being delivered in New York with the sanction of the American Red Cross, by Porter R. Lee, of the staff of the New York School of Philanthropy. The articles are being written by Karl de Schweinitz, of the New York Charity Organization Society.

are called into play there should be conflict with such a careful and all-round statement as we are wont to call the "true facts of the case." The personal point of view can never be entirely that of science, even with highly educated people; how, then, can we expect it of people who have never even realized that there is any other point of view than the personal; to whom facts have but one aspect, that which is felt by them at the present moment; and to whom every statement not conforming to that aspect is wholly irrelevant?

This insistence upon the one-sidedness of truth is at the root of all intolerance, whether of philanthropy or morality, politics or religion. It will never cease out of the land until we recognize, on the one hand, that other minds may be so placed as to catch a ray of light which is cut off from us, and, on the other, that the great majority of so-called "false statements" are the expression of an undeveloped intelligence, rather than a low standard of morality. The mind which is capable of deliberate falsehood is intellectually more developed than the majority of those which find their way into the offices of social agencies, and it is hardly too much to say that our work would be more hopeful if genuine mis-statements were more common.

None So Blind as Eye-Witnesses

THERE are other things which affect the reliability of statements which may be made to the visitor. A person reporting upon an incident may not have observed it accurately. Indeed, lawyers regard the testimony of an eye witness as much less satisfactory than circumstantial evidence. Mary E. Richmond in her book, *Social Diagnosis*, cites the following illustration from an unpublished paper by Julian Codman upon Evidence in Its Relation to Social Service:

One day Mr. P., a lifelong resident of Nahant, a man of high cultivation and exceptional ability, and an enthusiastic golfer, came to the chairman of the green committee of the Golf Club and told him that he thought part of the course was unsafe for passersby. This was a place where the county road crossed the course. He said that he thought a notice should be put up warning all players to look and see that the road was clear of foot-passengers and carriages before playing a ball from the teeing ground. The chairman suggested a notice as follows, and asked if that would be sufficient: "DANGER: All persons before driving from this tee are cautioned to see that no one is passing in the road." Mr. P. said that he thought such a sign would be just the thing. "Well," said the chairman, "a sign in exactly those words in letters three inches long in black paint on a white ground has been in front of your eyes every time you have driven off that tee during the last six years."

Again it must be remembered that what is proof to one generation or to one grade of intelligence is not proof to another. There was a time when women were convicted of being witches upon proof which would not be valid today. A few years ago in a certain village near Buffalo a man, notoriously a heavy drinker, was overtaken by a thunderstorm one afternoon. He sought shelter under a tree, was struck by lightning and killed. Immediately everybody in that town came to the conclusion that he had been killed because he was a drunkard. His death was a judgment upon him.

The importance that the social worker should keep an open and unprejudiced mind becomes, therefore, the greater. This is not easy. One is prone to prejudice by reason of one's hobbies, one's special interests, one's heredity. The same thing can have an entirely different significance to different people, as Browning has illustrated in *The Ring and the Book*.

Then there is the ease with which one can be led to set down an inference as a fact. Dr. Adolph Meyer in commenting upon a letter written by a social worker about a family under her care says that he finds a number of adjectives—incorrigible, vulgar, not very well, troublesome, and so forth. These adjectives represented inferences drawn by the social worker. Dr. Meyer wanted to know what the facts were that caused this social worker to use these adjectives so that he could form a set of adjectives of his own.

Thus at every turn the social worker's task is affected by the personal equation. This is particularly true in the helping of a family up the successive steps that will lead it out of trouble. This social workers call "treatment," distinguishing it from the work of learning the causes of the trouble and the things which will be useful in assisting the family to a better future.

In treatment personal influence is perhaps the most important factor. And here the personal equation counts most of all. Congeniality between the helper and the helped, tolerance for little peculiarities of temperament and habit, the quality of inspiring confidence—all these things are valuable. But the methods of personality evade definition. They can be appreciated only when observed in action.

A man of twenty-four contracted a disease in the leg and went to a hospital for treatment. The operation had doubled his leg up, making him a hopeless cripple. So sensitive was the young fellow about his affliction that he did not want people to see him. For a year he had refused to leave the basement room in which he and his mother lived.

What the man needed was suitable employment, both for the mental effect of occupation upon himself and for the income which the family required. There was, however, the great difficulty of the man's hopelessness of mind and his physical condition, which a year and a half in the hospital had failed to help. The social worker learned that amputation was necessary to enable the man to obtain employment. But amputation meant the hospital and the hospital was naturally tabooed by the man.

The young man had been silent and almost morose when the social worker made his first call. During three or four visits he showed no signs of interest. Then one day the social worker, apparently by oversight, left a newspaper. When he returned a few minutes later upon some pretext he found that the young man was reading it. Thereafter the social worker brought a newspaper on every visit. His next step was to induce the man to go to a neighboring settlement in order to read.

There the cripple discovered the advertisement of an institution which offered special treatment for twisted legs. He asked the social worker to write for particulars. The social worker knew that there was no hope, but in the man's expression of interest in his future he was quick to perceive his first opportunity. The reply from the institution was a great disappointment to the young man; but there was now a place for the future in his thinking. Into the gap left by the failure of the man's plans the social worker quickly thrust the alternative suggestion of amputation in order that there might be accomplished what the institution could not do—qualify the man for employment which he now wanted to undertake.

Roundabout Help by Suggestion

AFTER the amputation the man had another period of depression. Then he suggested that he would like a job as a railroad flagman. This did not seem to the social worker to be the best kind of work for the cripple. But not daring to discourage the suggestion he went to the railroad. There he found that there was need for telegraphers. This idea appealed to the young man. He took a course in telegraphy and now is self-reliant, self-supporting, and happy.

His success was really a victory for personal influence and what might be called the proper use of the personal equation.

COMMON WELFARE

TO SAVE FRANCE FROM TUBERCULOSIS

FRANCE'S condition from tuberculosis, as reported by Dr. Herman M. Biggs [the SURVEY for May 5] has led the Rockefeller Foundation to undertake the first steps in a great campaign of relief and prevention. Such a campaign must necessarily be long and arduous in a country having the highest death-rate from tuberculosis in western Europe, lacking a tuberculosis movement of any dimensions and having no appreciation of fresh air in homes and shops, such as is the tradition in England and the acquired practice in the United States.

Dr. Livingston Farrand, president of the University of Colorado, and for 10 years secretary of the National Association for the Study and Prevention of Tuberculosis, has been granted a year's leave of absence to direct the work. He and a number of assistants will sail for France in about a fortnight. The plan of campaign is thus outlined by the Rockefeller Foundation:

1. The maintenance of a central organization which will have charge of the work. This organization will be under the French government and will combine the special interests in tuberculosis work. It is expected that the special committee will, among other things, undertake the preparation of literature and exhibit material and will carry out a comprehensive scheme of education for the control of tuberculosis.
2. The organization of four units which, moving from place to place, will carry on a campaign of education and publicity.
3. The demonstration of dispensary methods and organization of local committees under whose auspices permanent dispensaries will be established.
4. The establishment of at least four centers for the training of nurses and others who will have charge of the dispensary work.

An appropriation of \$100,000 by the foundation will, it is announced, support the central administrative work, so that all other contributions will go directly for the dispensaries, nurses and supplies.

Dr. Biggs, it will be remembered, made what he considered a conservative estimate of a half million cases of tuberculosis in France. At least 100,000 cases

are among the two million refugees in the North. It was found that neither labor nor lumber for hospitals could be secured in France, and when these were found elsewhere, boats could not be had to fetch them. Dr. Biggs' plan, therefore, turned to the establishing of dispensaries with corps of visiting nurses, and the long-range results of an educational campaign to awaken an indifferent people.

The characteristic house of the French peasant plays directly into the hands of the tubercle bacillus. Built of concrete, without cellar or drainage and with few windows, it is damp of itself and from the rotting manure and other refuse in the court-yard which connects it with the stable. Refugees, neighbors, soldiers on leave are crowded into both house and stable in great numbers, and many of them have been underfed and exposed to every form of suffering for months or years.

The situation comes close home to the United States, for, unless our plans are radically different from the plans of the other allies, our troops will be quartered in these very houses during the times they are not actually in the trenches.

THE FIGHT ON "SPOTTED" PROHIBITION

WAR prohibitionists, with their fight half won, have suddenly been thrust into a new phase of the issue—to secure complete prohibition as a war measure of conserving grain for food against a determined effort on the part of brewers and some others to permit the making of beer and light wines. Such a partial measure is a familiar step in state prohibition campaigns, coming up always at the point when it is seen that distilled liquor must go.

In its national aspects, the movement is held by prohibitionists to be particularly bad. Insofar as it relates to reducing drinking, they believe, first, that there will be little change beyond the substitution of great quantities of beer for smaller quantities of distilled liquor; and, second, that even that change will not at once be manifest, for they find a great stock of whiskey on hand, due to over-production and to incidence of the state bone-dry laws as they go into effect one after another. As the measure proposed would prohibit the manufacture, not the sale, of distilled liquor, they would expect to see this big reserve stock of whiskey dispensed over the saloon bars at tremendous profit.

The Woman's War Prohibition Committee, Tremont building, Boston, has issued a postcard based on Elizabeth Tilton's article, Is Beer the Cure for the Drink Evil, in the SURVEY for February 24. They urge all who believe in complete prohibition during the war to send for copies to be mailed to their congressmen and senators and to all who can help. Mrs. Tilton says:

Social workers, I want you to rise up today and fight "spotted" prohibition. What is spotted prohibition? It exists now right there in the United States Senate in two forms. The first is held by Senators Weeks and Lodge of Massachusetts. They say they will vote to get rid of the grain that goes into distilled liquor only, but the manufacture of beer and light wines should go on. This would not affect the saloons or the sale, if I understand them rightly, for we have an over-production of whiskey, I am told, which would continue to be sold for many months in the saloons.

BETSY ROSS IN MODERN TIMES

“WE pledge allegiance to our flag and to the republic for which it stands—one nation, indivisible, with liberty and justice for all.” Some of the 1,000,000 New York school children who are thus taught the meaning of the red, white and blue each morning, go home at night (or stay at home from school) to learn a different lesson. The family in the picture was brought to the attention of the New York Child Labor Committee by agents of the Association for Improving the Condition of the Poor. Four little children, the oldest ten and youngest five, were hard at work affixing pins to tiny flag emblems and mounting them on cards. The mother, with the new-born baby, was helping all she could between caring for the child, keeping house and acting as janitress of the tenement. The children are frequently kept from school to do this task, although the father has a steady position in a factory. Working early and late at the rate of three cents for 144 flags, the best the five workers can make jointly is two dollars a week. Their tenement is not licensed for home work by the Bureau of Factory Inspection.

The other form of spotted prohibition is that being put forward by the Hearst papers. It says distilled liquors do the harm; get rid of them and keep beer and light wines (up to 10 per cent) and all will be well. This sounds well on paper, but repeated experiments have been tried which forbade distilled liquors only and kept beer—one in Massachusetts, one in Iowa, one in Michigan, one in Georgia. All failed. The saloons would sell whiskey along with the beer and in Georgia, where they allowed only light or near beer, to put it in the words of Judge Broyles of Atlanta: “You could have a chemist with every barrel to see that the beer was light and then men did get drunk on 2 per cent beer if they took enough of it.”

No one can study history, read the best Germans on the subject of beer, and not be absolutely convinced that the only remedy is complete prohibition. Says Prof. von Strumpel, Germany's most noted physiologist: “Nothing is more erroneous from the physician's standpoint than to think of diminishing the destructive effects of alcohol by substituting beer for other alcoholic drinks.”

Shoot the beer fallacy dead, but shoot it dead at once, for they write me from Washington that we are in danger of getting this compromise measure and if we get it things will not be any better, and yet they will turn on us and say: “We have given you prohibition and yet it has not helped.” The point is that spotted prohibition, the beer fallacy prohibition, is not prohibition. A virile nation will demand complete war-time prohibition.

Meantime United States marshals in all districts have been notified to exact rigid enforcement of the law prohibiting the sale of any liquor to any uniformed man in the federal service. Washington has added the word “serve” after “sale,” so that the prohibition of treating soldiers, sailors and marines, cut out of the act itself, has been re-introduced by a ruling. A general tendency to obey the law to the letter is reported on the part of keepers of saloons, hotels, restaurants and cabarets, to the discomfiture of some young gentlemen in khaki and their admiring fellow-citizens.

WANTED, REAL NURSES AT HOME

THAT the spirit of romance is unduly influencing some young women is the opinion of leaders of nursing work, who believe that many are enrolling in the Red Cross courses who might to great advantage take the full training course and do a most important service. Prof. Annie W. Goodrich, of Columbia University, says:

The need for thoroughly trained nurses is immediate and is going to be greater. We could place trained women now in very im-

portant positions for rural and city nursing work. We need trained women to take the places of those who are going to active service with the Red Cross units. The training schools must be kept up or the supply of trained workers will give out.

That women are in active patriotic service from the instant that they enter hospital service, does not seem to occur to some of these young people who crowd into the briefer courses, Miss Goodrich continued. These courses are admirable for those who cannot make such work their permanent choice; but it is time for everyone who is thus registering to stop and consider whether her patriotic duty does not lie in the direction of this larger need.

The call for nurses was never so insistent as today. In special fields—public health, child welfare, tuberculosis—as well as in the teaching of other recruits to the nursing service, the woman of suitable preparation and temperament has an unlimited opportunity for social service. And the larger work is worth the longer training.

A similar warning is issued by Lillian D. Wald, of the Henry Street Settlement, New York. Miss Wald considers the public-health nurses as the “first line of home defense,” and urges that women who are eager to serve their country remember that not all can go to the front, and that assignment for home duty is quite as patriotic as a call to go abroad, even though it be less romantic and exciting. That the Council of National Defense has included in its Advisory Commission a committee on home nursing is significant of the importance of this work. Of the section of home nursing, Miss Wald is chairman.

WHY MEN ARE BARRED FROM THE ARMY

“THE percentage of physically unfit from the standpoint of military service is appalling,” writes Major Harry D. Orr, Medical Department of the First Illinois Cavalry, in the *American Journal of Public Health* for May. “The verdict of the recruiting medical officer should be a shock to the nation. Ordinarily three out of every four applicants for the regular army are rejected as physically unfit.”

Major Orr's paper gives a summary of the physical equipment essential for the different services in the army. In the same issue of the *Journal*, Dr. C. E. Costello, Medical Reserve Corps, U. S. Navy, lists some of the defects which most often bar men from the service for which they volunteer. The first and most common is defective vision. Fully 35 per cent of rejections in recruiting stations are for this reason. Many men have had no idea of trouble with their eyes until they find themselves unable to read the eye-card at the required distance.

The second reason for refusal is frequently flat-foot, or more properly, fallen arches. Third and very important among these causes is defective teeth—the surprising rate of 27 per cent of rejections are for teeth so long neglected that they are beyond possibility of repair. Says Dr. Costello:

A peculiar coincidence, which I have noticed in the examination of applicants who have defective teeth, is the frequency of defective vision in the same individual. . . . I am led to believe that the man with a mouthful of decayed teeth develops a toxin which in some way is partially responsible for the condition of his eyes.

These causes of rejection are the "cardinal offenders" that disqualify more applicants than all other causes combined, says Dr. Costello. And he concludes with the reminder that these are conditions which show in early life and could easily be remedied by proper attention of school and health authorities.

TIN CAN PATRIOTISM AT ALBANY

TREMENDOUS opposition to the Brown bills, giving the State Industrial Commission authority to suspend the New York labor laws during war-time, was revealed at a hearing held in Albany May 23 before Governor Whitman. Trade unionists, women of wealth and prominence, social workers, doctors and lawyers came together to protest that no war shall be prosecuted at the expense of women and children. The bills have been passed by the legislature and are before the governor for signature.

Besides the wave of popular feeling against abrogation of the labor law, the hearing likewise disclosed beneath the ardent patriotism of Senator Elon Brown, who framed the bills, a desire to resurrect the good old days when New York canners were unhampered by labor regulations. Ever since the labor law

was amended in 1913 to include canneries, Senator Brown has made this attempt. Each time he has been defeated. This year, under the guise of national emergency, he has all but succeeded.

Although one Brown bill would permit the Industrial Commission to waive provisions of the labor law for persons engaged "in work or employment connected, either directly or indirectly, with the prosecution of the war or with preparation therefor, or for the relief of public necessity occasioned by the war," Senator Brown himself spent most of his eloquence at the hearing on the food situation. "Hundreds of dollars' worth of food went to rot last year," he said, "because of the laws that stand in the way of efficiency." And he added that it was

terribly necessary that laws regulating hours and night work be relaxed in certain industries — "canneries, for instance." The audience booded. Even Governor Whitman smiled at the allusions.

But while Senator Brown specialized on agriculture, other industries were not neglected. Printing and subway digging were shown to be war industries "which needed relief," as the bill proposed. Representatives of the State Manufacturers' Association and a score of chambers of commerce predicted a shortage of labor that would result in "our boys in the trenches being killed, starved or frozen unless some way of speeding up supplies were devised."

Three members of the State Indus-

THE architectural problem of the two-family house or cottage flat is met in the Riverdale Courts development of the Toronto Housing Company. "The Lindens," to the left, shows the pleasant effect of double porches and English gables around a grass-covered recreation ground. "The Oaks," on the right, takes advantage of natural grading. Each dwelling has a separate front door, porch and bathroom. Heating is by steam from a central station. Hot water is supplied all the year round.

trial Commission, which is charged with granting exemptions, favored the bill and promised to make only the most necessary concessions. The two labor men on the commission, John Mitchell and James Lynch, vigorously opposed the bill, however. The very fact, declared Commissioner Lynch, that representatives of industries remotely connected with war preparation are urging the bill is evidence of the enormous pressure which will be brought to bear on the Industrial Commission from every side. Commissioner Lynch said that labor would not have been so solidly opposed to the Johnson bill, defeated in the House, which would have permitted exemptions in particular factories. The present bill which permits whole industries to be excluded assumes, he added, that manufacturers of every kind of commodity have a right to exemption on the ground of "public necessity occasioned by war." "I don't think of an industry," he concluded, "that can't take advantage of this clause—except perhaps the movies." And when someone pointed out that the display of a patriotic film would give an excuse for working the girl at the ticket office half the night, the commissioner conceded an exemption even for the movies.

Other labor representatives brought out the cruel effects of such a law on the most helpless and unorganized of all workers—women and minors. Spokesmen of civic and social organizations voiced their opposition not only on humanitarian grounds, but on grounds of economics and expediency, drawn from English experience. Joseph P. Chamberlain of the Columbia University Legislative Drafting Bureau held that the bill was unconstitutional, as it delegated legislative powers to an industrial board, and pointed out that Governor Whitman had no power to veto exemptions, as was popularly supposed,

but only the rules and regulations prescribed by the Industrial Commission after an exemption had been granted.

The hearing on the second Brown bill, suspending the compulsory education law between April 1 and November 1 to permit the employment of children in agricultural pursuits, apparently made a less favorable impression on Governor Whitman. Opposition centered on the loss of school time and the inability of school authorities to competently supervise the children as provided by the act. Dr. Josephine Baker of the New York city Department of Health gave warning of the danger of exploiting young boys and girls in heavy farm work and an agent of the State Charities Aid Association asserted that she had found from experience that not more than seven out of ten farms are proper homes for children.

REASONS WHY NEGROES GO NORTH

WHILE much has been written about the recent migration of colored people from the South to the North, one of the first attempts to give a definite picture of the whole movement is made by W. E. B. Du Bois in the *Crisis* for June. Aided by funds of the National Association for the Advancement of Colored People, Mr. Du Bois explains, a questionnaire covering the whole South was resorted to to get information. While the margin of error is admitted to be large, the conclusion of the *Crisis* is that about 250,000 colored workmen have come northward. The accompanying map shows something

of the starting points and trend of this migration.

The immediate cause of the migration is declared to be economic. The movement began because of floods in middle Alabama and Mississippi and because the latest devastation of the boll weevil came in these same districts. A second economic cause was the cutting off of immigration from Europe and the consequent demand for labor in the North. The United States Department of Labor is quoted as saying that most of the help imported from the South has been employed by railroad companies, packing houses, foundries, factories and automobile plants. The third reason, according to Mr. Du Bois, has been outbreaks of mob violence in northern and southwestern Georgia and in western South Carolina.

Back of all these reasons is the general dissatisfaction with southern conditions of living. Individuals gave the following reasons for migration from certain points:

Montgomery, Ala., better wages, lack of employment, bad treatment; West Point, Ala., boll weevil; Americus and Cartersville, Ga., low wages, schools; Newnan, Ga., low wages; Birmingham, Ala., right to vote, discontent, bad treatment, low wages; Fairburn, Ga., low wages, bad treatment; Sanford, Fla., low wages, bad treatment; Anniston, Ala., low wages, bad treatment; Jefferson county, Ala., low wages, bad treatment; West Point, Miss., low wages; La Grange, Ga., low wages, bad treatment; Washington, Ga., low wages, schools; Newman, Ga., low wages; Jackson, Ga., protection, schools; Covington, Ga., low wages; Montezuma, Ga., low wages, oppression; Tallahassee, Fla., unrest, conditions, low wages; Honeapath, S. C., low wages.

APPROXIMATE trend and volume of Negro migration from the South, 1916-17. This is based on a total estimated migration of 250,000 persons in the last six months, and is compiled from a questionnaire covering the whole South.—From the "*Crisis*."

A colored man of Sumter, S. C., summed up the whole situation when he said: "The immediate occasion of the migration is, of course, the opportunity in the North, now at last open to us, for industrial betterment. The real causes are the conditions which we have had to bear because there was no escape."

It is interesting to note, says Mr. Du Bois, that this migration is apparently a mass movement and not a movement of the leaders. Economic distress and social unrest have pushed past the conservative advice of the Negro preacher, teacher and professional man, who are said for obvious reasons to be opposed to the exodus, and the colored laborers and artisans have determined to find a way for themselves.

The character of the people who are going is thus described by the Birmingham, Ala., *Age-Herald*:

It is not the riff-raff of the race, the worthless Negroes, who are leaving in such large numbers. There are, to be sure, many poor Negroes among them who have little more than the clothes on their backs, but others have property and good positions which they are sacrificing in order to get away at the first opportunity.

The entire Negro population of the South seems to be deeply affected. The fact that many Negroes who went North without sufficient funds and without clothing to keep them warm have suffered severely and have died in large numbers, has not checked the tide leaving the South. It was expected that the Negroes would come back, sorry that they ever left, but comparatively few have returned. With the approach of warmer weather the number going North will increase.

PLANS ANNOUNCED FOR A NEW DUBLIN

T. H. MAWSON, the English city planner, recently returned from a visit to the United States, enthusiastic over Burnham's plan for Chicago and convinced that, even if it is not carried out in all its details, it will have an immense influence on the future not only of Chicago, but also of other cities. This project was referred to several times in a discussion of the proposed city plan for Dublin as the only one comparable with it in scope at a meeting of the Town Planning Institute of London.

The scheme for the reconstruction of the Irish capital considered was that of Prof. Patrick Abercrombie and Sidney A. Kelly, F. S. I., which has been awarded the prize offered by Lord Aberdeen. Dublin is physically perhaps one of the most neglected seats of government in Europe. It is distinguished not only by overcrowding, insanitation of ill-adapted tenements and obstruction of buildings in the central sections, but also by an unusual extent of derelict sites and wasteful neglect of topographical opportunities of development.

A departmental committee appointed by the local government board of Ire-

land to inquire into the housing conditions of Dublin issued a monumental report and volume of evidence in 1914, amplified by the civic survey undertaken under the general superintendence of Prof. Patrick Geddes.

The extraordinarily small growth of the city population—by only 2,441 from 1851 to 1901—in the opinion of Professor Abercrombie offers a compensating advantage in giving a chance for modern planning denied to more fortunate cities. Nearly all the larger centers of Europe and America were disfigured during this half century of greatest industrial expansion by a ruthless disregard of economic and aesthetic considerations, creating new residential and factory areas which are badly planned and which it will take generations to remodel or eradicate. In Dublin this evil is much less pronounced. "Nowhere could central improvements be suggested with so manifest a prospect of appreciating values."

Indebtedness to American examples may possibly be discovered in some of the features of the successful project, which provides for a magnificent civic center with well grouped public buildings on both sides of the river Liffey, connected by broad avenues with three or four large park areas, which again are linked together, and with a system of smaller parks, by further parkways and boulevards.

One exceptional opportunity for large scale replanning in the central sections is offered by the existence in them of public and charitable institutions which cover an extensive total area and which, in most cases, can with advantage be removed into the country.

The plan provides for a considerable limitation in the number of tenements, since the survey made prior to the competition showed beyond doubt that an

appreciable proportion of the population now living in multiple dwellings might, with proper rearrangement of industries and transportation facilities, inhabit a suburban belt.

The most novel feature of the scheme is the deliberate division of the tasks of reconstruction into three separate "periods," based upon their relative urgency. "A competition would give a very wrong impression," says Professor Abercrombie, "if it suggested that a town plan was a finite design to be carried out like a modern building; it, in fact, should more resemble in its execution a medieval cathedral, which was an organic design continually undergoing modification as it progressed." Thus alterations of the less urgent parts of the enterprise can be introduced as the work proceeds without destroying the general conception.

The social and political significance

How to Economize in Home Baking

Use Royal Baking Powder in Place of Eggs

Fewer eggs may be used in many recipes, and in some cases left out altogether, by using an additional quantity of Royal Baking Powder, about a teaspoon, in place of each egg omitted.

The following tested recipe for corn bread is a practical illustration:

CORN BREAD

¾ cup corn meal
¼ cup flour
3 teaspoons Royal Baking Powder
1 teaspoon salt
1 tablespoon sugar (if desired)
2 tablespoons melted shortening
1½ cups sweet milk

DIRECTIONS—Sift the dry ingredients into bowl; add milk and melted shortening; beat well, and pour into well-greased pan or muffin tins and bake in hot oven about 25 minutes.

The old method called for 2 eggs

Booklet containing many other recipes which economize in eggs and other expensive ingredients mailed free on request.

Address Royal Baking Powder Co.,
113 William Street, New York

of the plan was emphasized both by the authors and by other speakers. Even if complete financial assistance is given for the specific housing schemes and their ancillary traffic connections, the plan can only come into operation as the result of prosperity and general optimism. The purchase and resale of the derelict sites, for instance, would otherwise entail a grave loss. A great political change, giving the citizens confidence in the economic future of the national capital, was mentioned by one of the unsuccessful competitors as an essential condition of success.

COMMISSIONER KINGSBURY ACQUITTED

JOHN A. KINGSBURY, commissioner of public charities of New York city, and William H. Hotchkiss, counsel for Mr. Kingsbury and for the city in the Strong inquiry of last year, were tried last week on the charge of unlawful wiretapping that grew out of the charities controversy. The judge ordered the jury to acquit them of the charge which, under the law, constitutes a felony.

The case was tried in the Kings County Supreme Court in Brooklyn. Justice Charles H. Kelby held that the prosecution had not proved bad faith and evil intent on the part of Mr. Kingsbury and Mr. Hotchkiss in suggesting to the police commissioner that important evidence of crime might be obtained by tap-

ping the telephone wires of the late Daniel C. Potter, Dean Potter, his son, and the Rev. William B. Farrell. Father Farrell was the signer of the famous "Farrell pamphlets," but Daniel C. Potter was suspected of having written them. Said Justice Kelby:

If at the time they sought supervision of the wire they in good faith actually believed this [that a crime had been committed], and they based their belief upon grounds that would appeal to the ordinary prudent man as reasonable, then they are guilty of no crime. . . . I am convinced that the proof in the case does not, under the rules of law, show the bad faith and evil intent of the defendants necessary to constitute the crime of which they are charged.

At the time of the wire-tapping it was suspected that Daniel C. Potter was about to absent himself from the jurisdiction of New York state to escape a subpoena, and that his son was removing the original manuscripts of the Farrell pamphlets so that they could not be used to identify the author.

Justice Kelby went into the right of the Police Department, under the law, to tap wires as an aid in the detection of crime:

The police have no greater right to act unlawfully or wilfully in the tapping of a telephone line than any other citizen. They have, however, certain duties imposed upon them by law, especially under the Greater New York charter, section 315. There they are required to preserve the public peace, prevent crime, and detect and arrest offenders. Under the power of the state com-

manding them to preserve the public peace, prevent crime, and detect and arrest offenders, they would have the right to intercept messages over telephone wires when they have reasonable grounds to believe that crime has been committed, is about to be committed, or to aid in the detection of a crime committed or about to be committed.

Commenting on the case, Martin W. Littleton, counsel for the defense, said: "It ought to close a chapter in this city of disputation which had got beyond its logical and reasonable limitation."

A MINISTER AND HIS CHURCH IN WAR

FOR making a "statement of faith" from his pulpit, in which he declared that war is a denial of Christianity and that he would do nothing to aid or support the war with Germany that he had not done as a loyal citizen before war was begun, the Rev. William M. Fincke, pastor of the Greenwich Presbyterian Church of New York city, has been asked by his congregation to resign. The matter has yet to come before the New York Presbytery, and Mr. Fincke's friends in the church are considering the advisability of making a fight before that body on the issue of "the right of a minister of Jesus Christ to say from his pulpit what he honestly believes to be God's truth."

Preceding his statement, Mr. Fincke had spent three days in Washington in an effort to have an amendment written into the army bill giving exemption to conscientious objectors. In his sermon, which was delivered April 29 and later issued in pamphlet form under the title A Ministry of Reconciliation, Mr. Fincke declared that although he could not see that "this war is even expedient as a fight for liberty and democracy," he was "no mere anti-war maniac." He would serve his country, he said, by striving "to keep alive the spirit of good will toward all men," by serving "the ideals of democracy which constitute the soul and center of her being," by working for the peace of the world, and by keeping his country "true to her ideal of international brotherhood."

A postal card referendum among the members of the church favored Mr. Fincke's remaining by a vote of 130 to 40. The church session, however, the governing body, composed of ten men, voted seven to three for his resignation and for the resignation also of the Rev. E. B. Chaffee, assistant pastor, who had expressed agreement with Mr. Fincke's views. Subsequently Mr. Fincke asked for a six months' leave of absence that he might accompany the Presbyterian Hospital unit to France. The moderator's council of the presbytery recommended that this be granted, but the session refused. Nevertheless, Mr. Fincke left with the unit as an orderly on May 14.

On May 22 a full meeting of the

congregation was held to discuss the matter. Speakers opposed to Mr. Fincke's remaining contrasted portions of his sermon with portions of President Wilson's reasons for our entering the war. The pastor was criticized also for going over the head of the session with his postal card referendum. The meeting voted 210 to 124 for his resignation.

The next meeting of the presbytery will be held June 11. This body is composed of some 400 pastors and elders.

FEDERAL HELP TO SCHOOLS WELCOMED

IN less than three months after President Wilson had signed the Smith-Hughes act, granting federal money to the states in aid of vocational education, twenty-nine legislatures had accepted the provisions of the act. Most of these were in the South and West, in states which have heretofore made little provision for vocational education.

The states that had accepted the act up to May 14, according to a canvass made by the National Society for the Promotion of Industrial Education, are Arizona, Arkansas, Colorado, Delaware, Indiana, Iowa, Kansas, Louisiana, Maine, Missouri, Nevada, New Jersey, Montana, North Carolina, Ohio, South Carolina, South Dakota, Tennessee, Utah, Vermont, Washington, West Virginia, California, New Hampshire, Michigan, Minnesota, Oklahoma, Wyoming and Massachusetts.

Seven states had bills pending at that time: Connecticut, Florida, Illinois, New York, Pennsylvania, Texas and Wisconsin. Rhode Island killed the bill presented to its legislature. The governors of four states having no legislative sessions this year—Kentucky, Maryland, Mississippi and Oregon—are taking steps to secure its benefits.

This bill appropriates large amounts of money to stimulate directly the teaching of agricultural, industrial and home economics subjects. To secure these sums the states must meet the federal grant dollar for dollar. The act extends the principle of land grants to agricultural colleges embodied in a law signed by President Lincoln in 1862, and has itself been ten years in passing Congress.

For cooperating with the states in paying the salaries of teachers, supervisors or directors of agricultural subjects the government appropriates \$500,000 for the fiscal year ending June 30, 1918. This amount is to be increased annually by \$250,000 until \$3,000,000 is reached, which is to remain the annual appropriation thereafter. The same appropriations are made with respect to home economics subjects and with respect to industrial subjects. All the other expenses of the school, including site, plant, equipment and operating expenses, together with the salaries of teachers of academic

Twenty Million Miles of Telephone Wire

The telephone wire in use in the Bell System is long enough to run from the earth to the moon and back again forty times.

The Bell System has about twice as much telephone wire as all Europe.

More than 500,000 new telephones are being added to the Bell System yearly—almost as many as the total number of telephones in England.

In twelve months the Bell System adds enough telephones

to duplicate the entire telephone systems of France, Italy and Switzerland combined.

In proportion to population the extension of the Bell System in the United States is equal in two years to the total telephone progress of Europe since the telephone was invented—a period of about forty years.

The Bell System fills the telephone needs of the American people with a thoroughness and a spirit of public service which are without parallel the world over.

THE SOCIAL TEACHINGS OF THE PROPHETS AND JESUS

By PROF. CHARLES FOSTER KENT, Ph.D.
12mo. Cloth. \$1.50 net

In this book Prof. Kent traces the development of the social conscience among the Hebrews from its earliest beginnings down to its culmination in the social message of Jesus as found in the Gospels and interpreted by Paul and the other great leaders of the early Christian Church. He shows that the Bible not only has a message for our personal lives, but that its purifying teachings are capable of enrolling the whole range of our social relationships, including the political and economic.

CECILIA OF THE PINK ROSES

By KATHARINE HAVILAND TAYLOR

A sweet Irish girl, the small daughter of an immigrant—her father's sudden acquisition of great wealth, the love of father and daughter—this is the theme of a story as amusing—as delightfully quaint and winning as "Mrs. Wiggs" or "Molly Make-Believe." It is the sort of story that strengthens confidence in humanity without taking liberties with the facts of human nature. 12mo. Net \$1.25

HOUSEHOLD ORGANIZATION FOR WAR SERVICE

America expects every woman to do her duty.

By THETTA QUAY FRANKS

By mail of the Survey \$1.05.

American women spend annually, in the home, \$9,000,000,000! Of this, \$700,000,000, according to the Dept. of Agriculture, is wasted! Make thrift nation-wide and hundreds of millions can be saved in a year! Wake up, women of America—read and absorb this book of Mrs. Franks—an earnest plan for economy based upon *business methods in the household*—a personal budget and the everyday use of a balanced ration, giving economical substitutes for meats—a simple, clear guide to economy.

THE STRAIGHT ROAD

Anonymous

The grass widow—does she prey or is she prey? This, in effect, is the theme of this factual novel, so true to its sources that it must be published anonymously—despite its author's several successes. Callie Young closed the door, from the outside, upon a life and a husband that spelled bondage and degradation. On her journey through life she was beset by every temptation which may be thrust upon an attractive woman—married but separated from her husband and undivorced—yet she held to the Straight Road in the face of a world of predatory men. Illustrated, 12mo. Net, \$1.50.

HENRY HOLT & Co., 19 W. 44th St., New York

subjects, are left to the states or to local communities.

Allotments to the states for teaching agricultural subjects are to be in the proportion that their rural population bears to the total rural population of the country, allotments for home economics and industrial subjects in the proportion that their urban population bears to the total urban population of the country.

The bill aims also to stimulate the preparation of teachers for these subjects. It appropriates \$500,000 for this purpose for 1918 and gradually increases this sum to \$1,000,000 by 1921, which is to remain the annual appropriation thereafter. The allotment of these funds is to be in the proportion that the total population of the state bears to the total population of the United States.

The states must submit to a joint supervision of the use of these funds by the Federal Board for Vocational Education, which is created by the act, and the state educational authorities. On its side, the state may put administration into an existing board or it may create a new one. Most of the twenty-nine states mentioned have designated the existing state board of education. Colo-

rado designated the state board of agriculture, although a board of education exists there, North Carolina created a state board of vocational education, West Virginia put administration into the hands of the state board of regents, and Maine, Ohio and South Dakota, none of which has a state board of education, created new boards of control.

The composition of the federal board was the chief point in dispute between the Senate and House conferees. The board was finally made to consist of the secretaries of agriculture, commerce and labor, the commissioner of education and three citizens to be appointed by the President, one to represent manufacturing and commercial interests, one agricultural interests and one labor interests. Professor Dewey, of Columbia University, has criticized this arrangement as "scandalously" lacking in educational representation. Another criticism of the bill by educators is that by permitting administrative boards to be set up under any system the state wants to employ, it allows, if it does not actually encourage, a dual system of control for vocational and general education.

The act stipulates that "the control-

ling purpose" of the education to be provided under it "shall be to fit for useful employment." It must be of less than college grade and must be designed primarily for persons over fourteen years of age. The plans of the state board for giving this education must be formally approved by the federal board. A state may, if it choose, accept the benefit of any one of the funds without accepting all.

BRITISH COOPERATION IN WAR TIME

THE publication of two new periodicals within the cooperative movement in England marks its growing strength. The *Producer*, published by the Cooperative Wholesale Society as a monthly since November, 1916, is intended as a trade and business paper and brings expert discussion of the technical problems which face individual societies and their managers. The *Co-operative Educator*, published by the Cooperative Union since January, is devoted to the promotion of popular education in the ethics and economies of cooperative enterprise. It serves as a connecting link between the large number of voluntary

teachers, most of them active members of local organizations, and supplies study circles with appropriate material.

There has also, in recent months, been a crop of books and pamphlets written by cooperative educators who discuss the new problems facing the various forms of cooperative enterprise during the war and expected to arise when the war is over, such as the relation to trade unionism, changes in the system of taxation, cooperative control of raw materials and prices, the need for changes in educational policy, and the maintenance of democratic institutions and international relationships.

Among recent books, *The National Being*, by George Russell, the well-known Irish poet and cooperator, outlines a plan for making cooperation, agricultural and industrial, the basis of unity in a national Irish political economy. "We hope," he says, "to create finally, by the close texture of our organization, that vivid sense of the identity of the people in this island which is the basis of citizenship and without which there can be no noble national life." The Cooperative Reference Library of Dublin, one of the fruits of the Irish movement, publishes an English translation of Dr. Hannes Gebhard's *Cooperation in Finland*, describing its rapid growth since its origin twenty years ago.

The forty-eighth cooperative congress was held at Lancaster in June, 1916. The report, just issued, a document of nearly a thousand pages, shows the importance which the movement has attained. Foreign representation, on this occasion, was limited to France; and purely national problems predominated in the discussions to a greater extent than usual. The largest amount of discussion was provoked by a paper on *The Economic Results of the War and Their Effect upon the Cooperative Movement*, read by F. Hall. He foresees that, owing to the diversion and destruction of capital during the war, higher rates of interest are likely to prevail in future and correspondingly lower wages. Prices, in his opinion, will not fall, but, on the contrary, go on rising owing to the exhaustion of stocks and the destruction of coal mines and other sources of supply.

The permanent transfer of large numbers of women from the consuming into the producing class and the effect of greater inventiveness and a more progressive spirit will to some extent counteract this tendency. The psychological development chiefly to be feared is a general relaxation after the high tension under which all classes have labored during the war. Altogether, though he tried to be cheerful, Mr. Hall was obliged to paint a pretty black picture of coming conditions for the workers, taking into account also the lessened purchasing power of foreign countries, the

(ESTABLISHED 1865) 10 South La Salle Street Chicago

burden of taxation, the abrogation of trade-union regulations, possible deviation from the principle of free trade upon which British prosperity has been built up.

To meet these difficulties, he urged the members of cooperative organizations—over one-fourth of the population of the United Kingdom—to remove restrictions on the accumulation of capital and increase their share capital, to establish or develop savings banks, to increase the loyalty and trade of present members, to prepare a plan of extension of both distributive and productive departments in readiness for the proper time, to overhaul financial arrangements with a special view to increasing reserves and making fullest allowance for depreciation, not to increase dividends from war profits, but rather to create with these a special reserve. Altogether, the cooperative movement can weather the storm only by a policy of extreme conservatism and greatly increased loyalty of its members; a deepening of its ideal rather than a wide extension of its propaganda is demanded by the expected situation at the end of the war.

SOCIAL HYGIENE IN WAR TIME

COOPERATING with the commission on recreation for military training camps, the American Social Hygiene Association announces it will assist in keeping the War Department informed as to the conditions in camps and the zones about them; it will help the medical department of the army to provide facilities for diagnosing venereal infections among the candidates for enlistment, and for the treatment and supervision of all cases in the camps who have been exposed to infection; and it will also cooperate with the Public Health Service and other governmental agencies in controlling the situation in cities and towns near military camps. Here the association's especial work will be in creating public opinion so that measures practically dealing with conditions may be unhampered. The provision of an adequate supply of salvarsan and of facilities for treating infected individuals in the civil population is contemplated.

There is much need for the assistance of civilians if this program is to be carried out, writes Dr. W. F. Snow, secretary of the American Social Hygiene Association:

Just what form of work may best be undertaken by a particular agency cannot be determined until the location of the camps is known and the power of military authorities is definitely fixed. But it is safe to assume that the government will look largely to the civil authorities to repress prostitution, alcohol and other vicious conditions in towns where the soldiers may spend their leisure time.

In spite of the progress of public opinion regarding prostitution, there are still towns

where segregated districts are tolerated, and camps may be located near such communities. . . . Official action may need the stimulation of private initiative to meet such a situation.

Besides removing opportunities for indulgence, the promotion of moral and physical welfare through clean recreation will, as has already been pointed out [the SURVEY for May 12], call for the assistance of many intelligent and effective organizations. The association urges that civilians be alert where camps are already established.

PORTUGUESE INDENTURED LABOR

SIMULTANEOUS with the encouraging forecast of the abolition of indentured Indian labor by the viceroy [the SURVEY for May 26] comes the publication of a British "white paper" concerning contract labor in Portuguese Southwest Africa. It may be recalled that for many years the condition of these *serviçaes* on San Thomé were so bad [the SURVEY, November 6, 1909] that British and Dutch cocoa manufacturers refused to handle the product of that island. Now conditions, according to the reports received from British consuls and embodied with previous correspondence in this parliamentary document, are so much improved that this voluntary embargo may well be removed. Consul-General Hall writes:

The reforms which the Portuguese have carried out since 1908 are so great that I think it may, without exaggeration, be said that a revolution has been effected. There seems no reason to doubt that the methods of recruitment are free from objection. The conditions under which the laborers live and work have reached a high standard and are improving. There is not only no evidence to show that fraud or violence or other illegal methods are used to secure renewal of contracts, but there is evidence tending directly to show that the laborers are left perfectly free to choose whether to recontract or not; the proceedings, moreover, are open to the public and are advertised beforehand. Finally, the fact of continuous repatriation to Angola, as well as Mozambique and elsewhere, is patent to every person who comes to these shores.

The principal reason for this improvement, both in methods of recruiting and conditions of work, apparently is the fact that by means of a bonus paid in a lump sum at the end of the contract, the laborer is enabled to return to his home community in comparative affluence and that, hence, the flow of labor has become more than sufficient and made any mode of coercion entirely superfluous even from the most brutal considerations of exploitation.

The effectiveness of the protests made five years ago is shown by the endeavor of planters to improve living conditions for contract laborers. Even though the glowing accounts of the consular officers may be somewhat influenced by political motives, and although, of course, every form of contract labor under white mas-

THE WAR AND THE END OF POVERTY

HERBERT C. HOOVER is to speak the evening of June 8 before the National Conference of Charities and Correction, at Pittsburgh, his subject being The War and Food. Other speakers announced for the special section on Social Problems of the War, of which Edward T. Devine is chairman, are Samuel Gompers on The War and Labor; E. H. Scammell, secretary of the Military Hospitals Commission of Canada, on Disabled Soldiers, and Eliot Wadsworth on the American Red Cross.

The program of the section on The Family and the Community as originally arranged has been supplemented by an address on the Patriotic Fund of Canada, by Helen R. Y. Reid of Montreal. Another session of the same section will consider The Treatment of Soldiers' Families. In the section on Health Dr. C.-E. A. Winslow will speak on Public Health in War Time and Mary E. Lent on Special Public Health Nursing Problems Likely to Be Created by the War. In the section on Community Problems, Prof. Irving Fisher and the Rev. Charles Stelzle will discuss national prohibition. Later, again under the health section, Prof. Graham Lusk will consider Economy in Diet and Lucy H. Gillette The Relation Between Expenditure for Various Types of Food and the Food Value of the Diet. Announcement of ex-President Taft's address on International Adjustments after the War has been made previously.

The whole program will, it is announced, reckon with the war and its demand for social organization of the whole people without scrapping the original program, made before war was declared. This, as described in the subject of the address of the president, Frederic Almy, is The End of Poverty, an Impossible Goal Which We Can Approach.

As in the past, various kindred groups will meet at or about the time of the National Conference sessions in Pittsburgh. The following are among those scheduled: National Conference on the Education of Truant, Backward, Dependent and Delinquent Children, June 4-6; American Association of Officials of Charities and Corrections, June 8; American Committee of Polish Social Workers, June 9-11; National Federation of Settlements, June 3-6; National Association of Jewish Social Workers, June 3-6; International Association of Policewomen, June 6-8; National Children's Home Society, June 4-6; National Probation Association, June 5-6.

Are You Interested in Publicity?

An open meeting for all social workers interested in publicity principles and practice will be held at the National Conference of Charities and Corrections in Pittsburgh, time and place depending upon possible arrangements and evident demand, probably June 10 or 11.

Those who will be at the National Conference, and wish to attend this meeting, are invited to give their suggestions of topics which they want discussed, to Elwood Street, at the SURVEY stand, in the headquarters of the National Conference in the William Penn Hotel, Pittsburgh. He will have information as to time and place of meeting.

Group Life Insurance

The Metropolitan Life Insurance Company has organized a special group insurance division because it believes that in this way it can enlarge its service to the people of the United States and Canada.

What Is Group Insurance?

Group insurance is insurance at wholesale whereby 100 or more persons are covered by the single policy.

What Is Its Purpose?

1. It seeks to provide a continuance of the pay envelope after the death of a wage earner.
2. It is used to provide endowments for schools, colleges, hospitals and churches.
3. It is a method for providing pension funds for the police force or the teachers of a city or for employees in a private business.

What Are Its Advantages?

1. It means insurance at lower cost.
2. When taken out by employers for the benefit of their employees it means more satisfactory results in industry.
3. It provides an easy method of securing protection.
4. It brings better relations between employer and employees, increases the interest of the worker in his position and in the firm for which he is working.

How Are Benefits Paid?

Group insurance may be written so that the amount of the insurance is paid in one lump sum on the death of the person insured, or it may provide for regular installments after death.

The Metropolitan Life Insurance Company is interested in Group Insurance. It believes that in offering it to the people of America it is filling a very important need.

One of the first groups on whom it wrote this insurance was its own employees, numbering nearly 20,000 persons.

You are invited to ask any questions concerning it. Address the

HO FOR PITTSBURGH!

SUITCASE in hand and speech in pocket, social workers from every state and from Canada are spending this week in Pittsburgh, where a score of social and civic bodies are meeting with or before or beside the National Conference of Charities and Correction, the parent body. A report of the discussions will be the leading feature of

The Survey Next Week

TWENTY Americans are off to study the tremendous task of rehabilitation in stricken France and as to how the Red Cross hundred millions may best be put at work. Page 235.

WITH the purpose in mind of enabling a soldier's family to live according to the standard to which they have been accustomed, the civilian relief worker must work out a plan of income and expenditures, just as she would for her own family or for a business enterprise. The basis of it is a family budget, flexible enough to meet changing needs and prices, to be kept by the family itself and made into an interesting bit of home-engineering. Page 239.

STATE executives, facing total expenditures of millions of dollars on account of dependent immigrants, have organized to get help from Washington. Page 246.

MEN who demand that their wages be fixed in terms of food, fuel and clothes, have increased greatly in numbers as the cost of living goes up, and filled the country with industrial unrest. The Council of National Defense is meeting the situation by appointing local committees to cooperate with the government labor mediators. Page 241.

MEANTIME, Secretary Wilson has drafted a bill which would establish a federal adjustment commission with plenary powers over interstate carriers and their employes. By fixing an eight-hour day for railroads he believes serious trouble will be averted for perhaps a generation, or until there has grown up a general demand for a shorter work-day. Page 244.

CONSCIENTIOUS objectors of all kinds and whether members of a church or no, should be exempted from war service, according to the labor and radical conference held in New York last week. The Russian revolution was acclaimed and the draft act denounced. Page 246.

DENTISTS working on a cooperative basis for all members of the constituent unions, are the latest development in the Joint Board of Sanitary Control in New York city. Page 248.

ST. LOUIS is surveying its alien population as the basis of an intensive campaign of Americanization, winding up with a Fourth of July celebration in which the veterans of the G. A. R. will be guests of the new citizens. Page 248.

THE PALISADES, saved from commercial wreckers, have been made into a great interstate park at the very doors of New York city. The commissioners, drawing on the experience of last year, are planning cooperative uses on a great scale by clubs and classes and families, all sharing in common water supply and waste disposal. Page 247.

SHRUNK to 69 cents, the dollar of the city employe of Dallas does not keep him out of debt except as he scrimps on the necessities of life. Food has risen 45 per cent in three years. A summary of an official survey. Page 248.

NEWSPAPER men from the whole country, diplomats, international lawyers, spokesmen of the submerged countries of Europe, leaders of thought representing almost everything except the belligerent governments, including our own, sat in at the Long Beach conference on internationalism. It was a training class in the world wide problems which editors and speakers and legislators must tackle as they have hitherto tackled the problems of city and state. Page 236.

THE SURVEY

The Red Cross Commission to France

WITHOUT announcement and on almost the briefest possible notice an American Red Cross commission of twenty persons slipped away to France within the week to answer what Henry P. Davison, the chairman of the new Red Cross War Council, has described as "the most stupendous and appealing call in the history of the world to aid suffering humanity."

The purpose of the commission, which goes abroad "for the period of the war" and which includes a notable group of business and professional men, is three-fold: to study the needs and conditions of non-combatant populations in some of the European countries, to prepare the way for the American troops that will be sent abroad, and to administer the relief for which the American Red Cross has already set out to raise \$100,000,000.

The work that the commission intends to do is partly revealed by the identity of its members. The commission is headed by Grayson M. P. Murphy, senior vice-president of the Guaranty Trust Company, New York city, who is called commissioner for Europe and has been given the military title of major for the purposes of this work. Mr. Murphy is a graduate of West Point. He goes with plenary powers.

There are eight deputy commissioners: James M. Perkins, vice-president of the National City Bank, New York city; William Endicott, of the firm of Kidder, Peabody & Co., New York city; Cary Taylor, lawyer, New York city; George B. Ford, town planning expert, New York city; Ernest McCullough, engineer, Boston; A. W. Copp; Ernest P. Bicknell, who has resigned as director general of civilian relief of the Red Cross; and Dr. Alexander Lambert, physician, New York city.

In addition, the commission is accompanied by six "inspectors for service in Europe," three secretaries and a comp-

troller. The Rev. John Van Schaick, Jr., of Washington, D. C., and president of the local Board of Education, is one of the secretaries.

In outlining recently the work that such a commission would have to do, Mr. Davison said that the American Red Cross must become a foster parent of our soldiers while they are in Europe. Not only must the sick and wounded be cared for, he said. Englishmen and Frenchmen, when relieved from duty in the trenches, go home. Soldiers from other countries have no home to go to. They go to Paris. "Many of them," said Mr. Davison, "do not return from Paris as efficient soldiers as when they went there. Our American soldiers must have a home in France, somewhere to rest, somewhere to find a friendly atmosphere, somewhere to go for recreation and wholesome amusement. These men will be returning to this country some day. We want to make it certain that as many as possible return in health and strength, and not afflicted with disease from which our forethought might have protected them."

The presence of Dr. Lambert on the commission indicates an intention to combat tuberculosis and other diseases. Tuberculosis, said Mr. Davison, is spreading in France. Moreover, some 1,500 towns and villages in that country have been destroyed. The people in these devastated regions require even the simplest essentials with which to begin life anew. Among the necessaries which Mr. Davison said we ought to furnish them are clothing, agricultural implements, domestic animals, especially horses and cows, seeds, fertilizers, tools, bedding, stoves and the elementary materials with which to cover themselves by day and by night. Some idea, he said, of the amount involved in such an undertaking can be formed from the knowledge that the Commission for Relief in Belgium has advanced for governments and from private subscriptions \$350,000,000 for relief in

W. FRANK PERSONS
*Director general of civilian relief
of the American Red Cross, suc-
ceeding Ernest P. Bicknell*

Belgium alone. Russia, too, needs our help, said Mr. Davison.

On the Russian line of 1,000 miles there are only 6,000 ambulances, while on the French front of 400 miles there are 64,000 ambulances, fully equipped. Behind the lines in Russia are millions of refugees from Poland, Lithuania, and western Russia, driven from their homes by the German and Austrian armies, wandering from city to city, crowded into unfit habitations, huddled in stables, cellars and outhouses and dying from disease due to exposure and insufficient food.

Russia needs our trained women to instruct hers in the art of nursing; she needs enormous quantities of the elementary articles necessary to relieve the very worst cases of pain and suffering. Probably nothing that can be done immediately will do more to win this war than to strengthen Russia. . . . Our Red Cross is the one agency which can exert itself effectively in this terrible emergency.

The passports of the commission read only to the allies of the United States and to neutral countries. It is not expected that the work of the commission will cease with the end of the war. Meanwhile, for its present trip it has received the cordial welcome of the French government.

Paul Rainey, the African huntsman, explorer and motion picture photographer, sailed with the commission. Mr. Rainey has made motion pictures on the Anglo-French front and it is expected that he will photograph scenes studied by the commission.

Mr. Bicknell's resignation in order to go to the front—a task

which is expected to keep him in Europe for a number of years, as the work of rehabilitation must go on long after the war is over—made necessary several changes in the Red Cross organization. Chief of these is the appointment of W. Frank Persons, of New York, as director general of civilian relief.

Mr. Persons has been with the Red Cross since February, organizing and directing the Red Cross supply service for collecting from all parts of the United States and distributing to the training camps, base hospitals and the troops at the front every sort of supplies and comforts [the SURVEY for April 14]. He entered the Red Cross service from the Charity Organization Society of New York city in which he was director of general work. His connection with the society dates from 1900. He is a graduate of Cornell College, Iowa, and of the Harvard Law School. As director general of civilian relief he will have charge of all forms of civilian relief undertaken by the Red Cross, including not only the work in Europe but in the United States. At the moment the Red Cross is in charge of relief work on a considerable scale following the recent tornadoes in the southern and middle western states. He is chairman of the section on The Family and the Community of the National Conference of Charities and Correction, meeting this week in Pittsburgh.

The Long Beach Conference

And Its Social Approach to Foreign Relations

Paul U. Kellogg

SOcial forces and considerations shot through the discussion at every session of the National Conference on Foreign Relations of the United States, held last week at Long Beach, L. I., under the auspices of the Academy of Political Science of the City of New York. But if this had not been so, the gathering itself would have warranted notice as a social phenomena. For here—the central core of the meeting—were from fifty to seventy-five newspaper editors and publishers from California and Texas and Louisiana, from the southern seaboard and New England, from the metropolitan press of the Central East and from the dailies of the Middle West. Beside them were magazine men, historians, economists, social workers, diplomats (especially from the South American republics and the Orient); spokesmen for Armenia, Greece, Bohemia, Ireland, Switzerland; Republicans, Democrats, Progressives and Socialists; professors of international law and international lawyers, labor leaders, officers of corporations active in international banking and foreign trade, and men who have represented the American government in international negotiations.

We have had notable professional conventions of political scientists and international lawyers in the past; the Mohonk and Clark University conferences have delved into foreign affairs; Pan-American gatherings have made us more and more conscious of the New World as something more than a map; peace organizations, especially since the outbreak of the European war, have drawn on hitherto unaroused reaches of public interest; and the recent missions from France, England and Italy have given color as never before to the rather drab conception in most men's minds of diplomatic relations. But these have all been fragmentary by comparison, both in the range of discussion and in the catholicity which drew into

these Long Beach meetings both the expert and the lay elements which will have to do with the molding of American policy and opinion. The purpose was solely one of exchange; no resolutions were passed. And the effort of the program committee was to break away from the more academic formulations of pre-war days to the dynamic issues which will engage public attention, and throw open the discussion to those who approach them from different angles.

Thus at the first morning session the clear preponderance of sentiment against the older secret forms of diplomacy and the quick recognition by lawyers and university men that the journalists were serving the whole people in their stand against an exaggerated censorship, were evidences not so much of mistrust of the administration, as self-assertion and determination to clear the ground for action by the very forces which have played so increasing a role in domestic affairs.

Here the lead was taken by Frederick Roy Martin, assistant manager of the Associated Press, who, on the basis of his personal experience with German, French and English censors since the war began, made a sweeping, destructive criticism of the censorship section of the espionage bill which was under debate in Congress as he spoke, and which had lost its last newspaper support in New York that morning. Nor was he lacking in American instances where misunderstanding had been needlessly provoked; for example, the wild rumors in Germany as to mistreatment of Germans in this country which ran their perilous course for four days while the naval censor at Sayville held up dispatches which told the truth.

He drove especially at the cabinet's attempt to stretch censorship from its legitimate sphere of military facts to cover comment, and from war operations to cover the discussion by the press of the objects of the war and the terms of peace.

Had the bill been passed as drafted, and had it been interpreted in line with the desires set forth by the Bureau of Information and Censorship in their memorandum to the press, such a conference as that at Long Beach would, he said, have been unlawful. Here, indeed, was one of the rare services of the conference—in its assembly of men and women who by no construction of the imagination could be classed as firebrands and meddlers, and who with deliberation and coolness staked off the claim of the public to discuss the grave questions of public policy which must be weighed and judged if public opinion is to resist a wrong settlement of the war or support a right one.

Housing reformers have visualized the fight against the white plague by imagining what the program of a Society for the Spread of Tuberculosis would be. It would hold fast to dark rooms and narrow airshafts; it would promote the construction of dumb-bell tenements and "lung blocks"; it would campaign for closed windows, for overwork and underfeeding. So, as was brought out in this discussion of publicists, a Society for the Perpetuation of War, or for the unnecessary prolongation of this one, would as its first task set out to keep the people of each nation from knowing how those of every other felt. It would snap the cables, cut off the posts, crush the free press, and spread on each side the most extreme utterances of anyone identified with the other side, so that each would be personified for the other in its worse representatives. Thus Berlin imperialists, in order to bolster up their hold on the people by spreading the dread of national annihilation, see to it that the most savage imperialistic wing of the English press circulates unhindered throughout the empire. And nothing would so make against cohesion among the allies as such misgivings concerning their mutual commitments in war aims as would be provoked by hindering the freest interchange of opinion not only among the governments but among the general public.

The topic of censorship fell in the first morning session, which was given over to the discussion of the need for better machinery in international negotiations. And Oscar S. Straus, former ambassador to Turkey, who was presiding, struck the keynote in suggesting as a better version, "The need of closer relationship between the machinery of diplomacy and the will of the people." As a foil to diplomacy carried on under "the cloak of secrecy and concealment," he maintained that the people through their chosen representatives should become a part and have a voice in making, confirming or rejecting their country's international engagements and policies. This, he argued, is only possible among democracies.

Those who spoke for the older methods—notably two diplomats, one from North and one from South America—unconsciously revealed their primary mistrust not only of democracy but of representative government, such as could scarcely fail to range them in opposition to the trend of the last twenty years in domestic affairs.

Mr. Straus quoted Treitschke as the most uncompromising opponent in his generation of democratic institutions in international relations; and identified German policy with the "original imperialistic conception to conquer whatever it can appropriate and hold whatever its power enables it to retain." President Butler held that when the doctrine that the state is superior to the rules and restrictions of moral conduct, or the view that to some one state is committed the hegemony of the world's affairs for the world's good, takes hold of the conviction and imagination of a great people, "an issue is presented that cannot be settled by vote in conference, that cannot be arbitrated by the wisest statesmen, and that cannot be determined by the findings of any court. The authority and value of each of these modes of procedure is challenged by the very

issue itself." What Dr. Butler advanced from the standpoint of "the international mind," Justice Hughes in his address at the opening session advanced from the standpoint of international law. "If the world is to be made safe for democracy it must be a world in which the nations recognize and maintain the supremacy of law," he said. "This war is in truth the negation of all law. No principle has been spared. Force derides treaties, dethrones law in the interest of expediency, and, defying God and man, resorts to unspeakable barbarities which mock the boasts of civilization."

At succeeding sessions, the fabric of law and agreement by which after the war the world might be organized to ensure peace, justice and democracy was discussed from various angles. Samuel T. Dutton spoke from the standpoint of the World Court League, and Hamilton Holt from that of the League to Enforce Peace. He held that its four-ply formula, hinging on joint compulsion upon any nation to bring its cause to conciliation or adjudication, is the one constructive proposal which has emerged since the outbreak of the great war. Alpheus H. Snow, of Washington, presented an original and comprehensive plan of international legislation and administration.

Prof. William I. Hull did not want to wait till the close of the war to set about creating what might be called spheres of civilization, but urged that the allies institute forthwith a joint commission to take over the administration of conquered areas. The Balkan commission had investigated atrocities and the abuses of military control after the war. Why not do it while the war is on? A joint commission charged with administering occupied territory in Asia Minor might, he argued, forestall military excesses, protect the inhabitants from exploitation carried on under shadow of the general preoccupation, set going the processes of relief and reconstruction, and afford a sounder basis for the transition after the close of the war.

Prof. John Bassett Moore of Columbia did much to extricate the minds of his hearers from the dilemma of choosing between a policy of leaving things at loose ends or of pinning their faith too implicitly upon legal clockwork as a surety for peace. Apparently he had less confidence in new forms than in restoring the full range of international issues to the sphere of conciliation and arbitration, which has been so cut down by treaty reservations in recent years as to render the breaches in The Hague undertakings more important than what remains. He showed the slow organic growth of international arbitration; argued on the one hand that it has met with increasing measure of success even in major causes and between the greatest powers; and on the other that the new proposals for international tribunals are not essentially different, and would in turn break down if the public will, rather than much machinery, is not enlisted.

Felix Adler carried the discussion to a further stage. Discounting any scheme of world organization which neglected the element of legislation, took over from the courts the process of law-making by precedent, and relied upon understandings framed by the representatives of governments as such, he championed a parliament of parliaments as essential to world organization, and wanted it a people's parliament. It should be made up, he urged, of delegations from each nation which would represent its primary social groups and interests, its farmers, its manufacturers and workers, its educators and scientists. Had there been such a body in existence in August, 1914, he claimed, there would have been no war, for the people did not want war, but were unable to get together except through artificial machinery of diplomacy. Security for the future lay in organizing the real forces at work

in the world in new contacts and channels for minding their business.

From this point on the sessions had to do with the forces—economic and social as well as national—at work in international relations, and their manifestation in given regions. It was a former judge who, in the program committee, put it down that developments in Russia were prophetic and that from now on organized labor in the different countries would have more to do with shaping issues than all the international lawyers combined.

Miss Addams interpreted the part of the unorganized masses as a conserving force for peace in the world's future. She spoke of the internationalism which manifests itself on every hand in settlement neighborhoods, in the mingling of workers of all races, and of the great migrations of wage-earners, not only as harvest hands in Europe, but the semi-annual ebb and flow between Italy and South America, by which, after garnering their own fields, the Italian workers go south in the northern winter in great bodies to do the work of Argentine. She spoke, also, of the high place which "bread labor," the nurture of growing things, holds among the sanctions of peasant folk the world over. The world's shortage of food has deepened this feeling and, together with the age-old instinct for craftsmanship and productive labor, makes the war seem a great interruption and personal wrong to simple minds. It enters into that recoil against war which is bound to assert itself in the ordering of the future.

Meyer London, the single socialist representative in Congress, sharply criticized the administration for blocking the sending of delegates to the Stockholm conference; and William English Walling, a leader in the protestants among American Socialists, outlined spiritedly what he called the Wilson-Kerenski peace terms. Throughout the sessions there was much approving application of the principles set forth by the President in his address to the Senate—principles of self-government, of respect for nationalities—weaker peoples as well as weaker nations—and the democratic organization of the world.

Prof. Stephen P. Duggan, whose excellent work as director made the conference a success, showed how the violation of the principle of nationality, especially by the dynastic and imperialistic builders of central Europe, had laid the seeds for this war.

Francis Hackett pointed out its exaggerations, whether on the part of a strong nation which overruns a weaker or on the part of a small nation which makes capital out of the difficulties of its neighbor to achieve its own ambitions; hence the suppressed nationality, with all its abuses and tension even under the hands of such an enlightened power as England.

The cases for Belgium, Greece, Ireland, Poland, Bohemia and Switzerland were put by various speakers from various angles, not as fixed parts of the program, but as spontaneous expressions from the floor. They were naturally conflicting but clarifying in this: They showed that it is a mistake to think the disentanglement of the European map in the day of settlement will be a simple matter, but that only in some international solution, broad enough at once to insure security to the great peoples as well as the small, can the settlement be free of weak spots which will prove its undoing.

S. R. Ratcliffe, American correspondent of the *Manchester Guardian*, interpreted British liberal opinion in a way which presaged a striking of hands among liberals throughout the allied countries, both in a fresh enunciation of war aims and in the final settlement. At the session on newer American concepts of international relationships, Prof. Henry R. Seager, who was presiding, raised the question whether the Russian

revolution and the entry of the United States into the war did not call for such a fresh statement of terms. And later, at an informal meeting, with Albert Shaw in the chair, fifty delegates, as individuals, signed a statement offered by Roger Babson, the statistician. It read:

Acclaiming the unselfish and constructive purposes set forth by the President as our objects in the war, and hailing the dispatch of our mission to the new Russian republic, which has overthrown the old Russian despotism and its policies of territorial aggrandizement, we express our eagerness as American citizens for a fresh statement of terms by all our allies which will again repudiate the spirit of autocracy, disclaim conquest, and will focus the liberal forces of all the nations on a democratic organization of the world.

An entire day was given up to the discussion of pan-American topics. The first session—that on the Caribbean states—was quick to provoke cleavages.

The glacier-like precision with which one after another we are taking over control of these little governments, the scattering of responsibility for this control among different departments of the government, and the lack of any public, known and supported policy toward the Caribbean were all brought out in the discussion. Oswald Garrison Villard, Albert Bushnell Hart and Moorfield Story all attacked our inconsistency in standing out for the rights of small nationalities abroad and overriding them to the south of us. Mr. Villard pointed out that we had developed no social policy to develop the people of the islands. And Professor Hart maintains that we run the risk both of doing injury to a culture and people different from our own, and of involving ourselves in problems of colonial administration over millions of aliens, to the detriment of our internal progress. The most original proposal was that of Prof. William R. Shepherd, who advocated the relinquishment by the three European governments concerned of their semi-circle of possessions from the Bermudas to Honduras, geographically and economically associated with the North American continent.

Midway between the "hands off" policy and the imperialists were those like Professor Brown of Princeton, who was author of a patriotic resolution in support of President Wilson's war program, but criticized his Mexican policy and his failure to recognize Huerta as leading to confusion and anarchy. He was for dealing with established governments, however established, and for effectively upholding American interests. The nation which holds a turbulent state to respect for the persons and property of outsiders is performing an international service.

Another trend was in the direction of internationalizing this service. Cyrus F. Wicker, formerly chargé d'affaires, Nicaragua, urged neutralization as the way out. Several speakers favored the encouragement of federation, and the further development of international courts and tribunals as the channels through which the United States could act in the Caribbean situation and preserve the good opinion of South America.

Space does not admit of an interpretation of later sessions on South America, in which diplomats of the various republics participated and at which the patronizing attitude, which regards the Latin-Americans as "feverish peoples" was exploded by Prof. Leo S. Rowe, secretary of the Mexican-American Commission of last summer. His address and that of Peter H. Goldsmith, director of the Pan-American Division of the American Association of International Conciliation, did much to restore perspective and to open up avenues of social, educational and scientific cooperation.

Similarly, the sessions on our relations with the Orient, which largely resolved themselves into a domestic question, temporarily and dangerously shelved, as to our treatment of oriental aliens, offered an opportunity for a reinterpretation

by Prof. Henry R. Mussey of Japanese social thought and makeup very different from that to be gained from war-scare headlines. With exception of two notable southern lawyers, the trend of sentiment was clearly toward exclusive federal control with respect to aliens, and exclusive federal jurisdiction in cases growing out of it. Hans von Kaltenborn, editorial writer on the Brooklyn *Eagle*, suggested creating an international commission to take up the common problems of the nations bordering the Pacific.

Nor is there space to follow the discussion at the last session of "property rights and trade rivalries as factors in international complications with special reference to investments and concessions," other than to point out that there was suggestion of another addition to the fabric of world organization—an international trade commission proposed by Prof. Overstreet, to take its place beside the International Postal

Union and the International Commission on Sanitation. There were frank exponents of the policy of economic exploitation, balanced off by the plea by Commissioner Frederick C. Howe for the social protection and development according to their own genius of backward peoples.

The proceedings of the conference are to be published in full in the *Proceedings* of the Academy. This summary is far from inclusive, but is perhaps sufficient to bring out the fact that at the time when the United States is putting its isolation behind it, when the American public is for the first time really staking its claim to the consideration of international relations, the opportunity before economists and social thinkers alike is to join in the process so that they shall not, as in so much of our internal affairs, be merely critics and adjusters of things established, but can share in laying the framework of a better day.

The Task of Civilian War Relief¹

VIII

NO matter how carefully the government selects its soldiers and sailors under the draft, there are sure to be taken for military service many men whose absence will mean a financial loss to their families that will have to be covered. For most such families the assignment of part of the enlisted men's pay or the grant of a separation allowance will, together with the earnings of other members of the family, meet the emergency. There will, however, be a large number of households which will need financial assistance in addition to what is paid to them by the government.

This must be supplied by the Civilian Relief Committee. Its task will be to make up the deficiency between the income of the family and its necessary expenditures. It must consider the resources and the standards of living of each family and adapt the allowance which it provides accordingly. For this purpose the budget method is invaluable.

Indeed, if any household is to manage its affairs economically and wisely, it must have a budget. A budget is a working plan for keeping a proper relationship between income and expenditure, a means of seeing that from its income a family obtains the things that its progress requires. Many people think that a budget is the keeping of household accounts. A family, however, may conduct ever so careful a record of its expenditures and still not follow a working plan. Similarly, a family without keeping an expense account may live according to a budget. A household budget may be what Scott Nearing calls an "unconscious budget," or it may be a statement set down in writing. Certainly, however, a budget will usually be of the greatest service when it is most clearly formulated, and that implies having it written.

It is well to ascertain first of all the present and prospective sources of the family's income. Presumably the government has made an assignment of pay. Perhaps it has also granted a separation allowance. Are any members of the household working? If the family has come to the attention of the Civilian Relief Committee because of the death of the wage-earner, is there any insurance? Did the man belong to a lodge,

a union, or a beneficial society which might be prepared to pay a regular allowance? Perhaps the church to which the family belongs may want to provide a stipend. Or perhaps the employer may have arranged to continue part of the man's wage when he went to the front. The relatives may wish to supplement the family's income if only to a small extent. All these possibilities should be taken into consideration by the civilian relief worker when she helps the family plan its budget.

In an article written at a time of rapidly changing prices it is undesirable to fix a minimum and a maximum expenditure for food, rent, fuel, and other items, even though such a statement might be suggestive to the civilian relief worker in planning allowances. This would be inadvisable, moreover, because of the great variation in living costs in various parts of the country. Besides the giving of a standard always tempts people to adhere to it instead of bearing in mind the individual needs of the family which they are trying to help. It is impossible to determine upon a certain amount of income and say that is what every family requires. In actual experience the tastes and habits of each family vary so greatly that unavoidably the household either spends more or spends less than the amount fixed.

It is to be expected that the civilian relief worker will do most of her work in the same town or in the same section of a town. Therefore, she will be able to learn what the standard of living in her neighborhood is, and to use it as an informal guide in the preparation of a budget. What is the budget of a thrifty family in the vicinity? What do the people of the neighborhood say it costs to live? What are the current prices in the local stores? What is the scale of rents?

With some knowledge of approximately what the living costs in the neighborhood are, the visitor will be prepared to help the family estimate its needs. Comparatively few families keep expense accounts. Fewer still have any adequate idea of how much money they spend in a year or a month for food or for clothing or the other necessities of life. They can, however, tell how much sugar and shoes, for example, are costing them and how much sugar they use in a week and how long a pair of shoes lasts. Indeed, the members of a family usually enjoy talking about specific costs of living even though they may not be able to estimate the total amount required for a well-considered budget.

¹ This article, the eighth of a series upon civilian relief, is based upon two lectures delivered by Emma A. Winslow, home economist of the New York Charity Organization Society, as part of the course upon civilian relief now being conducted in New York with the sanction of the American Red Cross by the New York School of Philanthropy. The articles are being written by Karl de Schweinitz, of the New York Charity Organization Society.

Social workers have found it helpful to inquire about the following items:

- I. Rent.
- II. Fuel and other housekeeping expenses—how much does the family pay a week for gas, coal, wood, oil, soap.
- III. Food. How much is spent a day for bread, milk, meat and vegetables; how much butter, sugar, cereal, fruit, tea and coffee is usually used during the week, and how much is expended for them.
- IV. Clothing. How much does the family pay for shoes, shoe repairs and stockings, and how frequently must these expenses be incurred for the different members of the family. In the course of the conversation the visitor is likely to learn how much clothing the family is obliged to purchase for itself and how much it has been accustomed to receive from friends and relatives. The visitor will thus obtain an estimate of the weekly clothing expenditures and the amount probably needed in the future for the purchase of outer and undergarments.
- V. Insurance, carfare, and so forth. How much must be spent weekly for insurance, carfare, lunch money, church contributions, and how much is reserved for spending money by the working members of the family.

Unless one understands the circumstances of the family, its problems and its standard of living, one is not likely to be able to adjust its income to fix its needs. Is it a family of adults or are there a number of children? Does the household include an old man or an old woman? Is there a delicate boy or girl in the home who must have special kinds of food and special forms of recreation? Has the family previously been living comfortably and adequately or is it undernourished by reason of privations which it has undergone? If there has been sickness or undernourishment, or if the family has been accustomed by reason of its nationality or its previous standard of living to a high-cost diet, the allowance for food must be generous in order that it will be adequate. The food cost of a family in which the woman goes out to work is usually higher than that of the family in which the woman has more time for buying and for the preparation of food.

Older and inactive people give their clothing less wear than children and able-bodied, active persons, and consequently need a smaller allowance for this item of expenditure. In families which have had insufficient or a very small income the expenditures of the woman for clothing are often pitifully low, especially if she does not go out to work. She is usually the last member of the family for whom clothing is purchased. In planning the budget the civilian relief worker should see that the woman as well as the children is provided with suitable garments for both house and for outside wear.

All families which are active church members make church contributions. It is only right that they should be enabled to continue them. Allowance must also be made for incidental expenditures for newspapers, medicines, recreation, and postage—particularly if the man is away from home in military or naval service. These and many other questions enter into the decision of how much money a family will require in addition to what it receives from the government.

Obviously, then, the first visit to the home is not the time to decide upon the amount of the allowance. If there is immediate need of food or rent, that need should be supplied, but the making of financial arrangements to continue for any period should not be undertaken until the visitor feels that she is well acquainted with the family.

On the other hand, a budget should not be considered as a permanent arrangement. The life of a family is constantly changing. A budget which might have proven to be adequate for six months might, in the seventh, become inappropriate because of a decrease or an increase in income or a decrease or an increase in the needs of the household. It will be wise, therefore, for the civilian relief worker to set down a statement of each of the budgets which from time to time she plans

for a family. These budget statements can be kept most conveniently upon a separate card filed with the rest of the case record.

Having planned the budget, the civilian relief worker should encourage the family to keep an account of its expenditures. This can be made a means of educating the household to a properly balanced expenditure. At the same time it will enable the visitor to make sure that her budget estimate has been sufficient for the needs of the home. An expense account is one way of helping the family to adjust itself to the new situation in which the departure of the man for military or naval service leaves it. The woman has probably been accustomed to depend upon what her husband gave her from time to time for her housekeeping expenses. The man has perhaps decided the amount of money to be used for the payment of rent and the other overhead expenses. The increased cost of living because of the war and the fact that some members of the family who had hitherto not been working may now have taken employment will complicate for the woman the apportionment of her income. A keeping of expenses will have a steadying influence. It will enable the woman to feel that she knows how her household management is meeting the changes in the circumstances of the family.

The kind of account book that has the greatest educational value is one in which the different items of household expenditures are indicated. A book that has been used successfully is one prepared by the American Home Economics Association, 1211 Cathedral street, Baltimore. It makes possible the keeping of a record of expenditures week by week. There are three principal accounts: house, food and personal. The house account is divided into three parts—rent or house payments, including taxes and house repairs; fuel, light, laundry and cleaning supplies, ice; house furnishing. The food account is arranged in six divisions according to nutritive requirement—1, meat, fish, eggs, milk, cheese, nuts, lentils, dried beans and peas; 2, fruit and vegetables; 3, flour, meal, rice, macaroni, breakfast food, cereals, bread, crackers; 4, butter, butterine, oil, lard, bacon, salt pork, etc.; 5, sugar, sirup, honey, molasses, candy, etc.; 6, tea, coffee, salt, spices, etc.

These divisions follow those suggested by the United States Department of Agriculture. Each of them should be represented each day in the diet of the family. The personal account includes clothing, carfare, lunch, health, recreation, education, insurance. Place has been provided for keeping separately the expenditures of six persons. Two pages of the book are allotted to each week. At the bottom of the second page is a space for a summary of the week's income and expenditures.

This book is being used successfully by a large number of families under the care of social agencies. It is a simple method of keeping accounts and, particularly because of the arrangement of the food account, is of help in assisting the family to maintain a balanced and healthful and at the same time economical diet. The introduction of the book explains how the accounts should be kept and tells something about the value of the different nutritive elements.

Perhaps the most important thing to remember in helping a family to plan and live according to a budget is not to supervise that family too closely. Allow the family to act upon its own initiative as much as possible. Let it develop responsibility. Perhaps, sometimes, it will make mistakes, but in the end it will be a stronger home if it has done its own thinking and planning. The use of an expense account is perhaps one of the best ways of advising in household administration without exercising a supervision which may make the family dependent upon the visitor instead of upon itself.

COMMON WELFARE

PROTEST OF THE UNITED MINE WORKERS

ON the coal supply depend munitions, transportation, war itself. Whatever brings about the heavy and continuous production of coal results in more efficient prosecution of the war.

Yet the Council of National Defense, in its recent appointments to the committee on coal production, has committed a blunder, it is felt, which may affect the committee's aim of raising to the maximum the coal output of America. The council has failed to place on the committee a single member of the United Coal Miners of America. On the other hand, it has appointed to represent the coal industry in Colorado, Montana, New Mexico, North Dakota, Oregon, Utah, Washington and Wyoming, J. F. Welborn, Rockefeller agent of the Colorado Fuel & Iron Company, and bitter opponent of the strikers in the Ludlow uprising. Moreover, F. S. Peabody, chairman of the committee on coal production, has issued a statement in which he urged "that the practice of moving miners from the mines of well-established, producing companies or communities to other districts be discouraged, as this practice creates a state of unrest and tends to decrease the total output of coal."

John P. White, president of the United Mine Workers of America, has protested to President Wilson and to the Council of National Defense for "placing the great coal areas of the nation at the dictation of the avowed enemies of union labor," and for failing to consult the workers who produce the coal in regard to the policies proposed by the committee. "A leading feature of these policies," writes Mr. White, "is the proposition that the mine workers shall not be free to work where they can produce the most coal and where they can advance the interests of the most capable and most humanitarian employers, but must stay chained to the service of the incapable, unfair and the unpatriotic exploiters of labor and of national resources if they happen once to be in such employment."

Mr. White also calls attention to the

fact that mine owners and workers in the central competitive field and the anthracite field have already offered joint committees of operatives and employes as auxiliaries to the Council of National Defense to direct the production of coal on a basis of mutual interest, confidence and efficiency.

"Our organization," Mr. White goes on to say, "spontaneously and with deep devotion, has pledged its membership to every service in defense of the nation, whether in the armies or in the mines. It has set aside for the period of national emergency its opposition to the militaristic spirit. It has subscribed to \$50,000 of the liberty loan bonds. . . . It is able and eager to double all records in the production and distribution of coal if it is given the necessary facilities and the right spirit of cooperation and help."

LABOR WINS

GOVERNOR WHITMAN has vetoed the Brown bill which would have empowered the New York State Industrial Commission to suspend provisions of the labor law in work directly or indirectly concerned with the prosecution of the war [the SURVEY, June 2]. In a memorandum, the governor explains that while it is of supreme importance that every man and woman should be willing to make every necessary sacrifice in this great war, the state must not permit its industrial population to have cause to feel that war burdens may rest most heavily upon the shoulders of people least able to bear them. "I am confident," declares the governor, "that no emergency can arise in this state at least before the next session of the legislature, which will justify the suspension of the laws passed in response to an overwhelming sentiment of our people for the protection of women and children compelled to labor for their daily bread."

The governor has signed, however, the second Brown bill permitting the employment of children in agricultural pursuits between April 1 and November 1. He argues that this bill in no way breaks down the child labor laws which at present allow employment in vacation time, but as never before authorizes superintendence for such vacation work.

NEW FEDERAL COMMITTEES ON MEDIATION

COMING to the aid of the federal Department of Labor in meeting the present great increase in the number of strikes throughout the country, the Committee on Labor of the Advisory Commission of the Council of National Defense is establishing local committees of mediation and conciliation of industrial disputes. Wage-earners, employers and the general public are to be represented on these local bodies, which will be appointed by Samuel Gompers, chairman of the Committee on Labor. The Committee on Mediation and Conciliation, formed as part of the Committee on Labor and headed by V. Everit Macy, of New York, has decided on the following cities as the ones in which the local committees shall first be created:

New York, Boston, Baltimore, St. Louis, Birmingham, Atlanta, Pittsburgh, New Haven or Bridgeport, Cleveland, Indianapolis, San Francisco, Portland or Seattle, Chicago, Philadelphia, Detroit, Salt Lake City, Denver, New Orleans, Kansas City, Louisville, St. Paul, Minneapolis.

In a letter announcing this decision Mr. Macy states that these local committees will have no government authority and the members are not expected to act as arbitrators. Their work will be confined to cooperation with the national, state and local authorities already authorized to act in case of industrial disputes.

The last annual report of the Department of Labor shows that during the three years and four months of separate existence of the department up to June 30, 1916, there were reported to it for mediation and conciliation a total of 296 industrial disputes, involving directly 268,313 persons. Of these disputes, 232 were adjusted, the settlement affecting directly 225,338 persons. During the eleven months since June 30, 1916, there have been reported to the department a total of 244 disputes, of which 131 have thus far been adjusted.

THE OPPORTUNITY BEFORE THE SURVEY THIS SUMMER

I. TO INTERPRET social work and needs in the fields to which it is historically committed, and which will have small attention in the general press.

- 1. Health.
- 2. Industry.
- 3. Relief and Livelihood.
- 4. Civics.
- 5. Education.
- 6. Crime.

1

II. TO INTERPRET the application of social technique and leadership to the civil activities paralleling military operations—such as relief and Red Cross work, the recreation commission, the medical and vocational work for invalided soldiers, the emergent social problems of garrison cities and a great number of other forms of emergent public service.

2

TO INTERPRET the movements for social control over food supplies, the encouragement of thrift and the conservation of wealth, all tending to maintain social fitness in the general civil population during the period of stress, and to free it from an overwhelming load of debt which will mortgage the social welfare of the future.

3

TO INTERPRET the efforts to conserve health and efficiency by maintaining labor standards and education.

4

TO INTERPRET the work of settlements and other agencies to promote social fellowship, reduce racial animosities and hatred, advance national cohesion among our immigrant population; and prevent the breakdown of tolerance and personal liberty essential to normal democratic life.

5

TO INTERPRET the social aspects of the movements towards enduring peace and an international fabric which will prevent the recurrence of the miseries of war and make the world safe for democracy and secure for social progress.

6

TO INTERPRET the social undertakings of war relief, reconstruction and settlement, and the advances and experience in administration and legislation worked out under pressure of the war here and abroad.

SURVEY PRINTS SERVICE SERIES

*To be published fortnightly in the Sur-
vey and reprinted in pamphlet form*

THE WARTIME RELIEF PROBLEM—as localized in every city and rural district from which soldiers with dependents leave for training camp or overseas service; the adjustment of individual workers and organizations to the Red Cross, state and government agencies, etc.

THE WARTIME HEALTH PROBLEM—as localized in every city and rural district in which incipient cases of tuberculosis, neurasthenia or other preventable and curable ills are revealed by the recruiting examinations; the utilization of government and private medical institutions and resources to prevent these cases from becoming chronic, to prevent spread of infection, etc.; their utilization in connection with the army and Red Cross medical service here and abroad; their subsequent utilization in the case of invalided men.

THE WARTIME RECREATION PROBLEM—as localized especially in the great camp centers; the utilization under the War Department of national social service agencies—the Y. M. C. A., American Playground Association, National Social Hygiene Association, etc.; the development of recreational facilities and health community activities in garrison towns, etc.

THE WARTIME CHILD WELFARE PROBLEM—as localized in every state legislature where ill-considered movements are on foot to break down child labor and compulsory education laws; and as localized in every schoolhouse and every agricultural district where social workers and educators can give direction to the training and conservation of childhood.

THE WARTIME LABOR CONSERVATION PROBLEM—as localized in every factory and industrial district, where, if English experience and the counsel of the leading national agencies in this field are to be heeded (such as the Consumers' League, the American Association for Labor Legislation and the Russell Sage Foundation), greater efficiency and greater output go with the conservation of scientific health standards.

THE WARTIME PROBLEM OF NEIGHBORHOOD RELATIONS—as localized in every tenement and industrial district, where immigrants of the different warring races are in residence and where new and delicate tasks of leadership and interpretation, in tolerance, fellowship and common understanding, fall to settlements, district offices and community centers.

THE WARTIME FOOD PROBLEM—as localized in every city and town; what the community and its leaders can do to aid the national legislative measures, soon to be enacted, to regulate the production, distribution and consumption of food stuffs, whether through actual participation in the administration of these measures, through local organizations, or through the creation of public opinion.

(Continued from page 241)

At the present rate of increase of industrial unrest, the total for this fiscal year is expected to be as great as for the three and one-third years preceding.

Nineteen men are constantly in the field as commissioners of conciliation for the department. Industries affected by "war work" are no more involved than are industries outside the munitions and supplies field. Wage contracts made one or two or three years ago are expiring, and the men are demanding increases in pay to meet the increased cost of the necessities of life. They want their wages calculated in food and fuel and clothing and shoes. Employers are, as a rule, pleading insufficient profits and a doubtful future. Ill feeling is reported between men and management in many factories where demands have been made that the standard of living of the workers shall be maintained by a raise in wages.

Mr. Macy says in his letter concerning the local committees on mediation and conciliation that

the members of our committee can be of the greatest service in obtaining a cordial reception for the government officials and in stimulating a fair-minded and patriotic attitude in the interest of national efficiency at a time when there may be friction between employers and employes.

It is of the utmost importance for the effective prosecution of the war that all industrial disputes be settled promptly and without the interruption of any industry. Under the prevailing abnormal conditions and owing to the many adjustments that will be necessitated by war conditions, all patriotic citizens must work together to minimize undue hardship to any individual or to any section of the community. . . . We need men who can keep a sound and broad point of view under trying, exasperating conditions.

Mr. Gompers, in a public statement in the *Official Bulletin* of May 28, on the value of the recent visit of labor spokesmen from Great Britain, says of the American situation:

Certain fundamental questions have required attention, one being the effort to maintain our present economic standards—legislative and otherwise—until such time as the Council of National Defense shall request the lowering thereof because essential to the maintenance of our democracy.

SECRETARY WILSON'S PLAN TO PREVENT STRIKES

INCIDENT to the investigation by a special committee of the United States Senate into the facts of the existing street railway strike in the city of Washington, Secretary of Labor Wilson has submitted to the committee the draft of a proposed bill providing for a United States Industrial Adjustment Commission, which shall act as an industrial court for all of the interstate carriers of the country as well as for the street railways of the District of Columbia. This commission would not have power to

prevent the dismissal of employes, either individually or collectively, nor the voluntary abandonment of employment by employes, either individually or collectively. In that sense it has not the power to prevent a lockout.

On the other hand, the bill does provide that the commission shall not only investigate industrial disputes involving these common carriers, but it shall pass judgment upon these disputes by the issuance of orders of adjustment. Moreover, "such order or orders shall specify the date, to be fixed by the commission, upon which they shall become operative, and shall thereafter have the same force and effect, both upon the employers and the wage-earners concerned, as would a contract made and executed by and between the same parties upon the same subject-matter and shall be so construed."

Machinery for the hearing of appeals from these orders is provided, through the federal district courts and circuit courts of appeals, but evasion of the terms of an order through separate agreement between employers and employes is forbidden.

Section 9 of the proposed bill reads:

That in the adjustment of wages and hours of service affecting wage-earners subject to the provisions of this act, all orders by the commission shall be just and reasonable and shall be based upon a workday of eight hours or less, and the commission may order extra pay for overtime, except that in street car service in the District of Columbia the commission shall have authority to determine the hours of labor. In each order the rates of wages, salaries, or compensation shall be established for the class or kind of work or labor performed, rather than for a particular individual who may be doing such work at the time the order is made, or subsequent thereto.

The bill was accompanied by a letter from Secretary Wilson to Senator Pittman, of Nevada, acting chairman of the Senate investigating committee, suggesting that the measure, "if enacted into law, will prevent strikes and lockouts by removing the motive, make progress possible without the use of such instrumentalities and at the same time conserve the rights and liberties of all persons concerned."

Secretary Wilson explains that the bill was originally drafted to deal with labor disputes on the great transportation systems, and was submitted to the heads of the House and Senate committees on interstate commerce last February, when the railroad eight-hour issue was threatening to lead to a strike. The only change made in the text has been the substitution of the word "adjustment" for "arbitration," and the inclusion of the street railways of the national capital within the scope of the bill. The letter says in part:

I have been opposed to compulsory arbitration because I did not believe that any

man or set of men should be compelled to work for the profit or convenience of any other man or set of men. All other objections are economic and incidental, although some of them are nevertheless serious.

All progress heretofore made by the wage-workers through their collective activities has been brought about by destroying the equities. To illustrate: The shorter work-day has not been obtained by reducing hours of labor from ten to eight per day in every part of the same industry or occupation at the same time. The object has been attained by grasping the opportunity existing in some locality to compel some particular employer or employers to concede a shorter work-day, and then utilizing the accomplishment as a leverage to force similar concessions from other employers. But in the meantime the competitive equality of the employer granting the shorter work-day has been destroyed.

In any system of arbitration the tendency is toward equalization with the highest existing standard for the workers as the ultimate basis upon which the equality should rest. With a continuing system of arbitration the lowest would in time be brought to an equal standard with the highest. When that point is reached the progress would be extremely slow, because the economic pressure would have to be sufficient to lift the entire load at once instead of lifting it a piece at a time, as the previous practice has been. In dealing with the railway situation, if the hours of labor are definitely placed upon an eight-hour basis or less, it would be one or two generations before there could possibly be any serious demand for change, and we might well leave the solution of that part of the problem to those who would have to deal with it at that time.

In any system of continuous arbitration the final protection of the wage-workers against unfair decisions would be the standard of living, which is flexible and may be raised or lowered and the workmen still live, while the employer would have as his final protection the clean-cut inflexible line between profit and loss, which he would be able to show definitely from his cost accounts. This would result in giving a greater measure of protection to the employers than to the employes against the possibility of unfair decisions.

The first objection cited involves a serious question of human liberty which no majority should have the right to invade. I realize, however, that when all the people are cut off from their food supply and starvation confronts them, they are not going to stop to consider whose rights are invaded or whose liberty is destroyed. They are going to find means of securing food. They will take the most direct road, whether that happens to be the right way or the wrong way. For that reason it would seem the part of wisdom to carefully work out the problem when no crisis exists with a view to conserving both the freedom of the workers and the food supply of the people. The other two objections are purely economic and may with perfect propriety be dealt with in such a manner as will best protect the general welfare.

These thoughts have been borne in mind in the preparation of the measure which I submit for your consideration. It is proposed to create a system by which nothing can be gained by striking. Other machinery is provided by which progress can be made. The worker is left free to work or not, individually or collectively, and the employers to dismiss their workmen individually or collectively, but the motive for strikes and lockouts is destroyed. I feel sure that with a measure of this character on the statute books strikes and lockouts would never occur over a sufficiently large area to seriously impair the transportation facilities of

THE SALOON DOING ITS BIT

Pictures taken near El Paso, Tex., during mobilization of troops on the Mexican border

WHEN the troops arrived at the border, the saloon shown above had two rooms in the rear for prostitutes. It was quickly mushroomed, as shown at the right, with a series of cribs, each housing a woman. Prostitutes swarmed to El Paso, near which city these pictures were taken, and to other parts of the backward Southwest which still tolerate segregated vice districts. The saloons welcomed them, as they did the troops. War prohibitionists are out for complete prohibition—not the high whiskey tax proposed in the Senate this week—as the best preventive of venereal disease in the army. They quote the British Royal Commission on Venereal Disease as noting “abundant evidence of the intimate relation between alcohol and venereal disease.”

the country, and the end would be reached, not by crushing the workers, but by giving them a different method of adjusting grievances. . . .

CENSORSHIP AS FINALLY ENACTED

REJECTING any press censorship by law by a vote of 184 to 144, the House on May 31 reversed its previous attitude on that issue and concurred in the decision already reached by the Senate. President Wilson's insistence upon some form of control of the press for the period of the war has failed to convince Congress that special legislation is required.

The clause in the conference report on the so-called espionage bill which was defeated in the House read:

Sec. 4. When the United States is at war, the publishing willfully of information with respect to the movement, numbers, description, or disposition of any of the armed forces of the United States in military or naval operations, or with respect to any of the works intended for the fortification or defense of any place, which information is useful to the enemy, is hereby prohibited; and the President may from time to time by proclamation declare the character of such above described information which in his

opinion is not useful to the enemy, and thereupon it shall be lawful to publish the same. In any prosecution hereunder the jury trying the cause shall determine not only whether the defendant did willfully publish such information, but also whether such information was of such character as to be useful to the enemy; provided, that nothing in this section shall be construed to limit or restrict any discussion, comment, or criticism of the acts or policies of the government or its representatives or the publication of the same, if such discussion, comment, or criticism does not disclose information herein prohibited.

Whoever violates this section shall, upon conviction thereof, be punished by a fine of not more than \$10,000 or by imprisonment for not more than five years, or both.

In the report of the House conferees on this section of the measure as agreed upon in conference, the explanation is made:

Section 4 as agreed to materially modified this section as it passed the House. It describes specifically the character of information useful to the enemy which shall not be published, and makes it unlawful to publish it. It leaves out the part that requires the President by proclamation to determine the character of information prohibited, and the existence of the national emergency, but authorizes the President, by proclamation, to declare the character of such prohibited information which is not useful to the enemy and thereupon makes it lawful to publish such information.

Chairman Webb, of the House conferees, pleading for the censorship, said in the debate which preceded its rejection:

Unless this House wants to put itself upon record as favoring the right of the newspapers to furnish and publish information as to the movement, numbers and disposition of the armed forces of the United States in time of war in a naval or military operation, which information is useful to the enemy, I think the House ought to support the amendment.

He specifically denied that the section would permit the suppression of either news or editorial discussion as to an embalm-beef scandal.

Representative Graham of Pennsylvania, who offered the motion to strike out the censorship section, held that the sections of the bill relating directly to espionage were sufficiently broad to cover any action on the part of any newspaper publisher which really constituted a willful publication of military or other information of benefit to the enemy. He argued that the language of the censorship section prohibited the publication of any news or the discussion of any fact with regard to the affairs of the armed forces of the nation, except to the degree that

the President should specifically permit such publication or discussion.

Despite the action of the House on the press censorship section proper, however, there remains in the conference report, under Title XII, this possible machinery of censorship, against which Representative Crosser of Ohio made ineffective protest:

Every letter, writing, circular, postal card, picture, print, engraving, photograph, newspaper, pamphlet, book, or other publication, matter, or thing, of any kind, in violation of any of the provisions of this act, or intended or calculated to induce, promote or further any of the acts or things by any provision of this act declared unlawful, is hereby declared to be non-mailable matter and shall not be conveyed in the mails or delivered from any post office or by any letter carrier; provided, that nothing in this act shall be so construed as to authorize any person other than an employe of the dead letter office, duly authorized thereto, or other person upon a search warrant authorized by law, to open any letter not addressed to himself.

And further:

Every letter, writing, circular, postal card, picture, print, engraving, photograph, newspaper, pamphlet, book, or other publication, matter, or thing, of any kind containing any matter advocating or urging treason, insurrection or forcible resistance to any law of the United States, is hereby declared to be unmailable.

Mr. Crosser contended that under this language the postmaster-general could bar any letter or newspaper from the mails, if it quoted an anti-war speech in Congress, on his own personal opinion that it was calculated to make men urge resistance to the law.

FOR DEMOCRACY AND TERMS OF PEACE

POPULARITY of the Russian revolution and unpopularity of the federal draft law shared favor at the first American Conference for Democracy and Terms of Peace, held in New York City last week, under the auspices of socialists, labor organizations, and the Emergency Peace Federation. About 1,000 delegates from forty-three states were in attendance.

At the final mass-meeting, which packed Madison Square Garden with 15,000 people and turned away several thousand more, the crowd cheered speaker after speaker, who urged that America join with "free Russia" in repudiating imperialistic purposes and clearing the way for peace negotiations on the basis of "no forcible annexations, no punitive indemnities, free development for all nationalities."

"Let us turn to our President," exhorted Rabbi Judah L. Magnes, chairman of the conference, "and adjure him to speak as the mouthpiece of the American people, to reaffirm his belief in a peace without victory, unequivocally to throw in the lot of the American democracy with that of Russia and bring a speedy, universal, democratic peace to the world."

The report of the platform committee, presented at a morning session by Morris Hillquit, who was recently refused a passport for the Socialist conference at Stockholm, placed the conference itself as well as the speakers on record in favor of the Russian peace platform and the immediate announcement of war aims in concrete and definite terms by the United States government.

The conference was not satisfied with "fighting for democracy." "Any people that are determined to have democracy can have it without war," said one speaker. "When Russia definitely decided to send the Czar packing, she did not wait for a victory over Germany to do so. . . . If the object of the war is to force democracy on Germany, regardless of the wishes of the German people, it will fail. And it will be undemocratic anyway to force democracy on those who do not want it. We should be told exactly what it is we want Germany to do in return for which we will make peace."

But while the conference demanded a more explicit definition of the democracy for which we are fighting abroad, it demanded even more clamorously the preservation of democracy at home. The break-down of labor standards and the assault upon free press, freedom of speech and freedom of assemblage, were scored as indications of the very Prussianism which America professes to be stamping out.

In an impassioned appeal for the maintenance of American liberties, Harry A. Weinberger, counsel of the American Legal Defense League, asserted that, "today men are being jailed for 'blocking traffic,' 'giving out circulars,' 'wearing buttons inscribed with 'Our rights but no war,' 'urging free speech or peace'—on the ground that all these things are disorderly conduct, tending to a breach of the peace. . . . If Christ gave out His Sermon on the Mount today, or Moses his ten commandments, each would go to the workhouse for six months."

But in spite of the assumption of autocratic powers everywhere, Gilbert Roe, New York attorney, reminded his hearers that until the first amendment to the constitution is repealed, citizens of the United States have a constitutional right to discuss every act and policy of the government, whether in war or peace, whether a tariff act or a draft act, whether a tax bill or a censorship bill.

Taking advantage of this right, the draft act was made the target of denunciation. It was assailed as un-American, undemocratic, even unconstitutional. Its repeal was advocated by many speakers. The conference pledged itself in a resolution "to work for the repeal of all laws for compulsory military training and compulsory service and to oppose the enactment of all such laws in the future."

The President's proclamation that the draft is "in no sense a conscription of the unwilling" was quoted as a reason for asking exemption, not alone for Quakers, but for all who refuse to kill their fellow men. The Rev. Norman M. Thomas classified conscientious objectors into two groups: first, objectors to this war who consisted mainly in young men of German descent who refused to bear arms against their kindred, and second, objectors to all war. Some of the latter would accept non-combatant service under military régime, others would accept alternative service of social value, such as the work of reconstruction, and still others would refuse all forms of conscription, arguing that any compulsory change of occupation in time of war is itself a military service. Dr. Thomas argued that of these conscientious objectors the last were "most heroic and most logical," but he pleaded for clemency and for moral, material and legal aid for all forms of conscientious objectors.

"Shall we," he asked, "betray our old American tradition—the tradition that this new hemisphere is the home of the exile for conscience sake, the home of pilgrims cast off in other countries, no doubt as 'slackers' or rebels against law?"

Resolutions were passed supporting all conscientious objectors and demanding that the exemption clause in the draft act be interpreted to cover all sincere objectors to war, whether or not they belong to a recognized religious organization.

Before the conference disbanded a permanent "people's council" of seven members, representing organized labor, socialism, peace and other sympathetic groups, was appointed. This executive council was instructed to present the resolutions passed by the conference to the President, to organize similar conferences in other cities and to create once a committee representing labor and peace forces in the United States to work in cooperation with the democratic forces of other countries, both during and after the war. The members are James Maurer, Judah L. Magnes, Emily Greene Balch, Morris Hillquit, Mary Ware Dennett, Amos Pinchot, A. C. Townley and Rebecca Shelley.

IMMIGRATION BURDENS ON THE STATES

PUBLIC support of dependent alien who are deportable under the federal immigration law is a serious and increasing problem for state government. The expense totals millions. The head tax of four dollars on each alien coming into the United States (increased to eight dollars under the new law effective May 1) was intended to meet the expenses of the immigration service and to reimburse state governments for the support of deportables. It is no longer

applied to either use. Instead, it has gone into the United States treasury, where it now constitutes a total of over eight millions of dollars. At the same time, reimbursements to the states for the care of persons who have gotten by the immigration officials illegally or who, within the law, have become undesirable since landing and therefore deportable, have been virtually cut off. The various boards and commissions in the separate states dealing with the federal bureau individually have been powerless to correct the palpable injustice of this situation.

But now the states are uniting. At the suggestion of Massachusetts, the governors of the states most vitally concerned have delegated the heads of their several departments of health, charity, prisons and the care of mental defectives to confer upon the problem, especially as affected by the new immigration law, and to interview the secretary of labor at Washington. The delegates have formed a permanent organization to be known as the Interstate Immigration Committee of State Department Heads. This committee is to be composed of each official head of the four departments in all the states of the union.

The committee contemplates uniform and complete understanding of the law and the rules for its application; identical record forms and a uniform practice in making claims against the federal government for reimbursement; a united voice in demanding all proper reimbursements for the care of deportable aliens, and united support of the federal Department of Labor in its requests for the necessary funds with which to carry out the letter and the spirit of the new law.

The committee is to hold a meeting at Pittsburgh June 12, after which a more detailed report will be made. The permanent chairman of the committee is Everett S. Elwood, secretary of the State Hospital Commission, New York; the permanent secretary is Robert W. Kelso, secretary, State Board of Charity, Massachusetts.

PUTTING THE PALISADES AT WORK

LAST year the commissioners of the New York and New Jersey Interstate Park on the Palisades, which flank the Hudson, decided to make that great natural park more accessible to the denizens of overcrowded New York by opening a summer camp in one part of it. By cooperation with the Association for Improving the Condition of the Poor and the *New York Globe*, it provided a camp for 429 children, selected for their need of open air, ample diet and medical supervision. The per capita cost of operating this camp was kept down to 49 cents a day. Yet a number of interesting experiments in dieting, graduated exercises and health régime were con-

ducted [see *Journal of the Outdoor Life*, March.]

On the basis of this experience, the commissioners this summer are starting an even more ambitious and novel plan. It has been shown that to make camping possible for wage-earning men and women and their children, to bring down costs to a minimum and yet to offer all possible facilities for health, comfort and a really good time, it is necessary to conduct camps on a fairly large scale. A number of municipalities, realizing this want, have organized large park camps outside the cities [the SURVEY for April 7]. But in these municipal camps it is difficult to arrange for the different needs and tastes of different groups; the family or a small group of families or friends is taken as the unit for which accommodation is provided as well as the individual, and apart from the common citizenship there are no recognized common interests among the campers.

In a great city, however, there are many organizations, large and small, which desire summer camps of their own—some for boy scouts or camp-fire girls, some for mothers with small children, some for needy children, some for groups of young people or adults who wish to spend their summer vacations together to further a common cause or enjoy a common sport or other pursuit. These groups either maintain permanent camps of their own or, at the beginning of the summer, search for a suitable locality and get together all the necessary equipment, buy their own stores, engage their own help, if any, draw their own rules. This, of course, entails much work, time, expenditure and talent of a particular kind—for successful camp organization makes serious demands on organizing ability, leadership, practical knowledge, and even rarer qualities. It is said that the camp leader must be so constituted that he can meet basest ingratitude with a smile and a word of cheer!

The commissioners of the Palisades Park have asked themselves whether, instead of themselves organizing a great camp, either for selected classes or for general use, they could not be of even greater public service by offering all the facilities now separately sought by individual groups of city dwellers and yet giving them individual and compact camp units of their own. Thus arose the idea of a centralized administration and commissariat for a number of camps spread over one of the most beautiful parks in the eastern states.

Standard buildings are being constructed throughout the park to accommodate groups of from twenty-five to several hundred persons. Each unit is provided with water connections and with toilet and waste disposal facilities, which will make it absolutely sanitary.

The purchase and preparation of food, on the other hand, the heaviest item of cost and labor, is centralized, and the food is sent out to each camp in insulated containers. The purchasing organization will also be placed at the disposal of individual camps—offering supplies at cost price—where for any reason they prefer to prepare their own food.

Camp equipage and utensils are standardized so that the best are offered at a moderate cost. Social and educational activities are coordinated by the engagement of itinerant story-tellers, plays, lectures, and the development of inter-camp recreations, such as hikes, games, meets, pageants and the like.

All these privileges, granted from year to year, are offered at a rental based on actual cost; all forms of exploitation for profit are rigorously excluded. Under this plan, it is possible for Y. M. C. A. branches, settlements, clubs, charitable agencies and associations of every kind to pursue their individual programs at a nominal cost, with assurance of the highest grade of comfort and efficiency, absence of worry and of excessive financial responsibility. They can keep themselves apart or fall in with a general program of recreation, guard all their individual privileges and enjoyments and yet take part in a general civic undertaking.

HOME DEFENSE NURSING PLANS

TWO sections of the New York Mayor's Committee on National Defense are studying the preparation of special nurses both for emergency duty as nurses' aides and as trained graduates for the responsible duties of the future. At the rate of 200 a month, trained nurses are now being called out for service in base hospitals and in the army and navy services. With a view to getting an immediate supply of recruits to fill the gaps in hospitals and training schools which result from such a demand, the women's committee on nursing is undertaking as its first and most important piece of work a survey of all the nursing resources in Greater New York. Then will follow the opening of a clearing bureau through which readjustments of trained and volunteer aid may be made.

Hospitals are being urged to increase the number of students in training as far as possible and to shorten the course for college women who enter for full training. The committee is making every endeavor to bring the urgent need of nursing work in institutions, social service and district nursing fields to the attention of high school and college graduates throughout the country.

The committee on medical and hospital facilities, another section of the mayor's committee, under the direction of Dr. S. S. Goldwater, is standardizing

the training of those volunteer workers who will be known as "nurses' aides." The committee found that the short course offered by the Red Cross was "simple and well thought out" and adapted to enable those who take the work to give a good deal of useful service. They intend to make some alteration in hours and theory and will add a moderate amount of practical procedure, increasing the period of practical work from 72 hours to 120 as a maximum.

The committee considers it of importance that these courses be under the direction of the National Red Cross rather than scattered among various small schools, for "in no other way can the volunteer nurses' aides be given the official recognition which will make them available for service when they may be most needed."

HOW A DOLLAR HAS SHRUNK IN DALLAS

DETAILED statistics on the upward sprint in the cost of living in Dallas, Tex., have been compiled by the Survey Committee of the Dallas Wage Commission appointed in February by Mayor Lindsley to determine what wage advance would be justified for city employes.

With the assistance of five students of economics from the Southern Methodist University as field workers, the Survey Committee secured records of the income and expenditures of fifty families for thirty days. Twenty-nine families were those of city employes, twenty-one of factory employes. In 34 per cent of the families the father's salary was less than sixty dollars a month.

The data secured showed that the average yearly salary of the fathers in the fifty families was \$814.56. The average yearly income brought in by mothers was \$30.72, by children \$51.60 and obtained from other sources \$65.95. Thus the average yearly income of the fifty families was estimated at \$962.83. This figure does not take into account time lost by wage-earners.

On the other hand, the average yearly expenditures reported by the group were \$1,134.55. Of this the largest amount (45.01 per cent of the total) was spent for food and the next largest (12.57 per cent of the total) for clothing. These two items, it was estimated, have risen in cost 45.1 per cent and 35.8 per cent, respectively, since 1914. In other words, 69 cents bought the same food in 1914 as \$1 buys now and 74 cents bought the same clothing in 1914 as \$1 buys now. Eighty cents, moreover, paid the same total expenses in 1914 as \$1 pays now.

The investigators accounted for the average year's deficit of the fifty families, \$171.72, by wage and chattel loans, aid from relatives, and accumulated debts. Only seventeen families acknowledged no debts.

From a cost of living table, compiled by Mary Gearing, of the University of Texas, the Survey Committee placed the lowest "bare existence" income for a family of five at \$747. However, the committee reported that this budget represents only the "borderland between bare existence and complete misery." The safe normal living cost for a family of five for a year was set by the Survey Committee at \$1,081.72 or \$156.72 more than the amount estimated to maintain a proper standard of living in New York city in 1907, by the Committee on Standards of Living of the New York State Conference of Charities and Correction.

COOPERATIVE DENTISTRY FOR GARMENT WORKERS

TOOOTHACHE is the latest evil to come under the inspection of the Joint Board of Sanitary Control of the Cloak, Suit, Dress and Waist industries in New York city. In May a dental clinic opened its doors at 31 Union Square under the auspices of the joint board, where garment workers may receive treatment from qualified dentists, under expert supervision by a board of consulting dentists.

The clinic does not guarantee to "extract teeth without pain," but it does guarantee not to extract exorbitant prices for the work done. No profits are to be made by anyone connected with the clinic. Charges (and the clinic will be run on an absolutely cash basis) will be based on cost. At the end of the year rebates will be given to each patient on the amount spent during the year, if any surplus is left in the treasury.

Nearly 20,000 workers have been examined during the past four years by the medical division of the Joint Board of Sanitary Control. These examinations disclosed that at least 50 per cent of the workers suffer from decayed and diseased teeth; that half neglect this important matter and suffer, as a result, from digestive, nervous and rheumatic disorders; and that each worker spends from \$5 to \$50 a year for dental work which is often worthless.

To offset these conditions, a dental clinic was proposed. Its establishment is in accordance with the principle on which the Joint Board of Sanitary Control itself was founded—that the best way to protect the workers is for the workers to protect themselves. By a clause in the famous protocol of September 2, 1910, after the big strike in the cloak and suit industry, the sanitary control of the cloak, suit and skirt trade was made a joint affair of unions and manufacturers through the organization of a board of supervision and inspection representing both sides. Later the dress and waist industry joined the movement, the Ladies' Waist and Dressmakers' Union as well as the Manufacturers'

Association sending two representatives each to the board. Dr. George M. Price has served as director of the joint board since it started.

At first "sanitary control" was limited to shop conditions, such as fire protection in buildings, safety and fire protection in shops and sanitation of factories. Later the activities of the board reached out to the workers themselves. Fire drills were held, educational lectures on health and safety were conducted, a first aid and nursing service was instituted and a medical division was organized to examine workers, arrange for medical attendance and take charge of tubercular members. The new dental clinic is thus in line with the plans undertaken by the board for conserving the health and strength of the workers in garment trades.

TO SURVEY THE ALIENS OF ST. LOUIS

THE Americanization Committee of the St. Louis Chamber of Commerce plans to coordinate all existing movements interested in Americanization in that city. Through the efforts of a speakers' bureau, composed of one hundred live public speakers, the committee will reach organization meetings of every type and character both in the English and foreign tongues.

To promote citizenship, the committee is urging the Board of Education to install a course in civics throughout grade and high school courses and in the higher institutions of learning. Similar efforts are being made among parochial and private schools. The Board of Education is also being urged to install three grades of English classes in night schools: for beginners; for those who understand English, but speak it imperfectly; for advanced students.

The committee is cooperating with the Industrial Department of the Y. M. C. A. in establishing English night classes in foreign colonies; shop talks and noon-hour talks are being promulgated; employers are being urged to give preference to naturalized citizens in promotion and employment over aliens.

To ascertain the status of foreigners in the city the committee will make a survey covering the following points: The present foreign population; the number of residents of direct foreign extraction (native-born children of foreign-born parents); number of unnaturalized foreigners of voting age; number eligible for naturalization; race and nationalities represented; percentage of illiteracy; number of non-English-speaking foreigners; number of foreigners employed in foreign commercial lines; number attending night and day citizenship classes; number possessing only first citizenship papers; number and description of colonies or segregated localities of foreign races or nationalities. When this

survey is completed it is planned to proceed along the same lines as did Detroit in Americanizing that city.

The amphitheater of Forest Park, with a seating capacity of 10,000, has been secured by the committee for a gigantic Fourth of July celebration to which foreigners will be specially invited. In years past the veterans of the Grand Army of the Republic have themselves made all arrangements for paying tribute to their departed comrades. This year the Americanization Committee plans to provide entertainment for the veterans, conveying them in automobiles on a sightseeing tour of the city, stopping at Forest Park, where lunch will be served, and then on to Jefferson Barracks.

THE PROTOCOL MEETING THE COST OF LIVING

PROOF of a protocol is in its workings. Through the protocol established after the garment strike in 1911 between the Amalgamated Garment Workers and Hart, Schaffner & Marx, the largest manufacturers of men's clothing in the world, 7,000 employes have obtained a quarter of a million dollars of increased wages to meet the rising price of bread and butter.

William O. Thompson, arbiter for the workers of Hart, Schaffner & Marx, in Chicago, announces that beginning June 1 cutters will receive a per capita increase in weekly wages of two dollars to three dollars, and that beginning July 1 a 10 per cent increase in weekly pay will be granted the tailors.

The award was made upon the application of the employes for higher wages to pay for the increased cost of living. Although the company was reluctant to meet the request at this time, arguing that it was a period of business uncertainty and expensive production, the Joint Board of Arbitration, established between the company and the Amalgamated Clothing Workers to arbitrate wage-difficulties, granted the increase.

The increase for the cutters will be so distributed that the lion's share will go to those receiving the lowest wages. Calculating roughly, those earning \$26 a week or more will be allowed \$2 additional; those earning less than \$26, \$3. Likewise certain piece-work problems will be adjusted. Instead of a flat rate of 52½ cents a cut for cutters, such hindrances to speedy production as bulky material, matching stripes, etc., will be taken into account. About 60 per cent of the employes affected by the change are women.

This is the second rise in wages obtained by arbitration by the Hart, Schaffner & Marx employes within a short time. Just a year ago a three-year compact, signed by firm and union, produced a reduction in hours from fifty-four to forty-nine and an

increase in wages of 10 per cent. The agreement provided, however, that in case of a general rise in wages or shortening of hours throughout the industry or other condition of a permanent nature, employes under the contract would be permitted to ask for more wages or shorter hours. This elasticity has once before been taken advantage of. A short time ago hours of labor were reduced from 49 to 48 per week to accord with the average working day of the clothing workers in New York, Baltimore and other cities.

The new wage arrangement is still another evidence of the quick and equitable settlement of grievances made possible by the protocol of 1911. This protocol provided for a preferential union shop, no cessation of work, a trade board consisting of a representative of each side with an impartial chairman for the adjustment of disputes and an arbitration board of three members, elected jointly by labor and capital, as a court of last resort.

RELENTLESS WAR AGAINST VICE IN CHICAGO

CHICAGO'S Committee of Fifteen which for four years has been vigorously following up the investigational work of the official Vice Commission, is one of the social agencies that shows no signs of relaxed energies under war conditions. Its initial survey of the situation following the state's attorney's spectacular raids on the segregated districts, disclosed 400 disorderly resorts with at least 2,000 inmates which managed to resume business after the districts were officially closed.

Publication of the names of the owners of these and other properties thus illicitly used led many of them to a thorough housecleaning. But when the injunction and abatement law was enacted two years ago, commercialized vice met what Chief Justice Olson, of the Municipal Court, declared to be its "Appomattox." Of 375 owners informally notified that their buildings were being used for immoral purposes, 310 took such action as to make it necessary to serve on only 65 others the legal notice of intention to apply for an injunction. Of the 65 thus notified, 50 acted so promptly that it was unnecessary to enjoin them. Of the 10 against whom injunctions were issued, 2 furnished bond for their guarantee to keep their property free from immorality, 1 tore down the house in which one of the most notorious resorts had long been sheltered, leaving only 7 to be proceeded against. Buildings containing more than 100 apartments have been demolished by their owners to avoid renting them for immoral purposes.

During the past four years 91 persons have been convicted of pandering on charges preferred by the committee. The fines imposed upon them aggregate \$32,-

492 and average more than \$350 per person. The prison terms to which 77 persons were sentenced aggregate more than 60 years and average more than 9 months per person. Today a house of ill-fame with 2 inmates arouses more opposition than did a resort harboring from 40 to 90 inmates four years ago. The committee asserts that there is no more vice in the residential districts now than there was when the segregated districts were tolerated and that the public conscience is so much more alert that disorderly resorts are more aggressively attacked and more promptly and continuously driven out or finally suppressed.

JOTTINGS

SIXTY young women are taking a course in civilian wartime social service under the Extension Division of the University of Wisconsin at Milwaukee, with the active cooperation, particularly in field work, of the Red Cross, the League of Patriotic Women, the Anti-Tuberculosis Association, the Associated Charities and the Central Council of Social Agencies.

THE new League for Democratic Control, 120 Boylston street, Boston, has established the *Forward* as its organ. No. 1, of eight pages, announces that publication will be "as opportunity offers" until Fall, when regular publication is expected. Stuart Chase is named first on an editorial board of five members. Those who pay a minimum membership of one dollar a year will receive the issues.

WISCONSIN is making extensive plans for distributing labor in agricultural regions. The State Council of Defense is appealing to all not otherwise engaged to help in the production of food. Cooperating with the State Industrial Commission and a farm labor specialist detailed by the Wisconsin State Department of Agriculture, each County Council of Defense is instructed to appoint a county labor agent who shall in turn appoint a local labor agent. Thus the industrial commission and the state farm labor agent, who are charged with supervising employment bureaus, will be kept informed by these agents of all surplus labor and all unfilled requests for labor in every region.

WOMEN trade unionists from England, France and Australia will attend the sixth biennial convention of the National Women's Trade Union League in Kansas City, Mo., this week. The English trade unionists look upon the convention as of such importance that they are sending as their delegate Mary Macarthur, secretary of the British Women's Trade Union League. Miss Macarthur is one of the women serving in the war councils of England. As a result of an interview granted by the queen in the early days of the war, Miss Macarthur was made chairman of the Central Committee on Women's Employment for England and Wales. The representative of the French-trade unionists will be Mme. G. Duchene, of Paris.

THE Equal Suffrage League, of St. Louis, has placed its secretary, Lucille Loweinstein,

at the disposal of the Food Conservation Committee, which has undertaken to teach the women of all classes how to conserve food. The public schools and social settlements are to be used as meeting places where women will be given lectures and demonstrations. This is one phase of the work of the Women's Central Committee on Food Conservation. The other phases are economic, which is to further the thrift garden idea along individual and communal lines; a speakers' bureau with Mrs. H. C. January, of the Consumers' League at the head, is to carry on educational work; a legislative committee to work for the enforcement of existing laws and ordinances as well as the furthering of new legislation that will aid in food conservation. The central committee is proud of its record of reducing the city garbage from 195 to 135 tons, with a decrease of 25 per cent in fatty substances.

MANY social organizations in Boston and Massachusetts have taken an advanced stand in favor of war prohibition. Among these are the Boston Social Union, representing settlements, the Boston Association for the Relief and Control of Tuberculosis, the Children's Aid Society, the Associated Charities and the following societies from Massachusetts cities and towns: Associated Charities of Newburyport, Quincy, Salem, Gloucester, Haverhill, Attleboro, Athol, Taunton, Worcester, and Fall River; the Milton Social Service League, Medford Visiting Nurse Association, Brookline Friendly Society, Lawrence City Mission, Waltham Social Service League, New Bedford Charity Organization Society and the Newton Welfare Bureau. These organizations took this position because of the large amount of food products consumed in the manufacture of distilled and fermented liquors, because of the necessity to protect the morals of young men in the army and navy, and because of the present need to develop national efficiency to its highest point.

NEW YORK is not the only state where working women and minors have been placed in danger by the war. The Connecticut legislature voted down a bill to forbid night work for women which has been endorsed by the State Labor Department, the Consumers' League and other social organizations. It also refused to raise the age at which children may go to work from fourteen to sixteen and defeated a bill to provide protection against occupational disease. In Pennsylvania, a bill is before the legislature authorizing the governor, upon request of the Council of National Defense, to suspend by proclamation, reductions relating to labor contained in any law of the commonwealth. Still another bill simply makes lawful for the duration of war the employment of women and minors for unlimited hours. Likewise, attempts are being made in the Pennsylvania legislature to emasculate the child labor law of 1915 by prohibiting the employment of children under fourteen only in dangerous employments, by permitting employment of children between fourteen and fifteen (instead of sixteen) provided the child attends school three hours instead of eight hours, and by increasing hours of labor for minors under sixteen.

HOUSE bill No. 685, sponsored by a Catholic member of the Illinois legislature, seeks to make the birth control law in that state as drastic as the New York act. State's Attorney Brundage, as reported in the SURVEY for May 5, in response to an inquiry by a group of Chicago physicians and social workers, expressed the opinion that physicians were at liberty in that state to give contraceptive advice. At the hearing on the proposed measure, Prof. James A. Field, of

the University of Chicago, and others appeared in opposition. In Pennsylvania, Rep. Isadore Stern, of Philadelphia, is responsible for the introduction of a bill which is probably more sweeping in its terms than any existing American statute. It provides a penalty of not less than \$250 and imprisonment for not less than three months for "any person who shall disseminate or impart or attempt to disseminate or impart information or knowledge tending to interfere with or diminish the birth of human beings in this commonwealth either by advertising or lecture or distribution or sale or circulation of written or printed matter or orally." Opposition is being organized by a group of influential Philadelphians and by the Birth Control League of Pittsburgh.

THAT feeble-mindedness is "an important phase of the unemployment problem as it exists on the Pacific coast" is the conclusion reached by Glenn R. Johnson, now on the staff of Columbia University, and formerly associated with Prof. Eleanor Rowland, Reed College, Oregon. Mr. Johnson tested the mentality of 107 destitute unemployed men picked at random from the unemployed in Portland during the unemployment season of 1914-15. The results are set forth at length in the *Journal of Delinquency*. Eighteen per cent tested below twelve years in mental age, 26 per cent below thirteen years, and 42 per cent below fourteen years. Taking all factors into consideration, Mr. Johnson inclines to the belief that about 21 per cent were high-grade morons. Since the number of known destitute unemployed men in Portland on April 15, 1915, was 3,600, the total number of feeble-minded was about 750. This, says Mr. Johnson, was somewhat greater than the Portland Vice Commission's minimum estimate of feeble-minded prostitutes in Portland. The number of men examined, he declares, is too few to justify extensive generalizations. He found also that organized charity cared for a larger proportion of feeble-minded than did the municipal lodging houses.

DISCUSSION of the effects which war may have on the loan business, at the ninth annual meeting of the National Federation of Remedial Loan Associations in Cincinnati, led to the adoption of a resolution to the effect that on loans made by remedial loan societies to men who are called to the colors and whose families are inadequately provided for, all interest shall be cancelled and the time of repayment of the loan indefinitely extended. Reports for the year showed 830,000 loans made for \$29,500,000, an increase over previous years. Satisfactory progress was reported in the organization of credit unions, of which there are now 34 in New York alone. The constitutionality of the small loan law has been upheld by the Supreme Court in Ohio, and by two of the lower courts in Pennsylvania. The bill, drafted by the Division of Remedial Loans of the Russell Sage Foundation, which provides for the license of lenders of sums of \$300 or less, and for the regulation of the business by a state authority, became law in Maine, New Hampshire and Indiana, and is pending in Illinois, having passed the House. Utah passed a law based on the New Jersey statute and Colorado another, limiting interest to 12 per cent a year, which was considered unsatisfactory. Hugh Cavanaugh, of Cincinnati, was elected chairman of the federation, and George E. Upson, of Utica, N. Y., secretary-treasurer.

THE Charities Committee of the St. Louis Chamber of Commerce has just issued the 1917 list of approved charities, 67 agencies having received endorsement. In addition to the committee's usual requisites of en-

dorsement the following four new requirements have been added, which will go into effect next year: 1, Social service organizations should not solicit funds outside of their usual budget without first submitting their plans to the committee for approval; 2, endorsed agencies must be members of the Central Council of Social Agencies; 3, charitable organizations must not solicit funds on public streets; 4, charities engaged in relief work should register their cases with the registration bureau and help pay for this service. The use of the service offered by the Charities Bureau of the Chamber of Commerce has grown each year. Recently the bureau investigated the operations of a so-called "war relief agency" under the name of the National Society for the Relief of Soldiers' and Sailors' Dependents. The originator planned to sell buttons each month on which were inscribed the name of the month and the words "Badge of Honor." Paid solicitors were placed on the streets and instructed to go from one end of the city to the other and dispose of the buttons at 10 cents each. A commission of 4 cents was allowed to solicitors; 30 per cent of the remaining 6 cents went to the promoter, and a portion of what remained went for overhead office expense. About one and a half cents was left for charitable purposes. The promoter was promptly convinced that St. Louis was not the place to carry on an undertaking of this sort and has since "sailed for another port."

ONE of the new fields of boys' work discussed at the recent eleventh annual conference of the Boys' Club Federation at Buffalo was The Boys' Club in the Industrial Plant. Delegates from a number of such plants took part. As to whether such clubs should be confined to employes of the company or enlarged to include sons and brothers of employes or even boys of the entire community, the consensus of opinion was in favor of the last plan, it being felt that the company had a distinct interest in all the boys inasmuch as they represent future employes. Vocational class work was advocated in addition to the regular program of club activities. Discussion as to whether this work should be conducted as a business proposition by the plant or as a philanthropy, was brought to an abrupt conclusion by the statement that the two are inseparable—it is good philanthropy to elevate the mental, moral, social and physical standards of the boys and bad business not to do so. Plants which have already introduced such work—notably the Larkin Company and the National Cash Register Company—reported that it secures the loyalty of the boy and permanence in his work for the company. Before the introduction of a boys' club it was reported in one plant that 75 per cent of boy employes changed in three months; after its establishment this was reduced to 15 per cent. The club makes the boys more efficient in their work, renders it easier to get other boys into the company's employ, and is conducive to character building, better health and general improvement in the life of the boy, all of which is permanently beneficial whether the boy remains with the company or not, it was reported. In addition to securing the loyalty of the boy, it also creates a loyalty in the parents, and it has actually been found that parents have refused larger wages in other cities where the plant did not have a boys' club connected with it. Thomas Chew was re-elected honorary president, William Edwin Hall president, Orison Swett Marden vice-president, Walter L. Worrall secretary, and Walter Seligman treasurer.

MASSACHUSETTS' General Court, led by Governor McCall, voted large appropri-

tions to equip the national guard, to provide for dependent families of soldiers and sailors, and for other war preparations. The old blue laws even, were amended in order to permit the tilling of gardens and farming on the Sabbath, in the campaign to increase the food supply. But social legislation in the session just closed, became, for the time being, a side issue. Among the measures defeated were the bill further limiting the working hours of women and children, the tour workers' bill decreasing the hours of labor in continuous industries, and a bill for a contributory system of annuities to provide against old age. At the beginning of the session popular attention was centered upon bills providing for a non-contributory system of old age pensions and for a contributory system of health insurance. The endorsement of Governor McCall was unable to save either proposal. But a new commission was appointed to study that subject and to report to the next General Court. A Bureau of Immigration consisting of five persons was established "to employ such methods, subject to existing laws, as, in its judgment, will tend to bring into sympathetic and mutually helpful relations the commonwealth and its residents of foreign origin, to protect immigrants from exploitation and abuse, to stimulate their acquirement of the English language, to develop their understanding of American government, institutions and ideals, and generally to promote their assimilation and naturalization." This is the fourth legislative session at which an effort has been made to have such a commission appointed since the report on immigration was made to the General Court three and a half years ago. Other legislation of note includes a bill providing that "pony licenses," allowing the delivery from the outside of liquors into no-license towns, shall be permissive. Hitherto the location of one such license in each town has been mandatory. The Massachusetts Commission on Probation was given power to make a study of methods of release and parole of prisoners from county jails and houses of correction, and to make a report of findings and recommendations to the next General Court.

TO What Extent Are Public and Private Relief Agencies Supplementing Low Wages?—an historic topic—was discussed before the New York City Conference of Charities and Corrections, by Harry L. Hopkins, executive secretary of the Board of Child Welfare, which administers widows' pensions in Greater New York. Inquiry disclosed, Mr. Hopkins said, the existence of a widespread belief that relief agencies do supplement wages with charity, thereby helping to keep wages down below the level which permits of an adequate family standard of living. He divided his inquiry into four questions. The first, Do relief agencies supplement the wages of a normal man with a normal family?—he answered with an unqualified no; the theory and practice of organized charity has, for many years, been against it. The second question, Do relief agencies under any circumstances supplement the wage of an able-bodied man?—he answered with a general no, qualified by the rather common practice of giving relief in cases of sickness, particularly of sick children, on the theory that greater social harm will result from improperly treated sickness than from relief. To the third question, Are allowances granted in larger amounts to families with wage-earning women and children than would be necessary were the wage-earners paid an adequate and fair wage?—his answer was that "the low wages of women and children are in some cases supplemented but earnest efforts are usually made to encourage the employer to pay a fair wage."

To the fourth question, Is there any reasonable proof that wages are adversely affected through the policy of relief societies?—his answer was no and he had, moreover, evidence to the contrary, as in the case of the visitors of his board who call upon the employers of underpaid widows and children and, failing to secure better pay for them, help their clients to secure other jobs. To the two chief means for increasing wages—organization of the workers in unions and interference by the state in the form of minimum wage laws—Mr. Hopkins believed the relief societies could make substantial contribution through their experience. "I believe there is enough information in the records of relief societies about the low wages paid to women and children to move public opinion forcibly," and he held that "the societies owe it to the people in need, for whom they are organized, to make every effort to secure a fair opportunity for them in the industrial field."

PERSONAL AND PROFESSIONAL

MINNIE V. TAYLOR, of the Martinsburg, W. Va., Social Service Union, is the new secretary of the Charity Organization Society in Williamsport, Pa.

W. J. NORTON, director of the Cincinnati Council of Social Agencies since 1913, has resigned to become director of the Detroit Associated Charities. He is succeeded in Cincinnati by his associate, C. M. Bookman.

GEORGE A. BELLAMY, headworker of Hiram House, Cleveland, has gone to San Antonio, Tex., in behalf of the training camp commission of the Council of National Defense. He will attempt to organize the community for wholesome conditions and recreation in and about the camp.

PROF. EDWARD A. ROSS, of the University of Wisconsin, is leaving shortly for Russia to make a study of social conditions, of the need for relief and community organization and to estimate the probabilities of emigration, for the American Institute of Social Service, New York city.

D. W. SPRINGER, secretary of the National Education Association, announces that despite a rumor to the contrary the annual meeting of the association will be held as planned at Portland, Ore., July 7-14. The program will be built around the subjects of preparedness, nationalism and patriotism. The United States deputy commissioner of naturalization has called a citizenship convention for the same time.

THE latest development in the National Council of Defense is the creation of a national statistical service, in charge of Frederick L. Hoffman, statistician of the Prudential Insurance Company. Foreseeing that grave social and economic problems will follow the war, this new committee on statistics and information will present regularly to the council and the public reports concerning the nation's health, physical and social well-being, sickness and accidents in industry and unemployment.

A Look Backward—A Close-up View of the Present—and a Vision of the Future "Story of the Automobile"

By H. L. BARBER

Economist and Financial Writer, Author "Making Money Make Money," etc.

Everyone who manufactures, buys, sells, invents, invests, professional and salaried people, car owners, read this story of invention, early struggles, rapid development, salesmanship of the highest type—the fortunes that have been made and are to be made in the automobile industry. Contains chapter by EDWARD G. WESTLAKE, foremost writer on automobile topics, another chapter by BUSINESS BOURSE, New York—interesting from start to finish.

Get This Book 250 pages, illustrated with Charts and Comparative Tables, lists all makes of cars and prices, bound in Cloth, stamped in Gold, 8vo., \$1.50 at all leading booksellers, trade supplied by A. C. McClurg & Co., Chicago; Baker & Taylor Co., New York and other leading wholesalers. Ask your bookseller, or mailed direct upon receipt of \$1.50.

SCHOOLS

**Training for
SOCIAL WORK**

Specialized study and research combined with practical experience in social work and welfare activities in Cleveland is now being offered in a graduate school.

All the courses given are distinctly professional in character and have a practical outlook. Students are given responsible field work, under the close supervision of members of the faculty who have had practical experience. This work is definitely educational in its value.

- Social Treatment of Needy Families**
- Co-ordination of Community Activities**
- Service Work in Stores and Factories**
- Executive Positions in Social Agencies**

JAMES F. JACKSON, Director
Division of Family Welfare and Social Service

WESTERN RESERVE UNIVERSITY
School of Applied Social Sciences
CLEVELAND, OHIO

NOTE: There is an increasingly great demand for those trained in practical social work. The supply is not at all adequate at present.

Other Divisions of this school are:
Municipal Administration and Public Service
Course for Public Health Nurses

The Training School for Community Workers
of
THE PEOPLE'S INSTITUTE of NEW YORK
JOHN COLLIER, Director

A one year course of training for professional work in Community Centers, Social Settlements, Public Employment and Child Welfare Services.

SURVEY ASSOCIATES, INC., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 10 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

MR. BRENNER'S bas-relief portrait of Frank B. Sanborn, reproduced on the cover of this issue of the SURVEY, is timely this last week of the National Conference of Charities and Correction, which he helped to found. The conference, like one of Sanborn's friends, "goes marching on" under its new name of National Conference of Social Work.

EXCEPT the army and the navy, organized social work is, of all our institutions, most quickly touched by war. Above its usual duties, which will not grow less, and beyond its new obligations, which spring up over night, it must face the greatest difficulty financing itself while the war relief funds clamor for their necessary millions. Yet in the presidential speech by Frederic Almy, and throughout the forty-eight sessions of the past week, a strongly optimistic note prevailed. And the conference voted unanimously for war prohibition with an extra dry year thrown in for good measure. Page 253.

CONGRESS, with one hand, created the new woman's division of the Department of Labor, and with the other withheld any appropriation to give it life. The mediation service has been crippled by reducing the number of men employed. And the federal employment service is cut down. Page 260.

ONE gift of a million dollars, conditional upon the securing of twenty-four others of the same size, has been made to the Red Cross to start its campaign for a hundred millions. Plans and reading courses for the training of civilian relief workers have been given out by the Red Cross. Page 261.

INDIANA'S state farm for misdemeanants has lived up to expectations in actually emptying the county jails of short-term prisoners, leaving them to serve only as places of detention for those arrested but not yet tried. Page 262.

DANBURY workmen are having their homes sold out from under them by court order—the final legal step in the long and famous boycott suits of the hatters. Page 262.

ANYONE who comes under the workmen's compensation laws wants to pick out the place where he has an accident. The varying state laws put a heavy penalty on the employes of a firm in one state as against their fellow employes across the border. Page 259.

CONFERENCES galore were held last week at Pittsburgh. Settlement folk, in spite of the leadership in pacifism which has come from their ranks, voted themselves at one with the nation in the war, but they stood out stoutly for the fundamental forms of freedom threatened in war time, "in order that we may not lose the very soul of democracy in undertaking its defense." The societies for organizing charity came out for war prohibition and urged all relief societies to follow their example as they have followed the example of the Massachusetts societies. The American Medical Association testified, through Dr. Mayo, that medicine no longer has any use for alcohol. The National Children's Aid Society added the word "welfare" to its title and invited into membership all who are interested in child welfare. The Jewish Social Workers have put a field service into successful operation. The National Probation Association came out for a family court to do in an orderly way what children's and domestic relations and other similar courts now do piecemeal. Pages 264-266.

Henry Ford's Money-Making Secrets Revealed

"Story of the Automobile"

By H. L. BARBER

Economist and Financial Writer, Author "Making Money Make Money," etc.

Amazing Facts No other hook like it in print — "Few things show better than the Automobile Industry, the chances for profitable investment in a short time, in articles which supply the needs or pleasures of the masses." Contains a chapter by EDWARD G. WESTLAKE, foremost Automobile Editor, another by the BUSINESS BOURSE, of New York—interesting from start to finish.

You Need This Book 250 pages, illustrated with Charts and Comparative Tables, lists all makes of cars and prices, bound in Cloth, stamped in Gold, 8vo., \$1.50 at all leading booksellers, trade supplied by A. C. McClurg & Co., Chicago; Baker & Taylor Co., New York, and other leading wholesalers. Ask your bookseller or mailed direct upon receipt of \$1.50.

FOR RENT OR SALE

Staten Island

Small farm, near New Dorp. Situated on high land in centre of island. 14 acres, 3-story stone house, completely furnished, 12 rooms, 2 baths, 3 toilets, veranda enclosed with glass. Annex adjoining containing 1 large room. Telephone.

Good barn, with cement cellar and gardener's living quarters above. City water in house and barn. Good kitchen garden. Fine orchard, yielding plentifully. 10 minutes from trolley. Has been occupied for the past 2 years as a Home for Girls. For further information, apply to

MRS. P. MALI, 8 Fifth Avenue.

SITUATIONS WANTED

RUSSIAN Translator, Harvard graduate, will do work at reasonable rates. Address, 2525 SURVEY.

EXPERIENCED social worker, arts and crafts teacher and designer, wants position in settlement, church social work, country or mountain community center. Address 2527 SURVEY.

EXPERIENCED occupation teacher of the handicapped wants position with sanitarium or hospital. Address 2528 SURVEY.

JOTTINGS

DURING 1916 the typhoid death-rate for the state as a whole, city and country, reached the lowest figure that Massachusetts has ever known, according to the latest bulletin of the State Department of Health, being only 4.5 per 100,000. Decrease is said to have been achieved primarily by the prevention of sewage pollution of public and private water supplies, as well as the closer inspection of dairies, the pasteurization of milk, investigation of causes of outbreaks of disease and the detection of carriers. Typhoid vaccine is now being extensively used by physicians as a prophylactic.

THE Parliamentary Land Settlement Committee for Scotland, appointed last fall under the chairmanship of William Young, M. P., in its report recommends closer settlement by the development of small holdings, use of military huts when no longer required for war purposes to provide temporary housing accommodation during the period of settlement, immediate use of German war prisoners for the development of small holding colonies. The general purpose of rural regeneration in Scotland is stated to be to compensate for the drain of pre-war rural depopulation; to add to the defensive manpower of the country; to bring back into cultivation the immense areas of cultivable land in the country at present uncultivated; and to add to the home-grown food supply in view of the present extreme dependence of the country on supplies from abroad.

PROBABLY the Charity Organization Society of Salt Lake City is the only one in the world which has upon its board not only Protestants, Catholics and Jews, but also Mormons. An apostle of the Mormon church has accepted full-fledged board responsibility, and other Mormons are serving upon it and upon committees of the society as well as on its staff and as volunteer workers. The work which has been done by the society in the last year under the general secretary, W. J. Deeney, has led to a closer working together of all of the religious elements of this city, whose religious lines of demarcation are more pronounced than in most American communities. A unique piece of cooperation is that with the Mormon hishops and woman's societies in the Mormon church. The hishops are unpaid officials, charged with responsibility in all things pertaining to the church in their respective districts. There are, for example, a considerable number of hishops in Salt Lake City alone. They may be business or professional men or artisans or what not. Whatever else they may be, they are real leaders in their different sections. Among the duties which the church has placed upon them is that of charitable relief, the relief being collected in a most systematic way through the churches, and accounted for in the great central offices in Salt Lake City. The hishops, having not only church affairs, but their own businesses to attend to, are pretty busy people. A number of them, therefore, have welcomed the presence of the society for the supplementary investigations which it could make, and the planning which it could work out with them.

WANTED—By young woman, college graduate, trained investigator and student of social problems, position of responsibility with social agency. Address 2529 SURVEY.

HELP WANTED

WANTED: Young Jewish couple to take charge of small home for working boys. Apply by mail, stating age, experience and qualifications, to Mr. Harry M. Lewy, 2 Rector Street, New York City.

BY

FRANK B. SANBORN

A LIFE OF

Henry D. Thoreau

"This biography treats Thoreau from a number of angles, and gives a large and human picture of a man who was of far greater caliber than his daily gesture revealed. No one reading this intimate and friendly account, turning over the pages of letters and comments, the personal reminiscences, the records of Thoreau's fiery devotion to freedom and unwavering devotion to his ideals can help feeling that here was a man of exceptional character. It is not only that there rises through these pages a powerful and winning portrait of its subject, but other and numerous appeals go to make the volume one of unusual charm and importance. It gives a living and faithful picture of the period immediately before the civil war. It tells again the story of John Brown, to whom Thoreau was devoted, whose cause and whose acts he openly advocated. Now, when America is once again being stirred to her foundations, these passages seem strangely close and real." *New York Times*.

The National Conference of Social Work

By *Arthur P. Kellogg*

OF THE SURVEY STAFF

WHETHER you look on war as hell or as an instrument of democracy, its immediate fruits are the fruits of calamity, and the fruits of calamity are the stuff with which organized social work deals in the regular course of its daily work. Social workers, therefore, have a peculiar obligation and opportunity for service in wartime, beyond the demands made on all citizens. As a representative of the Red Cross put it, social workers must not only do their bit, they must do their utmost. And they must do it in the face of an increase of their regular work while accepting new obligations, in the expectation that their ranks, like those of the doctors and nurses, will be raided for the federal service, and with the possibility that they will have the greatest difficulty in raising money at a time when national relief funds, war taxes and the climbing cost of living will all be competing for support.

That, in a paragraph, might be said to summarize the discussions of the National Conference of Charities and Correction which adjourned Wednesday night from its week's session at Pittsburgh. That it is facing its tasks soberly and confidently was apparent at every meeting and that, in its forty-fourth year, it has sufficient of the elasticity of youth to meet new situations was perhaps nowhere more strongly brought out than in the unanimous vote by which it changed its name to National Conference of Social Work.

War, then, was the theme, and preparedness for war the detail of the discussion. But that war brings not so much a change in social work as a great increase in it was equally clear. Helen R. Y. Reid, of the Patriotic Fund of Montreal, put it in a sentence: "All of the problems met in peace times we meet again in our soldiers' families and in increased and intensified form." What those problems are was tersely stated by Edward T. Devine, chairman of the special Committee on Social Problems of the War:

Incredible numbers of the strongest and best men are killed. Incredible numbers of others are wounded and blinded. The ordinary casualties of industry, which concerned us so much but yesterday, are almost forgotten. The birth-rate decreases. The death-rate increases even in the civil population, and in the neutral countries near the seat of war. Infant mortality, unless superhuman efforts are made, reaches a dizzy height. Tuberculosis breaks through all the modern restraints built up so skilfully and develops

into an epidemic of such dimensions that "the white plague" is no longer a figure of speech. Typhus and cholera and scurvy and malaria reappear to ravage the more backward nations, and such novelties as trench-foot and gas-poisoning and nervous shock literally overwhelm the medical services of the most enlightened. The venereal diseases, never under efficient control, overrun the armies and training camps. Public opinion as to sexual immorality is relaxed. Illegitimate children are born in unheard-of numbers. Prostitutes increase. Undernourishment, exposure, anxiety and other hardships undermine physical and mental health. Insanity increases. Orphans are multiplied. Juvenile crime and lawlessness become alarming. Education is neglected. Recreation loses its recently acquired standing among the necessities of life. Children and women are allowed and induced, if not compelled, to work too hard. The standards of living fall. Provision for the future is forgotten under the pressure of immediate needs. High wages, like high prices and high taxes, continue, but they are no longer an indication of a high standard of living for workingmen and their families. Family ties, family interests, individual initiative, individual development and all else that form the foundation of social work, lose their importance save as they can be made to contribute to the national purpose, and that national purpose is destruction. All the resources and forces of the nations at war are organized—more or less thoroughly, more or less intelligently—for the destruction of enemy life and the things that sustain that life, with the indirect result, also, it would seem, of self-destruction.

What, then, is the place of our humanitarian endeavor in the midst of the world at war, and what will be the effect of the war on the causes which this conference especially represents? . . . Is fighting power rather than charity the thing that abides, along with faith and hope, and is it the greatest of these four? . . . The destruction and devastation which appal us are but means to an end—a most regrettable means to an end with which the means seem incompatible. . . .

It is not that the ideals of social work—which are the ideals of religion in terms of practical life, the ideals of democracy in economic and social life, the ideals of humanity in the life of the generation that passes—are mistaken and unworthy. They assume, however, certain other ideals with which social workers as such have not greatly concerned themselves, simply because they have taken them for granted. Freedom, nationality, respect for treaties—for such great causes as these our fathers fought and for them now our sons are called to fight. If we thought they were automatically secure forever, we were in a fool's paradise. When they are challenged they come first. They are more important, more fundamental, than comfort, physical health, mental development. Until they are assured, the struggle for a normal life, as we have conceived it, is hopeless; until men are free and the framework of international society is secure, the individual and social welfare, which is the concern of social work, must remain precarious, however efficient our governmental machinery for its protection, and our voluntary associations for its promotion may be.

That, said Mr. Devine, was the first naked truth of the

FREDERIC ALMY

President of the National Conference of Charities and Correction of 1917 at Pittsburgh

matter. The second was that legislation and reforms which are not firmly grounded in convinced public opinion form a flimsy platform which falls under the more insistent demands of war. Protective labor legislation, for instance, can only be saved in our states by the utmost united endeavor. The brighter side of it is that, by the very urgency and bulk of the demand for good work and sound children, the nations at war are beginning to understand the things that social workers long ago understood—the need for adequate physical care and mental development of the young, the sick, the discouraged, and the protection of normal family life if the whole people is to be sound and well and do its part in either war or peace.

The challenge of this to social workers was made again by Miss Reid. She said: "God has given it to us as a priceless heritage to live in these great times." Repetition of it came out in the forty-eight meetings held during the week.

There was, perhaps, greatest interest in the care of soldiers' families and the way in which the government, the Red Cross and the private organizations are to function. The government has not yet declared its purpose, beyond the passage of the draft act which raised the pay of private soldiers from \$15 to \$30 a month. There are, also, supplemental payments for foreign service, for length of service and for marksmanship which raise the private's pay to a possible total of \$48 a month after he has been for some years in the service. Nor has the Red Cross, just reorganized, and the new director-general of civilian relief, W. Frank Persons, of New York, appointed less than a week before the conference met, declared its policy.

It was understood, however, that the Red Cross stood unequivocally for the largest and most generous treatment by the government which can be secured; and that it will encourage the cooperative action of all existing organizations

with the Red Cross chapters; that it favors the raising of funds and the care of families locally—by friends and neighbors and fellow townsmen—as against a great national fund disbursed and administered from Washington. Such local funds are already being collected in some cities and a number of states have made appropriations. But as to what the relations of these funds to each other may be no one was willing to risk a prophecy. Miss Reid deplored the state grants and, on the Patriotic Fund experience, favored a single national fund, local collections to be turned in to headquarters, but the care of families and the actual disbursements to be in the hands of local branches. It had worked well administratively and had not, she said, shown the least tendency to dry up local collections in the belief that a great, vague, central purse might be opened for all needs.

At an unofficial luncheon meeting on the matter two distinct points of view came out. One was that the soldier should be considered as an employe of the federal government, engaged in an extra-hazardous occupation, calling for wages high enough to enable him to meet himself all the exigencies of his family during his absence and, by an application of the principle of workmen's compensation, to carry the risks of death and injury to himself. This was, it might be said, very widely regarded as the ideal method. The practical difficulties are many. Chief of them is the fact that, when an army of two million men is enlisted, the government will be paying out sixty million dollars a month in wages alone. What it may be expected to do beyond that, in more pay or separation allowances, is problematical, although it was the general opinion that a separation allowance of some amount must and would be voted for soldiers with dependents.

The other point of view was that the soldier is not rendering industrial service, but patriotic service; that his pay for such service should be smaller than for ordinary labor; that, so far as he has dependents, such pay must be supplemented by a separation allowance; that beyond the separation allowance there still must be provision, through non-official funds, of help for emergencies. It was emphasized that, even under a full compensation system, provision could not be made for sickness of members of the man's family; that the government could not pay the hospital bill for his wife nor carry her through childbirth.

The feeling at Washington that the exemption of married men will relieve this country of the need for providing separation allowances for families was not shared by the conference. The selective draft will undoubtedly give us a much smaller relief problem than other countries have had; but there will still be dependents who must be cared for. There is, for instance, the young fellow whose father dies after he enlists, leaving the mother dependent on him; there is the man so anxious to fight that he lies about his marriage; there is the deserted wife or the common-law wife, denied by the soldier, but able to present a creditable claim. Many claims have already been filed by dependents of regulars, guardsmen and sailors. In one eastern city one-half of the first 150 claims made on the Red Cross were by the dependents of unmarried men; in a middle western city the very first claim made was by a young unmarried girl, pregnant by a guardsman. Of 275 chapters which have reported, 80 have been called on to give material relief—\$13,000 to 1,100 families in about two months.

The unofficial meeting led to the passage of a resolution urging the Council of National Defense to act favorably on the proposal now before it of appointing a commission to study the whole matter, including the compensation and

insurance features, and to endeavor to work out a system that will be both generous and just. At another meeting, Royal L. Meeker, of the Bureau of Labor Statistics, pointed out that the government has already accepted the principle of federal social insurance in insuring the lives of sailors on merchant ships taking the heavy risk of sailing for England with food and munitions.

In the discussion of standards of living and labor during wartime there appeared to be, for the first time, unanimous approval of prohibition. And the discussion seemed to show that this was for a permanent policy and not just for war prohibition. Elizabeth Tilton has very suddenly achieved her purpose of enlisting social workers in the prohibition cause. Speakers from one dry state after another testified to the good social results of prohibitory laws. And before the week was over, Prof. Irving Fisher of Yale had secured the passage of a resolution urging Congress to prohibit the manufacture, importation and sale of alcoholic liquors during the war and for one year thereafter.

Mrs. Tilton, just from Washington, reported the Lever bill, giving the President control over the use of grain in making alcohol as well as a general and sweeping authority over the food supply, as stalled. Sugar interests, cotton interests, liquor interests were opposing it—everyone wanted control except in his own commodity, she said; everybody wanted Mr. Hoover except Congress. She brought word that the nations abroad had offered him anything he would accept if he would stay in Europe in control of the allies' food supply, but that he had felt the better plan was to come here, where the food must be grown. We will have to export hundreds of millions of bushels of grain, she said; more than we have ever done before. There is a good crop in India and in Australia, but it is a long and difficult haul to get it to London and Paris and Rome and Brussels. The task rests on us; the man able to do it is ready, yet we stand back and listen to the selfish arguments of special interests afraid not that they will lose money but that they may not make the ultimate profits. To make the exports which are called for we must economize a bit here and a bit there; but, she said, there is no place we can save so much at one fell swoop—3 per cent of the total—as in refusing to have another bushel of grain go into the making of alcoholic drinks.

Florence Kelley made the striking point, already familiar to readers of the SURVEY, that the grain raised by schoolboys in any state, dry or wet, may go into whiskey or beer, which is true also of the sugar beets raised in the dry West; that an emergency which called for the cutting down of the school year by one-half, as in New York state, is a great enough emergency to stop this very minute the distilling and brewing of the world's food into beverages. Mr. Devine testified that, as a result of his trip over a large part of Russia, he was inclined to believe that the social revolution which followed the prohibition of vodka was more profoundly important and more likely to be permanent than the political revolution which abolished autocracy.

As to labor standards, there was no debate; everyone was agreed that the time has certainly not yet come and very likely will never come when the war need will be so pressing that we must throw health and efficiency to the dogs for the sake of a temporary increase in factory output. Mrs. Kelley acclaimed Governor Whitman for his veto of the bills repealing labor standards and offered it as a striking fact that the greatest industrial state had refused to yield to the hysteria of the first weeks of war—"in New York no woman can work at night in any process, though we are surrounded by

ROBERT A. WOODS

President of the National Conference of Social Work of 1918, at Kansas City

states in which women can and do work at night." She was loudly applauded and continually quoted during the week on her statement that "we believe that in war as in peace the heavy work should be done by men and that at night the mothers of little children should be at home."

There was considerable talk of various types of war economy, but no agreement with the proposal of one delegate that, in order to restore work to certain groups of dressmakers and milliners now idle, women should continue to buy clothes and hats as before. Rather there seemed agreement that purchasing should be confined to essentials and, so far as possible, to the products of which there is not a shortage; that care for the unemployed girls should be provided through a better system of employment agencies; that there is no lack of work—rather a lack of workers, and the girl who makes evening gowns or trims bonnets can be put at some other task. It was pointed out, also, that for men as well as women there will be a widespread attempt to demand longer hours of work, and that this, together with speeding up and the employment of great numbers of inexperienced men in the place of those who have enlisted, may be expected to lead to an increase in the number of industrial accidents.

General concern as to the support of social work during the war led, in another informal and extra-conference meeting, to requesting the Council of National Defense to appoint a commission on the conservation of social work. This grew out of a proposal, broached some time since in New York and brought before the conference by Samuel McCune Lindsay, that Congress be asked to exempt from the operation of the income tax law gifts made to regularly incorporated social agencies. These agencies, Dr. Lindsay said, face a very serious situation. A great deal of their support comes from sources which are not only paying the normal tax but, under

the bill now pending in Congress, will pay a very heavy super-tax. To exempt these gifts would, he said, cost the government a comparatively small amount of money, while it would serve greatly to help the organizations.

Discussion at a luncheon conference showed so much opposition to Dr. Lindsay's argument, chiefly on the ground that this was proposing a new form of special privilege, that the plan to send a resolution to Washington was given up and instead there was substituted the request for the commission to study the status and needs of social work. Some striking reasons for the need of such a commission were brought out, such as, for instance, the departure of a hospital unit from a middle western city with sixty-five nurses, sixty of whom had been in executive positions. A physician in New York has recently stated that the older men of his profession must give up all idea of a vacation this year and must, in caring for the civil population, work harder than the young doctors at the front; should there be unusual sickness, such as the polio epidemic of last summer, he was appalled at the thought of what might happen; at the very best he felt that the health of the general civil population was in grave danger.

This question of the health of the civil population came up at various times. Dr. C.-E. A. Winslow, professor of public health at Yale, stated, for instance, that, leaving deaths and wounds out of account, the progress of military hygiene has put us in a position where "preventable disease is now more effectively controlled in the camp than in the marketplace. We may well learn to apply the lessons of military hygiene and sanitation in the conduct of our daily life." The death rate in the registration area of the United States has gone down from 14.4 in 1909 to 13.6 in 1914, but there are still 100,000 deaths a year "due to simple and easily controllable causes. War conditions, unless they are intelligently met, will gravely accentuate our losses. Not one state board of health in ten, not one city board of health in twenty," he said, "has an organization and a budget adequate for pressing needs." The Canadian delegates testified that social and educational work supported by public funds has been generally starved during the war, whereas, over the full term since August, 1914, that supported from private gifts has, by the greatest exertions, been able to keep up to standard. The outlook for public health work would, therefore, seem grave. Nevertheless, Dr. Winslow hoped that some good might come out of it. "The present crisis may perhaps awaken America to the concrete possibilities of a serious application of the laws of public health. We have two wars to win—one against the central powers and one against the invisible microbic enemies of mankind. The military establishment, the munition

factory and the farm all depend upon man-power; and preventable disease gnaws at the root of national strength."

Dr. Grace L. Meigs, of the federal Children's Bureau, was similarly hopeful that infant-welfare work might gain during war without waiting, as it did abroad, particularly in the hard-pressed nations like France and Belgium, for a decreasing birth-rate and an increasing death-rate of infants to sound the alarm. It has tended to the preventive rather than the palliative side, she said, and "it is the fruit of the great and intelligent movement for the prevention of infant and maternal mortality for the last decade." Out of it she drew these practical suggestions for this country:

1. That no hasty conclusions should be drawn that the war makes immediately indispensable in this country such palliative measures as the increase of day nurseries or the supervision of pregnant women working in factories, to which dire necessity has driven certain foreign countries.

2. That the chief preventive measures for protecting babies is to insure their care and nursing by healthy mothers in their own homes.

3. That the disorganization of infant welfare work through the loss of doctors and nurses especially trained for it is an imminent danger and should be avoided if possible.

4. That the preventive work for infant and maternal welfare already established should be strengthened and extended; that nothing should be considered more important in wartime.

The Rape of Girlhood

ONE of the keen observations in the headquarters lobbies, though it did not find expression on the program, was the expectation of great numbers of unmarried mothers in the vicinity of the military training camps and in only less degree wherever troops are enlisted or temporarily camped en route to camps or to shipboard. Experience on the Mexican border as well as abroad led to the feeling that the debauching of young fellows in khaki will, with the plans for recreation and the minimizing of prostitution, be as nothing to the ruin of young girls in the civil communities. Forces are gathering for the protection of girls and the supervision of their meeting the soldiers—as they are bound to do. But at best it was felt that this will shortly be recognized as one of the greatest and most subtle and difficult of social war problems. For not only are hundreds of thousands of young fellows freed of all the usual home restraints and exposed to moral standards of every sort, but the best of girls, in the hysteria of wartime and the eagerness to entertain and give a good time to the boys who are about to go into battle, suddenly find themselves in the worst of predicaments. So it was perhaps significant that one of the conference papers most talked about was that by J. Prentice Murphy, of Boston, on unmarried mothers. He stood out stoutly for treating them as we would any other mothers—as individuals, some competent and some incompetent, even under the best guidance, to bring up a child, but none to be judged as "immoral" and in a class apart from other human beings. Some of the best results of work with unmarried mothers of which he has known have been obtained with girls who have had two or even three illegitimate children. He was very much against herding them in institutions.

There were, of course, innumerable war points of which not even mention may be made here. The adjoining resolution urging a restatement of the terms of peace was sent to the White House with 570 signatures, including most of the leading men and women. The address on the League to Enforce Peace, by William Howard Taft, brought prolonged applause from a theaterful of people, especially in his statement that the United States, Great Britain, France, Italy and Russia are now engaged in performing the duties

ACCLAIMING the democratic principles set forth in the President's address to the Senate in January, and reaffirmed in his war message of April; welcoming the response thereto by English liberal opinion; hailing the democratic purposes of the Russian revolution with its disclaimer of territorial aggrandizement; and recognizing that the democratic elements of the central empires are at a disadvantage so long as their war groups can claim they are resisting annihilation, we pledge the administration our support in such steps as will elicit a fresh statement of peace terms by the allies, repudiating autocracy, disclaiming conquests and punitive indemnities and focusing the liberal forces of all mankind for a democratic organization of the world.

The national conference has an established practice of declining to pass resolutions that commit its members to any position. The one given above was circulated unofficially and signed by 570 members as individuals, to be transmitted to President Wilson.

of a league to enforce peace. And Morris Hillquit made a profound impression in his statement of the Socialist position and aims, particularly when he declared that the Social Democrats of Germany will yet send the last of the autocrats packing and will convince the world of the physical and moral impossibility of continuing to carry a crushing load of armament. These and a later meeting of the American Union Against Militarism were, of course, all outside the program and the regular meetings of the conference.

In introducing former convicts, members of his Mutual Welfare League at Sing Sing, into the conference program, Thomas Mott Osborne not only provided a unique feature but an astonishing sequel for himself. One of his speakers, missing the man who was to have met him at the station, went to the lobby of the headquarters hotel, was recognized by a Pittsburgh city detective and promptly arrested. The police permitted him to telephone to Mr. Osborne, who went surety for him and secured his release. But they were none-the-less proud of their recognition of a man whose picture is in every police station of the country. Mr. Osborne himself urged that in a time when democracy is the watchword of the world it be applied in the prisons where, until the last few years, it has been utterly unknown and where arbitrary authority survives in a measure unknown in civil life.

Such a transitional situation has never been faced by the administrative officers of the conference in all its forty-four years as that through which they have just steered it. For several years there have been signs of change. Changing social, economic and administrative conditions have greatly diversified and specialized social work. Therefore the constituency of the conference became more varied and comprehensive. The officials of state institutions, who founded the conference, had long ago been constrained to admit the voluntary charities' representatives to their fellowship. These proved to be only the advance guard of a long procession of representatives of individual causes and interests whose knock at the door led to their admission, at first one by one, and then by groups, year after year.

These newer elements began to chafe under the old name, which those who had made it historic naturally cherished. More and more kindred groups tended to meet at the same time and place as the conference and clamored for some sort of recognition. Last and greatest of all these changes was the sudden and tremendous transition of the world war.

A New Name for New Times

THE executive officers of the conference demonstrated their ability to adjust themselves by the promptness and vigor with which they responded to the call of the times in rearranging the settled program so as to add the distinctive feature of Social Problems of the War. And this they did without other authority than that of the exigency of war. This in itself was the auspicious harbinger of the response which the conference itself would make to the demands of the readjustment.

For three years a committee on change of name had been trying out the wish and will of the members. The first committee found little if any demand for it and many reasons against it. The second committee discovered widespread though sporadic sentiment for some change, but could get very little direct response to its requests for individual opinion. But the preferential balloting persistently urged by the third committee rallied 284 votes. Their first, second or only preferences were 169 for the old name, 323 for National Conference of Social Workers, 151 for National Conference on Social Welfare, 77 for National Conference on Public Welfare, and 99 for National Conference on Social Service.

THE NEW ORGANIZATION

President, Robert A. Woods, Boston.

Vice Presidents, John A. Kingsbury, New York; Judge William A. Way, Pittsburgh; Florence Kelley, New York.

Members Executive Committee, Roy Smith Wallace, Philadelphia; Mrs. W. L. Murdoch, Birmingham; Rev. Frederick Siedenberg, Chicago; Ida M. Cannon, Boston; Otto W. Davis, Minneapolis; Marcus C. Fagg, Jacksonville, Fla.

Chairmen of Divisions:

Children, Henry W. Thurston, New York.

Delinquents and Corrections, Jessie A. Hodder, Framingham, Mass.

Health, Dr. J. H. Landis, Cincinnati.

Public Agencies and Institutions, Albert Sidney Johnstone, Columbia, S. C.

The Family, Gertrude Vaile, Denver.

Industrial and Economic Problems, Florence Kelley, New York.

The Local Community, Charles C. Cooper, Pittsburgh.

Mental Hygiene, Dr. William Healy, Boston.

Organization of Social Forces, Allen T. Burns, Cleveland.

Social Problems of the War and Reconstruction, V. Everit Macy, New York.

Eleven blank ballots were cast. Discussion of these results led, by a large acclamation vote, to the final choice of National Conference of Social Work.

A still harder change to achieve was in gearing up the many groups kindred to the conference in a more definite and yet free relation to it and to its program. For two years the Committee on Kindred Groups made a thorough study of the whole situation, past, present and prospective. The scheme as first formulated was sent out to all members of the conference in an elaborate printed proposal which in the discussions of the committee, after convening at Pittsburgh, was deemed too complicated. Prolonged and patient discussion and a conciliatory spirit achieved a more simplified but none-the-less thoroughgoing plan which received the endorsement of the executive committee and was adopted by a unanimous vote of the conference.

The plan to ally kindred groups vitally reconstructs the organization of the conference without making any unnecessary changes or taking away the self-government of either central or kindred bodies. Specialized interests within and without the conference membership are provided for by creating divisions, which include a larger number of sections than have hitherto been found to be practicable. Seven of these divisions are designated as continuous from year to year; namely, the family, children, health, delinquents and correction, public agencies and institutions, industrial and economic conditions, the local community. Members of the conference may register for any or all divisions. Those registered in each division nominate to the conference at its annual business session a committee of not less than nine members to arrange for its section meetings and their place on the conference programs. Chairmen of these committees are to be nominated by each division and confirmed by the executive committee of the conference. The secretaries and reporters are appointed also by joint action.

On petition of twenty-five members of a conference division, or in case they refuse to accede to it, to the special executive, special divisions may be created for a year at a time. Thus new groups or interests may find place and temporary recognition. Independent organizations desiring the fellowship and publicity of the conference may be recognized to this extent on condition that their sessions be held either before

or after the entire program of the conference is rendered. The programs of all general sessions of the conference and the oversight of all section meetings of every division are left in the hands of the conference executive committee, to which the division committee chairmen are added as ex-officio members.

The value of the conference as a great central clearing-house is thus conserved, as well as the free initiative of each group of its members. Interests that have been tried, tested and approved to be permanent are recognized as continuous, and yet recognition is temporarily extended to new interests with a chance to attest their right to continuance or to take turns on the annual programs. Flexibility with continuity, centrifugal and centripetal movements, freedom of individuals and groups with enough authority to maintain order and progress, are thus constructively promoted. Credit for this unique achievement is due most of all to Roger N. Baldwin, chairman of the committee, whose cooperative spirit proved to be as effective as his constructive efficiency.

Action on the plan was taken by the kindred groups as follows: Five will remain completely independent—American Association of Societies for Organizing Charity, National Conference of Jewish Charities, National Conference of Jewish Social Workers, National Conference on the Education of Truant, Backward, Dependent and Delinquent Children, Secretaries of Social Service Exchanges; nine will retain independent existence but will unite their programs with the national conference—National Children's Home Society, National League on Urban Conditions among Negroes, National Housing Association, American Social Hygiene Association, National Association for the Study and Prevention of Tuberculosis, National Probation Association, International Association of Policewomen, Hospital Social Service Workers, Polish Social Workers; eight will become integral parts of the national conference—Teachers of Practical Sociology, Industrial Social Service Group, Group on Charities Endorsement, Charities Federation and Central Councils of Social Agencies, Officials of Charities and Corrections, Presidents and Secretaries of State Conferences, Land Taxation Group, Special Committee on Radical Social Movements.

In his presidential address, Frederic Almy, of Buffalo, struck the note for the conference—a note of courage and optimism and of refusal to believe that all things are rushing to everlasting destruction—"nothing seems impossible, with effort." He was, he said, a "discouraged optimist," a "war pacifist" who had wanted to fight two years ago for Belgium. "I would rather be a Belgian than a German. I would rather be a dead Belgian than a live German. But I still love Germany. I hate the sin, but love the sinner. The victory

depends on our work as well as on the fighting. There is just as good fighting in social service as there is in military service." And no one hailed with greater glee the newspaper report which made him say: "There is just as good fighting in social circles as there is in military service."

The discouraged optimist insisted on pausing a moment in the long climb and seeing "that the summit is now nearer than the valley." His subject was *The Conquest of Poverty*. We may look forward, he said, to the end of hopeless, involuntary, innocent poverty. Two centuries ago one-fifth of the population of England consisted of paupers and beggars, most of them able-bodied. Those in the almshouses wore iron collars. The necessities of the working man of today were unheard of luxuries for the rich of Queen Elizabeth's time. Even in forty years there has been a great falling off in actual poverty; in Buffalo, for instance, there is "less by actual count than when the city was one-fourth as large and had a smaller proportion of immigrants and though we now recognize and count incipient poverty which forty years ago was not so recognized." Health has been tremendously improved, illiteracy almost wiped out, crime reduced—and all of these are potent causes of poverty; we have even gotten to the point of handling city congestion and of making the city a healthier place than the open country or the small town. War itself, Mr. Almy demanded, should contribute to his optimism:

I think we all agree that in spite of the value of intelligent autocracy, democracy will in the end lessen poverty by giving more opportunity to the poor; and in the last one hundred years the proportions of democracy and autocracy in the world have been reversed. Today democracy is almost universal, and autocracy the exception, and the end is not yet. I think we all agree that prohibition will lessen poverty, and through this war it exists in Russia and has a foothold in England. We all know how it is sweeping America. Already more than half of our states are dry. Many of us think that the emancipation of woman will lessen poverty, and through this war this is already a certainty in England and has a foothold in Russia. In America one-third of our presidential electors are now from suffrage states. Eastward the star of suffrage takes its way and it has reached Rhode Island. Moreover suffrage, unlike prohibition, is irrevocable where it is once gained, for women will not disfranchise themselves. Again, already through this war constructive social work by the state, which seemed utopian, has become familiar, and sacrifice and service by volunteers are universal. In a twinkling also, quicker than ever before, we have gained in internationalism. War is abominable, and the hate and loss it causes make the whole world poorer, but out of the great evil we make some great gains. As Bossuet says, "When God rubs out, it is because he is getting ready to write."

So it went. The cobbler must stick to his last. Indeed, with the present price of leather, the shoemaker's skill in pegging the new fibre soles to our frayed uppers may be all that keeps us from going barefoot. So, too, with social work. If good social work was important in humdrum times it is important now a thousand-fold.

COMMON WELFARE

STATE COMPENSATION LAWS REVIEWED

IF a traveling salesman is injured in the course of his employment in West Virginia, Michigan or California, he cannot claim workmen's compensation. In Minnesota, he is assured compensation if he happens to be engaged by a Minnesota firm. On reaching New Jersey the same salesman may lose arms, legs or eyes in an accident that occurs when at work and gain a right to workmen's compensation.

Such curious inconsistencies in the laws of the thirty-seven states and three territories which have granted workmen's compensation are brought out by a recent pamphlet on the legal phase of workmen's compensation acts. This document is published by the National Industrial Conference Board, a cooperative body comprised of representatives of national industrial associations. It will be followed by later reports discussing the operations of compensation statutes from the medical, economic and administrative standpoints.

Not only is there diversity in state laws in the classes of employes affected by workmen's compensation. In eight states compensation acts are compulsory upon the employer. In twenty-four states the employer may make a choice between workmen's compensation payments and common-law defense, but if he does not accept the former he must forfeit some or all of his common-law defenses in any action brought by an injured employe. In twenty-three of these twenty-four states the employe likewise has an option; in Texas he is bound by his employer's choice. In twenty-five states the employer affected by compensation acts must either insure his liability or demonstrate his financial capacity for self-insurance. In some states contribution to a state insurance fund is obligatory.

Classification of "hazardous" occupations is very uncertain in the various acts. Although private insurance experience shows many forms of agricultural employment to be more dangerous than mechanical trades, agriculture is nowhere designated by compensation

acts as a "dangerous" or "hazardous" occupation.

Another source of conflict lies in the significance given to the term "accident." In the English compensation acts of 1897 and 1906, largely used as a basis for American legislation, the liability is expressed by the phrase "personal injury by accident arising out of and in the course of employment." In the compensation acts of fourteen states this language is followed identically; in others, the words "by accident" are omitted, thus broadening the liability; in some cases the words "out of" are also omitted, further extending the liability to cover injuries received in the course of employment, although the occupation has no direct connection with the injury. For instance, the Ohio Industrial Commission awarded compensation to the dependents of a stenographer because, while taking dictation from her employer, she was murdered by a jealous suitor; the New York Industrial Commission awarded compensation for the death of a street-railway process-server from gangrenous diabetes alleged to have resulted from having his toes trodden upon by a fellow passenger in a street-railway car of the company which employed him.

In this country "occupational diseases," as a rule, are not included under the term "accident" in workmen's compensation acts, but in the administration of these acts an increasing tendency to include many forms of diseases contracted during employment is evident.

The pamphlet reviews the growth of workmen's compensation acts from the first Maryland statute of 1902 applying to coal-mine operatives to the federal compensation law for government employes passed in 1916. It analyzes the decisions of the United States Supreme Court in three important cases which have established beyond question the right of states to enact such legislation. Despite inharmony of enactment and interpretation in the laws of various states, the report endorses the fundamental principle of compensation; namely, "the substitution of a definite and certain measure of relief for the former uncertainties of redress through litigation."

CHICAGO'S PUBLIC SCHOOL TANGLE

THE Chicago public schools are still suffering from the turmoils of their administrators. The board of education and the mayor, the teachers' federation and the courts, the Chicago Federation of Labor and two citizens' associations are now directly involved in the endless controversies, while the children, their parents and the public are innocent bystanders who are paying the heavy costs of the prolonged struggle. No sooner does one situation clear up than complications worse confounded arise.

The supreme court of the state recently decided that the board of education had authority to drop teachers "for any reason whatever or for no reason at all," as they had no definite tenure of office other than their appointment by the board for a year at a time. Thus the right claimed by the teachers' federation to affiliate with the Chicago Federation of Labor against the rule of the board was denied. Thereupon the affiliation was formally withdrawn, under protest by the officials of the federated teachers and with the consent of the federation of labor. In this way only, if at all, could the sixty-eight teachers dropped for such cause hope for restoration.

Meanwhile the state legislature has enacted a school law giving the school trustees more independence of the city administration than ever. The appointment of the trustees, now reduced from twenty-one to eleven, is left with the mayor, whose nominations, however, must be confirmed by the city council, as heretofore. Under the new statute the teachers must accept probationary appointments for the first three years; thereafter they can be removed only for cause, and not until after they have had a hearing. The truce promised by this compromise measure was roughly interrupted by a fierce encounter between the president of the school board, Jacob L. Loeb, and Mayor William Hale Thompson and his political advisers, who were denounced publicly before the board for plotting to nullify the civil service law in order to gain partisan patronage and for planning to lease school lands with-

out provision for revaluation during the coming year, Secretary Wilson's ninety-nine years.

To head off this alleged plot, President Loeb seized the advantage given by the new law in authorizing the old school board to make appointments in conformity with civil service rules, before the board could be reconstituted by the mayor's new appointees. As the principal administrative offices were thus filled for four years by the reappointment of experienced incumbents, the mayor was deprived of making them the "plums" of patronage. The office of superintendent of schools is still held in abeyance. Six nominations for school trustees, meantime, had been submitted to the city council by the mayor. Pending their consideration by the aldermen, two nominees publicly withdrew their names on account of the charges alleged against the mayor by the president of the school board.

Such is the present situation in this state of war, with the strategic positions in the possession of President Loeb and a strong majority of the hold-over board of education. The final issue depends upon the constituency of the new board which is to be determined by the outcome of the struggle between the aldermen and the mayor over the new appointees.

FEDERAL BUDGET CUTS AFFECTING LABOR

RECENT war economies of the House Appropriations Committee will be felt by labor.

An item for some \$47,000 to create an independent women's division in the Department of Labor has been stricken from the sundry civil appropriations bill. Five of the six conferees on this measure were individually committed to it, but on the ground that the Department of Labor did not estimate for the item it has been dropped. Chairman Fitzgerald, of the House Appropriations Committee, is held responsible for its defeat.

Another proposition benefiting labor which has been vetoed by the chairman of the House Committee on Appropriations is a plan to eliminate the waste of time for skilled mechanics and common laborers between the completion of one employment and the beginning of the next.

Secretary of Labor Wilson, who submitted the plan to Congress, believes that, since carpenters are found to lose as much as 150 days a year because of lack of continuous work, the creation of an effective employment service would enable them to "connect" from job to job and thus almost double their annual output and earnings. The same rule, he holds, would apply to many other trades, and to the vast army of migratory unskilled labor.

At an estimated cost of \$750,000 for

the coming year, Secretary Wilson's program could be carried out by the organization of a nation-wide staff in the United States Employment Service. At the capitol, however, the request of the department is refused on the ground that the employment service has no legal existence, is unnecessary and has been sustained on funds diverted from other legally directed channels. The secretary argues that legal existence of the employment service is established in the Bureau of Immigration, of whose funds it used \$150,000 last year. He is ready, moreover, to have specified legal status given the service, but Chairman Fitzgerald does not propose to permit this change.

Even more serious a handicap to the welfare and efficiency of labor during war-time than failure to establish a woman's division or to minimize seasonal employment is the dismissal of seventeen of the twenty-one commissioners of conciliation from the Department of Labor. A year ago the department received an appropriation of \$75,000 for its conciliation work. This amount has been exhausted on account of the unprecedented demands for services during the last year [the SURVEY, June 9]. When Secretary Wilson made a recent request for \$250,000 to continue the work effectively, the sum was refused.

Meanwhile, industrial disputes are rapidly multiplying, and Secretary of War Baker has secured the services of Prof. Felix Frankfurter, a member of the committee on labor of the Council of National Defense, as his special adviser in the adjustment of labor troubles connected with the construction of cantonments, military works, manufacture of munitions and supplies. Federal troops have been called out by local authority, and withdrawn on orders from Washington, in the case of a strike of molders in a Newark, N. J., plant doing war work. Request has been made by another Newark concern for the services of federal secret service operatives against strikers.

At the same time, also, complaints are being lodged by labor unions against the employment of convicts in painting buildings for the War Department at a camp near Charleston, S. C., and against the employment, through a prison-contracting firm, of naval prisoners from Portsmouth, N. H., in a garment shop at Wethersfield, Conn. Similar complaint of the employment of convicts at chain-making and other metal work has come from Concord, N. H. Carpenters' and plumbers' unions at Ft. Snelling and Ft. Benjamin Harrison have grievances regarding work on camp buildings.

The appointment of local committees of mediation and conciliation under the labor committee of the Council of National Defense, while most useful and

important at this time, relieves the situation but little. The members of these committees are not expected to act as arbiters, but to obtain a cordial reception for government authorities and in every way promote this method of peaceful settlement of labor troubles [the SURVEY, June 9].

Secretary of Labor Wilson has intimated that a central board may be created to safeguard labor standards upon war work and to consider industrial disputes. Press discussion has gratuitously employed the phrase "labor dictatorship," despite the fact that emphasis was laid upon the non-dictatorial character of the proposed arrangement. The Secretary of Labor stated on June 8:

There is no such thing contemplated by the Council of National Defense as a labor dictator. There has been no necessity for such action because of the spirit of co-operation that has existed since the beginning of the emergency among all classes of workmen, organized and unorganized, and the able and earnest manner in which the spirit has been publicly expressed by their chosen leaders. Methods of adjusting labor troubles are under consideration by the Council of National Defense, each of which considers the human element in industry, but none of them contemplate the establishment of a labor dictatorship.

The only alternative to the creation of a national board with adequate legal authority was brought forward at a meeting of the wages and hours committee of the committee on labor of the Council of National Defense. This alternative proposed a sub-committee to agree upon industrial standards, and to report upon disputed points in the labor field.

It was pointed out to the trade union representatives that this plan would involve, first, a hearing on each definite point, then a session and decision by the sub-committee, then debate and decision by the hours and wages committee, then a report to the executive committee, then new debate and report to the committee on labor—which consists of some 150 or more members in various parts of the country—and thence presentation to the advisory commission of the Council of National Defense. Finally decision could be made by the Council of National Defense itself.

Recital of the complexity of the machinery was sufficient to convince the practical trade unionists that some other method must be adopted. The national board, consisting of spokesmen for labor and employers, with a chairman speaking for the whole public, grew in favor as a solution.

Secretary of Labor Wilson is understood to be desirous that this board, if created, be under the authority of his department. Other members of the Council of National Defense are understood to favor giving it a separate existence, with direct responsibility to the President. This differ-

ence of opinion, involving the comparative increase or decrease of the importance of the Department of Labor, has not yet been bridged.

OPENING THE RED CROSS CAMPAIGN

A CONTRIBUTION of \$1,000,000 has been promised to the \$100,000,000 being raised by the American Red Cross, on condition that twenty-four other contributions of equal amount are forthcoming. The donor is Cleveland H. Dodge, of New York city, who is chairman of the finance committee of the newly created Red Cross War Council.

The Red Cross is laying plans for its campaign week, June 18-25. In announcing Mr. Dodge's gift and several smaller ones, Henry P. Davison, chairman of the war council, made a further statement in regard to the uses to which the money would be put. After pointing out that our first obligation was to care for our own soldiers and sailors and those of our allies, he said:

We shall help provide the bare necessities of life to the homeless in devastated France; to aid them to rehabilitate themselves and thus strengthen the man power of the French army.

We shall strive to hearten Russia, by providing additional ambulances and other relief for the sick and wounded along the battlefield. We shall try to succor the homeless and wandering peoples of Poland, Lithuania and western Russia.

We hope to extend aid to those who are fighting the battles of liberty in Rumania, Serbia and Italy—indeed, to relieve human misery everywhere among our allies.

As told in the SURVEY last week, a Red Cross commission has already gone to Europe to study conditions and direct the expenditure of funds.

RED CROSS COURSE FOR CIVILIAN RELIEF

TO train volunteers for the delicate task of dealing with the dependent families of soldiers and sailors, the Department of Civilian Relief of the Red Cross has suggested to its chapters a short course of study. The program is especially recommended for small communities where there are no schools of philanthropy or their equivalents giving such training. Probably ten sessions will be needed, says the department, to cover the subject matter, and it suggests that classes or round-table groups be formed to listen to lectures, to discuss the problems involved and to report on supplemental reading.

Though urging the use of volunteers, the department strongly advises the employment in every community of at least one trained social worker who has had considerable experience in dealing with families in distress, especially wherever the total amount of relief is of fair size.

The department does not share the view that if the order against accepting

HINTS TO RED CROSS VOLUNTEERS

1. General information concerning the organization and work of the Red Cross

Organization: headquarters, official, chapters, committee.

Work: In peace—in war. Work for families of soldiers and sailors.

2. The Family

Its normal composition and status; its normal problems; variations in its composition, status and problems when the breadwinner leaves home. Possible increase in juvenile delinquency.

3. Effective Methods of Social Work with Families

a. Right attitude; interview; use of available sources of information; interpretation of information.

b. Supervision of families aided; objectives—protection, conservation, development, rehabilitation.

4. Family Problems

a. Health; the home and its environment; standards of living and variations in standards among different nationalities and races.

b. The children and the adolescents; the wife and mother; education, moral and religious influences; recreation.

5. Relief Problems

a. Point of view; family budgets.

b. Adequacy; food, fuel, rent, clothing, medicines, etc.; employment; sources of relief, including man's pay and possible government allowance; the handicapped. Variations necessary on account of national and racial differences.

6. Helpful Tools

Red Cross cards and report forms, vouchers, accounting system, social service directory and exchange (wherever available).

7. Cooperation

Spirit; aim; existing social agencies to be understood and utilized; regimental auxiliaries; women's and church organizations.

SUGGESTED HELPFUL READING

The Normal Life, by Edward T. Devine (out of print, but on the shelves of most public libraries).

Red Cross Pamphlets on Relief Work among Families, and *Red Cross Reprint of Paul U. Kellogg's articles in the SURVEY on Relief Work among Soldiers' Families in Canada*. (See ARC 155, 162 and 163. If not supplied, write American Red Cross, Washington, D. C., or the SURVEY).

The Good Neighbor, by Mary E. Richmond (small handbook—60 cents, published by J. B. Lippincott, Philadelphia).

Weekly articles in the SURVEY (based upon Porter R. Lee's lectures on Red Cross work among families at the New York School of Philanthropy), written by Karl de Schweinitz.

How to Help, by Mary Conyngton (handbook—50 cents, published by the Macmillan Co., N. Y.).

men with dependents is rigidly enforced, it will have little or no relief work to do. Some of its reasons for thinking that the contrary will be the case are as follows:

1. It is generally recognized that the rule cannot entirely prevent dependence among the families of enlisted men. The provision which the War Department is recommending for federal aid for families is evidence of this. Another item of evidence is to be found in the present regular army where, although the general policy is to recruit only from the ranks of single men, there are still found to be among the enlisted men approximately 10 per cent who have parents and other relatives dependent upon them, while about 4 per cent more actually have wives and children dependent upon them.

2. In the navy there is no such rule against men with dependents.

3. Some men who wish to enlist, conceal the facts in regard to dependents.

4. Others have relatives who are not dependent at the time of enlistment but who later become dependent.

5. Another factor which must be reckoned with is the reluctance of men in the ranks to apply for discharge on the ground that they have dependents. They fear that their motives will be misunderstood and that they will be regarded as cowards or quitters.

6. It is well known also that commanding officers are usually opposed to seeing their ranks depleted by such discharges and are not inclined to encourage men to apply for release.

7. Reports from chapters recently received by national headquarters indicate that already considerable relief work is being done.

HOSPITAL CARE FOR THE SAILORS

PUBLIC and private hospitals in New York city have agreed to supply more than 7,000 beds on short notice to care for wounded American sailors who may be brought to this country.

This arrangement has been made by the Committee on Hospital and Medical Facilities, a sub-committee of the Mayor's Committee on National Defense. This committee, of which Dr. S. S. Goldwater is chairman, was formed some weeks ago to develop existing hospitals and hospital facilities to their maximum usefulness for war emergencies. For two years the Navy Department has been collecting information on hospital facilities throughout the country. Since New York city is the port to which wounded sailors are most likely to be brought, the committee was formed, first, to learn what the facilities are, and, second, to provide the machinery for making them immediately available when needed.

Sixty hospitals affiliated with the Council of Associated Hospitals are included in the inventory. Public hospitals offered 1,646 surgical and 2,346 medical beds; private hospitals, 1,447 surgical and 1,067 medical beds, and private special hospitals, 617 surgical beds. Hundreds of these can be provided within six hours' notice, and all within a month.

Another possible use for these beds will be the care required for certain sur-

gical and long-time cases if concentration or training camps are established near New York city. It has also been suggested that some Canadian cases may be sent to this country, since Canadian hospitals are already crowded.

Men offering to enlist at naval recruiting stations are sometimes found to have slight defects that operations or hospital care will remove. Several hospitals have agreed to treat such cases free of charge and the committee will try to act as a clearing-house for this service.

COUNTY JAILS CONTRASTED IN TWO STATES

THE campaign against county jails in this country has started off with a bang. Indiana is out with evidence of the emptying effect which her new state farm for misdemeanants has had on jails, and the Alabama state prison inspector has discarded polite words in describing conditions in that state. "The law regulating the fees of the sheriffs for feeding prisoners in the jails in Alabama," he says in his biennial report just published, "can be characterized by one word only—DAMNABLE!"

When Indiana opened her 1,600-acre farm for misdemeanants in April, 1915 [the SURVEY, January 1, 1916], it was predicted that the effect of placing men out of doors would be to put many of the county jails out of business. This is exactly what is happening. Sixteen county jails stood empty September 30, 1916, the figures for this period being just published. There were fewer than five inmates in thirty-eight counties and only between five and ten in eighteen others. At the close of the preceding fiscal year only ten jails were empty.

Moreover, the number of convicted law-breakers in the jails has decreased 45 per cent in two years. In 1914 it was 18,130; in 1915, during half of which the farm was in operation, it was 14,644. In 1916 it was only 9,896. The number of commitments to the farm itself in 1916 was 2,322.

These results, states the Indiana Board of State Charities, "demonstrate that the state rather than the county should take charge of the misdemeanant."

While there has been much improvement in jail conditions in Alabama since the establishment of the office of state prison inspector, the present holder of that title, W. H. Oates, thinks that matters are still very bad. No enlightened people, he says, would tolerate a law providing that a thief should be inoculated with the germs of tuberculosis or typhoid. Yet that is what is happening today. Prison life, with its "lack of occupation, no exercise, inadequate supply of wholesome food of sufficient variety, insufficient air, deprivation of sunlight and outdoor life" is leaving men "at the mercy of tuberculosis and other com-

municable diseases." The 71,000 persons who have been released from the jails of Alabama in the past three years constitute, Mr. Oates thinks, a "potent factor in disseminating the 'white plague'."

It is with respect to the fee system, however, that Mr. Oates' vocabulary fails. The sheriffs of Alabama are paid fees for feeding their prisoners. They are allowed specified amounts of money, and whatever they do not spend is theirs. The scale of fees for feeding prisoners is this:

From 1 to 10 prisoners.....	60c per day each
More than 10 and not exceeding 20 prisoners.....	50c per day each
More than 20 and not exceeding 40 prisoners.....	40c per day each
More than 40 prisoners.....	30c per day each

No sheriff spends all of this, of course. He feeds the prisoners what he pleases and puts the unexpended portion of the money in his pocket. One sheriff has admitted, Mr. Oates declares, that he made over \$25,000 net profit on his feed bill alone in one year. In the great majority of jails only two meals a day are served. In one county the sheriff puts half the feed bill in his pocket, then gives the other half to a man to feed the prisoners and make such profit out of the transaction as he can.

In instances where it has been deemed wise by the state prison inspector to close jails because of bad conditions, sheriffs have invoked the aid of probate judges to go to the state capital and protest to the governor, so that the sheriff might not be deprived of his feed bill, according to Mr. Oates.

Mr. Oates gives account of respects in which conditions have improved and shows diagrams of new types of jails that are being constructed.

DANBURY HATTERS' HOMES PLACED ON SALE

THE last chapter in the Danbury hat makers' case, opened fourteen years ago, was written on June 7, when Judge E. S. Thomas, of the United States District Court signed the decree ordering the sale of the homes of 140 workmen in Danbury, Bethel and Norwalk. The sale is to satisfy the judgment for \$252,130 damages awarded D. E. Loewe & Co., who brought suit under the Sherman law against a union boycott of the product of their hat factory. Nearly \$60,000 has already been paid on account, but the accumulation of interest money is such that about \$250,000 is still due. The property is expected to yield \$200,000, leaving a deficiency judgment.

At the inception of the case in September, 1903, the hat makers' union entered into a written agreement with each of the defendants whereby it proposed to "pay all of the expenses of such defendants and save each individual from all liability." Later the American Federa-

tion of Labor took over the defense and pledged such financial support as would be necessary. It remained in charge of the case until a judgment against the defendants was affirmed in the United States District Court of Appeals in 1913 [the SURVEY, January 16, 1915]. At that point the federation disclaimed further responsibility, but took up a voluntary contribution which is reported to have amounted to about \$150,000.

Loewe & Co. announced that if this sum were paid over to them, all proceedings would be discontinued and the defendants released. The unions are said to have declined to do this and the plaintiffs then took steps to obtain satisfaction in the judgments. It is said that the unions have declared that they will indemnify the defendants after their homes are lost.

DEMAND AND SUPPLY IN THE LABOR MARKET

SO many women are flocking to employment agencies to register for farm work that the New York Bureau of Employment has established a separate department to handle them.

However, since few of these applicants have had experience in gardening, poultry-raising or farming, the bureau hopes to switch the preferences of the majority from agricultural labor to domestic work on farms. Hundreds of urgent letters have been received from farmers all over New York state and the states of New Jersey, Pennsylvania and Connecticut, asking for housekeepers and other house servants.

Contrasted with the supply, very few orders have been received so far for women farm workers. In fact, there is even a lull in the immediate call for male farm hands. The farmer, although he has considerably increased his acreage, is "getting along" with the help he has. In the latter part of June and during July there will be a rush of requests for assistance in harvesting, haying, picking fruit and berries. Much of this work (in the hay fields, particularly) will have to be done under a hot sun and the bureau advises that so far as possible, builders, construction workers, and other men used to the open air, be secured. On the other hand, certain tasks, such as weeding, berry and vegetable-picking, will be suited to women and to inexperienced men and boys.

The bureau of employment, at the same time, has sent out a warning against women taking men's places in offices and factories until the supply of male labor is exhausted. While there are instances of women replacing men, the bureau feels that there has been a great deal of exaggeration as to the necessity and demand. There is a slackening in the call for male workers in some few industries. Gradually, it is believed, a natural readjustment will take place.

The volume of work of the State Bureau of Employment for the month of May was the largest of any month since the offices of the bureau were opened, both as to the number of people referred to positions and the number of placements recorded. This is due to the demand for farm hands, hotel and resort workers and men for army service. Workers were furnished to build barracks and to supply military camps—such as building mechanics, cooks, waiters and kitchen men. The calls for clerical and professional help have not been heavy, although there was a strong demand for stenographers. The federal government is now using the state and municipal civil service lists of eligible stenographers from which to make selections.

GROWTH OF PROPORTIONAL REPRESENTATION

ONE of the most important actions taken by Mr. Asquith's government before it went out of office was the appointment of a conference of members of both houses of Parliament to report on the reform of the franchise, the basis for redistribution of seats, reform of the system of registration of electors and methods of elections. The report of the conference was made public at the end of January and was noted throughout the world for its limited approval of woman suffrage in the large cities. The recommendations contained in it regarding methods of election have, however, scarcely been noticed in the American press.

They were unanimous and include the redistricting of London and other large cities so as to create in those cities multi-member districts to which proportional representation could be applied; and for those enlarged districts they prescribe the "single transferable vote," that is, the Hare system. They also recommend the application of proportional representation to members elected from the universities.

Considering the representative character of the conference and the unanimity of its report on these points, it would have seemed natural that this part of the program should be embodied by the government in legislation before the first after-war parliament is elected. For, in the words of Mr. Asquith when he suggested the conference last August,

with regard to the parliament which is going to undertake the work of reconstruction after the war, it is eminently desirable that you should provide an electoral basis which will make that parliament reflective and representative of the general opinion of the country and give to its decision a moral authority which you cannot obtain from what I may call a scratch, improvised and makeshift electorate.

But the present cabinet seems to take the view that proportional representation is not an essential part of the scheme of

reforms advocated by the conference. Against this view, H. G. Wells and Earl Grey, formerly governor-general of Canada, among others, have protested in strong letters to the *London Times*. A bill embodying the reform was introduced in Parliament a few weeks ago with the understanding that the government would not take sides on it. This bill is expected to pass.

C. G. Hoag, general secretary of the American Proportional Representation League, informs us of three other important advances in the movement for that reform the world over. The Social Democratic party of Germany has included in its program a demand for it as a basis for elections to the Reichstag.

On May 10 the legislative assembly of British Columbia passed a bill, introduced by the premier, which gives municipalities the option of adopting the Hare system of proportional representation for their local elections. This is the first passage of an optional municipal proportional representation bill by any legislature in Canada or the United States. The act of Congress establishing a civil government in Porto Rico, approved March 2, provides for the election of five senators and four members of the House of Representatives at large by the single non-transferable vote.

Thus the principle of proportional representation is approved by Congress in connection with the government of Porto Rico. But, Mr. Hoag contends, the system must be applied to the election of at least one entire chamber of the Porto Rico legislature before it can be expected to give satisfactory results. The proposed non-transferable balloting also has other defects, as compared with the Hare system, which are set forth in the April number of the *Proportional Representation Review*.

A WARTIME "BIT" FOR THE FEEBLEMINDED

TRAINING the feeble-minded to useful labor is an important element in their institutional education. An opportunity for the spread of an interesting experiment in this field is believed by many institutional superintendents to be afforded by the present demand for an extension in farming operations to increase the food supply.

For several years Rome State Custodial Asylum, a state institution for the feeble-minded at Rome, N. Y., has trained its better grade boys and men to become farmers and has put colonies of them on owned and rented farms in the neighborhood of the institution, under the supervision of a normal man and wife who know farming. The first of these farm colonies was established ten years ago. Since then six others have been acquired, four of which are owned and three rented. Each has a colony of twenty inmates with a man and wom-

an in charge. All the work is done by the boys and the two employed people. Today the institution is operating 1,200 acres of land, 600 of which are owned and 600 rented. "These colonies," says the latest annual report of the institution, "are entirely self-supporting, including all expense and 5 per cent on the investment."

While the boys are living on these farms it is customary to spare some of them to help surrounding farmers. If a farmer has a rush job that he wants done, several boys are allowed to do it, and one of the brighter and older boys goes along to supervise them. The farmer pays ten cents an hour for the work of each boy and in this way, says Dr. Charles Bernstein, superintendent of the institution, "they are able to earn money enough to pay for all their clothing, to give them spending money and to pay for other little articles they desire, and also to put some money in the savings bank."

After they have lived for a year or two on these farms and made good records, many of the boys are sent out to work for private farmers under contract. They may even be sent to farmers in remote parts of the state. The farmer signs a contract agreeing to report on the boy's condition and progress every three months. He pays the boy \$10 a month for ten working months and gives him board and spending money. Fifty boys have been sent out in this manner within six weeks and 120 are out altogether. From the standpoint of the institution, the valuable thing to the boy is the training that he gets from this kind of life.

"The boys we train for farm work," says Dr. Bernstein, "will harrow, plough, cultivate, drive farm wagons, and do about everything that the ordinary farm hand will do. They need more supervision, of course, than the intelligent farm hand. We believe the time has come when the support of the defective and dependent classes must cease to be a burden on the state. On nearly every cross road in every township there are farms available for just this use."

This method of training mental defectives is followed to some extent by other institutions for the feeble-minded, but nowhere has it been worked out so fully as at Rome. It has been suggested that some of the insane in institutions could be used similarly. If this should prove feasible there might be found, it is estimated, as many as 5,000 insane in New York alone who could be used in extending agricultural operations.

At this time, when the labor of women, school boys and other groups of the population is being proposed as a partial solution of the problem of food shortage, there may be value in the experience with these feeble-minded boys at Rome.

CONFERENCES

SOCIETIES FOR ORGANIZING CHARITY

THE meetings of the American Association of Societies for Organizing Charity this year were largely devoted to a discussion of the relation of the societies to the problems in family work which result from the war. In the special meetings, both for general secretaries and for district visitors, the work of the societies connected with civilian relief was the principal topic. The necessity for having that relief under other auspices than those of the societies themselves was generally acknowledged; yet it was the common desire also that the officers of these societies should put the best of their experience in dealing with families at the disposal of the Red Cross civilian relief committees; that these trained workers, both paid and voluntary, should be transferred to their staff or serve on their committees.

At the annual meeting of the association, formal action was taken on these matters, and a resolution was passed that a letter be sent to its 166 member societies outlining what, in the view of the conference, is the logical relation of the C. O. S. groups to the Red Cross chapters in their localities.

Two other resolutions were passed. One called for every effort on the part of the member societies to prevent the breaking down of industrial laws on the false assumption that the present crisis demands it. In securing this legislation, many of the societies have taken an active part, and they will be ready to help develop public interest in safeguarding it. The second resolution was in favor of national legislation "prohibiting the importation, manufacture and sale of intoxicating liquors within the United States, except for scientific, medicinal and sacramental purposes, at least for the period of the war." These resolutions will be sent to the member societies with the request for such further action on their part as they may deem wise.

The meeting approved an increased budget for next year, providing for an additional field worker, in order that at a time when many of the societies will have especially difficult situations to face the association be of particular help to them.

It is just ten years since the field work for the charity organization societies was undertaken by the Russell Sage Foundation in connection with *Charities and the Commons*. At the morning meeting,

Francis H. McLean traced the growth of the movement during that period. The number of active and efficient societies with trained workers has more than doubled, with especial growth in the smaller cities and in the South. He also analyzed the differences in the programs of the societies in places of from ten to twenty thousand inhabitants, where often the secretary has to provide the only trained social leadership from those of societies in cities of over one hundred thousand, where the charity organization society is only one of a group of strongly developed agencies working together in a central council of social agencies. Whatever its specific activities, however, its program, to be sound, must grow out of its knowledge of and service to the dependent families in its city. For so it comes to know the real needs of the community and will be ready to take its part in securing action in any field—tuberculosis, housing, health, industrial legislation—either through its own committees or through separate agencies.

Mary E. Richmond spoke of the special need at this time of maintaining accepted standards of service to families

WAR RELIEF

Resolutions of the societies for organizing charity

THAT we believe that the joint collection of money for war relief and ordinary agencies is essentially unsound and unwise, since it will fail to impress on the community the need of maintaining all ordinary forms of social service and will leave the social agencies after the war without any financial clientele of their own, while, on the other hand, it is unfair for the social agencies to utilize the war sentiment as an easy way of obtaining support for their work;

That the societies should place themselves at the service of civilian relief committees in any practical ways which do not cripple their own necessary day to day work; that they should not, however, serve as agents for these committees, but should insist that such work be done under the banner of the Red Cross;

That the societies should keep in mind that the Red Cross directors have impressed upon their chapters the fact that Red Cross responsibility is not confined to the provision of material relief, but should include the highest type of family planning and personal helpfulness to the families of our soldiers and sailors.

and of developing a sense of professional solidarity. Joseph C. Logan, in opening the discussion, expressed his conviction that, no matter how the particular form of work might alter, there will always, in a democracy, be a place for "case work"—which he defined as the effort to secure for those who fall below normal the opportunities which democracy provides for the average man.

NATIONAL PROBATION ASSOCIATION

THAT family courts take over the work of children's courts and so-called domestic relations courts and coordinate all investigations and probation treatment of children and cases arising out of family difficulties, including non-support and divorce, was advocated in resolutions adopted by the National Probation Association at its ninth annual conference at Pittsburgh, June 5 to 7. A report urging the establishment of such family courts was presented by a special committee of the association, which has been investigating the matter during the past year. Judge Charles W. Hoffman, of the Board of Domestic Relations of Cincinnati, is chairman of the committee, which was continued to do active work during the coming year.

Judge Hoffman in his report to the association said: "The unit of society is not the individual, but the family. The causes of juvenile delinquency, dependency of children, desertion and non-support, pauperism, alcoholism, divorce and marital dissensions are inter-related. All these in a measure can be traced to some defect in the family, and that defect in many instances is so obscure that current methods of dealing with domestic relations fail to reveal them. It is apparent that to deal with the family effectively, to relieve present distress and to ascertain causes of disruption of the family and the causes of anti-social conduct in general, it is necessary that some court have power to deal with the family as a unit."

It was urged that the family court be under the direction of a single judge who, in the large courts, may assign the entire charge of certain classes of cases to specially qualified judges. The report recommends ample probation departments equipped with medical and psychological clinics.

The work of the Philadelphia Municipal Court was discussed in this connection by Jane D. Rippin, chief probation officer. This court is in many respects a family court. The evils of treating the parents and children in different courts with no interchange of records have been obviated to a large degree by the coordination of the court's work, especially of the probation department.

The committee on juvenile courts reported through its chairman, Roger N

Baldwin, that the cooperation of the federal Children's Bureau had been obtained for the making of a nation-wide study of the juvenile court in this country. The findings of this field study will be published.

The following officers were elected for the ensuing year: President, Mrs. Benjamin J. West, chief probation officer, Juvenile Court, Memphis; first vice-president, John W. Houston, chief adult probation officer, Chicago; second vice-president, Judge Charles W. Hoffman, of Cincinnati, Ohio; third vice-president, Herbert C. Parsons, deputy commissioner on probation, of Massachusetts; secretary and treasurer, Charles L. Chute, of the State Probation Commission, Albany, N. Y.

SOCIAL WORKERS AND RADICAL IDEAS

LAST year as a result of an informal meeting, addressed by Mrs. Florence Kelley on the relations between socialism and social service, a committee was appointed by the meeting to arrange for similar gatherings at the Pittsburgh conference. The committee consisted of Mrs. Kelley, Hornell Hart, Graham Taylor, Roger N. Baldwin and Oscar Leonard.

The first meeting was held on Friday afternoon, the speakers being Roger Baldwin, Bolton Hall, Raymond Robbins, Oscar Leonard. The movements discussed were: Socialism, single tax, anarchism, syndicalism and the I. W. W. A good deal of time was devoted to a discussion of the unit plan and its relation to socialism. Jessie Bogen, who made her maiden speech, emphasized the point that the unit plan is no more socialistic than any other form of social work.

Robert A. Woods, in the course of the discussion, expressed the desire that such meetings should be an integral part of the national conference of charities and correction and not "side shows."

On Saturday afternoon another meeting of the series was held with Morris Hillquit as the principal speaker. Mrs. Kelley presided and also delivered an address.

The attendance at these meetings demonstrated a deep interest by social workers in radical movements, and in all likelihood more of them will be held in the future.

NATIONAL FEDERATION OF SETTLEMENTS

FOR the seventh year—and for the second time at the countryside Lillian Home of Kingsley House, Pittsburgh—the settlements met in their national federation from June 3 to 6. It was a joint session with the National Association of Music School Societies, whose representatives on the program were settlement workers and added

WAR RESOLUTIONS

Adopted by the settlements

WHEREAS, our country is involved in a war for the definitely avowed purpose of "making the world safe for democracy," therefore,

Resolved, that while a small minority of our number opposes, on conscientious grounds, all warfare, the National Federation of Settlements hereby records its loyal support of the government in the prosecution of the war to a successful issue; and further

Resolved, that the federation unanimately expresses its conviction that true patriotism requires the greatest vigilance in order to safeguard democratic institutions during the progress of the war.

We recognize that the exigencies of the situation require, to a certain extent, governmental control of industrial, commercial and social life, but we affirm that to the greatest possible extent the rights of free assembly, free speech, a free press, and the freedom of conscience must be preserved. We urge the importance of exercising the greatest calmness and discretion in dealing with these issues of fundamental democracy. We conceive it to be our peculiar task to oppose in our neighborhoods every attempt to sow the seeds of disloyal and illegal action; and at the same time to uphold the right of honest discussion of questions of public policy, to the end that we may not lose the very soul of democracy in undertaking its defense.

much to the fellowship of the occasion by their singing and playing. The registrations included 118 women and 51 men, representing 94 organizations in 33 towns and cities, scattered over 17 states and provinces, from Massachusetts and Canada on the east to Kansas and Colorado on the west, and Tennessee and Georgia on the south.

Keynotes were struck in the opening addresses of Gaylord S. White, of New York, emphasizing the preponderance of good over evil as seen from the close settlement contacts with humanity; and of John L. Elliott, who charged the settlements to strive to develop a "democracy which shall be safe for the world."

A preliminary forecast of an inquiry concerning the "preadolescent girl" reported studies undertaken during the year at 35 settlements by 350 of their workers among 9,900 girls of 13 principal nationalities and many minor ones, living in communities both small and large. The returns from the carefully drafted questionnaire were made by school principals and visiting teachers, nurses and domestic science instructors, mothers and members of parent-teacher associations, court officials and charity workers, as well as settlement residents; while experts in vocational guidance, recreation, social research and psychopathic science acted as consultants.

Harriet E. Vittum, chairman of the committee, reported that the conclusions drawn from this data would deal with the little girl at home, at school, at play, in the neighborhood, and as related to the settlement. A similar inquiry concerning the preadolescent boy was called for after T. W. Allinson demonstrated the lack and need of a more definite knowledge of that small boy who is the large problem of every community. The discussion of what the New York Police Welfare Bureau is doing through the Junior Police and what motion pictures do against the boy, and might do for him, drove the subject home to every heart and conscience.

The unanimous declaration of the attitude of the settlements towards the war was reached only after a free, full and independent expression and consideration of all the divergent views drawn forth by prolonged discussion.

The officers for the ensuing year are Graham Taylor, president; Frances M. Ingram, vice-president; Robert A. Woods, secretary; Albert J. Kennedy, assistant secretary; and W. E. McLennan, treasurer.

NATIONAL ASSOCIATION OF JEWISH SOCIAL WORKERS

THE meetings of the National Association of Jewish Social Workers in many respects presented the aspect of a large family talking over the ways and means of mutual helpfulness. The camaraderie and fraternal spirit of the delegates present gave zest to the deliberations. The year was a fruitful one. New things have been started. The most important of these is the field bureau, with Boris D. Bogen, dean of Jewish social workers, at the head. The bureau was conceived by the National Association of Jewish Social Workers at a previous conference, when the social workers pledged the first five hundred dollars toward its budget. Early in 1916, the bureau was opened in Cincinnati. The field secretary, Dr. Bogen, during the year visited twenty-two communities, where he was invited to give his counsel and the benefit of his experience.

The field bureau also started a transient registration for Jewish transients with a view to finding out the extent of Jewish migration in America and perhaps finding a remedy for it. Maurice B. Hexter, of Cincinnati, in a paper on the transient, looked into this problem broadly and tried to evaluate the meager figures so far in the possession of the bureau.

Another important work of the field bureau is the organization of the National Jewish Tuberculosis Commission, which will handle the entire tuberculosis problem among the Jews of this country, operating also a registration bureau of Jewish tuberculosis patients.

A committee was appointed to work out standards for Jewish social workers for the purpose of establishing a registration of social workers along the lines of registration of nurses. This committee is to make its report next year in Kansas City.

Among many interesting subjects discussed was that of Americanization, following a paper by Dr. Bernheimer, of Brooklyn. Dr. Aaronson, of Baltimore, pointed out that Americanization can never be done successfully at the expense of deJudaization and that the Jewish immigrant can be a good American only while he remains true to his Judaism.

Judge Harry M. Fisher, of the Chicago Morals Court, delivered a stirring address on the social aspects of the court, and expressed a hope that the day will come when the social worker will handle much of the work now handled in our courts.

AMERICAN MEDICINE FOR PROHIBITION

IN opening the convention of the American Medical Association in New York last week, the new president, Dr. C. H. Mayo, of Rochester, Minn., sketched the progress of the profession in this country, showing how its discoveries and devotion have placed its members on a par with the much-lauded scientists of other lands. The increasingly social outlook of physicians, shown by their interest in social insurance and social service; the ever stricter demands of medical education; the great significance of public health—"disease can be checked by order"—and the importance of having a physician among the cabinet officers, were some of the topics of his address. Dr. Mayo urged national prohibition:

No one except the policeman sees more of the results of overindulgence in alcohol, demonstrated by pauperism, sickness, immorality and crime, than the physician. Medicine has reached a period when alcohol is rarely employed as a drug, being displaced by better remedies. Alcohol's only place now is in the arts and sciences. National prohibition would be welcomed by the medical profession.

Col. T. H. Goodwin, ranking British medical officer in this country, urged the strictest public health measures throughout the country during war. The experience of England had shown that increased sickness follows the movement of large numbers of the population. Men from rural districts tended to become ill on being transferred to the city, and often vice versa. But an army is of no use unless it is protected from epidemics. He acknowledged the assistance that America was already giving through the medical, nursing, and public health professions, and added, simply, "We need it; indeed we do."

A strong plea for sanitation of home areas, especially the rural sections of the country, was made by Dr. William C.

Rucker of the federal Public Health Service, which has charge of sanitation around training camps. Infections which the country managed to live along under in times of peace become impossible of endurance under the special strain of war. Dr. Rucker urged that all members support the joint resolution No. 163 now before Congress, and at the close of his address a motion was made that the section on Preventive Medicine ask the American Medical Association in convention assembled, to memorialize Congress in favor of this resolution. The joint resolution would create a reserve in the Public Health Service of trained sanitarians who could be rapidly mobilized and could deal at once with an emergency in any part of the country.

An entire session of the convention was given to poliomyelitis. The main problems of diagnosis and treatment were given [the SURVEY, June 9] and illustrative clinics held in several centers by Dr. Lovett of Boston and others. Opinion in the conference was divided between theories of "direct transmission," and indirect. That is, whether infection is given from person to person or is passed on by an intermediate host, animal or insect. But it seems probable that not again will the disease get such a start as it did last year.

Not all reports of the association's official action are yet available. But, perhaps, widest attention will be given to the continued report of the association's Committee on Social Insurance, the first report of which, presented at the convention a year ago, concentrated upon health insurance. The present report reviews the findings of the several commissions on health insurance, and also other fields of social insurance developed abroad and of compensation against accident in the United States. After voluminous quotations from all available sources, Dr. Alexander Lambert's comment is:

All these quotations seem to show that the laws have accomplished what they were designed to do. But they have not accomplished results for which they are often held responsible, and for which they were never designed. . . . That is, these laws have been designed especially to relieve the distress and strain of want when the income of the family ceased through accident or sickness to the wage-earners or when the income of the wage-earners of the family ceased through invalidism or old age. These laws were not designed to cure pauperism, nor were they designed as a cure of poverty. . . .

Wherever introduced accident insurance has materially contributed to industrial safety. Sickness and invalidity insurance have resulted in the improvement of hygienic conditions of life and work. The better treatment of the sick has improved the general health and prolonged the life of the workers. Unemployment insurance has stimulated regularization of conditions and of unemployment through organization of public employment bureaus.

The committee closes its report by offering resolutions that the study of

these conditions be continued and that so far as may be possible that the association cooperate in molding legislation so that the health of the community may be safeguarded and the interests of medicine be protected. A further resolution insists that any legislation shall provide for the freedom of choice of a physician by the insured; payment in proportion to the work done; separation of the function of official medical supervision from the function of the care of the sick; and representation of the medical profession on the appropriate administrative boards.

Dr. Lambert, who has been for two years chairman of the committee studying this subject, has given up his practice in New York city and leaves at once for France to become medical adviser to the War Relief Commission of the Red Cross in France and Belgium.

NATIONAL CHILDREN'S HOME SOCIETY

TWENTY-SIX of the thirty-two societies affiliated were represented at the annual conference of this society, held at Pittsburgh June 4 to 6. Among the more important topics considered were "juvenile courts and child-caring agencies," "the development of rural nursing," "the relation of child-caring agencies to the natural family," "ways and means of preventing separation of child and family."

Perhaps the chief item of interest was the change of the policies and of the name and scope of the conference itself which hereafter will be known as the National Children's Home and Welfare Association. From being an exclusive group of child-placing agencies it now becomes a nation-wide conference of all child welfare organizations, institutions and agencies—for conference purposes only—and any child welfare agency in the country doing meritorious work can become a member. Provision is also made for membership of individuals as associates.

No new state societies were accepted into membership, though several applied, it being held that certain standards and conditions must be met to assure eligibility.

The conference was the largest in attendance and the finest in spirit ever held. Every effort will be made during the coming year, according to the officers, to enlist the support and interest of all American child welfare agencies and institutions in the big conference to be held next year.

The next annual meeting will be held in Kansas City. The following officers were elected: D. F. Shirk, Kansas, president; S. W. Dickinson, St. Paul, Minn., vice-president; W. S. Reynolds, Chicago, secretary and treasurer; Marcus C. Fagg, Florida, assistant secretary and press and publicity director; D. C. Hutchins, Chicago.

SCHOOLS

Training for

Municipal Administration and Public Service

Now offered in a graduate school, combining specialized study and research with practical experience in municipal, county and state departments.

All the courses are distinctly professional in character and have a practical outlook. A distinguishing feature is responsible field work, conducted for its educational value, under the close supervision of members of the faculty who have had practical experience in positions of responsibility in municipal administration. During the second year this field work is increased both in amount and specialization. The City of Cleveland offers unusual opportunities for municipal research and first hand acquaintanceship with administrative experience and with various forms of civic work.

GOOD NOVELS

For
Libraries

THE ROYAL OUTLAW

By CHARLES B. HUDSON

Around that portion of David's life when he had to flee from the animosity of Saul and live as an exile and outlaw in mountains and desert with his followers, Mr. Hudson has woven as breathless a novel as any modern scene could yield. It is rich in local color of the time and historically accurate in every way. Net \$1.50

BEHIND THE THICKET

By W. E. B. HENDERSON Net \$1.50

A novel of vivid imagination, power and extraordinary originality. *New York Herald*—"The reading public has gained a new novelist of no small ability and one who is destined to go far in the field of fiction."

APRIL FOLLY

By ST. JOHN LUCAS Net \$1.50

Seldom has the fight between the artistic temperament and an instinct for conventionality been so admirably drawn.

IF WISHES WERE HORSES

By the COUNTESS BARCYNSKA Net \$1.50

Author of "The Little Mother Who Sits at Home."

New York Globe says—"It is a novel worth reading. Seldom does one read a story in which there is less exaggeration or less straining for effect."

GRAIL FIRE

By ZEPHINE HUMPHREY Net \$1.50

The Dial—"Zephine Humphrey has written a very charming book, 'Grail Fire.' The theme is the spiritual struggle and development of a man and the woman he loves. Miss Humphrey handles the theme very beautifully."

THE GOLDEN ARROW

By MARY WEBB Net \$1.50

Boston Advertiser—"A story of a lovely mountain glen on the border of Wales. The author has caught the very substance of the quaint atmosphere of this far away country and given it to us in a way we shall not forget."

EREWHON

By SAMUEL BUTLER Net \$1.50

Author of "The Note Books of Samuel Butler."

Introduction by Francis Hackett.

"It is not wonderful that such a man as Butler should be the author of 'Erewhon,' a shrewd and biting satire on modern life and thought—the best of its kind since Gulliver's Travels. . . . To lash the age, to ridicule vain pretensions, to expose hypocrisy, to deride the humbug in education, politics and religion, are tasks beyond most men's powers, but occasionally, very occasionally, a bit of genuine satire secures for itself more than a passing nod of recognition. 'Erewhon,' I think, is such a satire."—*Augustine Birrell in The Speaker*.

THE WAY OF ALL FLESH

By SAMUEL BUTLER Net \$1.50

Author of "The Note Books of Samuel Butler."

Introduction by Professor William Lyon Phelps, of Yale.

Arnold Bennett says: "It is one of the greatest novels of the world." John Macy in the *Boston Herald* says—"The Way of All Flesh' contains more than any other single book of the intellectual history of mid-Victorian England."

THE WAVE. An Egyptian Aftermath

By ALGERNON BLACKWOOD Net \$1.50

Author of "Julius Le Vallon."

The Boston Transcript says—"Never before has Mr. Blackwood written a novel that comes so close to the real things of life as 'The Wave.' With a skill that is extraordinary he tells a story that is of absorbing psychological interest."

SEEN AND HEARD

By MARY and JANE FINDLATER Net \$1.50

New York Herald—"The book is a 'war book,' but the crash of cannon and the cry of the wounded are in the far background. Few volumes that are so good have come out of Scotland in a generation; none that is better."

THE TAMING OF CALINGA

By C. L. CARLSEN Net \$1.35

The San Francisco Chronicle says—"It has entirely new flavor, new people, new scenes, new motives and a startlingly new ending. He draws his people from sure knowledge on a background of glowing tropic color."

A LOVE TANGLE

By F. E. PENNY Net \$1.50

Set in the wonderful background of its tropical foliage and in the mysterious shadows of its immemorial forests, romance complicated by differences of station and race carries the reader into an atmosphere as strange and foreign as it is enjoyable.

PETUNIA

By MRS. GEORGE WEMYSS Net \$1.50

Author of "Jaunty in Charge."

New York Sun says—"A story as wholesome as 'Jaunty in Charge' with a delicate humor and deftly drawn characters." *New York Herald*—"A story of great originality and charm."

THE PURPLE LAND

By W. H. HUDSON Net \$1.50

Author of "Idle Days in Patagonia."

Introduced by Theodore Roosevelt.

James M. Barrie says—"It is one of the choicest things of our latter-day literature."

A CRYSTAL AGE

By W. H. HUDSON Net \$1.50

Author of "Idle Days in Patagonia."

With a critical appreciation by Clifford Smyth, Litt.D.

New York Evening Post says—"It has the zeal of the open air, kinship with beauty of all sorts and a relieving glint of humor."

TWO SINNERS

By MRS. DAVID G. RITCHIE Net \$1.50

Philadelphia North American—"A clearly devised and entertainingly written story of love and domesticity in high life. A bright and engaging story." New edition.

THE JOYFUL YEARS

By F. T. WAWN Net \$1.50

A romance of real human life. Just a love story in fact, but one done by a master hand. Humor, beauty and gladness, these are the keynotes of this simple and exquisite story of the making of a boy and girl into a man and woman, presented with such subtle art that it appears artless. The background is principally laid in the wild and legend-haunted scenery of Northern Cornwall, the country of King Arthur and the Knights of the Round Table.

THE MASTER OF THE HILLS

By SARAH JOHNSON COCKE Net \$1.50

Author of "By-Paths in Dixie."

In this vital sincere story of the adventures of two generations of Georgia folk the author interprets these unknown and misunderstood Americans of the mountains to their fellow countrymen. Ready in June.

EL SUPREMO

By EDWARD LUCAS WHITE

The Big Book of the Year

Net \$1.90

H. W. Boynton says in the *Nation*—"An historical romance upon the great scale. A story of unflagging interest and charm." The *Philadelphia Press* found that "To open this book is to walk into a picturesque civilization which to all but a few scholars is practically unknown" and that "to read it to the end is to enjoy an historical romance of striking merit."

BOTH SIDES THE ATLANTIC

RELIEF has been sent abroad in great sums and is shortly to be sent in greater. But we have scarcely known of the backwash of it—the reservists' families here tided over their hard times by the consuls and relief funds of France, England and Italy. Seventeen hundred such families live in New York alone. A description of their plight and of the help given them in

An Early Issue of the Survey

MONEY makes the war go. Last week the liberty loan of two billions was vastly oversubscribed. This week the Red Cross is out for one hundred millions—such a relief fund as was never raised before. The American Jewish Relief Committee will, by the end of this month, have raised more than half of its ten million dollars. Scores of foreign relief funds are actively in the field. And next week the Y. M. C. A. will set out for another million to be added to the three already in hand for its religious work and recreation in the training camps.

WAR money comes easy. But it is feared there's hard sledding ahead for the plain causes that do not wear khaki—the charities, churches and colleges. Congress has been asked to come to their rescue by exempting from the income tax the gifts made to them. The arguments for exemption were put before the Senate by Dr. Lindsay. And the arguments against it were advanced by social workers at Pittsburgh. Page 274.

SPEAKING for the oldest of democracies to the youngest, Senator Root told the Russians of the great measure of good will which the American commission is charged to put at their disposal. We are concerned with the outstanding fact of their new democracy rather than with its excruciating growing pains. "As we have developed our institutions to serve the needs of our national character and life," said Mr. Root, "so we assume that you will develop your institutions to serve the needs of Russian character and life." Page 271.

THE first woman member of a ministry is a Russian and she is minister of social welfare. Page 276.

JUST at the time when the whole world's stomach is beginning to gnaw at its ribs, the government publishes its elaborate survey of Negro education, advocating agricultural training. From a beginning in gardening, it goes on to a two-years' course for the older colored children of the South, most of whom will live on small farms, to a four-years' course for the more ambitious young men who may manage large farms, with home economics for the girls, manual training for all and, at the top, three fully developed colleges. Page 267.

CONGRESS has before it as many brands of prohibition as the unregenerate have of fancy drinks. The evidence of thoughtful observers added to, this week, by ninety visiting nurses in Boston. Page 274.

TWO of the best established of the old military conventions—that the soldier must drink and that the army must have camp followers—have been officially denied the past month. Congress has enacted and federal officials are enforcing a law prohibiting the sale of liquor to men in uniform. And now Secretary Baker has closed two of the most conspicuous open vice districts in the country—at San Antonio and El Paso—by notifying them they must clean up or lose the training camps in their suburbs. Page 273.

WITH the help of three books, which are named, a belief that health can be promoted, an understanding that a sick person is first of all a patient—not a delinquent, even though he have venereal disease—and patience, the civilian war relief visitor can achieve real sanitation and health in the families she is privileged to visit. Page 270.

THE year ahead as foreseen by Robert A. Woods. Page 269.

Farm Training for Negroes

The Essential Factor in Colored Education in the South

THE two-volume report entitled *Negro Education: A Study of the Private and Higher Schools for Colored People in the United States* and issued in Washington this week by the United States Bureau of Education, comes at a time when the awakened national consciousness widens the appeal of any comprehensive statement of an element so intimately bound up in America's potential strength as is the Negro problem. The fact that the rural South is drawing so largely on the rest of America for farm products at a time when the food surplus is jealously guarded, only heightens public interest in conditions below the Mason and Dixon line.

Thomas Jesse Jones, specialist in the education of racial groups, has spent the past three years in an intensive investigation of the 625 private schools and the 122 higher public schools for the Negro, the survey being made possible by the cooperation of the Phelps-Stokes Fund with the federal bureau. As a background for this task he has also studied the elementary school systems of the sixteen southern states and has collected official reports and statistics, so that he is able to throw into relief the concrete results of fifty years of state and philanthropic activity for the education of the Negro. Further than that, the many months spent in personal field work by him and a staff of expert assistants enable him to weigh nicely the factors now at work and to present a general policy for bringing teamwork into the mushroom growth of schools. This is how he states the needs and the method of meeting them:

The education of the Negroes in the United States involves much more than the instruction of a people fifty years removed from slavery. It involves the adjustment of that group to the economic, civic and spiritual possibilities of a democracy. Never was greater opportunity for service offered to any nation than that presented by the need of the American Negro for an education that will fit him to undertake the responsibilities of life in the twentieth century. Never was there a more searching test of democratic ideals than the present necessity of a wise adjustment of the hopes and aspirations of 10,000,000 black people, and the standards and principles of the 90,000,000 white people of the United States. . . .

Though the movements herein outlined are but slender beginnings, they are deeply significant. They indicate that democracy's plan for the solution of the race problem in the southland is not primarily in the philanthropies and wisdom of northern people; nor is it in the desires and struggles of the colored people; nor yet in the first-hand knowledge and daily contacts of the southern white people. Democracy's plan is in the combination of the best thought and the deepest sympathy and the most abiding faith of these three groups working with mutual faith in one another.

It is just because he sees the need for something more than book-learning that Dr. Jones takes issue with a great deal of what is being done by the South, the Negro and the North (which is pouring more than \$2,500,000 a year into southern schools) for the education of the 8,500,000 colored persons in the South. He shows that the South is 77.5 per cent rural, the Negro population being 80 per cent rural; that there are about 3,000,000 colored persons engaged in agricultural pursuits, cultivating upwards of 100,000,000 acres; that, as owners and renters of land, the Negroes are farming 41,500,000 acres, or twice the amount of land tilled either in Virginia or in New England; that, in short, it is in the country districts that the Negro has made his most remarkable progress yet still presents his most pressing needs.

Despite this clear-cut proof that the problem of educating the Negro is primarily a rural one, the public and private schools for the colored people ignore the fact, with a few notable exceptions. Although Dr. Jones explains at length the various conditions which have made for a slow development of public education for the Negro in the South, a careful reader of the report cannot escape the feeling that the only real contribution which the elementary public schools have made in the past fifty years has been a large share in reducing the illiteracy rate from approximately 100 per cent to 30 per cent. Even in this primary step in education they have been aided by the schools supported by northern contributions or by the sacrifices of the Negroes themselves; yet Dr. Jones justly points out that the private schools have been less active in this field than is generally understood in the North.

As for the southern conception of literacy, it can be surmised when one learns that more than one-half of the 30,000 teachers in the colored schools have had as preparation for their work an education equivalent to the first six elementary grades or less. Supplementing the elementary schools are 122 secondary institutions for which the South appropriates a third of a million dollars annually. Not only is this provision for higher education inadequate, but the authorities exercise an interest in and supervision over the existing schools, that is far from satisfactory.

Turning to the 625 private institutions, Dr. Jones rates only 266 of them as essential parts of the educational systems of their respective communities. Not only do they provide a large part of the existing opportunities for secondary

education for the colored people of the South, but they form practically the sole means for their collegiate training. Splitting the whole group of 625 schools into their component parts, it is found that 118 are maintained by independent boards of trustees. This division includes the 85 institutions which make a pretense of teaching agricultural training and which together employ only 115 teachers of agriculture. The next division is that of the 354 schools maintained by white church boards, and here even less emphasis is placed upon teaching pupils from the farms how to farm. The third division, that of the 153 institutions under the control of the colored denominations, ignores to all intents and purposes both agricultural and industrial instruction. More Latin and Greek are taught than in the schools of Massachusetts. On this question of an educational policy which fails to adapt itself to the community needs, Dr. Jones says among other things:

Preparation for rural life is the greatest educational problem of the white and colored people of the South. The rural education of the Negro is absolutely essential, not only to the welfare of the race, but also to the successful development of the southern states. Though rural opportunities are perhaps least appreciated by the educated group of colored people, they are those in which the Negroes are making their most remarkable gains. Rural life represents both the best progress and the greatest needs of the colored people. All plans for their improvement must give large consideration to the problems of the rural Negroes.

Important as this phase of education is, both to the South and to the colored people, the public and private facilities provided are very inadequate. Other than the agricultural and mechanical schools, largely maintained by federal funds, the states make practically no provision for agricultural education. Of the private schools, Hampton Institute, Tuskegee Institute and a few smaller institutions are making a genuine effort to prepare pupils for rural life. With very few exceptions, however, the colored schools have failed to develop an interest in rural problems. The large majority have not even tried.

The explanation of the indifference is in the conviction of the colored people that the way to prosperity is the study of literary subjects and especially the classical languages. In this way they are following the example of the white people, who are only now beginning to see the error of their belief. This conviction is emphasized by the life of drudgery which the pupils in colored schools have always seen to be the lot of colored farmers. Their own limited education, also, makes them loath to lose any opportunity to master the wonders of the printed page.

A partial explanation for the failure of the schools lies in poorly prepared agricultural teachers who have themselves only a weak-hearted belief in rural life. With inadequate training and a lukewarm interest in their subject, these teachers have endeavored to make use of large farms in their educational efforts. Failure was inevitable. The emphatic conclusion of this study is, therefore, that the first step in rural education should be the enthusiastic advocacy of the theory and practice of gardening for every colored pupil.

Starting with the simple courses in gardening, which require no great amount of preparation for the teacher and no heavy expense in plant, Dr. Jones would then build up an educational pyramid of which the next step would be schools giving two-year courses in agriculture for the older children, most of whom will live out their lives on a 30- or 40-acre farm; next, institutions providing four-year courses for the older boys who are ambitious to manage large farms or to become themselves teachers of agriculture. Naturally, his scheme provides also for a similar development in the teaching of industries. While the children are learning gardening, they should also be taught manual training; those who go on into the higher schools, should learn the simple processes of, say, blacksmithing and carpentry while they are being given the two-year farming course, and so on. As for the girls, they, too, should start with gardening and then, as they advance in

school grade, get ever wider practice in household economy and the domestic sciences.

It is apparent that Dr. Jones places his greatest emphasis on the agricultural and industrial end because his investigation has proved to him that the educational policy for the southern Negro has over-emphasized the literary and collegiate side and that it must be brought back to a just equilibrium. He urges, however, the importance of having adequate collegiate provision for a race of 10,000,000 persons who must develop their required quota of business and professional men and especially teachers and ministers who will have the background and training to lead their race. To this end he presents an outline for the reorganization and development of the higher scholastic and technical facilities. He finds that many of the so-called colleges have neither the income, equipment, faculty, nor even the student body to measure up to collegiate standards. Such institutions he would make into good secondary schools, concentrating upon Howard University, Fisk University and Meharry Medical College as the three institutions now worthy to be developed into colleges of the first grade. So developed, he says, they will take ample care of the present collegiate requirements of the race.

Dr. Jones presupposes through his entire argument the necessity that the public school systems of the southern states be developed as rapidly as possible to assume the entire responsibility for the elementary education of the colored people, thus freeing the private institutions for the special phases of higher education for which they are pre-eminently fitted. He states emphatically that the time has come to call a halt to the establishment of any more private schools, and to concentrate upon the development of the existing institutions of greatest promise.

In urging that the North continue its notable record of generosity in the gifts both of money and of devoted men and women who have consecrated their lives to teaching the Negroes in humble schools throughout the South, Dr. Jones makes of his second volume a handbook for the guidance of the prospective philanthropist; he discusses each private school in turn and appends his recommendations for its future development, or, in some few cases, for its discontinuance.

Potential contributors who want to know what sort of support their gifts will receive from the state school systems will find some interesting reading in the statistics cited in the first volume. These figures are compiled from official reports and they show, among other things, that the colored public schools are getting on the average one-fourth of the appropriations which they would receive if the state funds were divided between the white and Negro schools on the basis of relative populations. This comparison applies to the elementary schools; in the apportionment of funds for the state secondary schools, the Negro gets about one-seventh of his due. The inequality in some of the Black Belt counties expands, in the case of the elementary schools, to the point where for every \$22.22 spent on the education of a white child, \$1.78 is allotted to the Negro. But Dr. Jones testifies to a growing sense of duty among the progressive southerners to measure up more fully to their responsibility to their 8,500,000 black neighbors, and he has "an abiding faith" that the North, the South and the Negro are equal to the task of straightening things out if they will pull together for the sake of the democracy.

Looking Forward

A New Name and a New Era in the National Conference

By *Robert A. Woods*

PRESIDENT-ELECT OF THE NATIONAL CONFERENCE OF SOCIAL WORK

WHETHER a year hence we are in the depths of war—and we must act as if this were certain—or on the threshold of a world-wide period of reconstruction, the intense and profound sense of the reality, in the face of the total situation of nearly all that the conference includes, must be maintained and developed. The projection of this new emphasis on into the coming years represents an opportunity of unparalleled importance.

A fresh recognition of the great part to be played by the volunteer was a striking phase of the discussions at Pittsburgh. Everyone is today called to wartime duty. The agencies represented by the conference must be relied upon to provide training and leadership for all outside the military ranks who come forward to re-enforce the army and sustain the fabric of the nation. It is to be hoped that when we meet a year hence at Kansas City each section—laying aside all restricted professional traditions—will be able to present reports and forecasts covering considerable new projects for the use of volunteer service.

The war, as Bishop Canevin pointed out, is serving to lessen the isolation of the different religious communions from one another. There is good prospect that next year there will be a fuller participation on the part of direct representatives of the church in its various branches than ever before. This will mean sound progress toward distinctively present-day ethical fruitage on the part of religion and toward a freer and higher spiritual note in social work.

The war places the last exaction upon science. The conference just finished drew more fully and broadly upon the expert than ever before. The next conference, coming to its problems with ample notice of their immeasurable seriousness, should, at every point when technical questions are involved, secure the services of the ablest specialists in the country. The readiness with which the leaders in scientific achievement are found to adapt themselves to the point of view of the conference is a reassuring tribute to both.

Lay the axe to the root of the tree is henceforth more clearly the sentiment of the conference, with a form of organization that makes the application more certain. One permanent section, in particular, is to be devoted to the issues of industrial democracy and one to the coming on of the people in the local community; but the true value of the radical movement in the conference will come as it sympathetically and constructively permeates every section. Let there be placed continuously before every phase of activity represented in the conference the necessity of the deeper analysis, the broader assembling of evidence and the resolute prosecution of penetrating, comprehensive plans. It is now happily clear that every positive program, however alien in the past, will have full rights in the conference. It is definitely hoped, however, that the broader platform will induce a general spirit of appreciation and approximation rather than anything of underestimate and recoil.

The new name of the conference is organic, creative. It has

regard to all the complex issues and all the cumulative powers that go with the network of human relations. At last fully concerned with every outward phase of this protean fabric, the conference takes this step at a moment when both baffling problems and new revelations are coming as to the inner mazes of the human spirit. In this new, as well as in the more familiar directions, the lessons of the war will be such as form a greatly altered perspective, which the conference should be keen to follow.

Not merely the ascent to a bare normal existence, not merely the prevention of evil and suffering, but the exaltation and the fulfilment of life for all, is henceforth unmistakably the motive of the conference. Let it be understood on all hands, however, that in a peculiar degree we recognize and rejoice in that fundamental nucleus of our loyal fellowship who go to meet the deepest and saddest needs, sorrows, sins, and while daring to work, step by step, toward bringing the victims of the dark forces of life to their rightful human portion, uncover the clues by which these enemies of mankind may be opposed and ended.

The determined unanimity with which the conference urged national prohibition for wartime and reconstruction period shows how fundamental is the common interest which unites its vast and varied constituency. It may be that by another year much of its best thought will be concentrated upon the almost unimaginable prospects that would lie before every branch of social work without the endless ramifications of the curse of alcohol.

The most effective maintenance of the nation at war must be the central and dominating consideration; but if within the year there are genuine prospects of the great truce, the historic question taking precedence of all others will be: How can the war be paid for; how can the world be restored? When all the resources in reserve are inventoried, it will be found that in the wide and bold application of the principles and methods of social work lies the greatest potency for the recovery of both man and money power even to the degree in which they have been destroyed. Here in any case is a suggestion of the measure which the conference should apply to the future of its field of service.

The group of men and women who fifty years ago in London laid the foundations of organized charity and of the work of the settlements, began with "the principle of locality." They sought to reconstruct the neighborhood unit. But they proceeded to articulate neighborhood to neighborhood into a new and humanized city formation. And this was only a next step. Their underlying watchword was nothing less than "the whole nation organized for righteousness." Some of the founders of the National Conference of Charities and Correction, their American contemporaries, in the new national consciousness following the civil war, had much the same purpose. In the present crisis the forces of history seem in many ways to be preparing a state of things in which this prophecy might be brought to pass.

The Task of Civilian War Relief¹

IX

THERE are three books which every Red Cross civilian relief worker should read. They are: *A Layman's Handbook of Medicine*, by Dr. Richard C. Cabot; *Health and Disease*, by Dr. Roger I. Lee, who occupies the chair of Hygiene at Harvard University; and *How to Live*, by Professor Irving Fisher and Dr. Lyman Fisk.

These books are important not because they discuss the treatment of disease, but because they tell about the maintenance of health. Indeed, one of the most valuable functions of the civilian relief worker will be helping those under her care to keep well.

Despite the vigorous campaigns for the prevention of disease and for sanitation and personal hygiene, most people still put off taking thought about the proper care of their bodies until after they have had the importance of so doing emphasized to them by an attack of sickness. Therefore, although the social worker should not wait until disease makes its appearance in a household before showing a family how to live hygienically, she ought not to fail to use the educational opportunity afforded by the interest in health that an experience with sickness arouses.

When in Doubt Call the Doctor

THIS fact makes medical examination all the more important. When the civilian relief worker observes the symptoms of disease she should encourage the family to consult a physician. In many cities the leading doctors are volunteering their services to the Red Cross Civilian Relief Committee, so that the wives and children of soldiers and sailors may be sure of receiving the most competent medical advice available.

Social workers have found that a diagnosis in writing is far more effective than one made verbally. The New York Association for Improving the Condition of the Poor has a special blank which it asks the doctor to use in recording the results of examination. This card has room for the name of the dispensary and of the doctor; the name, age, address, occupation of the patient, and the date. It then provides for the following medical statements; temperature, pulse, respiration, weight, past history, present illness, diagnosis, prognosis, does patient need hospital or dispensary care? When? Is present occupation injurious? Country outing advisable? Treatment suggested, remarks.

The civilian relief worker may not be able to diagnose a patient's condition. She can, however, help in carrying out the treatment suggested. If hospital care is required, if an outing in the country or rest in a convalescent home is necessary, if a special diet is needed, she should see that it is obtained. She should cultivate the point of view of the nurse in feeling that doctor's orders must be carried out and carried out promptly and effectively.

Usually the homes in which there has been sickness or in which there is sickness or danger of sickness, will be the homes most ready to take advantage of any sanitary and hygienic measures that may be suggested. This was illustrated by the

way in which infant mortality from general causes was reduced last summer in New York when the presence of poliomyelitis made everyone realize the importance of prophylaxis. The health of the child is the most effective argument for convincing people of the necessity for a hygienic home.

The elements of household hygiene are relatively simple. The refrigerator, if the family has one, should be cleaned thoroughly every week with hot soapsuds. There is no value in putting clean milk into a dirty refrigerator. Milk must always be kept covered in order that it may be safeguarded from flies, dirt and dust. All containers of milk should be carefully cleaned and boiled.

Garbage should be kept in closed receptacles. All food should be put away between meals and should be covered. While many homes may not have bathrooms, nearly all will have their own closets. These should be washed daily. A brush should be used for this purpose and the closet should be flushed with soda hot enough to boil.

Personal hygiene is essential for everybody, but most of all for the expectant mother. The civilian relief worker should see that such a mother does not overwork and that she has nourishing food. The mother should be examined by a physician and should return for observation as often as necessary. The importance of breast-feeding should be emphasized. This means that if possible the baby should not be weaned at the earliest before it is six months old. In many cities there are milk stations, infant welfare stations, health stations and the like, where the mother can go for consultation and advice. Social workers have made the most successful use of these stations when they have taken the mother there and introduced her to the nurse in charge, or when they have made special arrangements to have the nurse call at the home. For many women it is not easy to meet strangers and some such procedure as this makes a pleasant introduction.

Obvious though it may seem, there are hundreds of mothers who do not realize how necessary it is that their children should have an abundance of sleep. Children should be in bed by eight o'clock and of course their windows should be kept open. Many women are converted to sleeping with open windows by being told that at night there is less dust and the air is therefore cleaner than in the day time.

The Tubless Family

WHERE there is no bathtub, bathing becomes an effort, especially when the family is large. The taking of a sponge bath, at least once a week, however, should be encouraged. Nervous children should be given a warm bath before they go to bed. If there is no tin tub the laundry tubs can be requisitioned. It is good to encourage the bathing of the neck and chest of the child in the morning.

The finger nails of most children are allowed to be long and dirty. To keep them short is to make cleanliness easier. The tendency among many families is to overclothe the children. This is especially true where there are babies. Care should be taken to see that the clothing is not too tight, but that it is loose and comfortable.

One of the best ways of being sure that the children are using the tooth brush is to comment upon the condition of the teeth. With girls it is enough to say something about how good looking the teeth are. The importance of clean

¹This article, the ninth of a series on civilian relief, is based upon two lectures delivered by Bessie S. Le Lacheur, superintendent of the Bureau of Educational Nursing of the New York Association for Improving the Condition of the Poor, as part of the course on civilian relief now being conducted in New York with the sanction of the American Red Cross by the New York School of Philanthropy. The articles are being written by Karl de Schweinitz, of the New York Charity Organization Society.

teeth to a strong physique is the argument that appeals to boys.

Constipation is one of the ways in which many sicknesses get their start. To avoid it, coarse food should be included in the diet. Cereals, fruits, stewed fruits, green vegetables should be eaten, plenty of water drunk. Exercise, and particularly for adults, abdominal exercise should be taken and the habit of regularity in going to the toilet should be cultivated.

Pediculosis, that is, the presence of vermin in the hair and scalp, is more frequently met with by social workers than is generally known. Once the head of a child becomes infected, it is a tedious undertaking to rid the boy or the girl of the trouble. One remedy is to wash the head at night with kerosene and oil in equal parts or perhaps with a little more kerosene than oil. In the morning a thorough shampoo should be given. This kills the vermin but not their larvae. A brush and hot vinegar will take most of them from the hair and the remainder must be picked off.

When sickness comes into a home the doctor will of course diagnose and prescribe. There are, however, certain ways in which the social worker can be of help. The mother should, for example, be urged to put a sick child into the airiest and best lighted room. Only too often the family allows the child to lie about in the kitchen when it should be undressed and put to bed. Almost without exception, the first thing to do for a person who is ill is to administer a laxative. Castor oil is to be recommended.

Upon the mother and the other members of the family the importance of care in the disposal of all discharges from the body should be stressed. Stools and urine should be promptly gotten rid of. Dishes and clothing used by the patient should not be generally handled and should be washed separately. The patient should be kept apart from the other members of the families and not kissed and fondled, as is so commonly done in many homes. The hands of the person attending the patient should be scrubbed frequently, plenty of soap being used. Especially before eating or handling food should the hands be washed. The mouth must be protected from receiving any bits of mucus that might be scattered by the coughing, spitting or sneezing of the patient. If the patient is not careful to turn his head away, the visitor should be sure to turn hers. Proper care is all that is needed to prevent the spread of communicable disease. So generally is this fact understood in hospitals that it is considered to be bad form for a nurse to get typhoid from a person for whom she is caring.

Visiting Scrub-Women Have Kept Well

THAT it is possible for a person with little medical experience or education to follow these instructions successfully is shown by the success of the visiting cleaners of the Association for Improving the Condition of the Poor. They enter a great variety of homes in order to do the scrubbing that the mother cannot do; yet they have neither contracted nor carried any communicable disease in the course of their work.

The presenting symptoms of tuberculosis—loss of weight, coughing, night sweats—are now almost universally known. The first step toward the successful treatment of consumption is an early diagnosis. When the social worker suspects this disease she should insist upon examination by a competent physician.

Persons who suffer from cardiac troubles should place themselves under observation. The social worker should see that the school teacher, if the patient is a child, understands what is wrong. If the patient is an adult, an occupation adapted to the disease should be obtained. Heavy work is of course unsuitable for such patients. Women should not be permitted to do heavy washing and arrangements should be made so that the family does not have to live on the top floor of a tenement, which must be reached by many flights of stairs.

Except that early surgery is advisable, little definite about the treatment of cancer is known. Any lump in the breast should be examined and persons suffering from any form of stomach trouble should be brought to a physician.

Encouragement for the Neurasthenic

NEURASTHENIA is by no means limited to the wealthy. The interest of a friendly visitor is a great help to a patient suffering from this affliction. The neurasthenic must be helped to form new habits of life and thought and new interests. Encouragement is what the patient needs above everything else.

Orthopedic defects must not be considered as permanent. The social worker should promptly bring the person so handicapped under the care of a specialist. Early treatment often means early cure.

Should the visitor have reason to think that some member of a family is suffering from syphilis, she should immediately arrange for a medical examination. If syphilis is found she should not be discouraged. The treatment, it is true, must be continued for years, but with persistence a cure can be effected.

It is important that the social worker does not allow herself to be affected by any moral implication because of the presence of this disease, or for that matter of any other disease. The patient should be treated as a patient and given the same conscientious care that every patient deserves. Furthermore, it must be remembered that again and again the disease is innocently contracted.

The elements of health are simple indeed. If everybody were to observe even the few outlines of rules here suggested there would be a great decrease in disease. The social worker must not, however, expect to teach these to the family in the first visit or the second or the third. They can only be suggested tactfully and in the course of an intimate acquaintance.

But the maintenance of health should always be in the mind of the worker. To supply financial assistance without the rules of hygiene is likely to be a waste of effort. Usually the family which is receiving an allowance can be made to be eager to observe the suggestions given. The social worker should help it to feel that by keeping a healthful home it is discharging a debt to the nation, the duty of producing a strong and sturdy citizenship.

From the Oldest of Democracies to the Youngest

Elihu Root's Speech in Petrograd on June 16

MR. PRESIDENT and members of the Council of Ministers:

The mission for which I have the honor to speak is charged by the government and people of the United States of America with a message to the government and people of Russia. The mission comes from a democratic republic. Its members are commissioned and instructed by a President who holds his high office as chief executive of more than 100,000,000 free people by virtue of popular election, in which more than 18,000,000 votes were freely cast, and fairly counted pursuant to law, by universal, equal, direct and secret suffrage.

For 140 years our people have been struggling with the hard problems of self-government. With many shortcomings, many mistakes, many imperfections, we still have maintained order and respect for law, individual freedom and national independence. Under the security of our own laws we have grown in strength and prosperity. But we value our freedom more than wealth. We love liberty and we cherish above all our possessions, the ideals for which our fathers fought and suffered and sacrificed, that America might be free.

We believe in the competence of the power of democracy and in our heart of hearts abides faith in the coming of a better world in which the humble and oppressed of all lands may be lifted up by freedom to a heritage of justice and equal opportunity.

The news of Russia's new-found freedom brought to America universal satisfaction and joy. From all the land sympathy and hope went out to the new sister in the circle of democracies. And the mission is sent to express that feeling.

The American democracy sends to the democracy of Russia a greeting of sympathy, friendship, brotherhood, godspeed. Distant America knows little of the special conditions of Russian life which must give form to the government and laws which you are about to create. As we have developed our institutions to serve the needs of our national character and life, so, we assume that you will develop your institutions to serve the needs of Russian character and life.

As we look across the sea we distinguish no party, no class. We see great Russia as a whole, as one mighty, striving, aspiring democracy. We know the self-control, essential kindness, strong common sense, courage, and noble idealism of the Russian character. We have faith in you all. We pray for God's blessing upon you all. We believe you will solve your problems, that you will maintain your liberty, and that our two great nations will march side by side in the triumphant progress of democracy until the old order everywhere has passed away and the world is free.

One fearful danger threatens the liberty of both nations. The armed forces of a military autocracy are at the gates of Russia and the allies. The triumph of German arms will mean the death of liberty in Russia. No enemy is at the gates of America, but America has come to realize that the triumph

of German arms means the death of liberty in the world; that we who love liberty and would keep it must fight for it, and fight for it now when the free democracies of the world may be strong in union, and not delay until they may be beaten down separately in succession.

So America sends another message to Russia—that we are going to fight, and have already begun to fight, for your freedom equally with our own, and we ask you to fight for our freedom equally with yours. We would make your cause ours and our cause yours, and, with a common purpose and mutual helpfulness of a firm alliance, make sure of victory over our common foe.

You will recognize your own sentiments and purposes in the words of President Wilson to the American Congress, when on the second of April last he advised a declaration of war against Germany. He said:

We are accepting this challenge of hostile purpose because we know that in such a government [the German government], following such methods, we can never have a friend; and that in the presence of its organized power, always lying in wait to accomplish we know not what purpose, there can be no assured security for the democratic governments of the world. We are now about to accept the gauge of battle with this natural foe to liberty, and shall, if necessary, spend the whole force of the nation to check and nullify its pretensions and its power. We are glad, now that we see the facts with no veil of false pretence about them, to fight thus for the ultimate peace of the world, and for the liberation of its peoples, the German peoples included; for the rights of nations, great and small, and the privilege of men everywhere to choose their way of life and of obedience.

The world must be made safe for democracy. Its peace must be planted upon the tested foundations of political liberty. We have no selfish ends to serve. We desire no conquest, no dominion. We seek no indemnities for ourselves, no material compensation for the sacrifices we shall freely make. We are but one of the champions of the rights of mankind. We shall be satisfied when those rights have been made as secure as the faith and the freedom of nations can make them.

And you will see the feeling toward Russia with which America has entered the great war in another clause of the same address. President Wilson further declared:

Does not every American feel that assurance has been added to our hope for the future peace of the world by the wonderful and heartening things that have been happening within the last few weeks in Russia? Russia was known by those who knew her best to have been always in fact democratic at heart in all the vital habits of her thought, in all the intimate relationships of her people that spoke their natural instinct, their habitual attitude toward life. The autocracy that crowned the summit of her political structure, long as it had stood and terrible as was the reality of its power, was not in fact Russian in origin, character, or purpose, and now it has been shaken off and the great, generous Russian people have been added, in all their native majesty and might, to the forces that are fighting for freedom in the world, for justice, and for peace. Here is a fit partner for a league of honor.

That partnership of honor in the great struggle for human freedom, the oldest of the great democracies now seeks in fraternal union with the youngest. Practical and specific methods and the possibilities of our allies' cooperation, the members of the mission would be glad to discuss with the members of the government of Russia.

COMMON WELFARE

CLEANING UP THE CAMP CITIES

EL PASO and San Antonio have abolished their segregated vice districts. St. Louis is undergoing a process of social cleansing in behalf of the troops at Jefferson barracks. San Francisco is reported as showing a fair condition of social cleanliness. In all the localities where army cantonments and concentration camps are being located the same process is—more or less evidently—now under way.

Such are the reported preliminary returns from the issuance of a circular letter by Secretary of War Baker to the governors of all states and to the chairmen of all state councils of defense. The letter follows:

DEAR SIR: I am very anxious to bring to the attention of the state councils of defense a matter in which they can be of great service to the War Department. In the training camps already established or soon to be established, large bodies of men, selected primarily from the youth of the country, will be gathered together for a period of intensive discipline and training. The greater proportion of this force probably will be made up of young men who have not yet become accustomed to contact with either the saloon or the prostitute, and who will be at that plastic and generous period of life when their service to their country should be surrounded by safeguards against temptations to which they are not accustomed.

Our responsibility in this matter is not open to question. We cannot allow these young men, most of whom will have been drafted to service, to be surrounded by a vicious and demoralizing environment, nor can we leave anything undone which will protect them from unhealthy influences and crude forms of temptation. Not only have we an inescapable responsibility in this matter to the families and communities from which these young men are selected, but, from the standpoint of our duty and our determination to create an efficient army, we are bound, as a military necessity, to do everything in our power to promote the health and conserve the vitality of the men in the training camps.

I am determined that our new training camps, as well as the surrounding zones within an effective radius, shall not be places of temptation and peril. The amendments to the army bill recently passed, a copy of which I enclose herewith (sections 12 and 13), give the War Department more authority in this matter than we previously possessed. On the other hand, we are not going to be able to obtain the conditions necessary to the health and vitality of our

soldiers, without the full cooperation of the local authorities in the cities and towns near which our camps are located,—or through which our soldiers will be passing in transit to other points.

Will you give earnest consideration to this matter in your particular state? I am confident that much can be done to arouse the cities and towns to an appreciation of their responsibility for clean conditions; and I would suggest that, through such channels as may present themselves to you, you impress upon these communities their patriotic opportunity in this matter. I would further suggest that as an integral part of the war machinery your council make itself responsible for seeing that the laws of your state and of Congress in respect to these matters are strictly enforced. This relates not only to the camps established under federal authority, both the present officers' training camps and the divisional training camps soon to be opened, but to the more or less temporary mobilization points of the national guard units. It relates, too, as I have indicated, to the large centers through which soldiers will constantly be passing in transit to other points.

As I say, the War Department intends to do its full part in these matters, but we expect the cooperation and support of the local communities. If the desired end cannot otherwise be achieved, I propose to move the

camps from those neighborhoods in which clean conditions cannot be secured.

In this connection let me call your attention to the Commission on Training Camp Activities which I have organized to advise with me on questions relating to the moral hazards in our training centers, as well as to the promotion of rational recreation facilities within and without the camps. The members of this commission are as follows:

Raymond B. Fosdick, chairman; Lee F. Hanmer, Thomas J. Howells, Joseph Lee, Malcolm L. McBride, John R. Mott, Charles P. Neill, Maj. Palmer E. Pierce, U. S. A., Joseph E. Raycroft.

It is possible that the chairman of this commission or some of its members will consult with you in regard to the activities which they have in hand. I bespeak for them your utmost support and cooperation.

Very truly yours,

NEWTON D. BAKER,
Secretary of War.

Chairman of the Council of National Defense.

Chairman Fosdick of the Commission on Training Camp Activities states that El Paso and San Antonio, like other cities having army posts, were given to understand that if they did not provide social conditions which would furnish some guaranty of the health of the soldiers, they would not have the opportunity to bring the soldiers within their gates. The appeal was made on a basis of patriotic duty and of the public's right to safeguard the efficiency of its army. This appeal has in every case been met by a ready response, he says. In a few days one of the most vicious sections of the entire South was wiped out by the El Paso authorities, who did not wait for the use of the authority of the secretary of war to make the change.

Owing to the fact that numerous inquiries have been made as to responsibility for conditions about the naval camps at Philadelphia, Newport, Brooklyn, Mare Island and other points, the Committee on Training Camp Activities explains that it has no authority over matters outside the War Department.

The camps and cantonments within the authority of the War Department, however, will look to this committee to furnish means of athletic, musical and dramatic entertainment, Y. M. C. A. facilities and other features of healthy social activity during the period of military training.

ALCOHOL

FOR the sake of those who grow rich in body and poor in soul by it;

For the sake of those who grow poor in body and poor in soul by it;

For the sake of those kept poor in body and poor in soul by it;

For the sake of the fathers unfathered by it;

For the sake of the mothers unmothered by it;

For the sake of the children orphaned by it;

For the sake of those made murderer—adulterer—thief—outcast—by it;

For the sake of the flag it dishonors;

For the sake of the God it crucifies;

LET IT DIE

LAY IT IN THE GRAVE

COVER IT WITH THE EARTH.

Then,

With the millions you have freed,

Arise and truly sing—

Of LIBERTY!

—From Little Adventures with John Barleycorn, by Harry Lee and William H. Matthews; New York Association for Improving the Condition of the Poor.

PROHIBITION BILLS BEFORE CONGRESS

THE dry forces in Congress are beginning to try out their prohibition measures. Senator Shepard has had a bill voted out favorably by the judiciary committee calling for a bone-dry federal amendment to the constitution.

Besides this, there are numerous amendments to the war revenue bill to bring about wartime prohibition by taxation. These amendments, offered by Senator Gore, are not given even a bowing acquaintance by the true war-prohibitionist. In addition to this, the Committee on Agriculture has reported a bill to prohibit the use of foods and feeds in the manufacture of intoxicating liquors for beverage purposes and directing the President to commandeer existing stocks of distilled liquors for the manufacture of munitions. This bill finds more favor with prohibitionists, as it strikes at beer and distilled spirits alike, and does not leave for sale the two years' supply of distilled spirits now in bond, as does the bill favored by Senator Lodge, of Massachusetts.

A clause in the Lever bill also gives the President power to stop foodstuffs going into alcoholic beverages. Herbert C. Hoover, speaking before the Senate Committee on Agriculture, said: "We could save from fifty to sixty million bushels of grain on the brewing side, after having allowed for the fodder proposition, and that grain is of the utmost importance to our allies."

Other bills are expected out any moment. Some which make a dry sound are said to have "wet fathers."

Prof. A. E. Taylor, crop expert of the Department of Agriculture, said at the Senate hearing: "In my opinion, on the basis of crop prospects, the need of grain, and especially barley, which has proved itself valuable as a flour, is such as to make it imperative upon us after the present maltings . . . have been concluded, in about three months, to cease the manufacture of malt for internal or external or export trade for brewing."

To meet the prohibitionists, a two-page advertisement was inserted in the Washington dailies, unsigned, but supposed to come from the brewers. It declares that over 2,000,000 workingmen want beer as a temperance drink. Four years ago a brewer boasted to Mrs. Tilton, of Cambridge, that the United States would never go dry because by the time the bill got to Congress the brewers would, by means of the bartenders' union, have organized labor so under their thumb that no one would dare to strike at beer. To a degree this has been done, but no union in a dry state is found among the 528 labor organizations listed in the advertisement. Bartenders' unions in wet

states predominate, and often the unions are counted twice over and sometimes three times, according to W. G. Calderwood, executive secretary of the Committee on Wartime Prohibition. But, the committee points out, congressmen are not analytical and it calls on all friends of prohibition to wire or write at once to their congressmen and senators in support of complete prohibition during war. The Senate is the storm-center and the northeastern states are the backward ones—New York so far is wet, Massachusetts wettish and so on. "The very most effective way to get the attention of congressmen is by wire," says the committee. The fight is by no means won—"Congress should know that the people oppose this waste. . . . Please help quickly."

Among the most recent organizations to take a stand in the matter is the Instructive District Nursing Association, of Boston, which begs its friends "to do all in your power to bring about national war prohibition." Its resolutions declare:

The experience of our ninety nurses (who visited 14,930 patients last year) keeps vividly before us the evil effects of drink, physically and socially, at the best of times, and we feel certain that its disastrous results will be greatly increased by the added temptation to drink, which the abnormal social conditions and the nervous strain of war will bring.

The country has assumed a tremendous responsibility for the thousands of young men gathered together in the unnatural life of concentration camps. These young men, who are to be subjected in France to the inevitable dangers of wounds and death should be safeguarded from the earlier dangers of drink and the diseases due to it; and girls should be safeguarded from the dangers of relations with men under the influence of liquor.

We understand that efforts are being made by the government to keep the camp zones free from drink, but we are convinced that prohibition in such restricted areas cannot meet the problem, that vice will be only forced back among the civilian population

and that the men and women at home who work under great strain in the effort to fill the places of those at the front should be safeguarded likewise from the mental, moral and physical deterioration which drink produces.

At this time, when the country depends for its safety on the most efficient services of each citizen, we urge national war prohibition as the preventive health measure which should be immediately adopted.

THE CASE FOR EXEMPTING GIFTS

CONGRESS has now officially before it the proposal to exempt from the federal income tax contributions "to any incorporated association engaged in charitable, educational, religious, civic or social work." The proposal, made in New York city some weeks ago, has been gathering headway, in spite of the bucket of cold water thrown on it at a luncheon meeting during the National Conference of Social Work at Pittsburgh last week. Samuel McCune Lindsay, professor of social legislation in Columbia University, presented it to the Senate Finance Committee on June 13 in behalf of a newly organized Committee on War Charity and Social Work. Dr. Lindsay is chairman of the committee, and the other members to date—it is not yet complete—are the following men:

Cornelius N. Bliss, Jr., Edward T. Devine, Homer Folks, John A. Kingsbury and V. Everit Macy, of New York; President John J. Goodnow of Johns Hopkins University, Baltimore; Warren G. Candler, Atlanta; Dwight W. Morrow, Englewood, N. J.; Robert A. Woods, Boston; A. J. McKelway, Washington; George Burnham, Jr., Charles C. Harrison, Philadelphia.

In a printed statement submitted to the Senate committee, Dr. Lindsay proposes that to the eight deductions now allowed there be added the following:

Ninth. Gifts or donations to charitable, educational, religious and civic societies or corporations, incorporated under the laws of the United States or of any state, and whose property is or may be exempted from taxation under the existing laws of the jurisdiction in which the society is incorporated.

Much of the work done by these organizations, Dr. Lindsay's statement points out, is done in other countries by the government, and he quotes Prof. E. R. A. Seligman, of Columbia, to show that excessive taxation now "will cause a serious diminution of the incomes which are at present largely drawn on for the support of educational and philanthropic enterprises"; that such taxation will result in the government having to take over such enterprises; and that "the difficult and hasty transition from private to public activities would in all probability entail a considerable loss and would seriously cripple the efficiency of our war activities."

The government's loss in taxes would, the statement argues, "be a contribu-

Flaschke in Louisville Times.

tion by the government to such work, greatly enhanced and augmented in the making by the psychological effect upon the contributors to charitable and educational funds"; and "it cannot be said that those who ask the government to refrain from taxing contributions to work which sustains and strengthens the social and moral fiber of the nation, are seeking special privileges."

A list of precedent exemptions is given: the English war savings certificates, the liberty loan bonds, the Spanish war federal inheritance tax act of 1901, the income of educational and charitable institutions under the income tax law and the corporation excise tax law, and similar exemptions in Australia. Summing up, the statement says:

It is difficult enough in normal times to get sufficient funds to support the enormous work carried on by private philanthropy in this country. Under the present abnormal conditions and with the increasing demands of every sort which the war is making on philanthropy, it becomes well-nigh impossible to find the money to meet them. We are actually facing the breakdown and bankruptcy of some of the most important work that develops and sustains the higher life of the nation.

If the nation must take a larger share of the income of her citizens and apply it to the defense of their rights and ideals, it must also protect and support in every possible way those forces and activities which create the ideals and make for the security of the foundations of the republic. The spirit of humanity, the enlightened and quickened impulses of education and the regenerative influence of religion are the essential elements of national strength and character. We must foster them. We dare not refuse the relief and encouragement which the proposal to exempt from taxation income applied to their support would give when such refusal will place them in jeopardy.

The exemption has been approved by the Rev. Charles S. Macfarland, general secretary of the Federal Council of the Churches of Christ in America, who prefaced his approval with a statement that wealth as well as manhood should be conscripted by the nation, and by the *New York Evening Post*.

At Pittsburgh last week many arguments were advanced against the plan.

ARGUMENTS AGAINST THE EXEMPTION

CHIEF of these was that the plan proposed to set up a new form of special privilege; that it would apply most of all to very wealthy persons who must, as now proposed, pay a heavy super-tax and that it, therefore, flew in the face of the current expectation that the unusual expenses of the war are to be imposed so far as is possible on the rich rather than on the poor. As a tax measure these people found it, also, going contrary to a growing feeling among the rank and file of social workers that social, educational and church work should not be exempted from any taxes; that they should, in-

"ALICE IN WONDERLAND"

deed, be the first to come forward and pay their full share of the expenses of local, state and federal government. They pointed out that the Cleveland Foundation is specifically authorized to pay taxes on its investments, whether or not the state law exempts them.

As a social measure, these objectors found even more fault with the plan. They argued, first, that we cannot assume from the mere fact of incorporation that a given agency is doing vital work which the government itself would have to do if it failed; some agencies represent chiefly the whim of a single giver. They held that it would immediately be attacked by tax-reformers and other radicals, and would widen the breach between organized labor and organized charity, which thoughtful leaders on both sides are trying to bridge.

And they argued, most of all, that such an exemption would inevitably dry up, at least for the present, the feeling of responsibility on the part of the small giver and would, therefore, tend to confirm the practice—which the financial secretaries present deplored—of getting a continually larger share of their funds from a few large givers. This, they said, was the easiest and cheapest way to get money, but churches, colleges and charities will never occupy

their rightful place in the community until a great number of men and women of modest means, or no means at all, feel their responsibility for them and become contributors or members in such modest measure as they find possible.

Finally, the argument ran, these agencies dare not let themselves be put in an exceptional and sheltered position where they will not have to bear their full share of the cost of war. Such a position would make them unpopular. More than that, it would have a bad internal effect. For the probable shrinking of funds and the difficulty of tapping new resources will put them on their mettle; their appeals must be better done and more strongly grounded on proved good work than ever before. Difficulties would tend to draw agencies together to meet the common need; overlapping, always decried, would be looked upon as inexcusable; standards of work would be raised, for the better-managed agencies would feel, in such stress, more than ever the reproach which comes indirectly to them from poor work by others.

They were quite ready to acknowledge, these opponents of exemption, that some institutions, which cannot make good a claim to doing absolutely essential work, may go by the board. That,

they felt, was one of the risks of war that we all must take. And they even foresaw some good in it, as, for instance, when of three relief societies, one failed, the surviving two got closely together in their work to save the day; or when three competing churches in a country town came out of the time of trial as one union congregation, using in full for the community's welfare the energy hitherto spent in keeping the wolf from three parsonage doors.

THE MINISTER OF SOCIAL WELFARE

IT is announced from Petrograd that Her Excellency the Minister of Social Welfare is the new title from now on of Countess Sophie Panin, the first woman in the western world to be called to join a ministry. The countess, who is forty-five years of age, though an active worker of the constitutional democratic party and a frequent speaker in the cause of woman suffrage, never has been in the political limelight. But for nearly a score of years she has enjoyed the respect of the authorities and the love of the people as a practical social worker.

When the government, some fifteen years ago, instituted the liquor monopoly and desired to give an earnest of its desire to fight intemperance, it created in many cities so-called People's Houses, where recreation of the best type, including libraries, drama and even opera, was offered to the masses. It also gave liberal support to a number of similar institutions created by private enterprise and, in some cases, enjoying municipal grants. In many of these voluntary institutions a spirit of liberalism and criticism developed which was not at all the one desired by the government.

Most prominent among these has been the People's House built and run with her own money by the Countess Panin. It is situated in one of the poorer parts of Petrograd and contains a library, theater, physical laboratory, astronomical observatory and other educational equipment. Evening and Sunday classes provide for serious adult education and its recreational organization is not unlike that of one of the larger social settlements in this country.

At the beginning of the war the countess organized sewing-rooms for the employment of the wives of soldiers in the reserve, which rapidly developed into a factory giving work to some 2,000 women. Later the countess became the head of an organization covering the whole city, which aims at providing employment for soldiers' wives. Both during the war and for many years previous she has given practically all her time to a variety of social endeavors.

The SURVEY learns the following

concerning her from A. J. Sack, assistant director of the Russian Information Bureau and staff correspondent in New York for the publications of the Russian Ministry of Finance:

The Countess Panin, in Petrograd, and the Countess Uvaroff in Moscow, are equally well known, though neither of them is a sensational figure. Their reputation and influence is rather like that of Jane Addams in this country. Both are prominent social workers of many years standing and have taken part in every big movement for improving social conditions. Both have participated from time to time in investigations of economic and social conditions in the two metropolitan cities, and all their enterprises have been in the direction of improving those conditions.

Both women come from very aristocratic and very wealthy families. But they have never looked upon social work in the spirit of the so-called society woman. They are imbued with lofty and radical ideas and regard the problems of the poor as their own.

Under the old regime, they could not very well work out their schemes of social betterment; but now an enormous field of activity has opened up for all social workers in Russia. There is no doubt that the appointment of the countess will be greeted with enthusiasm all over Russia, and that this is only the first appointment of the kind. The women of Russia will be given every opportunity to participate in the government and to fill responsible posts in every branch of political and social life. Russian women have probably contributed no less than the men to the political education of the people and to the cause of the revolution. To give them an equal chance with men will be only a modest reward for the services which they have rendered.

The ministry to which the Countess Panin has been called is charged with the administration of charitable and social institutions and with the care of dependent children. In a statement issued by her, the new minister has declared that her staff will for the most part consist of women, a precedent which she hopes will find wide imitation in other countries.

SOCIAL SERVICE AND WAR SERVICE

IN its forty-four years of existence just closed under the old name, the National Conference of Charities and Correction has passed perhaps a dozen or fifteen resolutions which committed its members to anything more definite than an expression of thanks to its officers and the local committees which provided for its entertainment. In its first three days, the National Conference of Social Work has taken a definite position in two resolutions formally offered and adopted. The first of these, urging complete national prohibition during the war and for at least a year after peace is declared, was reported in the SURVEY last week.

The second, offered after the SURVEY had gone to press, takes a stand on the relation of organized social work to the war. It grew out of a resolution,

from the Section on Health, suggesting that public health nurses be not called to the front as long as other nurses are available; and one from the Section on Social Problems of the War, urging the cooperation of social agencies throughout the country with the American Red Cross. The Committee on Resolutions, of which Hastings H. Hart, of New York, was chairman, found itself "in sympathy with the purpose and spirit of these resolutions," but it did not feel "that the conference should take action so specific as that contemplated by these resolutions." It, therefore, offered the following resolution, which was adopted:

In the Pittsburgh meeting of the National Conference of Social Work there has not only been a special section created to discuss the social problems of the war, but the relation of the social agencies to the war has become apparent in every section of the conference.

While recognizing that some members of the conference conscientiously object to war under all conditions, the National Conference of Social Work places on record in behalf of the great majority of its 4,300 members their intense loyalty and their purpose to support the President and the government of the United States in the prosecution of this war in the interests of liberty and democracy.
